While workyears devoted to in-district movement of prisoners continue to increase due to factors beyond the Service's control, NPTS continues to make improvements. For the period 1979 to 1989, NPTS prisoner movements increased 241 percent (from 31,407 in 1979 to 107,064 in 1989) while escorting-deputy workyears used decreased by 54 percent (from 274 in 1979 to 125 in 1988). In order to accommodate the tremendous growth in the prisoner population, NPTS has developed and implemented plans that will satisfy these growing transportation requirements. In 1988, the Service made improvements in scheduling and deployed a second large aircraft to continue to meet the increased demands for this service. This second large aircraft expands airlift service to 16 additional cities, for a total of 36 major cities now served by NPTS.

In 1990, NPTS began air service to more remote areas through the assignment of Sabreliner jet aircrafts at satellite locations. NPTS also serves the Bureau of Prisons, Immigration and Naturalization Service, State and local governments, and the U.S. military (Army/Air Force). Negotiations are in process with the U.S. Navy for transportation of their prisoners through the NPTS.

NPTS is now one of the most valuable resources available to the law enforcement community. Not only does it transport large numbers of dangerous prisoners safely and within court-ordered deadlines, it does so at a fraction of the commercial cost. The 1989 cost per-prisoner-moved via the USMS airlift was $250, less than half the cost of commercial air. NPTS also plays a significant role in the war on drugs by providing air support for extradition of major drug crime figures to the United States. During the past year, the Prisoner Transportation Division has provided air transportation for 10 such extraditions. Additionally, NPTS provided air support during the Hurricane Hugo crisis by transporting manpower and supplies to and from the Virgin Islands.

In-District Transportation

In 1989, the Marshals Service received 87,600 individuals charged with violations of Federal law, with over 70,000 committed to contract jails and the remainder were housed in Federal institutions. On the average, each prisoner received is produced five times for detention hearings, trials, other court proceedings, medical care, or transfers between detention facilities. By 1991, the average number of times a prisoner must be produced will increase to seven.

The Service will continue to be faced with an unprecedented prisoner population and security requirements generated by Federal emphasis on drug prosecutions as well as the Comprehensive Crime Control (CCA) and the Sentencing Reform (SRA) Acts. A recent report from the Office of the Administrative Courts indicates that one year after the implementation of SRA, only 25 percent of prisoners sentenced were covered by SRA. Therefore, the full impact of SRA on increased productions and a longer average stay of prisoners may not be realized until 1990-1991.

In view of the increasing prisoner population and the jailspace shortfall projected, the requirements to move Federal prisoners will continue to grow. Additional operational workyears will be required to transport prisoners from jail to court and back for scheduled proceedings. In 1987 the Marshals Service was required to produce fewer than 300,000 prisoners; this year the number exceeded 441,000, and in 1991 over 600,000. In Oregon, Deputies travel as far as 30 miles from the Canadian border (a 600 mile round trip) to house prisoners. In Rhode Island, the Marshal sends prisoners to Otisville, New York (140 miles one-way) for lack of closer available space and in Vermont, Deputies travel 80 miles away to house prisoners.

Due to the shortage of jail space in the Northeastern United States, the Eastern District of Pennsylvania (Philadelphia) has been forced to transport prisoners on a daily basis to FCI Otisville, New York (approximately 360 miles round trip). This causes an undue burden on Prisoner Transportation Division resources. Out of district Deputy U.S. Marshals have been temporarily assigned to the Eastern District of Pennsylvania for the purpose of completing these prisoner trips, which in turn causes excessive travel, overtime, and per diem expenses.

Prisoner Detention

An audit conducted by the Department of Justice in February 1989, found the Service to be deficient in its completion of essential jail inspections. At the time of the audit, 79 percent of the required inspections were overdue. In 1989, the Service expended 34 operational workyears in support of this function. In order to ensure increased jail inspections and compliance, additional resources are needed. As it presently stands, efforts to review and inspect jail space are severely limited. Under present resource constraints, about half the necessary jail inspections are accomplished.

Producing prisoners in accordance with court calendars requires adequate detention space near Federal court cities. The dramatic growth in the average daily prisoner population (almost 6,400 new prisoners per day since 1984) generated by the Comprehensive Crime Control Act, Sentencing Reform Act, the Organized Crime Drug Enforcement Program, and recent anti-drug initiatives has significantly increased the level of deputy resources required for prisoner security as less jail space is available due to the national detention space crisis. To reassess the extent of the Federal short-term detention space crisis and to develop a plan to accommodate projected prisoner load growth levels for the next five years, the Service updated a national detention space survey of all Federal court cities in March 1989. The U.S. Marshal from each of the 95 districts provided estimated average daily prisoner population levels (for 1989-1995), resultant bed space shortfalls, assessments of each city's detention situation, and recommended solutions to the bed space shortages. In all, a total of 271 Federal court cities were covered in this survey.

As expected, the results again substantiated the Service's position that the Federal Government must take immediate action to resolve the Federal short-term detention space crisis. The estimated cost for the agency's latest USMS' 5-year Plan proposed is approximately $1.2 billion for 19,816 beds at an average cost of $61,277 a bed. By 1995, the Marshals Service daily prisoner load is projected to reach 29,581, more than four times the 1986 level. Of the 271 cities surveyed, 182 (67 percent) either had, or expect serious detention shortages by 1995. As of August 31, 1989 Bureau of Prisons (BOP) facilities housing Marshals Service prisoners are filled approximately 72 percent beyond rated capacity, compared to 63 percent over capacity nationwide. In 1989, 49 cities (where 40 percent of the prisoner load was housed) were in an emergency status. The Marshals Service defines emergency status as primary jail space exhausted or terminated. By 1995, this count is projected to increase to 116 cities, a shortfall of approximately 17,359 beds.

As a result of the worsening jail crisis, the Service must expend an increasing level of resources moving prisoners long distances (and incurring NPTS trip costs) to find adequate jail space. A study conducted in April, 1989, revealed that a total of 82 operational workyears were expended for these type trips at an estimated cost of $6.8 million to the Service. In view of the increasing prisoner population and the jailspace shortfall projected, it is anticipated these requirements will continue to grow and additional operational workyears will be required. This will mandate expanded use of the NPTS for these types of productions. It is clear that the continued dramatic growth in the Service's average daily prisoner population, as well as prisoner production requirements, provides justification for the resource increases requested. Unless sufficient additional resources are provided for this essential function and the revised USMS Five Year Detention Plan is funded fully, Federal court cities may not be able to function efficiently, and the Federal judicial system may be severely disrupted.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Prisoner Transportation and Detention................................	560	606	$41,686	606	630	$54,950	49	24	$13,264

The Marshals Service requests a net increase of 49 positions, 24 workyears and $13,264,000 for the 1991 Prisoner Transportation and Detention decision unit. This increase will provide necessary operational support to keep up with an ever-increasing prisoner production workload, ensure safe prisoner movement and provide for renovation of prisoner detention areas. Also included in this request is a reduction of six positions, six workyears and $36,000 due to A-76 management and productivity improvements.

National Prisoner Transportation

By 1991, the Marshals Service will continue to be faced with unprecedented prisoner receipt, process, production, and transportation demands, and a soaring average daily prisoner population. As more and more alleged drug and organized crime figures are apprehended, added reliance will be placed on the NPTS. Moves via NPTS will climb 27 percent from 107,064 in 1989 to 136,226 in 1991. This dramatic growth in movements, coupled with the rapid construction of new prison facilities located in remote less populated areas and the critical jail space shortage that forces a greater number of prisoners to be transported long distances for temporary housing, mandates a greater expansion of NPTS in order to continue basic transportation services. As a result of this expanded workload, the Service has initiated satellite air operations, transportation specialists units and strategically located air hubs, similar to commercial airline carriers. Because NPTS is required to service all U.S. locations, the satellite operations will be used as a feeder system to larger 727 jets. In order to expand operation of the Service-owned aircraft to support the increased prisoner transportation workload an increase of 6 positions 3 workyears and $203,000 is requested.

In-District Transportation

42 positions 24 workyears and $8,773,000 are requested for In-District-Transportation requirements associated with the growth in prisoner productions (up to 600,000 in 1991), and receipt and processing requirements.

In 1991, the Service's aged inventory of vehicles will be well beyond their useful life, but still used to transport prisoners long distances each day. The Service must replace 320 high-mileage 1988 model year sedans in 1991. They must be purchased outright because lease-to-purchase arrangements are no longer allowed under Administration policy. There is an urgent need for more over-the-road prisoner buses, which might be purchased through an existing INS or BOP contract, and passenger prisoner vans.

42 positions $2,691,000 - 42 Deputy U.S. Marshals for transporting, receiving and processing prisoners.
$6,082,000 - for 320 sedans, 3 prisoner buses and 30 prisoner vans.

Prisoner Detention

7 positions, 3 workyears and $447,000 are needed to perform on-site jail inspections in order to comply with an audit conducted by the Department of Justice in February 1989, which found the Service to be deficient in its completion of essential jail inspections. At the time of the audit 79 percent of the required jail inspections were overdue. In 1989, the Service expended 34 operational workyears for jail inspections and in order to ensure compliance, the additional 10 Deputy U.S. Marshal positions are needed.

An increase of $3,877,000 is needed to renovate and construct U.S. Marshals Service detention cells and cellblocks. During a recent facility survey and as a result of internal reports, it was discovered that many Marshals Service detention areas do not meet minimum Federal standards and contain definite safety and security violations. Arrests made in support of anti-drug and organized crime initiatives, and the implementation of the Immigration Control and Reform Act give the Marshals Service custody of the most dangerous types of offenders. The scope of involvement, the resources at the criminals' disposal, and their proven willingness to do whatever is necessary to disrupt the judicial process underscores the urgency for greatly improved detention facilities. There are currently 38 locations that require either complete or partial renovation of prisoner detention cells, and related space. The requested funding will allow the Service to complete a third of these renovations in 1991. The remaining projects could be completed during 1992 and 1993 as the requested funds are expected to remain in the Marshals Service base.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Fugitive Apprehension..	671	611	$47,870	671	686	$50,494	584	594	$45,094	-87	-92	-5,400

Long-Range Goal: To conduct investigations to apprehend fugitive felons domestically and internationally and to assist other agencies and foreign governments in fugitive investigations and apprehensions.

Major Objectives:

To reduce the number of dangerous fugitive felons through special investigative techniques, task forces and through continued emphasis on the apprehension and prosecution of the most serious offenders and those offenders contributing to the drug crisis.

To further the apprehension of fugitives located outside the United States through the establishment of stronger international law enforcement ties.

To continue to respond to State and local governments in fugitive matters in the form of individual investigative assistance, task force operations, emergency assistance and training.

Base Program Description: The Marshals Service is the "warrant squad" in the Federal sector - the only Federal agency primarily responsible for the apprehension of fugitives from justice, i.e., escapees, bail jumpers, parole and probation violators and others. The federal courts will issue approximately 18,600 new felony fugitive warrants in 1991, 65 percent drug related, in addition to over 30,000 new misdemeanor warrants. This new workload will add to the already high number of fugitive cases, an estimated 13,000, carried over from previous years.

The Marshals Service continues to focus its limited resources on the most serious offenders.

In August 1988, the Attorney General, responding to the drug crisis, the burgeoning workload of the Drug Enforcement Administration (DEA) and the growing number of drug fugitives, gave investigative and apprehension responsibility for most DEA fugitive cases to the Marshals Service. During 1989, the Marshals Service received approximately 11,000 fugitive investigations from the DEA with an additional 3,500 in 1990 and 4,000 in 1991. Already the Marshals Service has demonstrated unmatched effectiveness in this area in its Warrant Apprehension and Narcotics Team (WANT) operations. WANT is designed to focus on narcotics fugitives and is expected to make a sizeable contribution to the War on Drugs through diligent efforts on these cases.

Fugitives from justice, especially those connected with the drug trade, frequently find refuge in foreign countries. The Marshals Service uses its membership at Interpol to refer many U.S. fugitive cases for investigation in other countries. The Service also has increased its direct contact with foreign counterparts to yield many positive results.

The Service continues to increase the use of technology and special methods in fugitive investigations, i.e., electronic surveillance, special task forces targeting one or more major fugitives, and the use of automated information systems.

The profile of the federal fugitive population is changing rapidly. In 1985, approximately 35 percent of the fugitive felons sought by the Marshals Service investigators were charged with or convicted of illegal drug activity. By the end of 1989, that percentage will rise to over 60 percent, more evidence of the growing drug crisis in this country. Many of these fugitives have extensive criminal histories and continue to commit crimes involving drugs and violence.

29-646 O—90—28

Accomplishments and Workload: Accomplishments of the Fugitive Apprehension program are presented in the following table.

Item	1988	1989	Estimates 1990	Estimates 1991
Primary Felony Warrant Activity				
On hand beginning of year	9,845	10,580/1	15,946	14,996
New warrants received	12,209	13,289	13,600	14,200
percentage drug related	53	55	60	65
New DEA fugitive warrants rec'd	...	10,983	8,000	8,000
percentage drug related	...	100	100	100
USMS arrests	7,422	10,632	12,980	13,040
Administrative clears	3,289	4,798	5,870	5,880
Other agency arrests	447	3,476	3,700	3,700
On hand end of year	10,896	15,946	14,996	14,576
percentage drug related	53	63	64	65
Other Felony Warrant Activity				
USMS arrests	7,073	5,823	5,000	5,000
Administrative clears	3,595	5,879	3,600	3,600
Misdemeanor Warrant Activity 2/				
Caseload	66,442	68,747	66,000	66,000
USMS arrests/admin clears	32,493	26,617	33,000	33,000
International Activities				
International cases to be investigated	449	2,429	3,252	3,751
Investigations conducted	449	763	763	3,000
International extraditions	194	245	282	323
Special international extraditions	n/a	n/a	n/a	50
Interpol investigation workload	2,800	4,600	5,060	5,600
Investigations conducted	2,800	2,800	2,800	4,480
EPIC investigations workload	13,200	16,500	20,625	25,781
Investigations conducted	13,200	13,200	13,200	20,625

1/ Number of warrants on hand at beginning of 1989 differ from those on hand at end of 1988 due to discrepancy in field reports.

2/ Figure changed because final numbers were not available at the time of the 1990 Congressional.

Marshals Service investigators continue to produce an impressive number of arrests each year. But, even with an outstanding arrest and clearance record, the backlog of cases has increased steadily. In 1988, the Service had 9,845 primary warrants on hand at the beginning of the year. At the present rate of increase, over 13,000 primary warrants will be on hand at the beginning of 1991, and those warrants which are drug-related will constitute 65 percent of the new primary warrant caseload.

Since the establishment of the "15 Most Wanted" program the Marshals Service has made great strides in the arrest of those individuals. To date, 84 individuals have been cleared from the list, with the majority, 60, having been arrested by the Service or in conjunction with other law enforcement agencies. Among those arrested this year was Vernon Earle, an escapee from the Lorton Reformatory who was serving 65 years to life for murder. Earle is a member of the Jamaican Organized Crime Group, Shower Possee. William Harold Parker, an escapee from the Federal Correctional Institution(FCI) Talladega, Alabama was also arrested. Parker was serving 15 years for kidnapping and was arrested with two other federal fugitives. Other major fugitive cases include Robert Alan Litchfield, an escapee from the U.S. Penitentiary, Leavenworth, Kansas. Litchfield was serving 140 years for armed bank robberies and prior escapes.

Automated information systems play a significant role in law enforcement today, and the Marshals Service is capitalizing on this technology. The International Case Tracking System, updated in 1989, has streamlined the processing of new and existing cases and monitors the activity of open international investigations. Through the El Paso Intelligence Center (EPIC) lookouts, State Department passport and visa lookouts, and Interpol, fugitives are monitored as they move from country to country. An example of these system capabilities is the arrest of Deborah Troxell in New York. Ms. Troxell was wanted in Illinois and fled the United States after pleading guilty to charges of distribution of cocaine. Information developed during the investigation revealed that she was possibly en route to Libya. Lookouts were placed with Interpol Washington and State Department. Interpol Libya responded that she had entered their country and was expelled to Italy as an undesirable. Ms. Troxell was arrested entering the United States at JFK airport as a result of these lookouts.
The Marshals Service also handles the majority of international investigation requests to locate fugitives on behalf of foreign governments. These requests are referred by Interpol, the Office of International Affairs, or directly by the requesting country. In 1989, 374 cases were opened. Of these, 43 fugitives have been arrested, 35 located and 63 administratively cleared. Presently, there are 626 open and active international investigations. Among these is the arrest in San Francisco of Michael Herman Kortmann, an executive of a leasing corporation in Germany who made large transfers of money to Switzerland through the United Kingdom by providing fictitious invoices from 1983 through 1987. Marshals Service investigators stayed one step behind him as they tracked his movements back and forth across the United States. They arrested Kortmann in California after outwitting him with a well orchestrated ruse in conjunction with his bank.

Through exposure during international extraditions and special task force investigations, Marshals Service investigators have developed invaluable foreign law enforcement contacts which have resulted in the successful location and return of U.S. fugitives. A notable arrest made in the Dominican Republic was that of Ralph Staino, wanted in Pennsylvania for narcotic and RICO violations. Marshals Service investigators were invited to the Dominican Republic to assist in the identification, apprehension and subsequent deportation of Staino.

The Service opened 245 international extraditions in 1989 and has primary responsibility for the extradition of Colombian nationals wanted in the U.S. for drug-related crimes. Between October and December of 1989, 11 Colombians have been extradited by USMS personnel and aircraft. Jose Raphael Abello-Silva, a Colombian attorney indicted in Tulsa, Oklahoma, two years ago for the trafficking of over 1,700 pounds of cocaine and 6,200 pounds of marijuana, was transported from Bogota to Tulsa on October 29, 1989. His arrest and extradition represented a significant step in the Federal drug offensive.

The most recent Colombian to be extradited is Victor Eduardo Mera-Mosquera. Mera-Mosquera, a leader of a major cocaine trafficking ring, was convicted in New York City under the drug kingpin statute and is awaiting sentence on multiple cocaine offenses. He was extradited on December 23, 1989. Such extraditions require stringent security measures as evidenced by the use of USMS aircraft, military aircraft and private charter jets to remove high-profile fugitives. One such removal was that of Francisco Caro, wanted in San Diego for numerous drug charges and questioning in the torture-killing of DEA Agent Enrique Camarena. Francisco Caro is the cousin and right-hand man of Caro Quintero, head of one of the three top Mexican drug cartels. Information developed prior to the removal indicated that the cartel may attempt to rescue him during transport back to the United States, so the Marshals Service King Air aircraft was utilized for the removal.

With the ratification of new treaties and improved diplomatic relations, the United States will have continued success in the extradition of foreign nationals. The number of felons at-large, however, continues to grow at an alarming rate. There will be over 13,000 felony warrants on-hand at the beginning of the year (the backlog of felony fugitive cases) in 1991. Most will be drug-related, emphasizing both the continuing nature of the drug problem and its long-term effects.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Fugitive Apprehension........................	671	686	$50,494	584	594	$45,094	-87	-92	-$5,400

A program decrease of 87 positions, 92 workyears and $5,400,000 is requested based on an anticipated decline in the backlog of primary felony warrants.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Seized Assets Management........	240	230	$14,203	240	230	$14,981	374	297	$21,220	134	67	$6,239

Long Range Goal: To seize the assets and proceeds of criminals for forfeiture to the government.

Major Objectives:

o seize, inventory, safeguard, preserve the value of, and dispose of, targeted assets in a timely and appropriate manner.

To ensure sound pre-seizure planning, so that liability assets are not seized inadvertently and seizures are carried out effectively and at minimal cost.

Base Program Description: This program ensures that court-ordered seizures, restraining orders, and trustee arrangements are carried out effectively, and that the Department of Justice's asset seizure and forfeiture initiative is supported by effective management of property, information, and financial services. Marshals Service personnel execute court orders, initiate property management and disposal contracts, and administer the Assets Forfeiture Fund. Beyond the efforts required to secure, inventory, appraise, store, and manage properties, the Marshals Service participates in extensive pre-seizure planning with investigative and prosecutive agents, and the courts. Departmental pre-seizure guidelines emphasize that the investigative agency and U.S. Attorney exercise care in establishing the scope of the planned seizure, and that a comprehensive plan be prepared, so that post-seizure management problems are minimized.

Accomplishments and Workload: Accomplishments of the Seized Asset Management Program are presented in the following table.

Item	1988	1989	Estimates 1990	 1991
Total properties seized........................	21,809	25,363	37,440	48,672
Properties in custody (End of year)............	17,528	26,334	39,438	39,713
Forfeited property sold........................	5,586	6,309	7,600	19,000
Equitable sharing transfers....................	8,203	11,730	12,300	19,468

U.S. Marshals seize property when directed by a Federal Court and take custody of all non-evidentiary seized cash and all real and tangible property seized by the FBI, DEA, and INS, except for properties selected for placement into official use after forfeiture to the Government. U.S. Marshals also manage property targeted for forfeiture in judicial forfeiture actions originating with non-Justice investigations, e.g., IRS money-laundering investigations and U.S. Postal Service anti-pornography RICO investigations.

Disposal of forfeited property includes sale, return to lienholders, retention for official use by Federal agencies, and transfer to state and local law enforcement agencies under the Attorney General's equitable sharing authority. In most task force cases resulting in property forfeitures, property is sold and proceeds are distributed to state and local law enforcement agencies. The equitable sharing program, which has been an extremely effective factor in generating and rewarding cooperative efforts in the war against drugs, has also resulted during the past five years in a brand new and rapidly growing workload for U.S. Marshals.

The Marshals Service seized nearly twice as many properties in 1988 as in 1987 and experienced an additional 16% increase in 1989. Seizures will likely double again by 1991, from 25,363 in 1989 to almost 50,000 in 1991. That is more than thirteen times the number of seizures by the Marshals Service in 1986, with no corresponding increase in resources to carry out seized asset program management responsibilities.

In 1985, the U.S. Marshals were in custody of about 400 parcels of real property. In 1989, Marshals were managing more than 2,700 parcels. Without additional resources, these properties cannot be protected and maintained adequately, and cannot be disposed of quickly.

Real property and business seizures, which account for a third of all seizures, are always significantly more complex to seize and manage than seized cash, conveyances and other personal property. The Marshals Service tries to ensure that investigating agencies and U.S. Attorneys are aware of, and act to avoid or minimize, post-seizure problems at the preseizure stage. Nevertheless, post-seizure problems abound because of the nature of the property seized, the availability of high-priced defense attorneys, and the sensitive or notorious nature of related criminal cases. The Marshals Service is the agency responsible for fixing whatever problems were not or could not be avoided.

The challenges and problems associated with real property and businesses are multiplied and magnified in multi-jurisdictional cases. A recently concluded OCDE operation (Operation Polarcap) is a national operation targeting assets from New York to Los Angeles acquired through sophisticated money laundering schemes. This requires the coordination of U.S. Attorneys, OCDE task force members, and U.S. Marshals in New York, Chicago and Los Angeles. Through October 1989, over $105,100,000 worth of assets have been seized as a result of this operation, including ten jewelry businesses and a ten story office building. These properties must be inventoried, their condition documented, and lienholder interests investigated. All of these activities are very time-consuming in even the most straightforward seizures.

Over the past two years in the Southern District of California alone, 34 vehicle sales have been held, accounting for the disposal of 5,973 vehicles. Their net profit has totaled a little more than $5.3 million. Most of the vehicles are low value cars seized by the INS. Yet, the Marshals Service has realized an average "profit" of $897 on each of these vehicles.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Seized Asset Management.......................	240	230	$14,981	374	297	$21,220	134	67	$6,239

The Marshal Service requests an increase of 134 positions, 67 workyears and $6,239,000 for the Seized Asset Management decision unit to meet its increased workload in property management, contracting and information analysis, and the operational area resulting from the high volume of seizure activities.

The 1988 Anti-Drug Abuse Act authorized the transfer of $30 million from the Assets Forfeiture Fund to the Executive Office of U.S. Attorney's for the hiring of 175 Assistant United States Attorneys to prosecute forfeiture cases. Further, the President's 1990 Anti-Crime initiative calls for an additional 800 Assistant U.S. Attorneys to prosecute criminal cases. As these new attorneys are hired and become proficient in applying the forfeiture provisions, the number of assets targeted for judicial forfeiture will certainly increase significantly. The FBI and DEA have also created Asset Removal Teams nationwide. As a result, the U.S. Marshals Service has experienced extreme increases in workload over the last four fiscal years, and anticipates substantial additional workload increases in the coming fiscal years.

This program was established in the Marshals Service in 1984, and since 1985 U.S. Marshals have not received any additional resources to carry out seized asset program management responsibilities. By 1991, seizures will have increased thirteen-fold, from 3,645 seizures in 1986 to 48,672 seizures in 1991. Equitable sharing transfers to state and local law enforcement agencies, which require processing by the Marshals Service personnel, will have increased fifteen-fold from 1,362 decisions executed in 1986 to over 19,468 decisions to be executed in 1991.

The Marshals Service requests 2 positions, 1 workyears and $47,000 for two program analysts, one located in headquarters and the first of nine additional positions needed to identify seized asset management contract requirements on a district, regional and national basis, conduct quality control reviews of district records to ensure program compliance, and purge old cases to resolve and close forfeiture actions. These additional positions will also exercise oversight over the rapidly growing equitable sharing caseload.

An additional **132 positions, 66 workyears and $6,192,000** are requested to hire 44 Business Managers, 45 Deputy Marshals, and 43 Procurement Clerks to augment existing district seized asset management units and to increase the number of units from 12 to 56, to be located in districts demonstrating the highest seizure activity. The business managers will handle the increasingly complex and complicated transactions involved in managing an array of real and personal property, businesses, resort property and specialty assets. The additional Deputy Marshals are needed to handle the anticipated increased volume of seizures generated by the new Assistant United States Attorneys, and DEA and FBI Asset Removal Teams. In addition, Deputy Marshals will be required to perform post-award inspections on the numerous contracts that will be awarded to manage and maintain an increasing workload of seized property. Post-award inspections are needed to protect against fraudulent contractors and ensure the integrity of the seized asset mission. The procurement clerks will execute an estimated 10,000 small purchase actions required for property seizures (title searches, appraisals, property managers etc.) and disposal actions (i.e. auctioneers, realtors, and legal consultants etc.).

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
District of Columbia Superior Court.......	124	121	$5,547	124	121	$5,851	159	138	$7,391	35	17	$1,540

Long-Range Goal: To provide the Superior Court of the District of Columbia services usually performed by a local sheriff.

Major Objectives:

To provide security throughout the four Superior Court Buildings and for the judicial activities conducted there.

To serve process for the Superior Court.

To produce prisoners for the Superior Court.

To refine the organizational structure in order to improve the quality, efficiency, and accountability of services provided to the Superior Court.

Base Program Description: The office of the U.S. Marshal for the Superior Court in the District of Columbia is exceptional. Its functions are local in nature and are typically performed by a sheriff or similar local official. Thus, the Marshals Service supports the Superior Court with activities that are outside Federal jurisdiction in other Districts. These include such matters as serving warrants for nonpayment of child support and conducting court-ordered evictions. At the same time, though, this office performs services done in all the other Districts, including protecting the judiciary, prisoner transportation/detention, and tracking fugitives.

Accomplishments and Workload:

Item	1988	1989	Estimates 1990	Estimates 1991
Number of prisoners received....................	74,146	76,400	80,800	80,800
Number of prisoner productions.................	138,852	155,500	180,400	205,000
Eviction orders received........................	21,598	21,600	21,600	21,600
Eviction orders executed........................	3,066	3,100	17,000	21,000
Process received................................	9,324	9,500	10,000	10,000
Process served..................................	5,882	5,900	7,800	10,000

The D.C. Superior Court has 51 judges, 15 commissioners (magistrates), and 14 judges-in-senior-status in 62 courtrooms and hearing rooms, located in four separate buildings. It operates six days a week, including all holidays, and handles a wide variety of judicial cases including: Criminal (Felonies, Accelerated Felonies, Traffic Felonies, and U.S. Misdemeanors involving injury); Civil (including major actions above $2,000); Family (Domestic Relations, contested divorces, contested custody, etc., Domestic Relations Trials, and Family Trials); Commissioners (mental health hearings, small claims, U.S. misdemeanors not involving injury, D.C. traffic, preliminary hearings, arraignments, and family hearings); and Special Matters (Chief Judge criminal cases, and landlord/tenant disputes).

Unfortunately, the Nation's Capital is now the "Nation's Murder Capital", with a murder rate, most of which is drug-related, 35 percent higher than last year's. The Director for National Drug Control Policy has focused national attention on the District's drug plight. Inherently a local issue, drug-related crime in D.C. requires direct Marshals Service involvement. The trials of the defendants in these cases, with all their attendant risks, fall on this district's already overburdened staff. Staffing shortages often necessitate the dangerous practice of using one Deputy to escort ten prisoners through the Courthouse when moving them from the cellblocks to the courtroom.

The warrant squad for the District is staffed by six Deputies scheduled and paid to work from 6:00 a.m. to 2:30 p.m. They are required to serve all process that cannot be executed by mail and to execute all warrants. On most days, these six Deputies abandon warrant activities at 8:30 a.m. in order to provide a security presence in the courts, working until 5:00 p.m. (on paid overtime). Since security is a higher priority than warrant work, the District is facing a growing backlog of warrants which must be executed, a backlog which will increase as the Marshal is required to assume additional warrant activities from the Metropolitan Police Department.

This shortage of Deputies limits the level of judicial security the Marshals Service is able to provide to judicial officers. Of the 37 Deputies, 29 are theoretically available every day to protect 80 judicial officers. (Six Deputies are assigned to execute warrants and two are assigned to handle prisoner moves.) A full complement of Deputies is rarely available, though, once special assignments, leave (both annual and sick), and emergency situations come into play. Therefore, there are usually no backup Deputies available in the squad room when crises arise in the courtrooms or cellblock -- such crises average three per week. This shortage of personnel has forced the Marshal to assign ten detention officers, ten guards, and nine intermittent Deputies to courtrooms just to provide a minimum security presence. The lack of adequate staffing endangers the judiciary, the general public, and Marshals Service personnel.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
District of Columbia Superior Court..............................	124	121	$5,851	159	138	$7,391	35	17	$1,540

To fulfill the Federal responsibilities to the local judiciary in the special circumstances of the District of Columbia, the Marshals Service requests an increase of **35 positions, 17 workyears, and $1,540,000** for the D.C. Superior Court decision unit. These additional resources will allow the Marshals Service to respond more effectively to the needs of the court, including the expected increase in detentions, court appearances, which are expected to grow almost one-third above this year's level, and evictions (up 23 percent above the 1989 total). The District's plight has been the focus of national attention, and its drug and murder activity are local crimes requiring direct Marshals Service involvement.

The additional personnel will operate the cellblock, transport prisoners within the Superior Court buildings, and provide other court support. Sufficient personnel will reduce the danger now faced by the judiciary and the general public as one Deputy escorts up to ten prisoners through the Courthouse when moving them from the cellblocks to the courtroom.

The Marshals Service conducted an audit of this office in January 1988 and found that the staffing level was not adequate to conduct the large operational workload. Numerous security deficiencies were noted in procedures for handling and transporting prisoners. Also, significant backlogs existed in evictions and warrant investigations. These problems still exist despite extensive efforts to alleviate the situation. Unfortunately, the problem will worsen in the immediate future because six of the 37 Deputies are scheduled to retire during the next six months. Their loss must be measured in terms of both quality and quantity, because they represent levels of experience and knowledge which cannot be replaced easily.

And, this wave of retirements is only an example of the increase in mandatory retirements facing the Marshals Service during the next five years.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Service of Process....	182	195	$12,025	182	195	$12,684	182	195	$12,684	...	...	...

Long-Range Goal: To ensure the integrity of the criminal justice system through the execution of Federal warrants and other orders.

Major Objectives:

To provide for the timely service of process, court orders, and warrants in support of the federal judiciary.

Base Program Description:

Every year the Marshals Service executes hundreds of thousands of summonses, writs, mandates, and other process for the federal courts, United States Attorneys, private litigants, federal agencies, foreign governments, and others. Service of Process includes summonses and complaints in civil actions, subpoenas in both civil and criminal actions, writs of habeas corpus, writs of execution, and enforcement of major injunctions.

This program is also responsible for providing law enforcement assistance in nuclear weapons movement through reimbursable agreements with the Joint Cruise Missile Project Office of the Department of Defense and the U.S. Air Force; and providing specific assistance to State and local law enforcement agencies.

Accomplishments and Workload: Accomplishments of the Service of Process program are presented in the following table.

			Estimates	
Item	1988	1989	1990	1991
Court orders received..............	333,987	343,089	352,352	361,865
Served by mail......................	73,371	80,879	89,129	98,220
Served in person....................	211,246	222,003	214,337	150,000
Returned unexecuted.................	49,639	30,140	50,365	50,768
Court orders handled................	334,256	333,022	339,149	341,858

For non-warrant court orders sixty-three percent are served in person, twenty-two percent served by mail and fifteen percent are returned to the court unexecuted. What at first may appear to be routine work (i.e., summonses and complaints filed in debt collection cases) may require significant investigation by the deputies executing the process as they try to locate the individuals attempting to avoid service.

The work the Marshals Service provides to the Federal Courts through the execution of court orders is practical and fundamental. By delivering court documents correctly and assuring that the conditions within them are successfully met, the Service insures that the federal justice system is able to continue to operate smoothly and efficiently.

The Anti-Drug Abuse Act of 1988 amended 28 U.S.C. 1921, which provided for the collection of fees and commissions for the personal service of non-government civil process. The amended statute (Sec. 7608 (c), P.L. 100-690) permits the Attorney General to set fees and commissions. A proposed rule governing new fees and commissions for the service of process has been developed. Upon final approval and publication of the rule, reimbursement of Marshals' costs for actual expenses will occur on a broader scale.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Field Support and Training.........	168	176	$10,116	168	176	$10,671	168	176	$10,671	...	...	...

Long-Range Goal: To provide the requisite operational training for all employees and financial disbursement management training for field office administrative staff.

Major Objectives:

To develop and improve the Marshals Service's programs by providing training courses.

To collect and disburse funds in field offices in a timely and efficient manner.

Base Program Description This program provides financial support and develops, conducts and oversees the training of Marshals Service personnel. Field Support responsibilities include prompt payment of debts and collection and deposit of funds due the Government by law or court order. Training responds to ever-increasing demands by the judiciary and law enforcement agencies for courses of instruction to produce a highly competent and professional workforce capable of performing assigned tasks efficiently effectively and safely.

Accomplishments and Workload: Accomplishments of the Field Support and Training Program are presented in the following table.

Item	1988	1989	Estimates 1990	Estimates 1991
Check Issuances	294,000	329,280	368,793	368,793
Vouchers Certified at Field Offices	188,000	210,560	235,827	235,827
Basic Deputy Marshal Training received	181	112	288	350
Supervisory Management Training received	140	80	120	120
Chief Deputy/Management Skills Training received	90	98	72	72

Training remains an essential ingredient in the quality of a law enforcement agency, and the Marshals Service has developed the most effective, comprehensive, state-of-the-art training program in its long history. A combination of high-tech equipment, dedicated instructors, and priority attention to the training mission makes Marshals Service personnel among the best trained law enforcement officers in the world. During 1989, the Marshals Service Training Academy trained 1,417 agency and other law enforcement personnel in 60 separate schools and conferences. This consisted of 22,449 student training days at the Federal Law Enforcement Training Center (FLETC) - maintaining the Marshals Service's position as one of the top ten agencies at FLETC.

In 1989, there were three Criminal Investigator Schools with three follow-on Basic Deputy Schools. Specialized advanced training conducted included the following: six Court Security Officer Orientation classes; two Firearms Instructor Training programs; three National Asset Seizure and Forfeiture Schools; eleven Protective Services Training Schools; three State and Local Court Security Seminars; three State and Local Fugitive Investigators Courses; two Witness Security Inspector Basic classes; four Contemporary Management Concepts; one Court Security Inspectors school; three Federal Emergency Management Agency schools; four Introduction to Management and Leadership Seminars; and one Prisoner Detention School. The Training Academy arranged for Marshals Service employees to attend the following Federal Law Enforcement Training Center Schools:

Basic Instructor Training Program -	2 schools
Driver Instructor Training Program -	2 schools
Law Enforcement Spanish Training Program -	4 schools
White Collar Crime Training Program -	1 school

The average length of time for each course at the Academy was 14 days. The average cost per course was $32,281, and the average cost per student was $1,532.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease

ADP and Telecommunications...	32	29	$13,687	32	29	$14,437	32	29	$19,549	...	...	$5,112

Long-Range Goal: To provide all operational, administrative, and managerial functions of the Marshals Service with modern computer and communications equipment, software, and staff support to improve productivity and personnel safety.

Major Objectives:
To expand the radio and telecommunications systems to strengthen operational law enforcement capabilities.

To modernize district automation systems and complete office automation systems at headquarters.

Base Program Description: The Marshals Service telecommunications systems provide rapid data/voice communicating via telephones, facsimile transceivers, and visual display terminal systems, as well as radios and base stations to support all Marshals Service missions.

The ADP support function is designed to implement and maintain automated systems necessary to support the Marshals Service mission and permit field offices to perform effectively. This is accomplished by systems development and hardware acquisition for all Marshals Service entities.

Accomplishments and Workload: Accomplishments of the ADP and Telecommunications program are presented in the following table.

			Estimates	
Item	1988	1989	1990	1991

The Marshals Service teletype communications system provides full service to 95 field locations and is an integral part of the Justice Telecommunications Network (JTN). Districts' terminals can access the following information systems: (1) National Crime Information Center (NCIC); (2) State data banks via the National Law Enforcement Communications System (NLETS); (3) Treasury Enforcement Communications System (TECS); and (4) The Marshals Warrant Information Network (WIN).

This year, 38 STU III Secure Telephones were installed at various USMS locations. Several remaining districts also received upgraded telephone systems, including Eagle, Merlin and 1A2. The divestiture of AT&T led to subsequent requirements to purchase telephone systems from GSA authorized vendors through the Purchase of Telephone Service (POTS) contracts. In 1989, 160 Digital Voice Privacy (DVP) mobile vehicle radios were installed and 188 DVP handheld radios were distributed to the field. The fixed equipment component is now 80 percent complete, and the handheld radios portion is 45 percent complete. Once finished, this system will provide complete security and will be the standard for emergency communications.

With respect to ADP, the Marshals Service has made significant progress during 1989. With the installation of 56 District Automation Computer Systems in 1989, the Marshals Service reached its goal of automating all 94 District Offices. Each District now has a District Automation Computer System consisting of an Altos Supermicro Computer and Personal Computer Workstations. All Districts are now automated and operational with staff trained in Systems Administration. The Prisoner Population Management System, and the District Accounting System will be installed in the last 10 districts by the end of March 1990. An 8:30 am to 9:30 pm (Eastern Time) User Support Hotline is operational providing assistance to the nationwide user community. A formal Software Quality Control program was established for all software changes and modifications going to U.S. Marshals Service field locations. A formal District Automation System Configuration Control Program was established to maintain and track all information regarding software and hardware versions and changes throughout the 94 Districts and Headquarters.

The Seized Asset Management System (SAMS) was successfully installed and tested in four Marshals Service Districts (Southern New York, Middle Florida, District of Arizona, and the District of Oregon). With the implementation of a few small changes made as the result of the testing, SAMS will be installed in the remainder of the Marshals Service Districts and the eight Regional Seized Asset and Forfeiture Offices during 1990.

The Warrant Information Network (WIN) was modified to permit the addition of over 10,983 Drug Enforcement Administration (DEA) warrants. These DEA warrants were in addition to the 60,000 warrants added to WIN annually. Work has progressed on defining a new Warrant Information Network which will provide greater functionality to meet the increasingly complex Marshals Service investigative requirements.

This new WIN, titled Offender Based Information System (OBIS) was initiated in 1989 and will combine all related prisoner activities into one application. Also initiated during 1989 was OBTS, Offender Based Tracking System. This effort will result in a major central repository of prisoner data for use by all Federal agencies requiring information in the Federal Criminal Justice arena.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
ADP and Telecommunications..........................	32	29	$14,437	32	29	$19,549	...	...	$5,112

The Marshals Service requests an increase of $5,112,000 to fund improvements in the ADP and Telecommunications program.

The District Automation Project requires $1,500,000. With these proposed program increases, the areas cited in the Department of Justice audit report of February 19, 1989 can be addressed and problem areas avoided in the future. With additional resources, proper Automated Information System (AIS) planning can be achieved allowing the Marshals Service to fulfill long-range ADP missions, goals, and objectives. In the past, it was difficult to adequately plan and implement major initiatives without adequate resources. Additionally, the implementation delays cited in the audit report can be eliminated.

With all 94 districts on-line, the Marshals Service must expand the applications running on the Altos computer system. To accommodate new applications software, additional storage space and memory will be required. This will allow for the new applications along with increased volume of workload to be added without greatly degrading the current performance and service levels of the system.

With the limited funds available directed towards ADP development, the necessary AIS security program was not given sufficient attention as noted in the 1989 Justice Management Division Audit Report. With funds to procure equipment necessary to provide hardware security and train the users in security awareness, the Marshals Service responsibility in meeting the requirements set forth in the Security Act of 1987 can be met.

With this combined ADP decision unit request the fragmentation of responsibilities cited in the 1989 Justice Management Division Audit Report will be eliminated. By combining all the ADP resources, the Marshals Service will be going forward with a unified automation effort.

An additional $200,000 for dial back modems, on-site installation and a limited security awareness training program for all 94 districts is requested. These dial back modems will provide communications security to all field Altos District Automation computers by forcing the person trying to access the Altos to receive a call back validating they are authorized. This will prevent unauthorized access from freelance hackers. At the time of installation of the modems, a brief security awareness training course will be conducted to keep all users informed of the ever-growing computer security areas. These actions are absolute minimums to meet basic requirements of computer security for the Marshals Service District Automation Program. Failure to make these changes will be a security violation.

An increase of $850,000 is requested to upgrade and expand the Altos hardware. This upgrade will allow the equipment that was contracted for in 1988 to be upgraded to meet recent technology advancements. Besides improvements in overall performance, it allows for the sharing of Department of Justice (DOJ) standard software packages and will permit cost effective site licenses. This hardware upgrade will also permit the Altos computer to be compatible with current commercially available software releases. The current Altos computer central processor chip is now obsolete and will not be supported by Altos or software vendors. It must be replaced.

With the expansion of the office automation procedures, it is essential that the large Marshals Service Districts stay abreast with current technology to facilitate the exchange of information in response to the public as well as the courts. The items requested in this budget will permit this use of technology. These items include: purchase of standard office automation laser printers at $200,000, and local area networks for the 15 largest Marshals Service district offices at $250,000.

Laser jet printers will provide letter quality documents with the equipment and software previously purchased. The addition of laser printers would complete the necessary acquisition to give total office automation capabilities to the district offices. The printed output from the current dot matrix printers is not suitable or acceptable to many U.S. courts. One Laser printer for each District Office is a minimum essential requirement.

This request also includes resources of $700,000 for headquarters automation support. The need to replace obsolete Pyramid/Britton-Lee equipment will cost $300,000; installing Local Area Network for the 17 largest divisions at headquarters will cost $200,000; and software support for new applications will cost $200,000.

The current ADP computer equipment was purchased in the early 1980's. It is obsolete and difficult to maintain, and must be replaced to continue to provide services to the Headquarters Divisions. Furthermore, new applications will be added and old ones will be enhanced taking advantage of new technology.

New applications to be developed are 1) the Offender Based Tracking System (OBTS) which will provide the Service with a central repository of information, and enable the tracking of offenders from point of entry to disposition, and 2) the Director's Decision Support System (DSS), which will enable the analysis of data collected by all headquarters staffs and input by all district offices. These new applications will require appropriate processing hardware.

The majority of the office automation functions currently being performed in Headquarters are accomplished on a variety of stand alone computers. A need to procure file servers and a local area network to customize this operation is required.

The 1989 Justice Management Division Audit Report cited many problems with the collection of data by several Headquarters activities. The same data was being collected by different organizations and in some cases, the results were inconsistent. Other methods were cited as being inefficient. The Headquarters funds will be used to accumulate this type data in the Decision Support System. This will allow for a standard method of input, avoidance of duplication, and the ability to retrieve a multitude of data in a variety of ways.

Another $515,000 is requested to rewrite the Prisoner Population Management System (PPMS) software to interface with the Prisoner Automated Scheduling System (PASS), Sentry, and to establish a centralized database.

Additional resources of $577,000, requested for the District Accounting System (DAS), will allow timely responses in making required accounting changes. The February 1989 Department of Justice audit was critical of certain accounting procedures. The limited resources were directed towards implementing the accounting system which left the maintenance of the system short-handed, delaying necessary changes. The District Accounting System manual was incomplete as the resources were dedicated towards implementing DAS in districts. With these funds, similar problems (such as those cited in the Audit Report) will be avoided. A rewrite of the DAS software is required to better accommodate previous accounting modifications and allow the application to merge data with the Seized Asset Management System (SAMS).

Finally, $1,820,000 are necessary for new, fixed, Digital Voice Protection (DVP) base stations and repeaters, including $270,000 to purchase base stations. These base stations will replace old, non-DVP equipment in district offices. Additionally, $1,550,000 is requested to purchase new repeaters. These repeaters will replace older, non-DVP equipment and add new, badly needed repeaters in areas where the Service has no radio coverage. The addition of these radios completes the USMS long-range radio plan for fixed equipment, started in 1980.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Management and Administration........	161	170	$12,893	161	170	$13,600	184	183	$14,655	23	13	$1,055

Long-Range Goal: To plan, develop policies, direct, manage, budget and administer the Marshals Service's law enforcement responsibilities.

Major Objectives:

To provide executive leadership and policy guidance to operational and administrative staff for efficient and cost-effective operations.

To ensure a high standard of integrity, loyalty, and conduct among all Marshals Service personnel.

To disseminate information about Marshals Service activities to employees, public officials, other agencies and the public.

To provide efficient and effective personnel management.

To assess personnel and financial resource needs by program, obtain adequate resources and manage them effectively.

To maintain an effective Equal Employment Opportunity Program.

To procure and maintain equipment in support of district and headquarters requirements.

To improve overall management of and accountability for Marshals Service property.

Base Program Description: The Marshals Service could not function adequately without its management and support services, all of which directly support the operational mission. This program covers a wide range of activities --- legal guidance and representation, recruitments, procurement, space management, management studies, and financial management. Unfortunately, management support has not kept pace with operational demands. From 1988 to 1991, the number of personnel specialists remained static as the operational workforce grew; contracts have increased by 170 percent, small purchases have increased 92 percent and the complexity and number of transactions for the Service's finances -- approaching $1 Billion annually have increased.

Accomplishments and Workload: Accomplishments of the Management and Administrative program are presented in the following table.

			Estimates	
Item	1988	1989	1990	1991
Printed Products........................	1,100	2,168	2,700	3,400
Public/Congressional Information Dissemination..................	1,631,847	2,000,000	2,000,000	2,000,000
EEO Complaints Filed...................	19	20	20	20
Property Actions Completed..............	8,000	8,500	12,000	12,000
Minor Office Renovations................	167	256	318	318

Item	1988	1989	Estimates	
			1990	1991
Number of Contracts....................	74	104	147	200
Number of Modifications to Contracts....	210	247	292	372
Number of Small Purchases...............	3,235	4,000	5,000	6,200
Special Projects and Studies............	57	63	69	76

The following represents the 1989 accomplishments of the Management and Administration organizations.

The Legal Counsel staff responded to 300 tort claims, 20 employee claims for property damage, 60 personnel actions in administrative proceedings and arbitrations; issued 350 legal opinions; processed 800 Freedom of Information and Privacy Act requests and appeals; and handled the paperwork on 125 matters in litigation in Federal Courts. In addition, the Office of Legal Counsel was involved in 150 contract reviews or related proceedings.

The Personnel Management Division provided a full range of personnel services for approximately 3,260 permanent and temporary employees, 150 more positions than serviced in 1988. The Division also took steps to provide improved retirement assistance and benefits processing. This facilitates the retirement process and reduces the workload impact of an increased attrition rate. Further, the Division continued the highly successful Management Consultation Program (MCP) to assist District management. This program addresses both positive and negative areas of District operations and provides valuable information to senior District and Headquarters management. Working with the Field Administrative Review Committee, the Division reviewed the workforce composition of administrative positions in District offices, and developed three models for structuring administrative positions, depending on the level of activity. Implementation of these staffing structures will greatly improve District ability to handle the increasingly complex administrative functions they must perform. Finally, the Division continued use of special salary rates for entry level deputy positions in a number of geographical areas. The Service was the first major law enforcement agency to establish these higher rates of pay for operational positions, which enhances recruitment and retention of operational personnel in these high-cost locations.

The Service emphasized minority recruiting during 1989. The Employee Development Division administered the Chief and Supervisor Deputy U.S. Marshals Merit Promotion test to approximately 1,000 employees. The Division acquired OPM authorization to administer a Deputy U.S. Marshal exam, to be given frequently and in selected urban areas. Marshals Service officials interviewed over 1,070 applicants during 1989, and hired 99 new Deputies.

The Resource Analysis Division produced a variety of reports, notably the annual "Director's Report" and the "Report to the U.S. Marshals." In accordance with the Marshals Service Management Initiative identified in the 1990 budget submission, the Division began a feasibility and requirements study for interfacing the USM-7, the Service's biweekly time utilization report, with the Department's electronic time and attendance program at the District office level. A prototype decision support system was developed for the Seized Assets Division using object-oriented programming. Also, the identification of data sources and other Federal agency clients was accomplished in anticipation of a requirements and feasibility study for the 1990 development of an Offender Based Tracking System (OBTS). Developing OBTS is the logical progression of linking these information processes together into one Federal offender data base. In addition to being able to produce descriptive Federal offender statistics, OBTS would measure the impact of legislation; chart changes in offender-related workload as a result of budget fluctuations or program and policy modifications; and provide standardized reports on offender statistics on a monthly, quarterly, or yearly basis.

The Office of Congressional and Public Affairs coordinates internal and external communication activities, represents the Service in legislative matters and provides responses to Congressional inquiries.

Public interest in the national observance of the Bicentennial of the U.S. Marshals has generated more communications with members of Congress, the news media, and the general public. A number of events were held to commemorate the Bicentennial. In cooperation with the U.S. Marshals Foundation and the Smithsonian Institution, the Marshals Service organized a traveling exhibit to visit museums across the country with a smaller version of the exhibit displayed at other locations. In addition, with the cooperation, support, and technical assistance of the Service, the U.S. Marshals Foundation is establishing and building a National Memorial and Interpretive Center in Oklahoma City to honor the 400 or more Marshals and Deputy Marshals who have given their lives in the line of duty.

The Director's EEO Advisory Committee met to compile affirmative action and equal employment objectives to provide EEO training to all management officials and to eliminate under-representation of minorities and women in the Marshals Service. During 1989, the Marshals Service provided EEO training to 245 management officials. The cooperative education program was enhanced to recruit qualified minorities and women for Deputy U.S. Marshal positions. The Service continued its outreach program at colleges and universities and through the media to attract minority and female Deputy U.S. Marshal candidates. During 1989 the Office of EEO continued to manage a viable EEO dispute resolution system. During this period, the Office of EEO closed 31 complaints of discrimination. Over 50 percent of the complaints closed resulted in settlement.

The General Services Support Program experienced workload increases in the areas of transportation, space management, renovations, and materials management. Program personnel managed over 1,500 vehicles and 435 facilities, monitored 146 major GSA construction projects, funded 256 minor office renovation projects, completed 8,500 accountable property transactions, and filled 12,000 individual requests for stock items and handled 510 printing orders.

The Facilities staff, through a delegation of authority from GSA, entered into lease agreements for aircraft hanger facilities in Oklahoma City, Oklahoma, to support the Marshals Service Airwing; for the Special Operations Group, and Camp Beauregard, Louisiana. Staff also coordinated with the Administrative Office of the U.S. Courts and the National Institute of Building Sciences in revising the U.S. Courts design guide. Staff coordinated with the Federal Bureau of Prisons in planning for Metropolitan Detention centers in Los Angeles and Miami.

The Printing and Distribution Branch provided in-house printing and distribution to satisfy increased demands for printed products from the USMS Training Academy, and Operational Divisions, such as Threat Analysis and National Asset Seizure and Forfeiture Division (NASAF). NASAF produces a large number of reports required for disbursing seized assets. In addition, state-of-the-art binding equipment has enabled the Service to produce quality reports for operational missions and security briefings. During 1989, the branch processed 2,168 printing orders. The demand for printed products, especially by the Training Academy, is expected to grow to 3,400 in 1991.

The Budget Division is responsible for all budget submissions for the U.S. Marshals Service, Support of Prisoners and the Asset Forfeiture Fund. It also coordinates the submission of the Court Security appropriation with the Administrative Office of the U.S. Courts as well as the Protected Witness Component of Fees and Expenses of Witnesses. The Division briefs senior management and other officials on Marshals Service budget activity and provides budget execution training for chiefs, supervisors and other field personnel. The Division transmitted over 15,000 financial reports to the Districts for the various appropriations. It also processed over 45,000 separate transfers between Headquarters and the field to fund special out-of-district assignments for high-profile trials. Given the docket for 1991, over 20,000 transfers are anticipated. The Division also oversees budget execution for more than 20 reimbursements totalling over $20 million. Other transfers for transportation of prisoners, training, awards, repairs, SOG assignments and other operations reached 30,000. In 1991 these other transfers will exceed 35,000.

In 1989, the Procurement Division's workload increased significantly. This reflected a widespread need for procurement support in most major programs of the Service, as well as the significant growth of those programs. Unique to the Department of Justice is the USMS authority to award personal service contracts for Court Security Officers (CSOs). The converting of CSOs to personal service contracts began in a number of pilot Districts. Over the last three years the significant growth in the number of seized properties has not permitted adequate contractual support for the Seized Assets Division. In 1989 a number of regional property management contracts were awarded for the upkeep, repair and sale of seized real estate. Procurement training for virtually all NASAF administrative personnel now helps insure that field and regional offices are knowledgeable in procurement matters. Major contracts, each over $1 million, were awarded for the maintenance and repair of all aircraft in the air wing of the Prisoner Transportation System. Also, significant enhancements to PASS, the automated ticketing system, were secured through a competitive contract. Architect and engineering (A&E) contracts in support of the Witness Security program were awarded. These contracts contain a new provision, namely monitoring of the construction by the A&E firm to ensure compliance with the specifications. Procurement training was a major achievement in 1989, since training was conducted for virtually all Chief Deputies and NASAF administrative staff, most Supervisory Deputies, and over half of the Marshals.

The Finance Division assisted in the development and implementation of the District Accounting System by coordinating system enhancements and by completing the conversion of the 94 Districts to the automated system through 1989. During this period, the system was modified in several important respects: 1.) to provide for the automatic assignment of voucher numbers and speed data processing; 2.) to provide for the assignment of a fiscal year code to "X" account transactions; 3.) to facilitate the attribution of a single accounting transaction to multiple case records; and 4.) to correct certain flaws in the report format submitted to the Department of Justice. The conversion of individual districts to the automated accounting system is proceeding apace. At the end of 1989, a total of 81 districts were operating through the automated system.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Management and Administration..............................	161	170	$13,600	184	183	$14,655	23	13	$1,055

For 1991, **23 positions, 13 workyears and $1,055,000** are requested for the activities in this decision unit.

An increase of **6 positions, 3 workyears and $286,000** are required in the Budget and Finance Divisions to accommodate the rapidly increasing workload and to remedy the accounting weaknesses cited in the recent audit report. Financial activities within the USMS have increased tremendously the past few years. Additional staff in the Finance Division will enhance the ability of the Division to evaluate invoices submitted for payment, assemble the necessary documentation to support payments and to dispatch payments to vendors within the terms of the recently amended Prompt Payment Act. At present there is only one Accounts Payable Clerk reviewing over 600 invoices each month. In order to avoid delays that may result in late payment penalties, additional staff is necessary. Additional staff will also enhance the Division's ability to formulate and implement enhancements to the accounting system, furnish instruction to the accounting personnel located in the Marshals' offices, and review the documentation that is submitted to the Division by each District at the end of each month in support of the District's monthly statement of transactions. Additional staff in the Budget Division would enable Headquarters to provide prompt and individual service to the Districts, produce more timely and efficient analysis of the status of resources in the Districts and in Headquarters, to coordinate the resource needs of the USMS with other components of the Justice Department, to provide more timely and accurate responses to Departmental requests for information, and to produce budget documentation that clearly express the needs of the Service.

An increase of **7 positions, 4 workyears and $284,000** are required in the Procurement Division to accommodate the increases in workload currently projected throughout the Service. The procurement actions associated with replacement and upgrade of all handheld and mobile radios, Phase II of District Automation and the maintenance associated with adding three Sabreliner planes to the fleet requires the services of an additional Contracting Officer. It is projected that 50 contract awards will be made in support of the Seized Assets Division in both 1990 and 1991. Workload statistics used throughout the Justice Department and other Federal agencies dictate 18 awards per Contract Specialist per year and 25 contracts to Administer per administrator per year. These statistics generate a requirement for 3 additional Contracting Officers and 2 additional Contract Administrators in the Procurement Division. The number of small purchase actions in the Service increased by 24 percent from 1987 to 1988. Due to the continued growth in all program areas of the USMS it is reasonable to project the same rate of increase through 1991. The current workload in the Small Purchases Branch is 924 actions per agent per year; the anticipated growth in small purchase actions results in a requirement for 2 additional Purchasing Agents.

In 1991 the Resource Analysis Division requests **3 positions, 2 workyears and $142,000** to advance the Offender Based Tracking System (OBTS). The advantages of this system are widely recognized and endorsed by members of the criminal justice community. This unique system will provide the Service with a central repository of information, and enable the tracking of offenders from point of entry to disposition. The Bureau of Prisons (BOP) and the Administrative Offices of U.S. Courts (AOUSC) will also benefit from this system. AOUSC's Pre-trial Services will receive immediate notification of newly arrested individuals, and accurate initial information for background checks. It will also permit the Clerk of the Court to schedule workload more efficiently, and BOP will be able to accurately project what type of housing prisoners require. Also, this system will provide much needed management information for policy, program and budget purposes for the Marshals Service and the entire Department of Justice.

One attorney position, 1 workyear and $57,000 is required to meet the growing demand for legal assistance in the area of U.S. Marshals Service procurements, specifically contract review and litigation. The Office of Legal Counsel has noted a marked increase in the number of contract issues addressed in the past two years. The development of new and more sophisticated U.S. Marshals Service procurements, (ADP equipment, airplanes for the prisoner transportation program, advanced security systems, etc., and the increased reliance on the Procurement Division for assistance) means that the Legal Counsel's role in contract issues will continue to increase. The number of contract issues to be addressed by the Office of the Legal Counsel will go from 104 in 1989 to 200 in 1991.

A total of **6 positions, 3 workyears and $286,000** are requested for the Personnel Management and Employee Development Divisions. These additional positions will bring the personnel-to-organization staff ratio recommended by the Administration, of at least 1 personnel employee to every 72 employees for core personnel activities and an additional 10 percent for policy development and personnel management evaluation. At present the USMS has 38 employees covering the core personnel functions for 3,384 employees.

Furthermore, the workload in the Personnel Management Division will increase in FY 1991 as a result of the significant increase in the number of mandatory retirements that will occur during 1990 and 1991. Public Law 99-350 requires that when law enforcement officials reach the age of 55 and have 20 years of service, they must retire. In 1990 and 1991 the Service will have 78 mandatory retirements in addition to the usual optional retirements. This compares with 17 mandatory retirements in 1988 and 11 in 1989. An increase in staff will insure a smooth transition for our retiring employees and provide the extra attention they require. It will also provide for more efficient processing of retiring employees and help reduce the impact of increased attrition on the overall operational workload of the Division.

The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

United States Marshals Service
Salaries and expenses
Justification of Adjustments to Base
(Dollars in thousands)

	WY	Amount
Mandatory increases:		
1. Annualization of 1990 Positions...	183	$6,478
2. Additional Compensable day...	...	526
3. 1990 Full-year pay increase impact on 1991..................................	...	5,017

1. Annualization of 1990 Positions — This provides for the annualization of 316 positions approved in 1990.

	Approved 1990 Increases	Annualization Required
Annual salary rate of 316 positions	$ 9,866	...
Less Lapse (50%)	-4,996	$ 4,996
Net compensation	4,870	4,996
Associated employee benefits	1,480	1,482
Total costs subject to annualization	$ 6,350	$ 6,478

2. Additional Compensable day — The annual salary rate for Federal employees is based on 260 paid days. During 1991 there is one more compensable day (261) than 1990 (260). Appropriate personnel benefits are included in this figure.

3. 1990 Full-year pay increase impact on 1991 — This request provides for the full-year pay increase of 3.6 percent as contained in the general provisions of the U.S. Treasury, Postal Services and General Government Appropriations Bill, 1990, for civilian and military personnel to be effective in January of 1990. The Department will be required to absorb the total pay raise in 1990. The requested increase of $5,017,000 is the amount for full year funding in 1991. NOTE: The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

	WY	Amount
4. 1991 pay increase.. For the first time, the Administration is proposing to include the costs of the pay increase effective in the budget year with the initial budget request. This requests provides for 50 percent of the proposed 3.5 percent pay increase effective in January of 1991. The Department will be required to absorb half of the costs of this pay raise. The amount requested, $1,852,000, is the cost of the pay increase for approximately three-quarters of the year assuming a 50-percent absorption.	...	1,852
5. Senior Executive Service pay increase.. This request represents the 1991 costs of the pay raise for senior executive service employees. This pay increase is to be effective in January of 1990, but will be absorbed completely for the first year. In 1991, an increase of $65,000 is necessary for this requirement. Funding for the executive level employees pay pay raise is completely absorbed in both years.	...	$ 65
6. Special Salary rates.. This request provides increases as authorized by law in 5 U.S.C. 5303. The Office of Personnel Management (OPM) has approved these rates for positions where retention and recruitment of qualified applicants is a problem. The Department's request represents coverage of 33 authorized special rates.	...	217
7. Health Benefits... The Federal Employees Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1990 the actual contribution to health insurance increased 27 percent. The requested increase of $897,000 provides funds for actual increased costs from pay period 1 to pay period 2, projected for a full year.	...	897
8. Federal Employees Retirement System (FERS)....................................... This request provides for the additional costs in 1991 necessary to continue the implementation of the Federal Employees Retirement Act of 1986, P.L. 99-335. The Act established a retirement program for Federal civilian employees hired after December 31, 1983, who are covered by social security and for employees under the Civil Service Retirement System who chose to transfer to the new system. The increased requirement for 1991 is based on actual agency payments for the basic FERS annuity, Social Security and thrift savings.	...	95

	WY	Amount
9. Federal Employees' Compensation Act (FECA) Workers' Compensation................ This increase reflects the billing provided by the Department of Labor for the actual costs in 1989 of employees' accident compensation. The 1991 amount will be $2,870,000 or $430,000 over the 1990 base.	...	$ 430
10. GSA Rent.. GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $1,308,000 is required to meet our commitment to GSA.	...	1,308
11. GPO Printing costs.. The Government Printing Office (GPO) is currently projecting a seven-percent increase over the 1990 printing cost of $273,000. An additional $20,000 will be required in 1991.	...	20
12. Employee data and payroll services.. Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems, maintenance and payroll accounting, are based on the number of employee records maintained. The rate of $188.23 per record in 1990 will be raised to $199.52 per record for 1991. The change is based on anticipated uncontrollable cost increases of 6 percent for the operation of the Justice Employee Data Service. An increase of $32,000 will be required in 1991.	...	32
Total mandatory increases...	183	16,937

Decreases:

1. New positions approved in 1990 Nonrecurring costs associated with 316 positions requested in 1990.	...	-1,916
2. Special projects (i.e. Warrant Information Network) Nonrecurring costs associated with the 1990 program increase for the Warrant Information Network (WIN).	...	-700
3. Federal Employees' Compensation Act (FECA) Unemployment Compensation This decrease reflects the billing provided by the Department of Labor for the actual costs in 1989 of employees' unemployment compensation. The 1991 amount will be $26,000 less than 1990.	...	-26
4. Federal Telecommunications System (FTS) in 1991, the General Services Administration (GSA) is to have the FTS 2000 system fully implemented. At present GSA projections indicate costs for current FTS minute usage charges will decrease from 34 cents per minute to 18 cents per minute. The requested reduction of $1,257,000 from a 1990 base of $3,845,000, reflects this decrease.	...	-1,257

United States Marshals Service

Support of United States Prisoners

Summary Statement

Fiscal Year 1991

For 1991, a total of $193,034,000 is requested for the Support of U. S. Prisoners appropriation. Of this amount, $178,034,000 will be used to pay for the support, housing and safekeeping of Federal prisoners in Marshals Service custody and up to $15,000,000 will be made available for the Cooperative Agreement Program (CAP). The major initiatives and resource requests are summarized below.

Care of U.S. Prisoners

This activity is responsible for providing adequate medical care, hospital and detention facility guard services, and housing and subsistence for Federal prisoners in the custody of the Marshals Service. Detention of some 74 percent of unsentenced Federal prisoners in Marshals Service custody is accomplished through the negotiation and administration of approximately 875 agreements with State and local detention facilities located throughout the United States. The balance is dispersed in Bureau of Prisons facilities at no cost to this appropriation. During 1991, this program will require approximately $159,134,000 to fund 3,764,700 jail days at a projected daily rate of $42.27, and another $18,900,000 for medical care, guards and associated expenses.

Cooperative Agreement Program

The Cooperative Agreement Program (CAP) obtains guaranteed housing for Federal prisoners in State and local detention facilities in or near Federal court cities. At the same time, CAP funds improve the conditions of confinement in these facilities in accordance with national, State and local detention standards. This program also provides for the acquisition of excess Federal property and technical assistance to State and local governments which provide housing for Federal prisoners. For 1991, $15,000,000 is requested to fund an estimated 11 CAP projects with State and local governments.

Legal Activities
Support of United States Prisoners
Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Support of United States Prisoners

For support of United States prisoners in [non-Federal institutions, $137,034,000], ^ to remain available until expended; of which not to exceed [$5,000,000] ^ shall be available under the Cooperative Agreement Program.

the custody of the United States Marshals Service and as authorized in 18 U.S.C. 4013, but not including expenses otherwise provided for in appropriations available to the Attorney General, $193,034,000

$15,000,000

(18 U.S.C. 4001-4003, 4006-4009, 4013, 4042, 4082, 4085-4086, 4125, 4282-4283, 4285, 5040; Department of Justice Appropriation Act, 1990; additional authorizing legislation to be proposed.)

[To fight the war on drugs, $23,000,000, to remain available until expended for enhancing the availability of jail space for unsentenced Federal prisoners in the custody of the United States Marshals Service; of which not to exceed $10,000,000 shall be available under the Cooperative Agreement Program to obtain guaranteed housing for Federal prisoners in State and local detention facilities]

(Department of Transportation and Related Agencies Appropriations Act, 1990.)

Explanation of change

The first change provides the flexibility required to care for Federal prisoners in Marshals Service custody in those instances not covered by established detention programs and not specifically provided for in other appropriations. This includes use of Federal personnel to guard prisoners in any facility except established Bureau of Prisons and Immigration and Naturalization Service operated facilities. Hybrid Federal/State/local/private detention arrangements have been dictated by the lack of state or local detention space and the requirement for guard staff at a higher level of training and experience than is available from local sources. Recent examples include Bureau of Prisons personnel serving as long-term guards for Marshals Service prisoners in the state-owned Hartford Correctional Facility, and Marshals Service deputies guarding prisoners in Federal Court facilities when no other secure jail space was available from state or local agencies. In the Hartford situation, lack of any other suitable detention space in Connecticut or Massachusetts required the Marshals Service to create its own jail by occupying an entire wing of the Hartford Correctional Facility and staffing it with Bureau of Prison guards and USMS perimeter security guards. Its tenants are members of Los Macheteros and the United Freedom Front, terrorists who require the highest level of security.

This flexibility will not be used to augment or supplant funding authority vested in other Federal agencies, particularly the Bureau of Prisons and the Immigration and Naturalization Service. Further, this proposed language change emphasizes that the Support of U.S. Prisoners is the primary appropriation for the care and safeguarding of Federal prisoners in the custody of the Marshals Service. This appropriation will be used to pay all the expenses, including guard expenses, subsistence, medical, security equipment, jail space and building renovation costs, and any other expense related to housing Marshals Service prisoners, in any facility, Federal, state, local, private, or jointly operated facility, except for those expenses specifically funded by other appropriations. Guard expenses include those for Federal and non-federal employees used for this purpose.

The second change increases the limitation of the Cooperative Agreement Program in the Department of Justice appropriation. It should be noted that the Department of Justice Appropriations Act, 1990 included only $5,000,000 but that the Emergency Drug Funding title included in the Department of Transportation and Related Agencies Appropriations Act, 1990 provided an additional $10,000,000. Thus, both 1990 and 1991 have a $15,000,000 limitation on the Cooperative Agreement Program.

The third change deletes language which is included in the Department of Transportation Appropriation Act for 1990.

This activity is responsible for providing the adequate housing and subsistence of Federal prisoners in U.S. Marshals Service custody and for the Cooperative Agreement Program (CAP) to generate guaranteed housing of Federal Prisoners in compliance with acceptable detention standards.

	1990 Appropriation Anticipated	1991 Base	1991 Estimate	Increase/Decrease
Care of U.S. Prisoners.............	$143,587	$143,587	$178,034	$34,447

Long-Range Goal: To care for Federal prisoners in Marshals Service custody at a level which meets nationally accepted standards for detention or holding facilities.

Major Objectives:

To obtain adequate and sufficient detention space for prisoners in Marshals Service custody.

To improve the health care services provided Marshals Service prisoners held in non-federal facilities.

To ensure that qualified custodial guard services are obtained for prisoners undergoing medical treatment and in special detention centers.

To negotiate private sector contracts for the housing of minimum security alien material witnesses and their dependents as well as other prisoners in Marshals Service custody.

To enter into long-term guaranteed space agreements with State and local governments.

Accomplishments and Workload:

			Estimate	
Item	1988	1989	1990	1991
Facilities under Intergovernmental Service Agreement	835	845	855	875
Number of Contract Jail Days used	1,949,535*	2,478,146	3,140,000	3,764,696
Number of Federal Jail Days used	1,219,566	1,530,667	1,875,000	2,504,054
Average Jail Day Rate	$39.00**	$39.50	$41.48	$42.27
Average Stay (Days)	36.7	41.3	52.8	63
Number of Major Use Jails	232	246	260	275

* Count increased as jail days were paid.

** The Jail Day rate did not increase from 1987-1988, and averaged $39.50 for 1989. For 1990 and beyond a growth factor of 5 percent has been established, based on the high number of jails that are eligible to request rate increases.

Due to an increasing average daily prisoner population, the number of jail days continues to grow in excess of all projections. This increase is due in part to the implementation of the Sentencing Reform Act (SRA). The SRA is anticipated to have a continued impact on USMS's prisoner population in 1990 and 1991 in light of a recent report by the Administrative Office of the U.S. Courts indicating that one year after the implementation of the SRA (November 1987 to November 1988), only 25 percent of those sentenced were covered by its provisions. Based on the increased prisoner population growth experienced in 1989, and the continued impact of both drug enforcement initiatives and the SRA, the total number of inmate days is projected to reach 6,268,758 in 1991, a 25 percent increase over the 1990 level of 5,015,000.

The Comprehensive Crime Control Act, the Sentencing Reform Act, drug enforcement initiatives, and heavier security measures required by a more dangerous and violent prisoner population will extend the average stay by a minimum of 10.2 days per prisoner, resulting in large increases in detention costs. Also, continued significant increases in resources for the Federal investigative agencies, which in turn generate higher prisoner loads, have a direct impact on the Service's need for additional funds for prisoner guards, medical care, and jail bill payments. Lengthier, more complex trials with extensive pretrial production requirements and a resulting increased length of stay in jail per prisoner committed have increased the Service's daily prisoner load dramatically. From 1984 to 1991, the length of stay is projected to grow 142 percent (from 26 to 63 days).

The jail day rate is predicted to grow from $39.50 in 1989 to $42.27 in 1991. However, this relatively stable jail day rate growth has been more than offset by the rapid expansion in the number of contract jail days required. The level of increase is hard to predict because jails initiate rate increase requests. A major-use jail may suddenly request and justify a rate increase of 30-50 percent, which will have a significant impact on detention costs. In general, per diem rates of $50 are common, and some of the major-use jails have demanded rates of $80-101. For example, Multnomah County, Oregon, is receiving $97.55 (as no other facilities are available) and the City of Alexandria, Virginia (a CAP jail) receives $85 based on documented cost and pricing data. Lane County, Oregon (a CAP jail) documented and receives a rate of $76. Orange County, California, requested a rate of $113. This rate is being negotiated and no agreement has yet been reached due to disagreements on contract terms.

The Support appropriation historically pays State or local jurisdictions for the per diem cost of housing prisoners who are in the custody of the United States Marshals Service, i.e., generally prisoners awaiting trial or sentencing. These prisoners may also be housed in a Federal facility, generally a Bureau of Prisons (BOP) metropolitan correctional facility. The Bureau of Prisons is not reimbursed from the Support appropriation for providing this service.

In certain complex detention situations, State and local facilities have not been willing or capable of housing dangerous or high profile federal prisoners, particularly narco-terrorist groups. The Marshals Service has been forced in these instances to establish temporary detention units staffed by special operations group/deputy marshal personnel. In other instances, hybrid detention solutions have been accomplished involving the Federal Bureau of Prisons and state or local governments.

One example of such a hybrid arrangement is in connection with the trial of *United States v. Gerena* (Crim No H-85-50 TEC Connecticut). The District Court required that the defendants, "Los Macheteros" be housed in one facility near Hartford, Connecticut. No Federal, State, or local facility met the District Court's criteria. While the State was not willing to accept responsibility for the actual custody of this terrorist group, it did offer to provide a wing of the Hartford facility if it were operated by the Bureau of Prisons with 24-hour perimeter security provided by the Marshals Service. This is what is needed to be done to ensure the required security and detention for a terrorist group undergoing trial.

Other such situations which required the Service to develop extraordinary detention arrangements include the detention and trial of Carlos Lehder, a major international drug trafficker in Jacksonville, Florida and the operation of a special 24 hour detention unit at the Federal courthouse in San Juan, Puerto Rico for high security prisoners who (for their own personal safety) had to be housed separately from Commonwealth and other federal prisoners.

These examples demonstrate how the Support of U.S. Prisoners appropriation can be used in situations where there is either a hybrid detention arrangement involving both State and local and Federal elements, or where there is no Bureau of Prisons or State and local facility available and Federal agency personnel must provide the security services and detention facilities that are normally provided by a non-Federal institution.

Program Change:	1991 Base	1991 Estimate	Increase/Decrease
Care of U.S. Prisoners..........	$143,587	$178,034	$34,447

A program increase of $34,447,000 is requested for 1991 for the care of United States Prisoners Program. Of this increase $27,818,000 will assist the Marshals Service with its responsibility to care for Federal prisoners by providing 658,102 additional jail days at a rate of $42.27 per day, and $6,629,000 will be used for increased guard and medical expenses. Without the additional funding requested, the Service would have to divert more prisoners to already overcrowded Federal institutions where possible, as well as request that the courts release dangerous offenders on self recognizance.

	1990 Appropriation Anticipated	1991 Base	1991 Estimate	Increase/Decrease
Cooperative Agreement Program....	$14,850	...	$15,000	$15,000

Long-Range Goal: To provide funding to selected State and local governments for renovation and construction of detention facilities to obtain additional guaranteed jail space for Federal prisoners.

Major Objectives:

To encourage State and local governments to house Federal prisoners and to provide conditions of confinement and levels of inmate services which will be in compliance with acceptable detention standards.

To acquire guaranteed detention space in close proximity to the Federal courts in order to reduce the drain on Marshals Service resources for in-district handling and production of prisoners and to provide defendants with adequate access to counsel and to the courts.

To provide Federal excess property to facilities housing Federal prisoners, thereby improving conditions of confinement.

* Includes funding modifications

** Count of jails has been increased significantly due to the result of a national survey conducted in March 1989 by Prisoner Operations Division staff to update Jail Contracting Management Information System data. Districts had not previously reported all jails where use was restricted/terminated. The continued rapid loss of jail space is due to increasing local overcrowding and an increasing Marshals Service daily prisoner population.

Producing prisoners in accordance with court calendars requires adequate detention space near Federal court cities. The dramatic growth in the average daily prisoner population (almost 6,400 new prisoners per day since 1984) generated by the Comprehensive Crime Control Act, Sentencing Reform Act, the Organized Crime Drug Enforcement Program, and recent anti-drug initiatives has consumed virtually all the guaranteed bed space gains (4,131 beds) made by the CAP program. Of further concern is the expiration of those low-cost and short-term CAP agreements negotiated in 1982. Of the beds acquired, 351 expired in 1989, necessitating that long-term CAP agreements be negotiated to replace them.

To reassess the extent of the Federal short-term detention space crisis and to develop a plan to accommodate projected prisoner load growth levels for the next five years, the Service updated a national detention space survey of all federal court cities in March 1989. The U.S. Marshal from each of the 95 districts provided estimated average daily prisoner population levels (for 1989-1995), resultant bed space shortfalls, assessments of each city's detention situation, and recommended solutions to the bed space shortages. In all, a total of 271 Federal court cities were covered in this survey.

It is also significant to note that the number of prisoners requiring detention space in Federal court cities in emergency detention status are projected to increase 379 percent from 1989 to 1995. Since the initial detention space survey was conducted, the Sentencing Reform Act (SRA) has been implemented and upheld by the Supreme Court. The adverse impact of SRA on the already critical jail space shortage has increased the Marshals Service daily prisoner population at least 20 percent, and increased the average stay by a minimum of 18 days.

The Bureau of Prisons' facilities are so overcrowded that little space is currently available for Marshals Service prisoners. From 1986 to 1989 the number of Marshals Service prisoners housed in BOP facilities declined 6 percent (from 27,831 to 26,366) as BOP institutions passed their saturation point. In 1985, 44 percent of the total Service inmate days were provided in BOP facilities; this declined to 38 percent in 1989, necessitating an increased reliance on the CAP program to generate more jail space. To obtain the necessary jail space, the Marshals Service has continued to seek bedspace in rural jails far from Federal court cities. This has resulted in a dramatic increase in Deputy staff time required for prisoner production as demonstrated by the fact that from 1986-88, 240 additional operational workyears were required for this function and overtime increased 76 percent.

Because of local governments' reluctance or inability to fund all locally required jail expansion projects, the CAP program (even if adequately funded) will be able to address only a small portion of the Federal detention needs. BOP detention construction is often the best solution for an area's detention space shortage. BOP plans to construct a total of 3,650 detention bedspaces with 1990 funds, and is requesting funding in 1991 to construct an additional 1,250 detention bedspaces. However, due to construction time these additional detention beds will not benefit the Marshals Service until 1993-1994.

Since its implementation in late 1982, CAP, even though limited by budgetary constraints, has met with very positive support from State and local governments. The most significant accomplishment is the stabilization of the loss of contract jail space for Federal prisoners. However, gains from the CAP Program have been overwhelmed by the dramatic growth in the average daily prisoner population. As a result, from 1980 to 1989, the number of facilities which restricted or terminated detention space increased 574 percent (from 90 to 607). The 1982 to 1991 CAP agreements are expected to generate about 5,100 guaranteed bed spaces for Federal prisoners in local jails in 110 Federal court cities at a cost of only $104.1 million. This represents an average cost of $20,400 per bed, well below the national average cost of $70,000 for new construction of maximum security bed space.

With more dangerous Federal prisoners being held by local jails in remote areas, the need for added security was met, in part, by the Marshals Service's use of the Federal Excess Property Program. Through special authorization obtained from the Department of Justice, surplus security equipment (walk-through and x-ray metal detectors) was furnished to 23 contract jails (15 major-use), enhancing the ability of those jails to handle dangerous offenders.

Program Change:	1991 Base	1991 Estimate	Increase/Decrease
Cooperative Agreement Program...............	...	$15,000	$15,000

A $15,000,000 increase in the Cooperative Agreement Program would enable the Service to obtain sufficient guaranteed bed space in local jails for its expanded revised prisoner population. Florida, Georgia, Indiana, Iowa, Kansas, Mississippi, Virginia, South Carolina, Tennessee, and West Virginia have been targeted as potential recipients for the 1991 funds. These agreements would involve cooperative construction to provide long-term guaranteed detention space for Federal prisoners. With the requested funding, the loss of essential local jail space would be stabilized somewhat during the 2-3 year period required to bring construction projects on line to support the projected surge in the Service's daily prisoner population. Without an adequately funded CAP Program, the Service will face severe bedspace shortages for years to come and potential disruption of Federal court schedules in those court cities with severe bedspace shortages.

United States Marshals Service

Assets Forfeiture Fund

Summary Statement

Fiscal Year 1991

The Marshals Service is requesting for 1991, $372,000,000 for the Assets Forfeiture Fund. This amount represents an increase of $15,153,000 over the 1990 availability.

Objective: To secure and maintain seized assets and to realize maximum benefits from the sale and disposal of such properties.

The Assets Forfeiture Fund has proven to be a very effective tool in promoting proper maintenance and sales of forfeited property and property subject to forfeiture. Before the passage of the Comprehensive Crime Control Act of 1984 (CCCA), expenses related to the seizure and forfeiture of property were paid from agencies' salaries and expenses appropriations. To the extent possible, costs were recovered from proceeds of sales of forfeited property. However, there was no guarantee that a forfeiture action would result in the sale of property, or that sales proceeds would cover all costs. Investigating agencies were reluctant to incur costs that might not be recovered, that could otherwise have been used for high priority investigations. Furthermore, agencies were unable to predict and budget for the expenses associated with the seizure and forfeiture of property.

Since the creation of the Assets Forfeiture Fund in 1985, forfeited cash and proceeds from the sales of forfeited properties have been deposited in the Fund, and are made available for payment of expenses necessary to seize, detain, inventory, safeguard, maintain, advertise, and sell property under seizure or forfeited under any law enforced or administered by the Department of Justice. Further, receipts are available to pay valid liens and mortgages against forfeited property, for the purpose of protecting innocent lienholders' interests and to facilitate the sale of forfeited property on terms most advantageous to the Federal government. Receipts are also available for making equitable sharing payments to State, local and foreign governments for participating in asset forfeitures.

The request for the Fund in 1991 provides that, to the extent that deposits to the Fund exceed the amounts needed for the management expenses described above, $100,000,000 will be available for selected categories of program related expenses, such as awards for information or assistance in drug enforcement cases; costs of equipping conveyances for drug law enforcement functions; the purchase of evidence of violations of the Controlled Substances Act or the Controlled Substances Import and Export Act; and other expenses authorized by 28 U.S.C. 524(c)(1),(A)(ii),(B),(C),(F),and(G).

Further, the Asset Forfeiture Amendment Act of 1988 provided that after all management and program-related expenses have been met at the end of 1990, 1991 and beyond, the Attorney General shall transfer excess amounts from the Assets Forfeiture Fund to the Special Forfeiture Fund for use by the Director of the Office of National Drug Control Policy. At the end of 1990 and 1991 respectively, it is projected that a transfer of $109,000,000 and $128,000,000 will be made to the Special Forfeiture Fund if there are sufficient excess receipts.

United States Marshals Service

Assets Forfeiture Fund

Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in the appropriation language listed and explained below. Deleted matter is enclosed in brackets.

Assets Forfeiture Fund

For expenses authorized by 28 U.S.C. 524(c)(1)(A)(ii),(B),(C), (F), and (G), as amended, [$75,000,000], to be derived from the Department of Justice Assets Forfeiture Fund. $100,000,000

(28 U.S.C. 524; Department of Justice Appropriations Act, 1990; additional authorizing legislation to be proposed.)

[To fight the war on drugs, $25,000,000 for awards for information in drug cases, purchase of evidence for drug violations, equipping conveyances for drug law enforcement, and other expenses as authorized by 28 U.S.C. 524(c)(1)(A)(ii),(B),(C),(F), and(G), as amended, to be derived from the Department of Justice Assets Forfeiture Fund.]

[Department of Transportation and Related Agencies Appropriations Act, 1990.]

Total Budget Authority	356,847	370,945	372,000	$1,055

Long-Range Goal: To provide resources necessary to seize, manage and dispose of property seized for forfeiture under criminal law, including expenses of perfecting the forfeiture and recognizing legitimate interests of innocent third parties, and to provide central accountability for the management and use of forfeited cash and the proceeds of forfeited property. To the extent surplus funds are available, the Fund will provide a source of funds to assist in financing general forfeiture program expenses and investigative expenses.

Major Objectives:
To pay expenses for detention, inventory, safeguarding, maintenance of property seized for forfeiture and the disposal of forfeited property.

To pay case-related expenses for perfecting the forfeiture of seized property.

To ensure that valid third-party interests are not jeopardized unreasonably in the enforcement of forfeiture statutes.

To strengthen overall asset seizure and forfeiture efforts by funding certain program-related expenses allowable by statute.

To promote effective law enforcement by sharing amounts realized from forfeitures with State, local and foreign law enforcement agencies that contributed to the forfeiture.

To pay awards for information and assistance leading to civil or criminal forfeitures under the Comprehensive Drug Abuse Prevention and Control Act of 1970 or a criminal forfeiture under the Racketeer Influenced and Corrupt Organizations statute.

To equip conveyances for drug law enforcement purposes.

To assist in major investigations and prosecutions by making funds available to purchase evidence of violations of the Controlled Substances Act, the Controlled Substances Import and Export Act, RICO statutes, or criminal money laundering laws.

Base Program Description: Identifying, seizing, and forfeiting illegal assets plays an increasingly important role in the Federal Government's efforts to stop crime and punish criminals. Not until 1985 was there a suitable funding source to pay for expenses associated with asset management support for seizures and forfeitures. The Comprehensive Forfeiture Act of 1984 (P.L. 98-473, Title II, Chapter III) remedied this problem by creating the Assets Forfeiture Fund for the Department of Justice.

Receipts to the Fund from property forfeitures are the end result of a complicated and frequently long process typically involving a combination of State, local, and Federal investigators who locate, target, and seize forfeitable assets. After seizure, the Federal investigative agencies have a critical role in getting the legal forfeiture process started by: (1) providing personal notice to the owner, and advertising the seizure to the public; (2) handling claims for the property from owners, lienholders, and State and local agencies with an "equitable share" in the property; and, (3) if the forfeiture is uncontested, issuing a "Declaration of Forfeiture", closing out the case file, and notifying interested parties of the outcome. These Federal agencies (most significantly DEA) are already working at full capacity.

If the forfeiture is contested, or the value of the property exceeds a certain amount, then the case must be forwarded to a U.S. Attorney for the initiation of a forfeiture proceeding in Federal district court. In 1989, U.S. Attorneys received $22 million in appropriated funds to ensure adequate numbers of trained, experienced forfeiture litigation staff. Furthermore the U.S. Attorneys received a transfer of $30 million from the Assets Forfeiture Fund to use as needed.

It should be noted that Federal prosecutors are not alone in their increased expertise in forfeiture law and practice. Defense attorneys are also more knowledgeable and adept at strategies to defeat and frustrate the government. This has resulted in lengthier prosecutions; higher costs; and an increasing reliance on stipulated settlements and plea bargaining, resulting in the United States settling for the forfeiture of lesser amounts than it originally targeted and sought.

The Drug Enforcement Administration and the Federal Bureau of Investigation are experienced and successful in locating and targeting the assets of drug dealers. Prosecutors continue to use forfeiture more often, and have become innovative and energetic in applying the forfeiture provisions of drug laws. State and local agencies, as a result of the equitable sharing program, have increased their efforts to assist Federal drug law enforcement. The resulting growth in seized property leads to proportionate increases in associated expenses. Without the needed authority to expend monies from this self-sustaining program, seized property will deteriorate and depreciate, and the overall forfeiture program will decline.

Receipts: Estimates of receipts for 1990 and 1991 show a steady rise in income from forfeitures since the first full year the Fund was in operation. Income increased by about $22 million from 1986 to 1987; by more than $125 million from 1987 to 1988; and by nearly $400 million from 1988 to 1989; more than half of that increase ($222 million) was from a single RICO action against Drexel, Burnham, Lambert, Inc. The continued successful use of RICO could result in large future receipts to the Fund, provided victim restitution needs are satisfied.

- Although the value of property seized by the FBI for forfeiture is increasing approximately 50 percent each year, a significant amount (approximately 52 percent) results from RICO cases, many of which involve fraud. At this time the FBI has property named for forfeiture in RICO fraud cases which has a value exceeding $460,000,000.

Obligations: The amount requested for 1991 is essential if agencies are to continue to perform their missions at the current level.

Management of seized assets ($57,000,000): The primary purpose of the Department of Justice Assets Forfeiture Fund is to ensure an adequate and appropriate source of funding for the management and disposal of seized and forfeited assets. These expenses would otherwise be paid by seizing agencies out of budgets funded by taxpayer dollars. The Fund puts drug dealers' money to work for the taxpayer. The Department of Justice has successfully held management expenses to a minimum. Management expenses, excluding direct pay and associated costs, have increased an average of 38 percent each year from 1986 through 1989; during the same period, property in custody increased an average of 69 percent each year, and seizures increased an average of 53 percent. Furthermore, new requirements such as the requirement to assess environmental contamination at illegal drug manufacturing locations has resulted in increased management expenses.

Other Asset Specific Expenses (15,000,000): This category includes payments of amounts to satisfy third-party interests, including lienholders and other innocent parties, pursuant to 28 U.S.C. 524(c)(1)(D) and payments in connection with the remission and mitigation of forfeitures, pursuant to 28 U.S.C. 524(c)(1)(E). Normally, payments of liens are deducted directly from sales proceeds, using procedures customary in real estate settlements. However, in some cases forfeited cash and proceeds from the sale of forfeited property are first deposited to the Fund and then disbursements made to innocent lienholders. Also included are expenses incurred in relation to the prosecution of a forfeiture case or execution of a forfeiture judgment, such as travel and subsistence; translation services; and expert witness costs.

Equitable sharing payments ($200,000,000): Equitable sharing payments represent the transfer of portions of federally forfeited cash and proceeds from the sale of forfeited property to State and local law enforcement agencies that assisted in targeting or seizing the property. Most task force cases, for example, result in property forfeitures whose proceeds are shared among the participating agencies. Equitable sharing payments are expected to be 45-50% of net income.

Case-specific expenses:

ADP ($10,000,000): It is anticipated that funding for ADP equipment will decrease substantially in 1991 after an implementation of current forfeiture-related ADP initiatives.

The funds requested provide for new and upgraded hardware and software to provide automated support for processing forfeitures. The enormous growth in asset seizures and forfeitures has been accompanied by a similar growth in the number

OPENING STATEMENT

Mr. **Early**. We are extremely pleased to welcome for his first appearance before the committee the new Director of the U.S. Marshals Service, Michael Moore.

Mr. Moore, you may proceed any way you wish with your statement.

Mr. **Moore**. Thank you.

Mr. Chairman and members of the subcommittee, I am pleased to appear before you today in support of the 1991 requests for the United States Marshals Service. For 1991, we are requesting a total of 3,503 positions and $228.5 million for the Salaries and Expenses appropriation, $193 million for the Support of United States Prisoners, and an estimated $372 million in budget authority for the Department of Justice Assets Forfeiture Fund.

The fact that all of the participants in the administration of justice, judges, attorneys, investigative agencies and so forth continue to direct more attention to anti-drug activity requires that we respond in kind with improved security throughout the process.

With an estimated 70 percent drug-related workload by 1991, how the Marshals respond to this challenge and meet the full span of our responsibilities will do much to determine the outcome of the war on drugs and other criminal justice initiatives.

Almost three-fourths of the new resources sought improve the security and detention efforts required to sustain the judicial process. The remainder improves management of seized assets and provides necessary enhancement of administrative and support services. With this in mind, I would like to highlight the Marshals Service's 1991 resource requirements.

PROTECTION OF THE JUDICIAL PROCESS

Preserving the safety and integrity of the judicial process remains the Marshal Service's highest priority. The recent bombings in the Eleventh Circuit and the attendant rise in threats nationwide focus attention on the fragile nature of the judicial process.

Next year, time devoted to criminal proceedings will increase 20 percent above the 1989 level. Two-thirds of the proceedings will be drug-related. This foreshadows our requirements. For 1991, an additional 99 positions and $15.8 million are requested to provide the judicial, witness and prisoner security measures necessary to support this effort.

PRISONER TRANSPORTATION AND DETENTION

Prisoner transportation and detention requirements must be considered in tandem with security responsibilities. The resource drain is two-fold, affecting both the Marshals Service and Support of Prisoners appropriations.

For 1991, 49 positions and $13.3 million is requested for the Marshals Service appropriation for prisoner transportation and detention requirements. Approximately $10 million are for badly-needed infrastructure improvements, including cell-block construction and replacement of obsolete vehicles. The remainder supplies the deputies, and the resources needed to bring prisoners to and from jail and court, and inspect the State and local jails where they are detained.

In addition to the transportation and detention requirements borne by the Marshals Service appropriation, the staggering growth in the prisoner population and length of stay place increased demands on the Support of U.S. Prisoners appropriation. Costs associated with the care and housing of these prisoners will consumer $178 million of the $193 million requested for this appropriation in 1991. The remaining $15 million are sought for Cooperative Agreement Program projects. These funds will allow the Service to secure bed space in areas in the South and Midwest, which now lack adequate detention space near Federal Court cities.

FUGITIVE APPREHENSION

The Marshals Service will arrest over 18,000 fugitive felons in 1991. Over 65 percent of those arrested are wanted for drug-related offenses. Since August, 1988, the Marshals Service has been responsible for most of the Drug Enforcement Administration's felony fugitive warrants. This adds some 8,000 warrants a year for the Marshals Service fugitive caseload.

Another major Marshals Service responsibility directly related to the drug war is extradition authority. The sudden change in Colombia's extradition authority will require the Service to transport as many as 100 major drug figures in 1990. No additional resources are requested for fugitive apprehension in 1991; rather, a program decrease of 87 positions and $5.4 million is proposed.

SEIZED ASSET MANAGEMENT

As the War on Drugs advances, the Marshals Service Seized Asset Program continues to yield outstanding results. Resources previously provided the U.S. Attorneys and others for accelerated forfeiture activity have already borne fruit: the docket is full of forfeiture cases. It is not just what has been done, however, but what must continue to be done that will gauge the success of the program.

For 1991, the Service requests an additional 134 positions and $6.2 million to address these management concerns vis-a-vis the burgeoning inventory. These resources will deploy another 44 seized asset management units in high-volume districts.

D.C. SUPERIOR COURT

The difficulties facing this court cannot be overstated. The District of Columbia leads the Nation in the per-capita murder rate where at least two-thirds of these crimes are drug-related. Some 200,000 prisoner productions will be performed in 1991 before some 65 judges and 15 magistrates, who sit in session 6 days a week.

In 1991, 35 positions and $1.5 million are requested to address this urgent situation.

MANAGEMENT AND SUPPORT SERVICES

Many of the deficiencies noted here were cited both in last year's Department of Justice audit of Marshals Service activities and previous budget submissions.

For 1991, 23 positions and $6.2 million is sought for improvements in these areas. Of this amount, $5.1 million is for ADP and radio hardware necessary to replace and upgrade an aging inventory. Another 23 positions and $1.1 million are requested for personnel and support services necessary to sustain the operational mission.

This concludes my statement, Mr. Chairman. I will be pleased to answer any questions the subcommittee may have.

[Mr. Moore's prepared statement follows:]

DEPARTMENT OF JUSTICE
UNITED STATES MARSHALS SERVICE

STATEMENT OF THE DIRECTOR
K. MICHAEL MOORE
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE, THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to appear before you today in support of the 1991 requests for the United States Marshals Service. For 1991, we are requesting a total of 3,503 positions and $288.5 million for the salaries and expenses appropriation, $193 million for the Support of United States Prisoners, and an estimated $372 million in budget authority for the Department of Justice Assets Forfeiture Fund.

The Marshals Service's request for its operating account is 253 positions and $50.7 million above the 1990 appropriation, including program changes totalling 253 positions and $37.6 million. For the Support of U.S. Prisoners $34.6 million above the 1990 appropriation is requested, which contains $15 million for the Cooperative Agreement Program (CAP). The Assets Forfeiture Fund total is $15.2 million more than this year's level and includes a total of $100 million in definite budget authority, $1.1 million above the 1990 level.

As you know, Marshals Service responsibilities bridge the Executive and Judicial branches, affecting both the quality and substance of justice served. Whether fulfilling a prisoner's right to due process, maintaining a secure and open court environment, capturing a fugitive, or safeguarding members of the judiciary, the Marshals Service protects basic constitutional rights.

What others accomplish does much to determine our level of effort. The fact that all of the participants in the administration of justice process (the judges, attorneys, investigative agencies, and so forth) continue to direct more attention to anti-drug activity requires that we respond in kind, with improved security throughout the process.

Never before was the challenge so formidable. With an estimated drug-related workload of 70 percent by 1991, how the Marshals respond to this challenge and meet the full span of our responsibilities, will do much to determine the outcome of the War on Drugs and other criminal justice initiatives. With this in mind, I would like to highlight the Marshals Service's 1991 resource requirements.

Protection of the Judicial Process

Preserving the safety and integrity of the judicial process remains the Marshals Service's highest priority. For 1991, an additional 99 positions and $15.8 million are requested in support of this effort. Protection of the Judicial Process includes three major program activities: Judicial, Witness, and Prisoner Security.

Judicial Security

The recent bombings in the 11th Circuit and the attendant rise in threats nationwide focus attention on the fragile nature of the judicial process. Next year, time devoted to criminal proceedings will increase 20 percent above the 1989 level; two-thirds of the proceedings will be drug-related.

What was once unusual is now commonplace. Prolonged, multiple defendant trials occur in nearly every district. None have the in-house capacity to address emergency security requirements. Yet that is exactly what is needed.

The case of USA v. Ted O'Neill involves 181 defendants, 41 of whom are in custody. Charges against them run the gamut of crime: narcotics violations; association with the Irish Republican Army, Manuel Noriega, motor cycle gangs; plus, ties to organized crime. The trial began in October and is expected to continue another five months. The venue is a Marshals Service sub-office with three deputy Marshals assigned on a full time basis.

Stringent security requirements are also needed for one of O'Neill's alleged associates, Manuel Noriega. The proceedings and associated precedents have few equals during this century. Add to this the international attention and symbolism surrounding this deposed general/reputed drug lord, and you have the most and

and urgency of requests for information -- these requests range from demands for information from persons contesting the forfeiture of property to wide ranging requests from Congressional committees and members of Congress, to program managers' requirements for status and activity reports.

Training ($4,000,000): Training will continue to be a priority, due to the constant evolution and development of asset forfeiture law and policy, and because of the addition of new staff. Funding provides for a variety of essential training: for individualized agency courses, such as DEA's Asset Removal Training, which focus on particular aspects of agencies' procedures; for training in operation and using administrative and computer systems, such as INS's seized vehicle information system (SEVIS); for basic and advanced legal training for U.S. Attorneys' staffs; and for multi-agency (Federal as well as Federal/State/local agencies), inter-disciplinary seminars that ensure proper coordination and cooperation exist.

Awards for information ($32,400,000): The two categories of awards payable from the Assets Forfeiture Fund directly support drug law enforcement efforts by encouraging the cooperation and assistance of informants. The two categories are: (1) for information or assistance related directly to the forfeiture of property; and (2) for information or assistance related to a violation of criminal drugs laws including information leading to the arrest and conviction of anyone who kills or kidnaps a Federal drug law enforcement agent.

Equipping conveyances ($17,000,000): This category provides funding to drug law enforcement agencies to equip certain communication equipment for agency operated conveyances. This funding has been used for emergency and communications equipment, for voice privacy and surveillance equipment, for armoring; for engine upgrades and avionic equipment for aircraft. Further, the funding has been utilized for special projects, such as the funding in 1989 for equipping six helicopters for use in Peru and Bolivia in Operation SNOWCAP and other drug enforcement activities.

Purchase of Evidence ($13,600,000): The Fund may also be used to purchase evidence of violations of the drug laws, of the RICO statute, and of criminal money-laundering laws.

Storage, protection and destruction of controlled substances ($2,000,000): This expense is in actuality an uncontrollable, asset-specific type of expense consisting of (1) the costs of warehousing, guarding and the (2) costs associated with the removal, transportation and disposal of controlled substances as well as "precursor chemicals" and other hazardous materials seized at clandestine lab sites.

Special Contract services ($21,000,000): The funds requested will provide contract employees to agencies to assist in the legal and administrative processing of asset seizures and forfeitures, and in providing data entry and analysis assistance.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Program related expenses.....................	...	...	$98,945	...	...	$100,000	...	...	$1,055

An increase of $1,055,000 is requested in program related expenses to fund the categories of automated data processing, awards, purchase of evidence, equipping conveyances, training and printing, evidence storage and destruction, and contracting for services.

	Outlays..............................	241,842	171,365	320,165	

demanding security requirements ever afforded a single individual.

Unfortunately, there is a situation more acute which cuts to the basic integrity of the judicial process. The December bombings and resultant murders of Judge Vance and Mr. Robinson in the 11th Judicial Circuit spawned a wave of threats previously unknown. Through February, 224 threats against the judiciary had been received nationwide; 41 were in the 11th circuit. The national total to date in 1990 exceeds that of all threats received in 1988, and, if it continues at the current rate, it will double last year's total. The security demands of this emergency cannot be overestimated. Currently, every member of the 11th circuit, and many of their family members, are under Marshals Service protective custody.

These examples foreshadow our 1991 requirements. Of the 61 positions and $3.7 million sought for this element, 51 positions and $3.3 million will be devoted to improved security--including courtroom security, protective service details and enhanced threat analysis. Another 10 positions and $423,000 are required to expedite security investigations for operational employees.

Witness Security

In 1991, another 240 individuals will enter the Witness Security Program, raising the cumulative total to nearly 6,000 primary witnesses since the program began. (Another 6,400 family members will also receive protection.) This program continues to be a leading weapon in the Government's arsenal against crime.

This is especially true in drug-related cases where about 80 percent of the new protected witnesses appear. In cases where they testify, nine out of ten result in conviction.

Of particular concern is the level of support services required to sustain these witnesses under a new identity. An average witness receives funding for 17 months; currently there are nearly 1,000 active witnesses. Protection, however, remains a life-long commitment.

The number of "second generation" witnesses (the sons and daughters of original witnesses) continues to grow. The program also reflects the crimes of terrorism and drugs exported to our shores; most of the newly accepted witnesses are foreign born. Each group has a special set of documentation and security needs. Both make the job of protection increasingly problematic.

An additional 8 positions and $268,000 are sought for witness security in 1991, to provide improved identity, employment and relocation services for this diverse witness population.

Prisoner Security

The final component of the security triad is prisoner security. Last year, the Marshals Service received over 82,000 individuals charged with violation of Federal law. On any given day, the prisoner population approached 12,000. In 1991, the number of individuals received will stay about the same, but the average daily custody count will exceed 16,000, a one-third increase in two years. Similarly, prisoner productions (presentation of prisoners for court appearances and elsewhere) will exceed 600,000, nearly twice the 1988 level.

It is not just the sheer numbers but the caliber of the defendant that is cause for alarm. Every pre-trial hearing for Manuel Noriega is a media event--and a complex security operation. We anticipate 20 such hearings the rest of the year, lasting as long as a week in duration. Upwards of 40 deputies are required for each appearance. From the extreme security provided one defendant, we have the other extreme, multiple-defendant proceedings, such as for Terry O'Neill and Rayful Edmonds, each with as many as 25 defendants at once. A security complement exceeding the number of defendants is required for each appearance.

There is something else Noriega and others have in common: all appear in courthouses at least a generation old, never designed for today's stringent security requirements. In such courthouses nationwide, a heavy price is exacted simply to provide the security necessary to ensure justice.

For 1991, 30 positions and $11.9 million are needed to address these prisoner security demands. Of this amount, 30 positions and $1.9 million will improve security while prisoners are in courtrooms and adjacent areas. Another $1 million is for installation of security systems in courthouses and prisoner areas.

Finally, $9 million will provide for renovation and construction of courtroom holding cells and secure prisoner passageways. This includes a one-time expense of $5 million for construction of a secure prisoner elevator in the Federal courthouse at Foley Square, New York. The remainder represents the first installment of a three-year program to repair 57 holding cells and construct 232 new ones in courthouses slated to see a surge in multiple-defendant proceedings.

Prisoner Transportation and Detention

Prisoner transportation and detention requirements must be considered in tandem with security responsibilities. While we are attempting to address the first part of the equation (security), getting prisoners to and from court and finding suitable detention space are increasingly beyond our control.

The prisoner population and production statistics cited above reveal half the story. Full costs emerge when you review how deputies must travel farther and farther to find suitable, available jail space, simply to serve a growing number of prisoners and an ever expanding criminal docket.

This is now a nationwide routine. All over the country deputies, in vehicles beyond their useful life, begin each day early in the morning and end late at night transporting prisoners from jail to court and back. Deputies from Rhode Island and Massachusetts, for example, go to Danbury and Hartford. In Oregon, they travel to near the Canadian border. Puerto Rico's Federal prisoners are housed on the mainland in Miami and New York. The resource drain is two-fold, affecting both the Marshals Service and Support of Prisoners appropriations.

This detention crisis is not confined to jail space, however. Over 80 percent of the holding cells in Marshals Service district offices fail to meet basic Federal security and safety standards, rendering them of little use as short-term detention facilities. They are being pressed into service, nonetheless, as the War on Drugs escalates.

For 1991, a net increase of 49 positions and $13.3 million is requested for the Marshals Service appropriation for prisoner transportation and detention requirements. The majority of these resources are for badly needed "infrastructure" improvements.

This includes $3.9 million, the first part of another three-year installment, to renovate and construct Marshals Service detention cells and cellblocks for temporary security for prisoners in the Service's custody. cellblocks and provide new cells. Another $6 million allows for orderly replacement of the obsolete vehicle fleet used to transport defendants in custody.

The remaining enhancements requested for this program include 42 positions and $2.7 million for the deputies and the overtime and travel costs associated with the far reaching requirements to bring prisoners to and from jail and court. Necessary inspections of State and local jail facilities used to house these Federal prisoners will be conducted with the additional 7 positions and $447,000 requested for this activity. Finally, 6 positions and $203,000 will expand operation of the National Prisoner Transportation System (NPTS) to assist in the local (in-district) movement of prisoners, a phenomenon increasingly regional in scope.

In addition to the transportation and detention requirements borne by the Marshals Service appropriation, the staggering growth in the prisoner population and its length of stay place increased demands on the Support of U.S. Prisoners appropriation. By 1991, some 3.8 million "jail-days" will be consumed in State and local facilities, 52 percent higher than the 1989 level. The daily rate will be $42.27 a day/per prisoner, some $2.77 above last year's 1990 or 1989 rate. Costs associated with the care and housing of these prisoners will consume $178 million of the $193 million requested for this appropriation in 1991.

The remaining $15 million are sought for Cooperative Agreement Program (CAP) projects. These funds will allow the Service to secure bedspace in areas in the South and Midwest which now lack adequate detention space near Federal court cities.

Fugitive Apprehension

The Marshals Service will arrest over 18,000 fugitive felons in 1991; almost two-thirds of those arrested are wanted for drug-related offenses. Since August, 1988, the Marshals Service has been responsible for most of the Drug Enforcement Administration's (DEA) felony fugitive warrants. This adds some 8,000 warrants a year to the Marshals Service fugitive caseload.

Another major Marshals Service responsibility directly related to the drug war is extradition authority. The sudden change in Colombia's extradition policy will require the Service to transport as many as 100 major drug figures in 1990. Among the "extraditables" already brought to the United States are Jose Raphael Abello-Silva, and Victor Eduardo Mera-Mosquera, both high on DEA's priority list.

As a result of the increase for fugitive apprehensions granted in the President's 1990 Violent Crime Initiative, no additional resources are requested for fugitive apprehension in 1991. Rather, a program decrease of 87 positions and $5.4 million is proposed.

Seized Asset Management

As the War on Drugs advances, the Marshals Service's seized asset program continues to yield outstanding results. Every Assets Forfeiture Fund workload and financial indicator underscores the success of this program.

When compared to 1989 levels, total properties seized in 1991 will have doubled, properties in custody will have increased by one-half, and total properties sold will have tripled. Likewise, equitable sharing transfers to State and local agencies will number 20,000, almost twice last year's record.

The inventory and balance sheets are just as impressive. The value of inventory on-hand has risen three-fold since 1986. Today it stands at $1.2 billion, and is projected to reach $1.8 billion in 1991. The coffers, too, have grown rapidly. Next year, $500 million in receipts are expected to accrue from disposition of forfeited assets; in 1986 net income was $93.7 million.

Resources previously provided the U.S. Attorneys and others for accelerated forfeiture activity have already borne fruit: the docket is full of forfeiture cases. It is not just what has been done, however, but what must continue to be done that will gauge the success of the program. If the inventory is to be managed in a business-like manner and prompt disposition realized after forfeiture, additional Marshals Service resources are required.

For 1991, the Service requests an additional 134 positions and $6.2 million to address these management concerns vis-a-vis the burgeoning inventory. These resources will deploy another 44 seized asset management units in high-volume districts. These asset management units (including business managers, deputies, and fiscal/procurement analysts) work in concert with the U.S. Attorneys and DEA and FBI Asset Removal Teams to ensure coordinated planning throughout the process, from pre-seizure planning to ultimate disposition of the asset. Only by employing sound business practices will the income to the Assets Forfeiture Fund continue to be realized, and the benefits enjoyed by the entire law enforcement community.

D.C. Superior Court

The Marshals Service performs unique services for the District of Columbia. The United States Marshal for D.C. Superior Court acts as "sheriff" for the Nation's Capital. In that capacity, the Marshal must respond to situations confronting a major metropolitan police force, as well as the traditional duties required of all U.S. Marshals.

The complexities of this situation cannot be overstated. The District of Columbia leads the Nation in the per capita murder rate where at least two-thirds of these crimes are drug-related. Some 200,000 prisoner productions will be performed in 1991, before some 65 judges and 15 magistrates who sit in session six days a week. The District will serve over 10,000 pieces of process and conduct an estimated 20,000 evictions next year. Under these extreme working conditions, as many as ten prisoners are escorted to and from court by a single deputy. Given the chronic workload and acute staffing shortage, a backlog of 3,000 felony warrants goes unaddressed.

In 1991, 35 positions and $1.5 million are requested to address this urgent situation. These resources will be deployed in the cellblock and also to provide added security for prisoner transportation and safety in the courtroom.

Management and Support Services

Operational demands have outpaced logistical support to such a degree that substantial improvements must be made in basic management and support areas if the Service is to maintain successful program operations. A total of 23 positions and $6.2 million are sought for 1991. Many of the deficiencies noted here were cited both in last year's Department of Justice audit of Marshals Service activities and previous budget submissions. Again, "infrastructure" problems assume critical importance.

Both the Service's digital voice privacy (DVP) radio system (initiated in 1980) and the ADP system are fragmented and incomplete. The radio system stands 85 percent complete, just at the time obsolescence requires replacement of the equipment installed a decade ago. Many dead spots remain, particularly in the larger, more remote areas of the mid and upper West.

Although there were significant ADP achievements last year, (all Districts were fully automated, for example) advances in this field, plus urgently needed systems integration must be recognized before the Service realizes significantly improved operations.

For 1991, $5.1 million is sought for improvements in these areas. Of this amount, $3.3 million is for various ADP improvements, including: expanded applications for District automation, secure modems, and upgraded equipment to support field operations ($2.6 million); and equipment software upgrades and networking in Headquarters ($700,000). Another $1.8 million will provide the base stations and repeaters needed to complete the Marshals Service's DVP radio system.

Finally 23 positions and $1.1 million are requested for personnel, financial management and other support services, heretofore lacking, but necessary to sustain the operational mission.

Conclusions

In summary, from its vantage point in the criminal justice system, the Marshals Service sees first-hand how the system is responding to the War on Drugs and other crises, and those areas that must be shored--within the Marshals Service and elsewhere--if the framework of justice is to be maintained. With the resources cited in this request, I am confident we can fulfill our responsibilities in this effort and support all others who depend on us throughout the process.

This concludes my statement, Mr. Chairman. I will be pleased to answer any questions the Subcommittee may have.

BIOGRAPHY OF K. MICHAEL MOORE

K. Michael Moore was selected by President Bush to be the first Presidentially-appointed Director of the U.S. Marshals Service in November 1989.

Moore was born in Coral Gables, Florida on July 17, 1951. He received his B.A. degree from Florida State University in 1972 and a Juris Doctor degree from Fordham Law School in 1976.

Moore joined the Department of Justice in 1976 as an Assistant U.S. Attorney for the Southern District of Florida, where he handled a variety of significant cases in the Miami area. In 1981, Moore was promoted to Supervising Assistant U.S. Attorney for the Northern District of Florida in Tallahassee. In June 1982, he was selected as the court-appointed U.S. Attorney for the Northern District, and then he served as Chief Assistant under the U.S. Attorney.

In 1987, Moore was appointed as U.S. Attorney for Northern Florida. He has been called on to evaluate the performance of various U.S. Attorney's offices throughout the United States on behalf of the Executive Office of U.S. Attorneys, and has been a lecturer to law enforcement training classes at the Federal Law Enforcement Training Center in Glynco, Georgia, and to the Florida Department of Law Enforcement. While U.S. Attorney, Moore was appointed by Attorney General Dick Thornburgh to the Attorney General's Advisory Committee of U.S. Attorneys, and served both as Chairman of the Office Management subcommittee and as a member of the Budget subcommittee.

Moore and his wife Catherine have four children.

BIOGRAPHY OF JOHN J. TWOMEY

John J. Twomey was appointed to the position of Deputy Director, United States Marshals Service on August 6, 1976. Prior to this appointment, he served as the United States Marshal for the Northern District of Illinois from 1973 to 1976.

Mr. Twomey began his career in 1959 as a criminologist with the Illinois Department of Public Safety. In 1968, he became the Chief of Professional Services in the Illinois Department of Corrections. He later directed the Escape and Apprehension Unit and the Internal Affairs Division prior to serving as Warden of the Joliet and Stateville penitentiaries.

Mr. Twomey was born in Beverly, Massachusetts on November 1, 1936. He graduated from Loras College, Dubuque, Iowa with a BA in 1958. He received an MS in Administration (1966) and an MA in Criminology (1973) from Southern Illinois University, Carbondale, Illinois. Mr. Twomey served in the United States Military Counter Intelligence Corps from 1959-62.

Mr. Twomey has authored numerous articles for professional journals of Criminal Law and Criminology. He is a member of the American Society of Criminology, the International Academy of Criminology and the International Association of Chiefs of Police. In 1986, President Ronald Reagan presented to him the Distinguished Presidential Rank in the Senior Executive Service, the highest recognition awarded to career federal employees.

PRISONER TRANSPORTATION

Mr. EARLY. Thank you, Mr. Moore. We welcome you to the committee.

I am very impressed with your biography. You certainly bring to this very responsible position the background that is needed.

Chairman Smith and the ranking member Mr. Rogers are totally supportive of all the support agencies and staff that are part of the justice system. We talk an awful lot, and the media reports a lot, about the Judiciary, but if there is any weak link, whether it is the Marshals Service, the Parole Commission or whatever, the system does not work well.

Personally, I have many concerns about your budget. I hope that is a mistake regarding the District of Columbia. You say that under these extreme working conditions, as many as 10 prisoners are escorted to and from court by a single deputy.

Mr. MOORE. That is not a mistake.

Mr. **Early**. That is not fair to the one Marshal. How can he be responsible for policing 10 of these individuals?

Mr. **Moore**. It is a reflection of the resources that have been allocated to that task and prioritized with the other responsibilities that the Service has.

Mr. **Early**. Recently, before you came aboard, this Committee heard of an incident, a tragedy, where an inmate was being transported by a private guard service, I believe, and the fellow escaped, and a murder was committed. To suggest that you can provide the necessary supervision and security with one man for 10 prisoners is not good.

Mr. **Moore**. I would not have found that to be a good or acceptable practice.

Mr. **Early**. Mr. Moore, you need major changes. In just my State of Massachusetts, we have no facilities with space, Mr. Rogers, and prisoners are sent to Danbury, Connecticut as a holding station. Then you have to send a Marshal—how long does it take a Marshal? It has to be a 4-hour trip one way and a 4-hour trip back.

Mr. **Moore**. The problem you are describing is one that is occurring, unfortunately, throughout the country.

Mr. **Early**. I know you do this in other areas where the same problem exists, and you have to transport a prisoner a significant distance from the court. I don't know how you are going to do it, if, for example, there are several prisoners that have to come from Danbury for trial that particular day, and there isn't a place to house them when you get there. I mean, I just don't know how the system is going to work.

Mr. **Moore**. In my short tenure in the position, I have identified and you have identified prisoner transportation as the most critical problem facing the Marshals Service and it is my intention to elevate the awareness, both within the Congress and the Administration, as to the severity of the problem. I would be happy to provide you with those examples.

Mr. **Early**. I would like them for the record.

[The information follows:]

Prisoner Transportation and Detention

Virtually every Federal court district in the Northeast is experiencing prisoner transportation problems. All of Providence, Rhode Island's male prisoners are housed either in Hartford or Danbury, Connecticut.

Philadelphia, New York City and Brooklyn transport female prisoners to the Federal woman's prison located in Morgantown, West Virginia. Over 66 male prisoners awaiting trial in Philadelphia are housed in Otisville, New York. The District of Delaware has been forced into placing pretrial prisoners in the Federal facility located in Petersburg, Virginia.

The transportation problem is becoming more and more national in scope, forcing the reassignment of Deputy Marshals from other program responsibilities such as court security, fugitive apprehensions and asset seizure work. Deputies in Brownsville, Texas, move prisoners all the way to contract jails north of Houston while El Paso Deputies commute to and from Pecos, Texas.

Seattle personnel make prisoner runs to the City of Bellingham near the Canadian border and Portland, Oregon. Deputies make transports of 100 miles round trip to the new Federal institution at Sheridan, Oregon.

Similar critical problems exist in Kansas City, Missouri; Milwaukee, Wisconsin; Cleveland, Ohio; Memphis, Tennessee; Utica, New York; and scores of other cities where there is no local jail space available for the housing of Federal prisoners.

PROTECTION OF THE JUDICIAL PROCESS

Mr. EARLY. You are requesting an increase of $15.8 million for protection of the judicial process. Are these additional funds required because of the increase in the number of drug-related trials or because of the type of trials?

Mr. MOORE. Congressman, I think it is both. We are seeing an increase in the number of drug-related trials and a change in the nature of the drug-related trials, both the length of those trials and the number of defendants and the nature of the charges. They are no longer simple possession with intent to distribute counts, but you see increasingly complex counts, such as RICO, continuing criminal enterprise counts.

You also see an increased tendency, because of the sentencing guidelines, of a willingness to go to trial, because of the consequences that a conviction will bring now, in terms of the sentence that will be imposed. So, there is no one factor you can look to in the history going back to 1984 that has caused this increasing trend for longer trials, more narcotics trials.

Mr. EARLY. But you haven't identified one thing that has reduced the necessity for the Marshals Service, have you?

Mr. MOORE. None.

Mr. EARLY. The rash of bombings directed at Federal judges occurred subsequent to the submission of this budget. Are you formulating any proposals to improve judicial security?

Mr. MOORE. Obviously, we have placed a tremendous emphasis and attention as a result of this tragedy. I have met personally with each of the judges in the Eleventh Circuit, also with the Marshals in the Eleventh Circuit. I have also met with the Security Committee of the Judicial Conference on two occasions.

We are working hard to make sure that we not only have the protective details in place for each of these judges that are in the Eleventh Circuit, but that we also have the equipment to provide the necessary infrastructure security support.

Mr. EARLY. Mr. Moore, knowing your responsibilities, I would assume that the bombing incident in Alabama has had a tremendous impact on the use of manpower in your agency.

Mr. MOORE. That is correct.

Mr. EARLY. Will you provide for the record how many people you have had to assign to that district, how long they have been there, and what you expect to have to do at other courts?

Mr. MOORE. I would be happy to.

Mr. EARLY. Fine.

[The information follows:]

PROTECTION OF THE JUDICIAL PROCESS

As of March 19, 1990, there are 84 Deputy U.S. Marshals devoted to the Eleventh Circuit Court of Appeals judicial protection details. The host districts provide 31 deputies and another 53 travel from other districts every three weeks to supplement the manpower shortage in the Eleventh Circuit districts.

These details have been ongoing since December 17, 1989.

If a similar situation with a high threat level develops in another location, the U.S. Marshals Service would provide the same judicial protection services.

PROPOSED SUPPLEMENTAL

Mr. EARLY. Are there any proposed supplemental requests planned to fund any judicial security improvement?

Mr. MOORE. We are currently monitoring all of our spending in this area and have taken the necessary action to curtail discretionary spending and to eliminate some of our activities in those areas, so that we can continue to focus on our primary mission, which is the protection of the judiciary.

Again, as I say, we are establishing our program priorities with judicial protection and they are being reviewed and assessed continuously. It is a significant drain on us and it is something that we have to watch very carefully throughout the remainder of this fiscal year.

PROGRAM REDUCTION

Mr. EARLY. You recommend a program reduction of $5.4 million in the fugitive apprehension program, based on an anticipated decline in the backlog of felony arrests. Why do you believe that backlog will decline?

Mr. MOORE. Our figures right now show a slight decline from 1989 to 1990. We anticipate a further clearing of some of those felony warrants. We have focused in this area in the past and expect increased productivity through the use of automated information systems, electronic surveillance, informant payments, and special task forces that have received considerably good publicity throughout the country. These efforts are designed to focus all limited resources in a way that is most creative to apprehend the fugitives.

Mr. EARLY. Has there been any noticeable decline in the backlog over the past year? Why don't you provide that information for the record, Mr. Moore, the number in the existing backlog for the last three years?

Mr. MOORE. Yes, sir.

[The information follows:]

FUGITIVE APPREHENSION

The backlog of primary fugitive felony warrants for the last three years is as follows:

	1987	1988	1989
Onhand end of year	10,330	10,896	15,946

1989 reflects the first full year of responsibility for DEA warrants.

BACKLOG OF FELONY WARRANTS

Mr. EARLY. Would it make sense to retain the $5.4 million in 1991, in order to make an even larger reduction in the warrant backlog?

Mr. MOORE. The backlog could certainly be reduced with additional resources. However, in presenting the 1991 budget, there are higher priority areas where these resources should be deployed and I am referring specifically to the judicial security, the prisoner transportation, and the prisoner detention that you referred to earlier.

Mr. EARLY. For the record, is there an acceptable level for backlog in felony warrants, and, if so, what is that level and what funding above your current 1991 request would you require to achieve that level? Why don't you provide that for the record?

Mr. MOORE. Yes, sir.

[The information follows:]

FUGITIVE APPREHENSION

There is no "acceptable" level for a backlog of felony warrants. However, the present program level should allow us to continue to reduce this backlog.

In addition, funding is available to continue the development of an automated information system that will increase the efficiency with which fugitive investigations are conducted. The Marshals Service has also been very successful in the past at closing out thousands of felony fugitive cases through special task forces. These cost effective and temporary operations, if funded, together with improved automation, are important components of the solution to reducing the backlog of fugitive felon warrants.

JUDICIAL SECURITY

Mr. EARLY. I am going to yield at this time to the Ranking Minority Member, Mr. Rogers of Kentucky.

Mr. ROGERS. Thank you, Mr. Chairman.

Director Moore and your names please.?

Mr. HAYES. Bob Hayes.

Mr. ROGERS. And is it Mr. Twomey?

Mr. TWOMEY. Twomey.

Mr. ROGERS. I was reading your biography and this poor guy was born in Massachusetts and educated in Iowa. [Laughter.]

Mr. EARLY. Well, we pronounce it Twomey in Massachusetts. In Kentucky, we are not sure, Mr. Rogers. [Laughter.]

Well, that shows you have a good staff.

Mr. ROGERS. Director Moore, let me follow up on a couple of the Chairman's points on judicial security. Judge Vance was killed at home.

Mr. MOORE. Yes, sir.

Mr. ROGERS. A bomb went off in his home.

Mr. MOORE. Yes, sir.

Mr. ROGERS. Are you extending security to the judges' homes in that circuit?

Mr. MOORE. We do have personal security details where we have determined a threat to exist.

Mr. ROGERS. By the way, if you feel more comfortable discussing any of these things in a cleared atmosphere, we can clear the room. I do not want to pressure you to talk about things like that.

Mr. MOORE. I want to make sure that you have all the information that you want, but I do think that we should be sensitive to disclosure of the level of security and the kinds of security.

Mr. ROGERS. Well, I will not press that any further. Let me just ask you in a more general way. I understand that the Judicial Conference is now discussing judicial security and we will end up with the tab on a fairly extensive system.

As I understand it, the Judiciary's appropriations cover perimeter court security—around the courthouse, court buildings and the walk-through detectors. Any security of the judge other than that would be assumedly on your shoulders. Is that correct?

Mr. **Moore**. That is correct. We manage the Court Security appropriation on behalf of the Administrative Office of the U.S. Courts for the court security program, that provides for perimeter security and Court Security Officers

Mr. **Rogers**. Well, you do not have the money in your request to cover that kind of security, do you?

Mr. **Moore**. No, we do not.

Mr. **Rogers**. So, we might face that later in the year, perhaps?

Mr. **Moore**. Perhaps.

FUGITIVE APPREHENSION PROGRAM

Mr. **Rogers**. Also to follow up on the Chairman's lead on warrants my understanding is at the end of 1989 you had a backlog of 16,000 warrants and you say that will decline to around 14,500 by the end of 1991.

Mr. **Moore**. That is correct.

Mr. **Rogers**. And that is a 9 percent rate of decline.

Mr. **Moore**. That is correct.

Mr. **Rogers**. In the fiscal 1990 bill, we gave you an added 150 positions for fugitive apprehension. Did that contribute to this decline that you were able to achieve?

Mr. **Moore**. I believe so. I think you can point to that as a measure of success with the additional resources devoted to that area.

ASSETS FORFEITURE FUND

Mr. **Rogers**. Now, let me ask about the Assets Forfeiture Fund. The Justice Department tells me that they expect that half a billion dollars in receipts will come to the government through that program in 1991. Does that agree with your numbers?

Mr. **Moore**. I believe so.

Mr. **Rogers**. And of that, I am told that $140 million will go to what is called the special forfeiture fund for allocation by the Drug Czar, correct?

Mr. **Hayes**. Actually, it is $128 million.

Mr. **Rogers**. What did I say?

Mr. **Hayes**. $140 million.

Mr. **Rogers**. $128 million, and that the balance, which would be $372 million, would be used in two ways, $100 million for program-related expenses——

Mr. **Moore**. Correct.

Mr. **Rogers** [continuing]. That is, apparently activities using the assets to promote more seizures that are enforcement related.

Mr. **Moore**. That is correct.

Mr. **Rogers**. Retrofitting a seized vehicle for sale and that type of thing. This subcommittee, is scored for money used for those activities, which I never understood, but, nevertheless, it happens. Now, what happens to the rest of the money?

Mr. **Moore**. You have approximately $200 million that is shared with the State and local governments, through the equitable sharing program, $57 million that is associated with the asset management and disposal, and $15 million identifies other asset-specific expenses. I can go into any one of those items in more detail, if you want me to.

MANAGEMENT SYSTEM OF THE ASSETS FORFEITURE FUND

Mr. **Rogers**. Well, the receipts into that fund have grown astronomically in the last few years. GAO has made seized and forfeited assets management one of several high-risk or vulnerable areas in the government, where mismanagement may exist or could develop, at potential enormous cost to the taxpayers. What kind of steps are we taking to manage that enormous growth in assets and to timely process the seizures and sell them and realize the results?

Mr. **Moore**. Well, there are two parts to your question. One is what steps are we taking to manage it properly, and you see in our budget submission, and I mentioned in my opening statement, there are requests for additional funding in that area.

Quite frankly, as you realize, the program has skyrocketed in terms of the volume of activity, the number of transactions, the number of assets, the amount of real estate, the value of that real estate, and there has been no corresponding increase in the resources devoted to it. It is something that we need to be very concerned about in the management of that program, making sure that we can be accountable for that program.

We are attempting to automate as much as possible with the Seized Asset Management system, which is being implemented or phased into each of the districts. We also have regional National Asset Forfeiture Offices that provide program and quality control, so that we have the type of information to be responsive to any Congressional requests or Departmental requests. I do think that we are monitoring that program and its growth as best we can, under the circumstances.

Mr. **Rogers**. Are there any internal weaknesses in the way it is being managed?

Mr. **Moore**. Yes, I think that there are internal weaknesses that we can identify and strengthen. We are attempting to do that, making sure that data is entered in a timely manner when the seizures are occurring, making sure that we do have the training for these people that are engaged in this activity. This program is really still in its infancy, and you want to come in and tighten up and strengthen the internal controls.

The other area that you referred to is the disposition of assets, and we see the number of items, and the number of seizure cases going up. Unfortunately, their disposition does not occur as fast as the seizures themselves and that is because many of these items are contested. They wind up as a judicial forfeiture proceeding, and the litigation, depending on the type of property involved, can last one to two years before we are really in a position to dispose of the property. That is particularly the case where you have real estate, where there may be innocent third parties that own a portion of the property, where there are other encumbrances and you want to really clear title on it before you can go to sale.

So, we are sensitive to the problem. Any time you get in litigation, though, you lose control of your ability to unilaterally take the steps that you would like to take.

DISPOSAL OF SEIZED MERCHANDISE

Mr. **Rogers**. Well, you have got some reasonably perishable products and merchandise that you seize. Are we adequately taking care of those items and disposing of them in the most timely manner?

Mr. **Moore**. I think we are trying to be more sensitive up-front in pre-seizure planning to what we do want to seize. I mean we are trying to stay out of the animal business, for example, where we know that the maintenance costs will eat up whatever value may be there. I do not think you can always look to equity as the sole determinative factor in whether to seize or not to seize. Sometimes property in the hands of these defendants needs to be seized in certain instances even if there is no equity, just to remove it from the hands of drug dealers.

I think you are seeing, as this learning curve extends out, a base of knowledge that is expanding, both throughout the country and in its depth as well. Obviously, you tend to develop more experience in the larger metropolitan areas, where they are engaged in ongoing seizure activity and where most of the bulk of the assets are but you still need to expand or extend that out to other smaller districts.

VALUE OF ASSETS SEIZED

Mr. **Rogers**. What is the value of the current inventory?

Mr. **Moore**. I think it is approximately $1.2 billion.

Mr. **Rogers**. And you are extending it at the rate of about $500 million a year, right?

Mr. **Hayes**. In terms of income realized.

Mr. **Rogers**. Income realized, that means sales and disposals?

Mr. **Hayes**. Forfeitures and things of that nature.

Mr. **Rogers**. Do you have an idea of the value of assets seized per year?

Mr. **Hayes**. Not a single year per se. It is a floating inventory.

Mr. **Rogers**. I know that, but I am trying to get a gauge of—the value of the assets which entered the inventory last year.

Mr. **Hayes**. How much new business in a particular year? We could provide that for the record.

Mr. **Moore**. We do refer to the growth shown in our submissions as quite impressive. We seized twice as many pieces of property in 1988 as in 1987.

Mr. **Rogers**. You don't know the value?

Mr. **Moore**. I don't have the value reflected here. We can obtain that for you. Another example, I think, of the kind of growth without proportional increase in resources to manage it, is that in 1985 the Service was in custody of 400 parcels of real property. In 1989, we were managing more than 2,700 parcels.

Mr. **Rogers**. Well, provide that for the record.

[The information follows:]

Seized Asset Management System

The Marshals Service took custody of over 25,000 properties worth more than $570 million in 1989. Most of that property consisted of real property seized by the U.S. Marshals and cash seized by DEA and FBI and turned over to U.S. Marshals for custody and disposition. Some properties seized by Justice agencies are not turned over to the U.S. Marshals. For example, if FBI or DEA intend to use a seized item for official use upon forfeiture, then they will retain custody of the property; or if a conveyance is seized by a State or local agency, frequently that seizing agency will retain custody of the item.

The Department of Justice is currently in the process of establishing a system to provide readily available comprehensive statistics on the value of all property seized by Departmental agencies, regardless of whether the property has yet been turned over to the Marshal for custody.

FOLEY SQUARE ELEVATOR

Mr. ROGERS. Now, you are requesting $5 million in your budget request for a prisoner elevator at the Foley Square Courthouse in New York.

Mr. MOORE. Yes, sir.

Mr. ROGERS. Boy, that is an expensive elevator, is it not? How come that is so expensive?

Mr. HAYES. There is an elevator shaft there that needs to be built out. Part of the problem of the expense is it is in an existing building and would not be new construction. Not only that, but Foley Square is one of the most accessible and open public courthouses in the country with easy access from the subway.

Hundreds of thousands of people come through there on a yearly basis and some of the most important and highly sensitive trials, whether it be Leona Helmsley or an organized crime trial, can take place there. The passengers on elevators, as it currently stands, range from judges, witnesses, to the public at-large, to prisoners, and there must be a secure access area to separate those types of prisoners from the public.

Mr. ROGERS. I understand the need, but I do not understand the amount. What makes it so expensive?

Mr. HAYES. It is the renovation costs as opposed to existing construction. We could provide more detail, if you would like.

Mr. ROGERS. Is GSA contributing anything?

Mr. HAYES. No, they are not. They are contributing in the sense that they identified that it is a necessary type of activity. The question of funding was not addressed and, as a result, we are requesting it in our budget.

Mr. ROGERS. They have a handy way of doing that, seeing what is wrong and then fixing it.

Well, I have another question, Mr. Chairman, and I will submit it for the record.

FOLEY SQUARE COURTHOUSE

Mr. EARLY. I thought the Foley Square Courthouse was not built yet.

Mr. HAYES. This is Foley Square in New York.

Mr. EARLY. But I thought that a new courthouse was planned for Foley Square and that it was going to be done on a lease-purchase basis.

Mr. HAYES. As I understand it, that is a few years down the road. This is addressing the immediate problem. Nonetheless, the existing courthouse will continue to be in operation.

Mr. EARLY. The new courthouse will supplement the other one, which I think is 700,000 square-feet; this one will stay in operation when that one is opened.

Mr. HAYES. As I understand it. Now, I may be corrected on that.

Mr. ROGERS. For this kind of money, we could build a courthouse.

Mr. EARLY. In Kentucky. [Laughter.]

Mr. Moore, Mr. Rogers talked about the management of seized assets. I have some questions on that subject that I will put in the record.

ADP AND TELECOMMUNICATIONS PROGRAM

Mr. EARLY. For ADP and telecommunications, you're requesting an increase of $1,820,000 for digital voice privacy base stations and repeaters. In 1990 the Congress provided sufficient funds for the FBI to purchase base stations and repeaters for its DVP system. Now, since the Marshals and the FBI are basically located in the same geographic location, if not the same building, why can't you utilize or share the equipment already secured by the FBI, have some kind of cost-sharing arrangement?

Mr. MOORE. We are at the final stage of the completion of our system, which started in 1980. The question that you raise is one that has been asked previously and was thought not wise, for a number of reasons, including the different missions and needs of the respective agencies.

The Marshals system is approximately 85 percent complete now. The costs of including the Service in the FBI system would be significant. The $1.8 million requested completes the fixed portion of the U.S. Marshals system. Using the FBI system means starting from scratch, at a cost of approximately $125 million.

SENTRY SYSTEM

Mr. EARLY. I have a couple more questions on that and I will put them in the record for you to answer.

It has been suggested that due to the costs and interaction with the Bureau of Prisons, the U.S. Marshals Service should have a link with the Bureau of Prisons Sentry System. I understand that currently the Marshals telefax prisoner information to the Bureau of Prisons, while doing the same data in its own system would result in a time-consuming double-entry. Why do so few district offices have a sentry terminal?

Mr. MOORE. I think it is important to note that the Bureau of Prisons and the Marshals Service do work from some common data elements but in other instances their needs are divergent. The Marshals Service needs to track prisoners who are awaiting trials and this creates a demand that sentry was not designed to support.

The Sentry System is a useful source of information but it is not interchangeable with the Marshals system. There are areas where it is important to pass on basic information regarding any prisoner and, in fact, we do that on a number of occasions. Funding constraints have made it impossible for us to do it nationwide, but in the areas where we tend to use it most frequently, we do have that capacity.

Part of the difference, also, is the fact that where the Bureau of Prisons' systems are located are not necessarily where we have the Marshals Service locations. We tend to have many more district offices than BOP would have, and so we cannot really access them at every location, but we do have them, for example, in our headquarters, our prisoner transportation headquarters in Kansas, where we interface most frequently with BOP in the scheduling of prisoner transportation. We have them at Marshals offices in Fort Lauderdale, Miami, San Francisco, Los Angeles, and the District of Columbia. We do have Sentry coming on-line in 10 other locations and 5 more projected after that. So, we share with you the good reason for wanting to have access to that.

Mr. EARLY. I want you to provide for the record, Mr. Moore, what your plans are to improve that situation.

Mr. MOORE. Yes, sir.

[The information follows:]

SENTRY SYSTEM

As resources become available, Marshals Service offices that are co-located with Bureau of Prison facilities can be given access to SENTRY at a nominal cost since the USMS could share existing BOP lines. Long-term plans include OBIS, the "Offender Based Information System," to support a broad range of USMS needs for information on Federal offenders. Discussions are scheduled to define the USMS needs to share information with BOP and to approach BOP about establishing a SENTRY-OBIS interface. The USMS also plans to hold similar discussions with the U.S. Courts and U.S. Attorneys.

SEIZED ASSET MANAGEMENT SYSTEM

Mr. EARLY. I found Mr. Rogers' seized asset questions to be—that is an area where you spend money to save money, I would think. With regard to seized asset automation, I understand you are planning to replace the National Asset Seizure and Forfeiture System, NASFS, with the Seized Asset Management System, SAMS, by early 1991. How much will the SAMS cost and are you planning to fund it from the Assets Forfeiture Fund?

Mr. MOORE. Some of it has been funded through the Asset Forfeiture Fund and that is being looked at now as to whether that will continue.

Mr. EARLY. How much will it cost?

Mr. MOORE. We are estimating approximately $3.9 million over a 7-year period, from fiscal 1988 until 1994.

Mr. EARLY. That seems to be very slow, for a $3.9 million automation system. It will be outdated before it is completed. I recognize the shortage of money, but why don't we spend money to get that on-line immediately. For the record, would you provide what you could do, how you could improve that time frame. From your responses to Mr. Rogers, there is an awful lot of money to be had from the Asset Seizure and Forfeiture Fund. Because we are a bureaucracy, we evidently do not sell or dispose of the property too quickly. That is discouraging and the American people cannot understand that and I do not, either.

[The information follows:]

Seized Asset Management System (SAMS)

SAMS is replacing an inadequate and outmoded property inventory and management information system that has been in existence since 1984. SAMS has been under development for two-and-one-half years (since September 1987), and is currently operational in four pilot districts. We anticipate installing it in an additional 12 districts by August 1990, and completing its installation in 1991.

FUNDING FOR SEIZED ASSET MANAGEMENT SYSTEM

Mr. Early. Why has the department not requested specific funding for SAMS in 1990 or in the 1991 budget submission?

Mr. Moore. When the 1990 and 1991 budgets were prepared, the Department contemplated the use of the Forfeiture funds for the SAMS project. The next realistic opportunity to request appropriated funding is through the 1992 budget process and the Department is currently considering all funding alternatives to fulfill the SAMS requirements for 1990 and 1991.

ASSET FORFEITURE TRACKING SYSTEM

Mr. Early. Do you have an automation expert with the Marshals Office?

Mr. Moore. Yes, sir.

Mr. Early. Okay. Regarding AFTRAK, I understand that the asset forfeiture tracking system, which is supposed to track these assets, has serious data omissions, redundancies and data quality problems. Can you provide the Committee with details of a plan to correct problems in the AFTRAK system? If you do not automate, we will never catch up. The numbers that you gave Mr. Rogers are just going up like that. If you suggest that we are getting $500 million from it annually, I do not know what it could be if it was automated and you sold the property more quickly? I want you to provide your estimates for the record, please. I want you to tell us how long it will take to correct data and program deficiencies, how much it will cost and how you are planning to fund the needed corrections, 28 U.S.C. 524(c)(6) requires that the Congress be provided with annual reports on the Assets Forfeiture Fund and on forfeited property. Considering the status of your tracking system, can you certify the accuracy of these reports?

Mr. Moore. Congressman, in the first instance, the AFTRAK is not a Marshals system. That is a Department of Justice system to which the Marshals Service provides data.

Mr. Early. Wait a minute, Mr. Moore. Justice blames the Marshals for everything, why shouldn't they blame you for this? [Laughter.]

Mr. Moore. The inventory system the Marshals Service uses to provide the data to the Department is reliable, and it is one that I feel I can certify.

Mr. Early. Well, I would like that information.

[The information follows:]

Asset Forfeiture Tracking System

The asset forfeiture tracking system, known as AFTRAK, was designed to be a management information system for senior Department management. It is not an operational support system in the sense that the participating agencies do not use it as a system of record or use it to execute or record forfeiture activities. Each of the participating agencies has its own automated information system to support day-to-day case activity.

The AFTRAK data base is recreated each month by integrating extracts from the operational support data bases of the numerous agencies participating in our asset forfeiture program. Thus, the AFTRAK data base is as good as the data bases maintained by the various participating agencies. Initially, it was believed that this approach was the least costly and most expeditious way to gather management reports on the entire forfeiture program. Unfortunately, there are problems with the source systems that have a direct effect of the quality of the AFTRAK system. These problems have resulted in serious data omissions, redundancies and data quality problems.

The lack of complete, accurate and timely information on the entire asset forfeiture program was a prime factor underlying two important actions by Attorney General Dick Thornburgh. First, in October 1989, the Attorney General created the Executive Office for Asset Forfeiture within the Office of the Deputy Attorney General to provide increased oversight to all aspects of the Department's asset forfeiture program. He directed this new office to develop a single, integrated information system to capture and maintain operational information on all aspects of the forfeiture process. Second, in his December 1989 report to the President under the Federal Managers' Financial Integrity Act, the Attorney General reported the asset forfeiture program as a material weakness citing the inadequacy of existing tracking systems for seized assets.

The Executive Office for Asset Forfeiture has initiated several projects to remedy these problems. In October, an action plan was formulated by the Executive Office and approved by the Office of the Attorney General. This plan reflected both a short-term and long-term approach to forfeiture information management. The short-term approach involved assessment and evaluation of AFTRAK problems with a view to implementing corrective actions. Special software programs were written to evaluate the quality of data being provided each month by the various source systems. Since January, each of the participating agencies has been receiving a data assessment to serve as a guide in correcting problems with their existing internal systems. Further, the Executive Office initiated a case reconciliation project within the Department. The U.S. Attorneys, the Drug Enforcement Administration and the Federal Bureau of Investigation have been requested to reconcile their caseload inventory with the seized asset inventory maintained by the U.S. Marshals Service. This project is being conducted in phases and is intended to ensure that all agencies agree regarding what property is under seizure and the status of the property and the underlying cases. This project has identified numerous errors, omissions, and missed communications. We are very encouraged that this project will result in measurable improvement in the data maintained in the agency systems.

Yet, it is also clear that simply correcting data in existing systems will not eliminate all deficiencies in current program related information. Therefore, in November, the Executive Office began the process of documenting the information management requirements of all participating agencies with a view toward developing an integrated system design that will meet the needs of all agencies for operational support while still satisfying the management information needs of senior Department officials. This entire project will be monitored within the framework of the Department's internal controls system.

Over the next several months, the collective information management requirements of the participating agencies will be documented and validated, the functional design and a possible technical design of an integrated asset forfeiture information system will be developed, and the expected costs and probable schedule for implementation of the new system will be developed. When these aspects of the information systems initiative are completed and approved, we will be able to cite specific cost estimates and time frames for correction of these deficiencies. At this time, we anticipate it will take eighteen to twenty-four months to implement an integrated system. We plan to take full advantage of past investments in asset forfeiture information technology, wherever possible, not only to reduce cost but also to save time. We share your desire that modern technology be put into place as quickly as possible to improve the efficiency and productivity of this program, and will ensure that this project receives high priority for allocation of monies under the Assets Forfeiture Fund appropriation.

LIMIT ON FEES COLLECTED

Mr. **Early**. A couple of years ago the Committee removed the limit on the fees collected for service of process. How much did you collect in fees in 1989 and 1990?

Mr. **Hayes**. In 1989, fees collected for service of process were about $1.4 million.

Mr. **Early**. I do not know why we should reinsert the words "not to exceed $1 million." You have all the additional service of process, and the security requirements; you are not only responsible for the judges, but also for their wives and children, if there is threat, isn't that correct?

Mr. **Moore**. Yes.

Mr. **Early**. You are not doing enough with automation. We are talking about the problems of transporting prisoners great distances between jails and courts, even suggesting that in D.C. it is one Marshal for 10 prisoners. I do not know why you would suggest removing or changing the provision which allows you to retain the maximum amount of fees.

That is just an opinion. It is another case of OMB coming in where they do not know what they are talking about and they arrive at an amount of money, and it is all theory and not real.

Mr. Rogers, do you have any more questions?

NATIONAL PRISONER TRANSPORTATION SYSTEM

Mr. **Rogers**. Just one brief one. What do you call your airline?

Mr. **Moore**. Con Air. [Laughter.]

Mr. **Rogers**. How is that working?

Mr. **Moore**. The National Prisoner Transportation System, is a success story. It allows us to deliver a service more quickly, more efficiently. What it does is limit some of the other problems we are talking about, these 4-hour, 6-hour prisoner transportation drives, that if we did not have NPTS, is what we would be doing. We would just be doing more of that.

Mr **Rogers**. How many planes are in that airline?

Mr. **Moore**. We have two 727's and this year we will use the Assets Forfeiture Fund to finish retrofitting some of the Saberliner smaller aircraft, and we also have some other smaller planes. You may have read that we lost one to the bad guys, that we had seized from them, that they stole out of Miami. We have not recovered it yet.

Mr. **Rogers**. You mean they stole one from you?

Mr. **Moore**. We took it from them and they stole it back. They didn't know it was ours, I do not think. We have no reason to believe that they singled us out, other than the fact that it looked like it was a plane that would go long distances.

Mr. **Rogers**. So, when will you have the smaller planes in service?

Mr. **Moore**. They are coming on-line now.

Mr. **Rogers**. Well, that should be a great relief.

Mr. **Moore**. It is a big relief. Again, it is a new program, and competing with the private sector to attract qualified people to fly those planes and to manage that program is a big challenge.

Mr. **Rogers**. I know that the big planes fly regularly.

Mr. **Moore**. Yes, sir.

Mr. **Rogers**. Will the small ones do the same?

Mr. **Moore**. It is our intention or hope that we can get them into a regularly scheduled airline service, not only for Federal prisoners, but when, and if available, to State governments as well.

Mr. **Rogers**. I will tell you, if you get it to running half-way efficient, we may want to buy tickets, because with the regular airlines, half the time we cannot get tickets. [Laughter.]

A very close personal friend of mine is your Marshal for Eastern Kentucky, Sherman Hansford, and I will be with him this weekend, in fact, at a social occasion. He tells me the nitty-gritty of some of the end of the Marshals Service and he says to give you his regards.

Mr. **Moore**. Thank you.

Mr. **Rogers**. Thank you, Mr. Chairman.

CARE OF U.S. PRISONERS

Mr. **Early**. There is a large increase, a 25 percent increase of $34,091,000, for the care of prisoners, is this due, Mr. Moore, to the increasing number of jail days, the average stay in jail, the average cost or a combination of all?

Mr. **Moore**. It is all of them. It is the number of trials, and it is, as you mentioned earlier, the other resources going into other components of the criminal justice system, such as new Assistant U.S. Attorneys. Again, when you have more trials, you see the pretrial detention period expanding and that certainly puts an additional burden on the number of days that we now have prisoners in pretrial detention, compared to the earlier periods.

I do not think you can point to any one factor to explain the phenomenon. As I mentioned earlier, the sentencing guidelines, also have a direct impact on the willingness of defendants to go to trial, as opposed to a negotiated plea

Mr. **Early**. For the record, please provide the actual 1990 information to date for the number of jail days used, the average stay in jail and the average cost, and compare that with the comparative date in 1989.

Mr. **Moore**. Yes, sir.

[The information follows:]

Care of U.S. Prisoners

For the first quarter of 1990, the total number of contract jail days are 749,296, an increase of 34 percent over the first quarter of 1989 when we had 557,537 jail days. To date in 1990 the average length of stay is 52.8 days and the average cost per day is projected to be $41.48. The total number of contract jail days for 1989 was 2,478,146, the average length of stay 41 days and the average cost per day was $39.50.

JUDICIAL SECURITY

Mr. **Early**. Mr. Moore, the budget seems so inadequate to this member. I can think of one or two cases—and if the information is confidential, and for some reason should not be cited, do not cite it. The added security for the Lehder trial in Florida; in my own State, we could not guarantee security. It is embarrassing for a State. We could not guarantee security in the Boston court for a trial involving allegations related to terrorism where the defendants that were incarcerated for 15 years. They had to be tried, but we had to move them to Springfield, Massachusetts.

I understand the added cost to the Marshals service was astronomical. Could you or any of your staff tell the committee what it was, what range?

Mr. MOORE. I do not have the exact figure. I can tell you that, to my knowledge, the trial that you are referring to was the most expensive one that we have had to date. I can tell you that the numbers of those kinds of trials are increasing rapidly, in terms of what we identify as high-risk trials that require us to bring in additional resources and personnel. The problem with this is that today it may be in Massachusetts, tomorrow it may be in Des Moines.

You just cannot predict with any degree of certainty where high risk trials are going to be and staff up. The result is that we constantly see very dedicated deputies being sent from their district offices on TDY to other locations, and so there are a lot of contingencies and planning that have to go into preparing for those kind of high-risk trials. I would be happy to provide the committee, as well, with the increasing numbers of them over the years.

Mr. EARLY. I want the increasing number in 1990 and what it might be in 1991. I would also like to have the costs of that trial to the Springfield Marshals Office.

Mr. MOORE. Yes, sir.

Mr. EARLY. And can you tell the committee the cost for the Lehder trial?

Mr. MOORE. I don't have the figures on that, but I can provide it.

Mr. EARLY. You can do that for the record, as well.

[The information follows:]

JUDICIAL SECURITY

In 1990, sensitive trials are expected to increase 15 percent over the 1989 level. We estimate sensitive trials in 1991 to be 30 percent over the 1989 level.

The actual costs of the Lehder-Rivas trial in Jacksonville, Florida, and the Levasseur trial in Springfield, Massachusetts are as follows: *USA* vs. *Lehder-Rivas, et al.*, $2,140,853; and *USA* vs. *Levasseur, et al.*, $4,403,197.

MARSHALS RESPONSIBILITY REGARDING NORIEGA

Mr. EARLY. Aren't you going to have added responsibility with regards to Noriega, as far as security?

Mr. MOORE. We already have. As you know, we were responsible with DEA for bringing Mr. Noriega back and then we were responsible for the first period of time when he was in the United States for maintaining his custody. Yes, of course, it calls on us to provide those additional resources. It is when you have that and you have the coal miner's strike and you have the Judge Vance bombing, that it really tests the ability of an agency to respond with all its resources.

We personally feel very proud of the way the Service acquitted itself during that period of time, but I would be less than candid if I did not tell you that it has put a tremendous strain on us, through personnel and fiscally, during this period.

Mr. EARLY. You are an attorney, Mr. Moore?

Mr. MOORE. Yes.

Mr. EARLY. Do we always have an attorney in this position?

Mr. MOORE. The earlier Director, whom I respect, was not an attorney and I do not think he wanted to be one. [Laughter.]

Mr. **Early**. The Marshals Office has been running efficiently and I do not want to embarrass Mr. Rogers or Mr. Smith, but now we have put a lawyer in charge and we are going to blame the lawyers. The fact that we do not give you enough money to do the job, that is your problem.

Mr. **Rogers**. Things have been shaping up lately, coming around. [Laughter.]

Mr. **Early**. Mr. Moore, I want to thank you for your testimony. I really think your agency has tremendous responsibilities, but I do not think you have nearly the resources needed to do the job. I just wish you well. People who have been in the Marshals Service really handle their jobs well.

Mr. **Moore**. Thank you for your support and we will do the best with the money that we are given.

Mr. **Early**. Thank you very much.

With that, we will adjourn this subcommittee until 10:00 o'clock tomorrow morning.

[The following questions were submitted to be answered for the record:]

QUESTIONS SUBMITTED BY CONGRESSMAN EARLY

UNITED STATES MARSHALS SERVICE

Seized Assets Management

QUESTION: You request an increase of $6.2 million and 134 positions to enhance management of seized assets. Why are you requesting additional appropriated funds for Federal employees and their associated space and equipment costs, when you could contract out these services and be reimbursed from the Assets Forfeiture Fund?

ANSWER: The $6.2 million and 134 positions requested for seized asset management teams will work with the FBI, DEA, and USA in all phases of seizure planning. These are criminal cases of the most sensitive nature, confidentiality and security requiring direct government involvement. The use of contractors is simply not appropriate for these law enforcement functions.

We will continue to use contract services for post-seizure activities in the management of properties. This is a legitimate and cost effective means to manage the seized assets under government protection.

QUESTION: Assuming that seizures begin to decline over the next several years as our drug law enforcement efforts take hold and your management workload declines, will it not be easier to reduce contract support for this management than to try and cut back on Federal employees?

ANSWER: We believe that the opposite will take place and seizures will continue to increase. Increased seizure activity will be fueled by an influx of prosecutors, a build-up of Asset Removal Teams within DEA and FBI, and the passage of new money laundering statutes.

ADP and Telecommunications

QUESTION: You request an increase of $1.5 million for the District Automation Project. Why are these funds needed and what would be the impact if they were denied?

ANSWER: The $1.5 million provides improvements that are badly needed simply to keep pace with operational/informational requirements. The request includes $850,000 to upgrade and expand the obsolete district office computer equipment, much of which is based on a design seven years old, which is generations ago in computer terms. The request also includes $250,000 for networking and thus improving information sharing and transmittal among the 15 largest district offices and $400,000 to upgrade peripheral equipment (printers, modems, etc.) and for improved security measures for data collection and transmittal.

Denial of the funding requested guarantees system degradation and continued use of obsolete technology, at a time when the Service desperately needs better and more timely program and financial information to support its mission.

QUESTION: What is the full cost of the District Automation Project, and will it connect all 94 district offices?

ANSWER: Through 1990, it is estimated that $2.8 million of Marshals Service Salaries and Expenses funds will have been spent for this project.

While the present system provides automation in every district and district/headquarters communication capability, it does not provide networking capability. FTS 2000 will permit districts to be connected via existing District computer equipment.

Assets Forfeiture Fund

QUESTION: At a time when we are trying to enhance drug law enforcement efforts, why are you reducing amounts available for awards for information in 1991?

ANSWER: Since its inception, the Fund has been recognized as a generator of monies that could be used to expand the overall law enforcement effort. Initially oriented towards drug enforcement, our authorities have been expanded to allow the Fund to be used to support investigations of violations of the money laundering and Racketeer Influenced and Corrupt Organizations (RICO) statutes. Nevertheless, it has been clear from the beginning that the Fund was to be used to supplement the funds appropriated for these purposes to the investigative agencies, not to supplant those funds. Operational funding for the investigative agencies (e.g., funds to pay awards) should not be dependent on uncertain amounts generated by the asset forfeiture program.

For 1990, the total requests from the participating agencies for funding subject to the $100 million appropriation limitation exceeded $143 million. However, less than $28 million was sought for award payments. Even though the agencies sought 43 percent more, in total, than was appropriated, they sought 25 percent less than was planned for awards. In part, this represents a reassessment of requirements by the investigative agencies.

Warrant Information Network (WIN)

QUESTION: I understand you have experienced an 8-year delay in implementing a system to process and store warrant information and that some Federal warrant information is still maintained on 3 x 5 cards, and monthly warrant status reports are compiled from these

records in lieu of computerization. What is the status of the Warrant Information Network (WIN)?

ANSWER: For the last three years, 80 percent of the Service's primary fugitive warrant caseload has been tracked by WIN. This caseload originates from Federal courts in roughly one-third of the Service's field offices. The WIN system only tracks primary (Marshals Service) fugitive warrants. A manual 3 x 5 card type system is still used to track other felony and misdemeanor warrants in these field offices. The remaining two-thirds of the Service's field offices continue to use a 3 x 5 card type tracking system for all warrants.

However, we have introduced a new statistical tracking method automating a portion of the statistical reporting requirement.

QUESTION: Will the WIN include all Department of Justice (DOJ) warrants?

ANSWER: The Service does not plan to expand the WIN system to include all DOJ warrants.

Another Marshals Service system currently under development is the Offender Based Information System (OBIS), which will track all Federal warrants as well as important investigative and prisoner information. The current implementation date of OBIS is late 1991.

QUESTION: Can other DOJ law enforcement agencies access WIN?

ANSWER: The Service currently permits WIN access through our representative at the El Paso Intelligence Center (EPIC) and at INTERPOL National Central Bureau, Washington, D.C. We anticipate WIN access in the future for the Treasury Department's Financial Crimes Enforcement Network (FINCEN).

THURSDAY, MARCH 15, 1990.

BUDGET REQUEST

Mr. SMITH. Continuing with our review of the Department of Justice, we will now hear testimony from the Drug Enforcement Administration. The DEA requests $700 million in fiscal year 1991, an increase of over 20 percent above FY 1990 appropriations. We will insert in the record at this point the DEA fiscal year 1991 budget justifications.

Drug Enforcement Administration
SUMMARY STATEMENT
Major Resource Initiatives
Fiscal Year 1991

The Drug Enforcement Administration (DEA) requests 6,112 positions (2,919 Special Agents), 5,697 workyears, and $700,000,000. This includes program enhancements of 744 positions (408 Special Agents), 372 workyears, and $121,986,000. In addition, DEA is requesting 963 positions (749 Special Agents), 837 workyears, and $91,316,000 as part of the 1991 Consolidated Organized Crime Drug Enforcement (OCDE) budget request, including a net increase of 126 positions (93 Special Agents), 50 workyears, and $20,550,000. OCDE resources are contained within the Department of Justice Interagency Law Enforcement Appropriation and will be allocated to DEA on a reimbursable basis.

DEA utilizes a comprehensive, agencywide strategic planning process to identify long-term policy goals and derivative management objectives. In conjunction with the strategic plan, DEA Special Agents in Charge develop Field Management Plans which outline specific action plans, including resource requirements, for meeting agency objectives. DEA's 1991 budget request is the product of this planning process and is designed to provide the necessary means for implementing DEA's strategy. The resources identified in the 1991 budget request have undergone close scrutiny from all levels of management thereby providing an authoritative declaration of the policy, enforcement initiatives, and the resources required to respond the challenges confronting drug law enforcement.

During 1989, DEA's enforcement initiatives once again established record levels for arrests, convictions, and asset seizures. DEA arrested 25,618 violators, an increase of 6.8 percent from last year. Convictions totalled 15,492, an increase of 18.2 percent of 1988. Further, the value of assets seized by DEA totalled $976 million in 1989, a 45.6 percent increase over the $669 million seized in 1988. The value of asset seized exceeded DEA's budget authority for the fourth consecutive year.

Notwithstanding DEA's advances, the drug crisis has escalated to a level more costly and deadly than was previously believed possible. Day after day, news accounts throughout the country report of the increasing drug-related violence terrorizing our cities. Unfortunately, this trend does not show signs of abating and, in fact, has affected every major metropolitan area in the United States. The drug crisis has also produced an insatiable demand for increased DEA resources in every Field Division, because DEA's efforts, intensively concentrated within a targeted area, cause local disruption to drug trafficking organizations, which in turn provides the community with a belief that progress is being made toward a problem that would otherwise seem insoluble. Unfortunately, significant progress against drug trafficking requires much more. DEA's operational plans require consistent and sustained growth in Special Agent strength in order for its responsibilities under the National Drug Control Strategy to be implemented successfully.

This request also corrects continuing deficiencies in DEA's infrastructure for both support staff and equipment. During the past several years DEA has obtained significant increases in its Agent work force. In fact, DEA's staffing has increased by 50 percent since 1982, causing many Divisions to become diverse organizations with up to 500 employees. Consequently, the workload for support employees, at both the Headquarters and field levels, has increased exponentially. DEA has responded to this support deficiency in a variety of ways: in many instances, Agents or Intelligence Analysts assume collateral duties that do not fully utilize their talents; equipment is kept in service past its useful life, often compromising safety; and reporting is often done late or not at all. DEA's support shortfalls are creating a variety of unacceptable situations which cannot be tolerated in the agency with lead responsibility for eliminating the number one crime problem facing the Nation.

This budget request provides funds for all facets of DEA's operational support infrastructure, including intelligence, laboratory services, field administrative and Headquarters support, investigative equipment, and air support of DEA's domestic and foreign operations. Previous budget requests have utilized staffing projections and analyses of an administrative shortfall to justify its growing support requirement. This year, DEA bases it request simply on the critical relationship of enhanced support resources to agency operations. The initiative is so critical to DEA, in fact, that it is the highest ranked funding initiative for 1991.

Set forth below are DEA's 1991 funding initiatives:

INITIATIVE I: EXPAND DEA'S INVESTIGATIVE AND ADMINISTRATIVE SUPPORT FUNCTION

Request: 121 positions (24 Special Agents), 60 workyears, and $45,976,000.

Since 1982, DEA has grown by nearly 2,000 positions, including more than 1,000 Special Agent positions—this represents a 50 percent increase in total staffing during an eight year period. At the same time, the drug law enforcement mission has become more complex, requiring significant new approaches to attacking the drug trafficking menace. As the size of the agency increases, the workload for professional, administrative, and technical support increases exponentially. Although DEA has been fairly successful in obtaining clerical positions to provide direct support to new staff, it traditionally has been unable to provide an adequate support infrastructure to the agency as a whole. Further, because DEA has been required to absorb many uncontrollable increases over the past several years, resources have been siphoned away from the traditional capital-intensive programs, leaving insufficient replacement funds for such basics as vehicles, aircraft, and equipment installation.

This request addresses the administrative and equipment needs that this rapid growth has engendered. The initiative includes funds for field administrative support functions, investigative equipment, and for air support of DEA's domestic and foreign operations.

INITIATIVE II: TARGET AND IMMOBILIZE MAJOR TRAFFICKING ORGANIZATIONS

Request: 601 positions (366 Special Agents), 301 workyears, and $71,133,000.

This initiative addresses DEA's primary investigative mission and the resource shortfalls currently confronting the enforcement programs. As previously mentioned, DEA requires a substantial infusion of resources to fulfill the existing demand for Special Agent resources and to provide for expansion of successful enforcement programs in the near future. Using DEA's Field Management Plans, as well as assessments of Headquarters Drug Investigations Sections and the Office of Intelligence, DEA has categorized domestic cities into three levels with regard to the drug threat they represent and has developed staggered resource requirements based on this classification. The highest category of need includes five cities requiring two new enforcement groups each, the second level incudes ten cities requiring one additional group, and the third contains the remaining four DEA Divisions, for which no current enhancement is requested.

Of the Agents requested for this initiative, 36 will be assigned to the State and local task force program to convert nine successful provisional State and local task forces to program status. This initiative also includes resources to support targeting and immobilizing major trafficking organizations through enhancements to Special Enforcement Operations/Programs (SEO/P), intelligence, domestic cannabis eradication, and chemical control. The Intelligence program enhancement continues the effort, which began in the 1990 budget, to correct the shortfall between investigators and intelligence analysts.

INITIATIVE III: EXPAND DEA'S FOREIGN DRUG SUPPRESSION/ENFORCEMENT PROGRAM

Request: 22 positions (18 Special Agents), 11 workyears, and $4,877,000.

Foreign countries are the principal producers of cocaine, heroin, and marijuana for consumers in the United States. Consequently, DEA views enforcement efforts targeting the supply source as the most crucial component in the National Drug Control Strategy. Essential to initiating international investigations and SEO/Ps is an established framework of intelligence and cooperation which can only be established through long-term liaison within the host country. DEA's request includes opening one new foreign office in Salta, Argentina and increasing staffing in 13 existing offices in order to accomplish an expansion of the foreign program.

Drug Enforcement Administration
Salaries and Expenses
Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses

For necessary expenses of the Drug Enforcement Administration, including not to exceed
$70,000 to meet unforeseen emergencies of a confidential character, to be expended under
the direction of the Attorney General, and to be accounted for solely on his certificate;
expenses for conducting drug education programs, including travel and related expenses
for participants in such programs and the distribution of items of token value that
promote the goals of such programs; purchase of not to exceed [703] ^ passenger motor 1,293
vehicles of which [489] ^ are for replacement only for police-type use without regard 775
to the general purchase price limitation for the current fiscal year; and acquisition,
lease, maintenance, and operation of aircraft; [$492,180,000] ^ of which not exceed $700,000,000
[$1,200,000] ^ for research shall remain available until expended; and of which not exceed $1,800,000
[$1,700,000] ^ for purchase of evidence and payments for information, not to exceed $4,000,000
[$9,638,000] ^ for contracting for ADP and telecommunications equipment, [and] not to $4,000,000
exceed $2,000,000 for technical and laboratory equipment, ^ shall remain available until and not to exceed $20,550,000 for the purchase of aircraft and equipment,
September 30, [1991] ^ [Provided, That not exceed $30,000 shall be available for 1992: and, of which, not to exceed $10,000,000 shall remain available until
official reception and representation expenses.] expended, for planning, construction, renovation, maintenance,
remodeling, and repair of buildings and the purchase of equipment
incident thereto for a new aviation facility.

(Reorganization Plan No. 2 of 1973; Reorganization Plan No. 1 of 1968; 21 U.S.C. 801-966 as amended; 40. U.S.C. 304; Department of Justice Appropriations Act, 1990; additional authorizing legislation to be proposed.)

[For carrying out efforts at National Drug Control, $64,301,000, for additional agents, support personnel and equipment for improved domestic drug law enforcement; for expanded cleanup and disposal of toxic chemicals from clandestine laboratories; to expand State and local task forces; to complete the nationwide placement of asset removal teams; and to improve intelligence programs.]

(Department of Transportation and Related Agencies Appropriations Act, 1990.)

Explanation of Changes

1. The first change reflects the authorization to purchase 775 replacement passenger motor vehicles and 518 new vehicles in support of 408 new Agents, 96 State and local police officers and 14 new diversion investigators.
2. The second change reflects the authorization to purchase 775 replacement vehicles.
3. The third change increases the authorization for research.
4. The fourth change increases the authorization for two-year funding for the purchase of evidence.
5. The fifth change decreases the authorization for two-year funding for ADP and telecommunications.
6. The sixth change authorizes two year funding for the purchase of aircraft and related equipment.
7. The seventh change authorizes no-year funding for a new aviation facility.
8. The eighth change removes the language authorizing official reception and representation expenses.
9. The ninth change removes the language included in the Department of Transportation Act for 1990.

Long-Range Goal: Reduce the domestic supply of illicit drugs and disrupt permanently or eliminate the organizations trafficking in those drugs.

Major Objectives:

- o Investigate, arrest, and contribute to the successful prosecution of major drug violators throughout the United States.

- Identify and seize drug evidence and non-drug assets used in or derived from the proceeds of the drug trafficking activities of individuals and organizations involved in the illegal drug trade.

- Reduce domestic production and cultivation of illicit drugs.

- Assist Federal, State, and local law enforcement agencies involved in the fight against illegal drug production, cultivation, and trafficking.

Base Program Description: The Domestic Enforcement program includes the enforcement operations of DEA's 19 field Divisions and the DEA Headquarter's program coordinators. The program uses a variety of investigative tools, including confidential informants, undercover operations, and electronic surveillance, to identify and penetrate drug trafficking organizations that operate nationally and internationally. Domestic Enforcement investigations also involve obtaining and using information from intelligence sources and receiving referrals from other Federal, State and local law enforcement organizations. The program's financial investigations (which involve DEA's Asset Removal Teams) identify and trace assets subject to seizure and forfeiture, and lead to the destruction of the economic bases of drug trafficking enterprises. The Domestic Enforcement program does not include resources provided to Special Enforcement Operations/Programs (SEO/Ps), which are contained in the SEO/P decision unit.

Accomplishments and Workload: Beginning in 1990, DEA's OCDE resources were transferred to the Interagency Law Enforcement appropriation managed by the Department of Justice. The accomplishments and workload of DEA employees participating in the OCDE program will henceforth be represented as a program element of the Domestic Enforcement program.

- Arrests and Convictions: Through its Domestic Enforcement activities in 1989, DEA arrested 14,922 individuals, 9,407 of whom were arrested as a result of DEA initiated investigations. Most of the arrests (80 percent) resulting from DEA initiated investigations were from Geographic Drug Enforcement Program (GDEP) Class I and II cases (Class I and II cases are those that DEA identifies as the most significant). A total of 9,541 defendants in DEA cases were convicted in either Federal or State courts. DEA continued a high level of involvement in the OCDE program, participating in 350 cases in 1989.

- Drug Seizures: Through its investigations, DEA's Domestic Enforcement program in 1989 obtained drug removals of 622 kilograms of heroin, 74,438 kilograms of cocaine, 291,442 kilograms of cannabis, and 72,539 dosage units of dangerous drugs. Removals of cocaine increased by 51 percent from 1988 to 1989.

- Asset Seizures: As a result of DEA's continuing emphasis on asset seizure and forfeiture, DEA seized assets valued at $472 million through Domestic Enforcement activities in 1989. Additional assets valued at $369 million were seized through DEA's efforts in the OCDE program.

- Clandestine Laboratory Seizures: To reduce domestic illicit drug manufacturing, DEA and DEA cooperative investigations led to the seizure of 816 illicit drug manufacturing laboratories in 1989.

Two recent examples illustrate the types of cases in which DEA has been involved:

> By surveilling a 300-pound shipment of phenyl-acetic acid in October 1988, the Los Angeles Division discovered one of the largest methamphetamine laboratories ever encountered in Northern California. Hundreds of pounds of precursor chemicals, more than 72 gallons of methamphetamine in solution, four pounds of methamphetamine powder, and large quantities of laboratory glassware and apparatus were seized. DEA estimates that this laboratory was capable of producing as much as 1,600 pounds of finished product each month and the contents in the lab at the time of seizure would have yielded over 2,079 pounds of methamphetamine with a wholesale value of $210 million. Several indictments are anticipated as a result of evidence seized at the laboratory and a number of businesses and five other pieces of property are undergoing forfeiture proceedings.
>
> In May 1989, DEA, in conjunction with the Bureau of Alcohol, Tobacco and Firearms, the Bureau of Land Management, the U.S. Customs Service, the National Guard, and State and local authorities raided three indoor cannabis growing facilities--the largest marijuana production operation ever detected in the United States. Seizures at these three facilities totalled 9,526 sinsemilla plants, 550 pounds of processed sinsemilla, four real estate properties, 20 vehicles, and $25,000 in gold. Continued investigation led to the indictment of 30 defendants and included four Continuing Criminal Enterprise (CCE) indictments against the organizers of the growing operations; these indictments are the first CCE indictments involving an indoor marijuana cultivation operation.

Accomplishments and workload for the Domestic Enforcement program, including the OCDE program element, are as follows:

Domestic Enforcement	1988 Actual	1989 Actual	1990* Estimate	1991 Estimate

Program Change:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Domestic enforcement....................	1,704	1,720	$153,266	2,117	1,927	$191,956	413	207	$38,690

DEA requests 413 positions (300 Agents, 113 support), 207 workyears, and $38,690,000, to enhance DEA's Domestic Enforcement program by expanding enforcement operations in major domestic source cities and providing additional administrative and technical support to domestic field offices.

Field Administration

DEA requests 38 professional/administrative positions, 19 workyears, and $1,743,000 to provide increased administrative and technical support to domestic field offices. This request directly supports the strategic planning initiative to expand DEA's investigative and administrative support function by augmenting field administrative support in key areas of shortage.

During the past several years DEA has obtained significant increases in its agent work force. In fact, DEA's growth has surpassed 50 percent since 1982 and many Divisions have consequently become diverse organizations with as many as 500 employees. For example, the Miami Division now has a staff of 341 Agents assigned to the Division office, nine resident offices, two district offices, and four country offices. In addition, Special Agent strength in DEA's Divisions has expanded by an average of 55 percent while Miami, Atlanta, and New Orleans have realized a 70 percent growth rate. As new Agents are brought on-board and become productive, they generate substantial levels of administrative and technical support workload.

Field offices are responding to this support deficiency in a variety of ways. First, Agents are typically used to staff field office communication centers. When DEA was organized regionally, each Regional Office had approximately eight radio operators to staff the tactical communications center for all offices it supported. DEA is now located in approximately 165 domestic locations and the number of radio operators has not increased. Given the overriding concern to provide tactical radio support to ensure Agent safety, most offices now staff their own communications centers with Agents; this is, however, an inefficient deployment of Special Agent manpower.

Second, DEA has allocated no administrative support positions to its Division offices since fiscal year 1987, creating a support shortfall throughout the field offices. Considering the wide range of functions this category of positions is responsible for, this shortfall has significant internal control implications. Field administrative support duties include: personnel, fiscal, seized assets, facilities, supplies, procurement, property management, mail and file, and evidence. Because there are no positions which can be diverted into this type of function, such as Agents were for communications, the result is that the work simply is not done at all or, at least, not done well. Taking shortcuts, not following established procedures, and not maintaining adequate internal controls are all quite possible given the workload levels.

Of the 38 positions requested, 23 will be technical positions to increase the existing radio operators staff. This enhancement will allow each Division to have a minimum of 2 operators on staff, enabling them to operate the communication center on a 15-hour a day basis. Duty Agents will provide support during non-peak hours. This request also includes 15 technical/clerical positions to increase general field administrative support.

Priority Targeting

DEA requests 375 positions (300 Agents and 75 support), 188 workyears, and $36,947,000 to expand DEA's domestic drug law enforcement efforts in major drug importation and distribution centers throughout the United States. This request directly supports DEA's strategic planning initiative to target and immobilize major trafficking organizations by expanding DEA's priority targeting initiatives.

The demand for drugs of all types remains at an alarmingly high level and as long as this persists, trafficking organizations will provide an ample supply of illicit drugs. Significant changes in demand reduction can only be accomplished in the long term; therefore, effective law enforcement countermeasures are crucial in the interim. The National Drug Strategy requires a determined, focused, and coordinated effort of investigating and prosecuting major drug traffickers in order to ensure that Federal drug enforcement resources are being effectively directed toward the most significant national and international targets where they can have the most lasting impact on the national drug problem.

Key to this effort is the identification and cataloging of the most significant national and international enterprises responsible for drug importation, manufacture, and distribution in the United States. Such a process will require long-term and sustained investigations, including a consistent commitment of the most qualified investigative personnel and, where appropriate, the extensive use of sophisticated electronic and physical surveillance techniques.

This type of intensive targeting requires a dramatic increase of resources in selected cities. This will enable field enforcement operations in these areas to be increased, without detracting from ongoing successful operations. The level of Agent support required extends beyond the acquisition of only a few Agent positions per designated major trafficking center. One or two Agents per office will not achieve the requisite impact. In order to be effective, DEA offices in these primary source cities must add entire enforcement groups to the effort. For example, one or two Agents will not enable an office to initiate more electronic surveillance, given the labor intensity of this kind of investigation. However, an enforcement group of 15 Agents could completely staff a wiretap, even for an extended period of time, without temporarily halting all other aspects of the investigation. A typical electronic surveillance investigation requires at least 15 Agents: two Agents for three shifts to monitor the wiretaps; and three to four Agents for three shifts for physical surveillance.

Demand for increased DEA resources exists in almost every field office. It is not merely the DEA managers who are calling for increased numbers of Agents; more often, it is the public officials and citizens of our cities who are demanding an increased DEA presence. The local disruption that DEA's efforts have on drug trafficking within a targeted area provides a sense that some progress is being made toward a problem that would otherwise seem insoluble. Further, intensive targeting in selected cities also contributes significantly to DEA's overall enforcement effort. Maintaining consistent enforcement pressure nationwide helps to prevent traffickers from shifting operations to weaker cities, thus improving the chances for optimal effectiveness of DEA's special enforcement operations and programs.

Using DEA's Field Management Plans (plans developed by DEA Field Divisions that establish individual office objectives and specific plans for accomplishing them), as well as the assessments of Headquarters Drug Investigations Sections and the Office of Intelligence, DEA has categorized domestic cities into three levels and has developed staggered resource requirements based on this classification. The highest category of need includes the following five cities (which have also been identified as High Intensity Drug Trafficking Areas by the Office of National Drug Control Policy): Miami, New York, Los Angeles, Houston, and San Diego (part of the Southwest Border High Intensity Drug Trafficking Area). Ten cities are classified in level two: Atlanta, Chicago, Dallas, Detroit, Philadelphia, Phoenix, Seattle, Washington, San Francisco, and Denver. Intelligence estimates indicate that each of these cities rate as extensive or moderate in terms of drug trafficking in three of the four drug categories which include cocaine, heroin, marijuana, and dangerous drugs.

DEA proposes to allocate the 300 requested Special Agents as follows: two new Agent groups consisting of 15 Agents per group in the level one cities, and one new group in each of the level two cities; no enhancements are requested in the third category. These resources will allow one to two additional enforcement groups to operate in each of the major trafficking centers. Enhancements of entire enforcement groups will allow these DEA offices to expand significantly their ability to target major national and international drug trafficking networks, infiltrate these organizations, conduct Title III investigations, and perform other labor-intensive activities.

	1990 Appropriation As Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
SEO/Ps...........	559	551	$53,297	559	558	$58,276	596	577	$71,950	37	19	$13,674

Long-Range Goal: Reduce the availability of illicit drugs by immobilizing targeted organizations that are substantially responsible for the importation and distribution of drugs and by focusing enforcement operations on specific drug trafficking problems that are of significant concern to law enforcement.

Major Objectives:

- Develop tailored initiatives to address the most significant drug trafficking problems and organizations.
- Implement actions against identified problems/organizations to disrupt or immobilize drug production and trafficking.

Base Program Description: This program encompasses DEA's priority targeting mechanism for identifying and prioritizing action against drug trafficking problems and organizations which have the greatest impact on the U.S. drug availability. Special Enforcement Operations (SEO) and Special Enforcement Programs (SEP) are DEA's highest priority initiatives. They can be targeted at a specific problem (SEP), such as South American coca cultivation, or a particular organization (SEO), such as the Medellin Cartel. They are typically of the highest level; vary in duration (although SEPs tend to be of a more open-ended nature); managed by Headquarters Drug Investigations Sections; and implemented by domestic and foreign field offices. SEO/Ps require significant expenditures of resources that will focus DEA investigative, intelligence, and support resources on trafficking problems and organizations that account for large proportions of illegal drugs distributed in the United States. The current program includes a total of 18 active Special Enforcement Operations and 17 Special Enforcement Programs.

When this activity first surfaced as a distinct program element in the 1990 budget, it was referenced only as Special Enforcement Operations. During the last year, DEA has further refined its organizational structure to distinguish whether the operational focus is a problem or an organization, as described above.

Accomplishments and Workload: Because the SEO/P initiative has just been formalized, a mechanism has just been developed for overall collection and reporting of accomplishments, workload, and resources. A narrative description of operational accomplishments for 35 SEO/Ps would be too voluminous for this document; however, several recent examples are provided to illustrate the types of cases in which DEA has been involved.

Much of DEA's international drug control efforts are carried out through SEO/Ps. SEO cases typically are among DEA's most effective and important operations. Some examples include Operation BLAST FURNACE, a joint effort of the U.S. and Bolivian Governments aimed against cocaine processing laboratories in Bolivia, which all but ended cocaine production during the summer and fall of 1986; and Operation PISCES, a major money laundering operation involving Panamanian banks, which resulted in the arrest of 400 major violators, seizure of $77 million in assets and 22,000 kilograms of cocaine.

The fluidity and specialization of SEO/Ps make them DEA's most effective and important operations. For example, one SEO targeting the Medellin cartel, linked 70 active investigations in 44 DEA offices worldwide. Last year, the results of this effort included seizure of almost 32 metric tons of cocaine; 1.25 million gallons of precursor chemicals; $21.3 million in U.S. currency; and the arrest of 570 Medellin cartel traffickers. A second SEO targeting the Cali cartel comprises 121 investigations in 57 DEA offices. Last year's results were similarly impressive: the seizure of almost 27 metric tons of cocaine and $48 million in U.S. currency, accompanied by the arrest of 340 Cali cartel members.

Another major SEO, targeting Southeast Asian traffickers operating primarily in New York, has been in operation since February 1987 and currently encompasses 57 active Class I investigations in eight domestic and five foreign offices. During the last two years, this SEO has resulted in arrests of approximately 67 Class I traffickers, seizure of over 400 kilograms of Southeast Asian heroin and $16 million in assets, and the total dismantling of at least five major importing organizations. One particular investigation, which was recently concluded, resulted in the arrest of the principal member, along with nine associates, of a group trafficking Southeast Asian heroin from Hong Kong to New York. This group is believed to be responsible for shipping more than 1,000 pounds of heroin to New York during a two-year period as well as hundreds of pounds to Europe, Australia, and Canada. This investigation uncovered a large scale money laundering operation in which approximately 30 New York bank accounts were used to transfer funds to over 100 accounts in Hong Kong.

In 1988 (the last year for which statistics are available), the Domestic Cannabis Eradication/Suppression Program, which provides financial and technical assistance to States and localities for domestic cannabis eradication activities, was responsible for 6,000 arrests, destruction of 5.3 million cultivated plants and 1,240 indoor growing plots, and seizure of $9.8 million and 2,034 weapons.

Program Change:	1991 Base Perm. Pos.	1991 Base WY	1991 Base Amount	1991 Estimate Perm. Pos.	1991 Estimate WY	1991 Estimate Amount	Increase/Decrease Perm. Pos.	Increase/Decrease WY	Increase/Decrease Amount
SEO/Ps..........................	559	558	$58,276	596	577	$71,950	37	19	$13,674

DEA requests 37 positions (30 Agents and 7 support), 19 workyears, and $13,674,000, including $10,000,000 in program funding for domestic marijuana eradication, to enhance Special Enforcement Operations/Programs (SEO/Ps) such as Operation SNOWCAP in Latin America.

Foreign SEOs/Domestic Replacement Resources

In 1990, DEA formally established and institutionalized its Special Enforcement Operations/Programs initiative. To meet the Administration's funding levels in 1990, the initiative was funded slightly below the 150 Agents that were required. The full request would have replaced the full complement of Agent workyears that foreign SEO/Ps were utilizing from domestic enforcement programs.

Considering that all of the cocaine and heroin, and most of the marijuana consumed in the United States originates in foreign countries, international drug control is an area of primary concern for the U.S. Government. International drug enforcement is crucial for two reasons: first, evidence exists that the excessive supply of drugs creates even greater levels of demand; second, disrupting the first and least lucrative link in the grower-to-user chain will reduce the profits of trafficking organizations at a much smaller relative cost to drug law enforcement.

DEA's international enforcement and suppression programs play a significant role in the implementation of the Federal Government's international narcotics control strategy. Specifically, DEA's role overseas includes encouraging, advising, and assisting host governments in programs to identify and disrupt international trafficking organizations, reduce the supply of drugs, immobilize clandestine conversion laboratories, identify and destroy clandestine staffing areas and airstrips, and reduce the diversion of precursor and essential chemicals and licit drugs. During 1988, and continuing in 1989, DEA utilized the equivalent of 150 Special Agent workyears conducting four major foreign SEOs. The diversion of these resources from domestic enforcement activities to fund these SEO/Ps has created a significant drain on the capabilities of the domestic program to accomplish its wide-ranging mission. The foreign initiatives are expected to continue at an equal or increased level of activity into the 1990's. This enhancement will ensure that DEA's foreign SEO/Ps can continue at current levels, without compromising domestic investigative capabilities.

Domestic Cannabis Eradication

DEA requests $10,000,000 in special funding to assist the State and local governments in their cannabis eradication activities. These funds will be used to augment the efforts of the Domestic Cannabis Eradication/Suppression program, which will be able to provide increased support (including training and funding) to participating State and local governments to target and destroy domestic cannabis cultivation.

According to recent intelligence estimates, the United States has become the second largest producer of marijuana in the world. Domestically cultivated cannabis accounted for 25 percent of the marijuana consumed in the United States last year. As enforcement pressure directed at interdiction and source country eradication intensifies, the domestic growers' market share is expected to increase. Unfortunately, this may be inevitable. The potency of domestic cannabis continues to increase, making domestic marijuana increasingly the marijuana of choice among American consumers. Consequently, the United States could easily become the world's supplier of top quality marijuana, surpassing foreign production.

Further, intelligence has indicated that marijuana trafficking organizations are becoming increasingly sophisticated and extensive. Many groups now control multi-State, and sometimes international, operations that are well financed and highly organized. Frequently, these groups are switching from large outdoor plots to scattered plots and indoor greenhouse cultivation. For example, two growers in Michigan who, prior to their arrest, were cultivating 105 separate marijuana plots throughout the State.

In response to this increase in domestic cannabis cultivation, the Administration's Drug Strategy has called for an expanded national domestic cannabis eradication effort. This increased effort will require concomitant increases in the level of effort by participating States. However, a recent survey of the top marijuana producing States indicates that they have insufficient resources to expand their programs without increased Federal assistance.

	1990 Appropriation As Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Foreign Cooperative Investigations....	291	271	$49,202	291	271	$52,096	313	282	$56,973	22	11	$4,877

Long-Range Goal: Reduce the supply of drugs entering the United States and reduce the amount of illicit drugs cultivated, processed, and consumed worldwide.

Major Objectives:

- Assist the United States Department of State and host country officials in efforts to reduce illicit crop production.
- Disrupt narcotics trafficking as close to the drug source as possible. Focus in 1991 will continue in the areas of: international coordinated operations, legislative initiatives, expansion of DEA's overseas presence, and chemical control initiatives.
- Prevent drugs, ultimately destined for the United States, from entering international trafficking channels.
- Develop the groundwork for international investigations by establishing informant, intelligence, and diplomatic liaison within host countries.
- Increase the number of DEA foreign offices from 67 in 1990 to 68 in 1991.

Base Program Description: The Foreign Cooperative Investigations Program (FCIP) addresses the problem of drugs of foreign origin destined for consumption in the illicit market in the United States. The majority of illicit drugs available in the United States are of foreign origin. DEA's overseas efforts are directed towards encouraging, advising, and assisting host country governments in the development of programs to reduce the supply of drugs at or near the agricultural source; immobilizing foreign clandestine conversion laboratories; identifying export staging areas and interdicting the drugs; and reducing the diversion of legitimate drugs from international commerce. DEA's efforts include maintaining informants and developing intelligence that lead to cooperative arrests and drug removals in the host country and to investigations of United States distributors associated with these supply sources. DEA's presence is at the invitation of the host country. The FCIP program does not include resources provided to foreign Special Enforcement Operations/Programs (SEO/P), which are contained in the SEO/P decision unit.

Accomplishments and Workload: Successes in DEA's foreign operations continued during 1989 with 923 cooperative arrests, and drug removals of approximately 2,769 kilograms of heroin, 3,024 kilograms of cocaine, 13,900 kilograms of cannabis, and 51,576,000 dosage units of dangerous drugs. Foreign offices provided direct operational support to DEA Special Enforcement Programs and Special Enforcement Operations, including Operations SNOWCAP, CALICO, and BOLIVAR. Disruption of the operations of major international cartels trafficking in cocaine, heroin, marijuana, dangerous drugs, and chemical precursors resulted in the accomplishments listed below:

Foreign Cooperative Investigations	1988 Actual*	1989 Actual	1990 Estimate	1991 Estimate
Workhours				
Investigative	155,747	168,573	168,573	172,124

* DEA's statistical databases are continually revised. Figures shown represent the most accurate statistics available, and may differ from those previously reported.

- The International Drug Enforcement Conference (IDEC) continues to function effectively building on the cooperative experience of the IDEC Initiative during 1988. Precursor chemical control legislation has continued to be a high priority in IDEC with approximately one quarter of the participating countries implementing or planning to implement these very effective controls. When DEA began drawing attention to the chemical issue in the early 1980's, none of the 30 participating IDEC countries had chemical legislation. With the enactment of the Chemical Control provisions in the Anti-Drug Abuse Act of 1988, the United States has, with the support of IDEC participating countries, taken the lead in the development of a new and comprehensive chemical program. This success has also led to positive working relationships throughout Latin America and a climate in which to expand chemical control liaison activity into Europe in the 1990's.

- DEA advocates the use of specific legislative tools to control international illicit drug trafficking. DEA contributed to the drafting of the new United Nations Treaty that contains far reaching legal instruments to address this international problem. The major articles of this draft Treaty include provisions to address extradition, precursor chemical control, asset forfeiture, controlled deliveries, and other effective law enforcement techniques.

- The United States and the U.S.S.R. signed a Memorandum of Understanding involving cooperative efforts to combat illegal narcotics trafficking during 1988. The DEA Administrator has traveled on several occasions to the Soviet Union for discussions concerning the increasing drug problem affecting their country. As a result, more specific coordination has been initiated with regard to information exchange on narcotics traffickers and precursor chemicals, and law enforcement training. The initial follow-up visit by DEA's Vienna Country Attache in March 1989 resulted in unexpected openness and enthusiasm by Soviet counterparts.

- Based on information provided by a DEA confidential informant from January 28 to February 4, 1989, the Colombian National Police Anti-Narcotics Unit launched Operation Primavera, targeting the Medellin Cartel's cocaine hydrochloride laboratory production facilities near Puerto Triunfo, Antioquia. Sixty specially trained anti-narcotics troops participated in raids that destroyed 25 laboratories and resulted in seizures of 1,180 kilograms of cocaine base, and hundreds of thousands of gallons and kilograms of chemicals. These laboratories were capable of producing approximately 5,000 to 6,000 kilograms of cocaine hydrochloride per week. The chemicals seized could have produced 88 metric tons of cocaine. DEA's Bogota Country Office continues to assist in follow-up investigations to determine the sources for the chemicals seized.

Program Change:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Foreign Cooperative Investigations....	291	271	$52,096	313	282	$56,973	22	11	$4,877

DEA requests 22 positions (18 Special Agents, 4 technical/clerical), 11 workyears, and $4,877,000 including $505,000 in special program funding, to expand DEA's presence overseas in select source and transshipment countries.

DEA proposes the establishment of one new office in Salta, Argentina (2 Agent positions) and the expansion of 13 existing offices (16 Agent positions). This request includes $505,000 for start-up costs to open the new office. Expansions are planned to enhance successful programs with critical personnel shortages in Bogota, Colombia; Caracas, Venezuela; Guatemala City, Guatemala; Curacao; Asuncion, Paraguay; Tegucigalpa, Honduras; San Jose, Costa Rica; Canberra, Australia; Lagos, Nigeria; Nicosia, Cyprus; Peshawar, Pakistan; Karachi, Pakistan; and Milan, Italy.

Since all of the cocaine and heroin, and most of the marijuana consumed in the United States, originates in foreign countries, it is imperative that DEA focus resources on those countries serving as source, staging, and transshipment points. DEA's role overseas includes encouraging, advising, and assisting host governments in programs to identify and disrupt international drug trafficking organizations, reduce the supply of drugs, immobilize clandestine conversion laboratories, identify and destroy clandestine staging areas and airstrips, and reduce the diversion of precursor and essential chemicals and licit drugs. The breadth of this mission requires DEA to ensure that adequate resources are maintained in previously identified problem areas. Further, the continued success of DEA's Foreign Cooperative Investigation program requires a sufficient level of resources in order to ensure that changing trafficking trends will be adequately identified so that effective enforcement programs can be developed and implemented.

In order to maintain the level of intelligence and operational support to host countries required to sustain an effective world-wide cooperative effort, DEA must enhance its Foreign Cooperative program in the following areas:

- Argentina: Salta, Argentina is located in a remote area that is strategic to the transshipment of cocaine and chemicals. Salta is approximately 150 miles from the nearest DEA office in Asuncion, Paraguay, and the only other DEA office in Argentina is Buenos Aires, almost 250 miles away and staffed with only three Agents.

- Colombia: Colombia is a focal point of DEA's various Latin American initiatives and the Bogota Country Office is overtaxed with providing framework intelligence, liaison support, tactical coordination and oversight for approximately six SEO/Ps. The large number of Agents temporarily assigned make it even more difficult for this office to perform all of its required duties. Because of the significance of Colombia to DEA's foreign strategy, expansion and institutionalization of these and future SEO/Ps is crucial; however, this cannot be accomplished without additional permanent resources for the Bogota Office.

- Venezuela: U.S. Embassy personnel in Port-au-Spain and Georgetown have urged DEA to provide additional resources in Trinidad and Tobago, and Guyana, which provide a staging area for cocaine smuggling. Resources are also required to gather additional intelligence and enhance marijuana eradication efforts by host country officials.

- Guatemala: The Guatemalan chemical control program is designed to be a model for cooperative programs in other countries. This operation will use sophisticated enforcement techniques such as storefronts, undercover operations, and pipeline procedures to restrict the flow of precursor and essential chemicals through Guatemala, Belize, El Salvador, Honduras, and eventually Mexico. This position will also address the increased workload generated by the targeting of high level trafficking organizations. DEA guidance will also be required for ongoing marijuana and opium eradication campaign monitoring.

- Curacao: Enforcement operations within mainland countries of South America are predicted to force Colombian cartels to areas such as Curacao and the Eastern Caribbean. Curacao has minimal enforcement capability when compared to the corrupting influence of the cartels. Aruba has been identified as an increasingly important transshipment point for chemicals manufactured in Europe, primarily West Germany, and destined for Colombia. DEA must be prepared to counter the continued expansion of these criminal enterprises.

- Paraguay: Since the opening of the DEA office in Asuncion in 1988, Paraguay's role in illicit narcotics trafficking has been found to be more significant than was previously estimated. Paraguay is a transshipment area for cocaine and has a considerable marijuana cultivation problem. The country has been identified as a transit location for precursor chemicals destined for laboratories in Bolivia; cocaine processing sites have been sighted along the border with Bolivia. Paraguay's police force requires considerable guidance and training.

- Honduras: When the Tegucigalpa Country Office was opened in 1987, it was intended to be staffed with two Special Agents to cover the neighboring countries of Honduras and El Salvador. Assigning only one Agent resulted in El Salvador remaining the responsibility of the Guatemala City Country Office. Enhanced resources will realign the office to conform with the original plan and, more importantly, will provide resources to pursue the increasing evidence that Colombian cartels are operating in and through Honduras.

- Costa Rica: Ongoing efforts to conduct sensitive investigations, support marijuana eradication, and monitor chemical movement are significant. Expansion programs are needed to address the cargo smuggling of cocaine through Costa Rica and pursue evidence of cocaine conversion laboratories and huge caches of U.S. currency.

- Australia: With only one Agent currently in place, time is spent primarily in administrative functions to support the U.S. Ambassador and DEA Headquarters, or in liaison activity that requires time-consuming travel to New Zealand and the islands in the South Pacific south of the equator. An additional Agent would allow for more operational support and liaison with host country officials and more time-sensitive responses to the many requests for case support from DEA Domestic Divisions.

- Nigeria: Most countries in Western Africa need significant direct support in order to carry out drug investigations. This has been demonstrated during 1988 in Benin and Togo. These countries with no viable narcotics enforcement were provided training in drug identification and smuggling techniques. This training resulted in seizures by Benin Customs and police within a two-week period of 39 kilograms of heroin, and 65 kilograms seized by the Togo Customs in a one-month period. This additional position would enable these kinds of successes to be repeated throughout West Africa. Resources could also be dedicated to continue to pursue well-documented, high-level Nigerian trafficking organizations smuggling heroin into the United States.

- Cyprus: An enhancement in Cyprus will contribute vital intelligence resources needed to fully explore data on Southeast Asian heroin smuggling. Cyprus also serves as a secure meeting place for many international Middle Eastern narcotics traffickers, providing additional intelligence collection opportunities.

- Pakistan and Italy: The additional position in Peshawar will augment operations at the Pakistan/Afghanistan border. Karachi is the major port of the region and would play an important role in increased heroin trafficking out of Afghanistan. Milan is part of the Balkan Route for heroin trafficking. There is a sizable Middle Eastern population in Milan and a concentration of suspected trafficking groups.

	1990 Appropriation As Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Diversion control..	570	560	$37,466	570	560	$40,333	603	575	$42,352	33	15	$2,019

Long-Range Goal: Prevent legitimately produced controlled substances from being diverted into illicit channels.

Major Objectives:

- Conduct investigations of suspect practitioners and evaluations of registrant qualifications.

- Enforce all provisions of the Chemical Diversion and Trafficking Act of 1988. Assist foreign countries to prevent international drug and chemical diversion and eliminate diversion of controlled substances. Provide drug and chemical diversion expertise and intelligence directly in two primary chemical source countries, as well as Headquarters coordination worldwide.

- Assess the ability of the States to control diversion and assist them in their drug diversion control efforts.

- Identify all new substances which are being abused or have abuse potential, determine their placement in the appropriate Controlled Substances Act drug schedule and establish manufacturing quotas.

- Respond in a timely fashion to all requests concerning drug control issues and import/export data.
- Register all legal handlers of Schedule I and II controlled substances.

Base Program Description: The Diversion Control program seeks to reduce, to the maximum extent possible, the diversion of legitimately produced controlled substances into illicit channels at all levels of distribution and to provide leadership and support to ensure that State and local agencies and the pharmaceutical industry establish and maintain programs and policies to control diversion. The areas of the Diversion Control program include the following:

- Criminal Diversion Investigations: It is estimated that 12,000 practitioners are involved in activities that violate the Controlled Substance Act (CSA). Under the Targeted Registrant Investigations Program, DEA identifies the highest level violators responsible for large scale diversion and conducts high quality and timely criminal investigations of their diversion activities.
- Public Interest Revocation Investigations: DEA may deny an application for registration or immediately revoke or suspend a registration if it is determined that the issuance would be inconsistent with the public interest.
- CSA Mandated Cyclic Investigations: Cyclic investigations ensure that diversion does not occur at the manufacturer, distributor or wholesale levels of the distribution chain.
- Pre-registrant Investigations: Pre-registrant investigations ensure that only qualified individuals or companies are authorized to acquire or dispense controlled substances.
- State and Local Assistance: DEA assesses State programs aimed at suppressing the diversion of controlled substances from scientific, medical, research and legitimate distribution channels. In addition, the State Assistance Program provides expertise, leadership and guidance to the States consistent with national objectives.
- Drug Scheduling: DEA is responsible for determining the appropriate placement of controlled substances on the CSA Schedule. There are five established schedules, each of which imposes varying degrees of control over prescribing, distributing, producing, recordkeeping and providing physical security.

- Chemical Act: DEA receives and determines the legitimacy of all import/export declarations of listed chemicals, including foreign firms importing U.S. chemicals. DEA has the authority to stop suspect chemical shipments, to reject applications by chemical companies for "regular customer" status, and to follow up clandestine laboratory seizures to determine chemical supplier culpability, if any, in the diversion of listed chemicals. In addition, DEA is required to audit all U.S. chemical companies once every three years.

Accomplishments and Workload:

- Practitioner Investigation Program: DEA criminal diversion investigations increased by 150 percent during 1989 with a 50 percent increase in fines and seizures as compared to 1988. During 1989, DEA's diversion investigators have conducted 1,505 criminal diversion investigations and 441 public interest revocation investigations which resulted in the arrest of 272 individuals and fines and seizures in excess of $15.9 million. Also in 1989, 214 orders to show cause were referred for administrative revocation, denial or suspension of controlled substance privileges, and 59 administrative hearings were held.

- Non-Practitioner Investigations Program: During 1989, DEA conducted 843 cyclic investigations of drug manufacturers, wholesalers, distributors, import/export firms and narcotic treatment programs. As a result of these investigations, DEA issued letters of admonition to 419 firms citing failure to comply with regulations designed to prevent diversion which will later be used for more stringent action should violations continue. There were 930 pre-registrant investigations conducted during 1989.

- Chemical Control Program: The Chemical Diversion and Trafficking Act requires that United States exporters supply the names and addresses of their foreign customers for the chemicals listed in the law to the DEA for review. A central mechanism has been established to receive and process required declarations on all shipments of listed chemicals to foreign destinations. In order to determine the legitimacy of the foreign firms submitted by United States exporters for regular customer status, diversion investigators were sent on temporary assignment to Mexico, Guatemala, Colombia, Venezuela, Peru, Equador, Jamaica and Costa Rica. Foreign firms in other areas of the world were reviewed by the local DEA office.

  DEA has also established on-going chemical control/monitoring programs in Guatemala, Venezuela, Equador, and Mexico and deployed diversion investigators to certain strategic Latin American countries and Caribbean regions to assess the need for a chemical monitoring and tracking program.

Without exception, all assessments indicated that the establishment of a chemical monitoring program would provide invaluable information in identifying suspicious shipments of essential chemicals enroute to cocaine processing labs in South America. Additionally, these assessments provided information on the volume of chemicals imported, as well as the legitimate need for such chemicals. DEA is developing a microcomputer database and communications system to serve as a chemical import/export information system for Colombia. It is anticipated that this communications systems will be expanded to other key Latin American countries in the near future.

- State and Industry Programs: In March 1989, the Fourth National Drug Conference was attended by 80 high level State drug control officials representing 44 states and jurisdictions. The conference addressed critical and often controversial issues which included chemical control programs to curtail the almost exclusive use of U.S. manufactured chemicals by clandestine laboratory operators in the United States and throughout South America; the increasing problem of prescription drug abuse which now accounts for almost half of the total U.S. drug abuse problem; and the growing problem of steroid abuse by young people.

  To ensure industry compliance with the regulations, DEA conducts liaison activities with the pharmaceutical industry to explain the purpose and intent of the law and to provide clarification of its provisions. Industry liaison initiatives included a national conference for the pharmaceutical industry to identify concerns and problems and to provide mutually agreed upon solutions; the issuance of publications containing important up-to-date information; and DEA participation in national industry and professional meetings.

  The Chemical Control and Diversion Act of 1988 requires DEA to regulate an entire new industry. New regulations affecting fifteen national associations and thousands of chemical handlers are being drafted. Programs have been initiated to educate both the chemical industry and DEA personnel in carrying out the provisions of this law. DEA conducted a Chemical Industry National Conference which was attended by representatives of 53 domestic chemical companies and national associations. DEA conducted seminars with the chemical industry in Houston, Chicago, and New York. Representatives from 300 firms were in attendance. A "Chemical Handlers Handbook" has been developed by DEA which is geared toward assisting the industry in complying with the new law. This handbook is expected to be published in early 1990.

- Drug Scheduling and Quota Programs: DEA has used its emergency scheduling power to control 17 of the most dangerous and prevalent of the controlled substance analogues (designer drugs). To date, 14 other substances have been placed under permanent scheduling, and one more is in the process of being permanently scheduled. DEA has also initiated a risk assessment contract to predict possible new drugs of abuse.

During 1989, DEA permanently controlled two Methylene Dioxy Methamphetamine (MDMA) analogues. DEA completed the preparation of the Critical Review Document and conducted reviews of 37 benzodiazepines and propylhexedreine for the World Health Organization for rescheduling under the Psychotropic Convention. DEA participated in a narcotic raw material policy review with the Department of State, and a study of the scientific and medical utilization and availability of cocaine.

Under the Controlled Substances Analogue Enforcement Act, DEA scientists have provided expert testimony in criminal trials which resulted in the successful prosecution of "designer drug" manufacturers. DEA has also provided technical expertise in quota hearings, in a lengthy administrative hearing related to the scheduling of MDMA, in a hearing concerning the placement of marijuana in Schedule II, and at the Program Planning Working Group of the World Health Organization. Additionally, a microcomputer based electronic bulletin board was designed and developed to provide the most current information on drug analogues, scheduling actions, and listed chemicals to State, local and Federal agencies.

In 1989, 2,500 documents were issued by DEA for the importation and exportation of controlled substances. Additionally, DEA established approximately 900 procurement and manufacturing quotas and processed over 300 exempt chemical and prescription drug product applications.

o Regulatory Support Program: During 1989, approximately 300,000 new and renewal registration applications were processed. In addition to restricting access to controlled substances to a limited number of qualified applicants, this program also provides for an annual income of approximately $15 million which offsets the cost of the registration and diversion investigation programs. This program was also responsible for the issuance of 326,000 order form books for the purchase of Schedule I and II substances during 1989, and the issuance of 85,000 order form requests. In addition, 199 certified statements for use in Federal and State judicial proceedings were issued and responses were prepared for 48 requests from various State agencies for CSA master file lists.

Over 14 million ARCOS (Automated Record and Consolidated Ordering System) transactions were processed in 1989. Drug distribution sales profiles were developed for 339 registrants through the use of ARCOS data. During 1989, approximately 1,500 changes, additions or deletions were made to the ARCOS New Drug Code dictionary.

Through the Diversion Assessment Program, numerous registrants who were involved in large-scale criminal diversion of controlled substances were identified and targeted for investigation. As a direct result of this targeting, three Special Enforcement Operations were initiated which are geared toward eliminating the diversion of controlled drugs and arresting those responsible.

DEA is currently undertaking a study to determine the most efficient and economical means of implementing an electronic ordering and recordkeeping system for controlled substances. An electronic ordering system would enable DEA registrants to use electronic media when ordering all controlled drugs to provide the contemporaneous input of transaction data into ARCOS, to electronically verify CSA registrant information prior to the completion of a transaction and to allow more efficient ordering and reporting of controlled drugs.

The Drug Abuse Warning Network (DAWN) continues to provide trends in abuse of drugs. This information will be particularly useful in the review of the benzodiazepines.
Investigative accomplishments of the diversion control program are presented in the following table:

	1988 Actual	1989 Actual	1990 Estimate	1991 Estimate
Cyclic Investigations	771	843	850	850
Criminal Diversion Investigations*	1,003	1,505	1,530	1,540
Pre-registrant Investigations	1,300	1,300	1,300	1,300
Public Interest Revocation Invest.	370	441	450	450
Chemical Diversion Investigations	...	...	42	56

* Includes all complaint initiated investigations

NOTE: Figures shown represent the most accurate statistics available, and may differ from those previously reported.

Program Change:	1991 Base			1991 Request			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Diversion Control...............	570	560	$40,333	603	575	$42,352	33	15	$2,019

DEA requests a net of 33 positions, 15 workyears, and $2,019,000. This request includes an enhancement of 35 positions (28 diversion investigators and 7 support), 17 workyears, and $2,031,000 to implement the Chemical Control and Diversion Act of 1988 in the Domestic Divisions. In addition, chemical movement intelligence support will be provided at Headquarters and in select Country Offices with specific chemical control needs. This request directly supports DEA's strategic planning initiative to target and immobilize major trafficking organizations by expanding DEA's priority targeting initiatives. This request also reflects program decreases for management and productivity savings of 2 positions and $12,000 for pharmacist registration activities. This decrease is discussed in the justification of multi-program changes.

Chemical Act Implementation

DEA requests 31 positions (25 diversion investigators and 6 support) and $1,803,000 for DEA Domestic Offices to implement the Chemical Diversion and Trafficking Act, enacted as part of the Anti-Drug Abuse Act of 1988. This legislation provides DEA with an efficient, inexpensive tool to attack drug suppliers. The intent of the legislation is to control the sale and distribution of precursor and essential chemicals to prevent their being available to clandestine laboratory operators worldwide. By depriving clandestine laboratory operators of the chemicals required to produce cocaine, heroin, and clandestinely produced dangerous drugs such as methamphetamine, PCP and amphetamine, DEA can sharply reduce their supply at a relatively low cost.

Implementation of this significant legislative tool requires additional DEA resources. Approximately 6,000 chemical suppliers (a conservative estimate) must be audited every three years. In addition, import investigations will require many additional work hours. Full implementation of the Chemical Act also requires follow-up investigations following lab seizures to ascertain the source of the chemicals found on site and determine if the chemical supplier has violated the Act; an evaluation of the legitimacy of foreign importers of United States precursor and essential chemicals; and the encouragement of voluntary industry compliance with the Act through such liaison activities as on-site visits to firms, training seminars, and traditional means of disseminating information. These additional responsibilities will require significantly more diversion investigator positions.

Increasing the available diversion investigative resources will result in increases in follow-up investigations resulting from laboratory seizures to ascertain the source of the chemicals found on-site and determine if the chemical supplier has violated the Chemical Act. The diversion investigators will also evaluate the legitimacy of foreign chemical importers, conduct compliance audits, encourage voluntary compliance, conduct training seminars, and disseminate information as appropriate. With these enhancements, DEA can make a significant impact on chemical companies supplying essential and precursor chemicals to domestic and overseas clandestine laboratories.

Chemical Movement

DEA requests 3 additional diversion investigators, 1 support position and $228,000 to monitor chemical movements and advise Headquarters managers and Country Attaches on matters relating to chemical movement intelligence.

Enormous quantities of precursor and essential chemicals are being shipped internationally to clandestine laboratories. Many of these shipments are originating in the United States. Currently there does not exist within DEA, or any other drug law enforcement agency worldwide, any formal system for monitoring this chemical movement. Intelligence on chemical movements would be invaluable in ensuring the interception or control of essential chemical and precursor shipments, effectively disrupting the operation of clandestine laboratories. Such intelligence could also be used to provide information on the clandestine laboratories themselves by tracking their essential chemical and precursor shipments. Personnel with specialized expertise must be located in primary source countries for chemical production to ensure the timely analysis and dissemination of intelligence. Diversion investigators would be best qualified to distinguish the shipments not destined for legitimate purposes.

DEA will assign one Diversion Investigator to West Germany and one to Venezuela, in response to the volume of chemical production in each country, and each country's eagerness to initiate chemical control programs. In addition, DEA will place one Diversion Investigator in Washington, D.C. to communicate all United States suspect chemical shipments to the appropriate domestic field division for immediate follow-up and to coordinate intelligence concerning the international shipment of suspect chemicals.

	1990 Appropriation As Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
State and local task forces......	266	251	$32,340	266	265	$33,070	311	287	$41,894	45	22	$8,824

Long-Range Goal: Facilitate a maximum contribution from State and local governments and engender intergovernmental cooperation in order to reduce drug availability and immobilize major drug trafficking organizations at all levels.

Major Objectives:

- Conduct quality investigations leading to the arrest, prosecution, and conviction of drug traffickers, as well as the financial immobilization of their organizations.
- Establish and maintain an effective intelligence exchange with participating State and local law enforcement agencies in order to enhance and expand the Federal drug law enforcement intelligence network.
- Develop intelligence and investigations that become a springboard for more complex Federal investigations, launched as a result of the initial efforts of a task force.
- Continue to increase the percentage of Class I and II cases and arrests by at least five percent.

Base Program Description: The State and Local Task Force program effectively enlists the resources and support of State and local enforcement agencies in Federal drug enforcement efforts. The task force program assists in fulfilling DEA's responsibility to provide a diverse, creative, and all-encompassing Federal response to the multi-faceted and complex drug problem. By working together, DEA Agents and State and local police officers achieve increased cooperation and communication that aids the investigative process at the working level to help make DEA's cases more productive. The program expands the workforce under DEA's supervision; provides State and local officers special equipment and conveyances when needed for DEA undercover operations; contributes substantial intelligence to DEA's data bases; and achieves enhanced cooperation with local banks, thus improving DEA's ability to obtain emergency flashrolls and temporary storage of monies.

As of January 1990, there are a total of 57 task forces in the program, of which 49 are program funded and 8 are provisional. The 8 provisional task forces are as follows: Boston, MA; Columbus, OH; Saginaw, MI; North Lake Tahoe, NV; Weschester County, N.Y; San Diego Lab, CA; Fresno, CA; and San Francisco Airport, CA. DEA is currently evaluating requests by division offices to initiate additional provisional task forces to take the place of those task forces converted to program funded in 1990. By the end of 1990, 51 task forces will be program funded and approximately 13 will be provisional.

The provisional task force program was established in 1987 to identify task force potential and manage program resources more effectively. Under this plan, State and local law enforcement officials establish working relationships with the local DEA field office to demonstrate the potential of a proposed task force before it is funded under the task force program. The provisional program serves as a test-bed for future program-funded State and local task forces, and provides DEA management with a basis for assessing performance potential and information for projecting future resource requirements. While in the 12-15 month provisional period, a task force must prove that it can perform at a level comparable with other program-funded task forces. Performance is regularly assessed and a decision is made at the end of the provisional period to fund or disband the task force. Restrictions are imposed upon the length of participation in the provisional program and upon the total number of task forces that can participate. Since its inception, 9 provisional task forces have become program funded and 18 have been disbanded. The three provisional task forces that were converted to program funded status in 1988 performed at a commensurate rate with other program task forces. It should be noted that one of the assumptions underlying the provisional task force program is that when a provisional task force demonstrates the effectiveness of its operation, DEA will allocate program funds for its operation. If these funds are not obtained through a budget enhancement, they are reprogrammed from the Domestic Enforcement program. DEA anticipates there will be an increasing demand from the field, and State and local police for State and local task forces.

Accomplishments and Workload: State and local task forces were responsible for 6,750 arrests in 1989, 62 percent of which were Class I and II. Continuing the program's record of annual improvement, Class I and II arrests increased 10 percent over 1988 totals. With an investment of only five percent of the total budget authority for DEA and four percent of DEA's total position ceiling, the task force program was responsible for 33 percent of the total DEA arrests and 20 percent of the total cocaine and heroin seizures. The potential return on investment of the task force program is self-evident; in fact, the task forces seized assets valued at almost four times the amount the entire program cost the Federal government in 1989. State and local governments are entitled to an equitable share in the assets forfeited as a result of their contributions to investigations. In 1989, DEA shared $149.8 million in forfeited assets with State and local governments.

In the early 1980's, the State and Local Task Force program was considered primarily a State and local assistance program. However, it is now recognized that the program provides significant direct support in accomplishing DEA's strategic goals as well as enhancing State and local drug law enforcement expertise. Since 1984, there has been an increase of 383 percent in the number of Class I and II arrests, and an increase of 810 percent and 450 percent in cocaine and heroin removals, respectively. In addition to these direct contributions to the Federal drug strategy, the program also makes significant indirect contributions through the development of intelligence and generation of "gateway" cases (those that become a springboard for higher level investigations).

DEA has a responsibility to facilitate maximum contribution from State and local governments. As an example of the contributions by State and local task forces, in 1989 the New York Joint Task Force (NYJTF) developed information through an informant that resulted in a seizure of $19.7 million in U.S. currency and significant intelligence information regarding the Cali Cartel. This is the largest seizure of U.S. currency in DEA history. Other specific contributions by the State and local task forces include the largest single crack seizure ever in the Chicago area and possibly in the entire midwest. Over six pounds of crack was seized, valued at almost three million dollars, destined for distribution in the midwest. In another task force case, the DEA/Chicago Police Department Task Force seized 84 pounds of cocaine, one ounce of brown heroin, 1,827 grams of marijuana and $23,095.00 in U.S. currency. The two suspects arrested in this case are known to be associated with the Jaime Herrera narcotic organization, one of the largest trafficking groups in Mexico.

Workload statistics for the State and Local Task Force program are as follows:

State & Local Task Forces	1988 Actual	1989 Actual	1990 Estimate	1991 Estimate
Investigative Workhours by Case Class				
Class I	216,240	245,345	250,077	272,789

* DEA's statistical databases are continually revised. Figures shown represent the most accurate statistics available, and may differ from those previously reported.

Program Change:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
State and local task forces............	266	265	$33,070	311	287	$41,894	45	22	$8,824

DEA requests 45 positions, (36 Agent and 9 support), 22 workyears, and $8,824,000 to fund nine provisional State and local task forces. Of this amount, a total of $4,390,000 is included as special funding to purchase cars, radios and other equipment to support the participating State and local officers. Although demands by States and localities for additional task forces are substantially greater, DEA will continue to restrict the growth of the task force program by using the provisional concept to ensure that the program is well managed and the resources devoted to it are used effectively. The continued success of the program requires that it only expand as task forces demonstrate their effectiveness.

DEA has a responsibility to facilitate a maximum contribution from State and local governments and to elevate their efforts toward multi-jurisdictional investigations. DEA's State and local task forces play a major role in engendering intergovernmental cooperation by facilitating the immobilization of major trafficking organizations at all levels. The combined manpower, experience, and intelligence networks of the 535 police officers participating in DEA task forces greatly influence DEA's ability to operate effectively in an environment where it is outmanned by its opponent. For these reasons, DEA remains committed to the continuation of the State and Local Task Force program.

Long-Range Goal: Identify, develop, and exploit information and intelligence necessary to enhance effectiveness of drug law enforcement.

Major Objectives:

o Provide actionable, tactical intelligence on the current or imminent location and movement of particular targets which require a near-term law enforcement response to effect arrest and seizure.

- Collect, process, analyze, and disseminate drug-related intelligence in support of active investigations to aid and further the investigative process.

- Provide case support on complex money laundering investigations and develop intelligence profiles and trend analyses to target enforcement efforts on domestic and international monetary flow and money laundering operations.

- Provide accurate, comprehensive, and timely strategic intelligence on drug trafficking patterns and trends for use by management decision makers and policy planners.

Base Program Description: DEA's Intelligence program is comprised of four components: financial, operational, and strategic intelligence, and the El Paso Intelligence Center (EPIC). Each serves as a vital investigative support function.

The financial intelligence program focuses on the fiduciary aspects of the narcotics traffic. The primary goal of the program is to immobilize major trafficking organizations by depriving drug traffickers of drug-related assets. The financial intelligence program supports the enforcement effort by providing direct case support in the identification of assets and the development of financial conspiracy investigations. Further, this program provides strategic support by uncovering new money laundering methods, identifying participating organizations and individuals, and tracking the worldwide flow of laundered funds.

The operational intelligence program exploits information available to DEA in direct support of active drug investigations. Such support is provided through the collection, collation, and analysis of the vast (and often conflicting) available information that links events and individuals involved in drug trafficking. These data are used not only in developing investigative leads but also in assisting case agents and prosecutors in the management, organization, and the graphic portrayal of analyzed information during grand jury proceedings and trials.

Strategic intelligence develops a comprehensive picture of drug trafficking patterns, availability and consumption trends, and long-range supply reduction assessments. These efforts are a critical tool in assisting investigative agencies in managing their enforcement efforts. DEA is a leading agency for drug intelligence in large part due to its effectiveness at this function.

EPIC is a multi-agency facility charged with the responsibility of providing the law enforcement community with all-source tactical intelligence pertaining primarily to the interdiction of drugs, weapons, and aliens. Although managed by DEA, EPIC provides support and assistance to all Federal, State, and local agencies engaged in law enforcement. Currently, there are ten Federal agencies in addition to DEA that are on-site participants at EPIC.

Accomplishments and Workload:

- Special Field Intelligence Program (SFIP): SFIPs are probes that gather strategic, operational, and tactical intelligence to support DEA investigations, programs, special operations, and the management of resources. Approximately 80 percent of the 43 SFIPs achieved their intelligence collection objectives in 1989. This program played a significant role in the development of 207 confidential informants. As a by-product of the program, over 148 investigations were initiated which resulted in 508 arrests. Furtnermore, SFIP-generated intelligence supported seizures of 20,056 kilograms of cocaine, 13.5 kilograms of opium, 85,161 kilograms of marijuana, 12,584 kilograms of hashish, 30 kilograms of methamphetamine powder, 2.4 million dosage units of the amphetamine Captagon, $3,915,621 in cash and $503,899 in property, along with 28 vessels and eight aircraft. In addition, SFIP's were instrumental in the destruction of 10 clandestine laboratories and 8,254,359 cannabis plants.

- Financial: The goal of the financial intelligence program is to immobilize drug traffickers by hampering the ability of organizations to launder money domestically and abroad. Some of DEA's 1989 accomplishments include participation in an information exchange program with domestic bank regulatory agencies to keep drug violators from acquiring interests in U.S. financial institutions. The financial intelligence program supported major narcotics investigations conducted by DEA field offices through the identification of assets subject to seizure under current U.S. laws. In one prominent case, an organization responsible for laundering $1.2 billion in a two-year period was identified. This was the largest money laundering operation in DEA's history. The investigation resulted in the immobilization of the organization and seizure of over $100 million in assets. In addition, a bank in Panama was convicted of violating U.S. money laundering statutes. This conviction resulted in the forfeiture of $5 million in substitute assets and is the first action of its kind. Another major investigation resulted in the seizure of about $20 million in cocaine profits and the identification of a money conduit which operated from New York through Texas into Mexico and is headed by a major Colombian cartel member. Analysis of extensive bank records and other support was provided in still another international money laundering case, resulting in over $18 million in asset seizures and confiscation of about 100 kilograms of heroin/morphine base.

- Operational: Operational intelligence provided analytical support to major drug investigations and programs. Examples from 1989's workload appear below:

  Intelligence support was provided to investigations targeting a Southeast Asian marijuana organization which smuggled several hundred tons of marijuana into the United States for each of the last seven years. The result was the indictment of 250 defendants, seizures of $50 million, 100 tons of marijuana and ten vessels, and identification of 50 other prospective defendants, as well as forfeitable assets with an estimated value of one-half billion dollars.

  Intelligence analysts performed extensive file research on the principal members of the Medellin Cartel. This resulted in the expansion of active investigations, indictments, drug seizures, and sources of information. This intelligence formed the basis of information for an ongoing SEO which is credited thus far with seizures of 78,000 kilograms of cocaine, 1,398,257 gallons of precursor chemicals, 17 tons of marijuana, and 97 laboratories.

- Strategic: In 1989 this program continued to provide geographic expertise, assessments of drug cultivation production, smuggling trends, and foreign and domestic drug availability trends to Federal, State, local and foreign authorities. Recurring and special reports were published including Intelligence Trends, Opium Caravan Report, Drug Threat-The United States/Canada Border, Illicit Drug Situation in Pakistan and Afghanistan, Southeast Asian Heroin Seizures, Cocaine: A Threat to Western Europe, Puerto Rico/Caribbean Smuggling Trends, D-Methamphetamine HCL (Ice), and The Drug Situation in Washington, D.C. Country Profiles on South Asia, Turkey, Japan, Taiwan, Hong Kong, South Korea, and Peoples Republic of China were updated. Support was provided to Operation SNOWCAP though the Targeting Analysis and Retrieval System (TARS), a computerized data system to support tactical and strategic operations in Latin America. Analytical support also was provided for Operation SNOWCAP. Special intelligence reports were undertaken and completed on each of the following countries: Paraguay, Bolivia, Peru, Colombia, and Mexico. DEA chaired the National Narcotics Intelligence Committee (NNICC) in the development of the annual drug intelligence report. Special reports regarding drug trafficking in the Middle East and Africa were also developed. Support was provided for the President's annual foreign aid certification process, as required by the Hawkins-Gilman-Chiles Act and the Anti-Drug Abuse Act of 1988. The strategic intelligence program managed and expanded the Domestic Monitor Program, Heroin Signature Program, and the Marijuana Assessment Program in addition to conducting a feasibility study for a Marijuana Signature Program.

- o EPIC: EPIC provided 24-hour, 7-days-a-week support for drug law enforcement and interdiction operations at the Federal, State, and local levels. During 1989, 569,347 information queries were made by participating agencies. EPIC lookouts were instrumental in seizures of 4.2 kilograms of heroin, 14,125 kilograms of cocaine, 78,680 kilograms of marijuana, 41 kilograms of liquid hashish, 21 aircraft, 62 vessels, nine vehicles, and $59,989. The foregoing seizure figures reflect only those seizures which were the result of active lookouts. EPIC provided continuous operational and analytical support to several multi-agency efforts to locate and destroy clandestine cocaine laboratories in South American source countries; to multi-agency efforts targeting drug interdiction along the Southwest border; and to interdiction efforts across the interstate and state highway systems. In assisting the highly successful United States Marshals Service Warrant Apprehension Narcotics Team II, EPIC researched over 4,000 drug fugitive cases, which led to locating/apprehending 220 Federal drug fugitives.

Program Change:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Intelligence............................	549	546	$46,022	634	589	$53,145	85	43	$7,123

DEA requests a total of 85 positions (57 intelligence analysts, 12 professional/administrative, and 16 support), 43 workyears, and $7,123,000, including $2,450,000 in program funding to enhance its drug intelligence program. This enhancement directly supports DEA's strategic initiative to target and immobilize major trafficking organizations by enhancing DEA's field intelligence and financial investigative capabilities. There are two distinct components of this initiative: correcting the shortfall between Agents and intelligence analysts, which was initiated in the 1990 budget request; and completion of the El Paso Intelligence Center as a tactical, all-source intelligence center.

Operational Intelligence

DEA requests 68 positions (54 intelligence analysts and 14 support), 34 workyears, and $4,367,000, including $500,000 in program funding, to enhance its financial and investigative intelligence capabilities. A significant shortfall exists between the number of investigators involved in DEA cases and the number of operational intelligence analysts available to support their activities. Because of the sizeable enhancement that would be required to correct this inequity in one year, DEA proposed a phased enhancement beginning with the 1990 budget. This request represents the second part of the resources required to provide adequate intelligence support to an anticipated 4,000 Federal, state, and local investigative personnel in 1991.

The positions requested will be assigned to Headquarters' drug and financial intelligence units, domestic field intelligence units, and foreign offices. Headquarters-based positions will ensure that data from centralized records is made available to the field, and will support Headquarters-based Special Enforcement Operations/Programs and intelligence gathering programs, in addition to providing on-site support to major field investigations. Analysts assigned to domestic and foreign field offices will be in place to provide direct, on-site case support and intelligence collection. Foreign analysts will be assigned to newly opened DEA offices or existing overseas offices that currently have no, or inadequate, intelligence support.

In support of these positions, $500,000 in program funding is requested for increased utilization of Dun and Bradstreet financial reporting services. This is an essential resource that provides up-to-date financial records, business locations, business associates, and business histories. It is an extremely useful tool for identifying associates and assets.

EPIC

DEA requests 17 positions (3 intelligence analysts and 14 support), 9 workyears, and $2,756,000, including $1,950,000 in program funding, to make program improvements at EPIC. These resources are principally intended for EPIC's Special Operations program and will fund the following activities: radio communication monitoring, APOLLO completion, Joint Maritime Information Elements (JMIE) installation, and communications center staffing. As part of the 1989 budget process, DEA received a substantial enhancement for EPIC. Minimal additional increases are required to complete staffing of certain key programs and to fund several new requirements which have since surfaced. These include:

- Radio Communication Monitoring: EPIC's Special Operations program is responsible for integrating data from EPIC's Watch and Analysis sections. One of the most successful of the Special Operations programs conducted 48,830 intercepts, contributing to the interdiction of 46 vessels, 13 aircraft, 80.8 kilograms of marijuana, and 33.1 kilograms of cocaine during the first three quarters of 1989. Despite their successes, these Special Operations programs face a base shortfall, particularly for support staff and equipment. For example, no positions are dedicated to translating the more than 100 transcripts of trafficker communications which are received daily; there are inadequate professional analytical and support positions; only five radio operators are available for monitoring intercepted communications; and their is no system for monitoring short-range trafficker transmissions along the immediate Southwest border area is in place.

Three intelligence analysts, one electronics technician, two clericals and $581,000 are requested to expand current successful monitoring operations. In addition, six systems operators and $250,000 for equipment are requested to establish a short-range radio monitoring program along the Southwest border in support of Operation ALLIANCE. In addition to providing 24 hour, seven days a week staffing for the program, this request will allow for installation of UHF/VHF equipment at 12 fixed Southwest border sites as well as a mobile monitoring vehicle.

- APOLLO Computer System: The FBI, which funded the initial development of the APOLLO system, cannot support completion of the final two phases. APOLLO has become the principal computer system for EPIC's Watch but still requires substantial work to reach planned effectiveness.

  $1.4 million is required to complete the final two phases of development of the APOLLO system. This includes contract development and software purchase totalling $600,000 and $800,000 for additional terminals.

- Joint Maritime Information Elements (JMIE): Although Coast Guard completion of the JMIE system (beyond the current implementation test phase, in which EPIC is a full participant) has been delayed, current plans call for participating agencies to begin paying their share of the system in December 1990. This system has become integral to EPIC operations.

  $300,000 is required for charges EPIC will incur for participation in the JMIE system. Of this amount, approximately $90,000 is needed to purchase three terminals and the remaining $210,000 is needed to reimburse the Coast Guard for EPIC's share of system costs.

- Communications Center: EPIC currently has 11 equipment operators staffing a communications center which operates 24-hours a day, seven days a week and processed a traffic volume of 559,168 messages in the first three quarters of 1989. This center is the focal point for all incoming and outgoing hard copy message traffic between EPIC and participating agencies. Because EPIC is a multi-agency facility, it must send and receive messages over approximately six different communications circuits, requiring the operators to not only be proficient in operating all circuits, but also to re-enter all outgoing messages into each individual circuit. EPIC has used double shifts and overtime to meet demand; however, this has slowed the response time to queries and delayed entry of incoming information.

Five additional equipment operators and $225,000 are requested for EPIC's Communication Center. These positions will allow EPIC to increase communications staffing on all shifts, including weekends and holidays, to ensure timely response to the increasing message traffic.

	1990 Appropriation As Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
DEA Laboratory Services	247	236	$20,220	247	246	$19,567	285	265	$22,854	38	19	$3,287

Long-Range Goal: Provide required laboratory support to ensure maximum achievement of enforcement, intelligence, and diversion control activities.

Major Objectives:

- Provide timely analysis of DEA, FBI, and other Federal agency drug evidence.
- Provide expert testimony in court cases.
- Provide field assistance (clandestine laboratory investigations and seizures, and crime scene searches for trace drug evidence) to DEA and FBI special agents.
- Assist DEA and the FBI in the development of conspiracy cases, monitoring of foreign drug distribution patterns, determination of origin of controlled substances by conducting in-depth signature analyses and ballistics examinations of DEA and FBI evidence (including tablets, capsules, and papers).
- Assist other Federal agencies in forensic drug examinations and improve forensic drug capabilities of law enforcement agencies worldwide through training and interagency conferences.
- Conduct research on new analytical techniques and monitor the emergence of new drugs of abuse.

Base Program Description: This program provides laboratory support services for the enforcement, intelligence, and diversion control activities of DEA. Enforcement activities are supported by the timely analysis of drug evidence by forensic chemists and presentation of expert testimony in court; by providing field assistance to agents on clandestine laboratory investigations and crime scene searches for trace drug evidence; and by conducting ballistics, in-depth and signature analysis for the development of conspiracy cases. Intelligence activities are supported through the heroin signature analyses which shows the origin of the controlled substance and highlights foreign drug distribution patterns. Intelligence activities are also supported through the signature analyses of the Domestic Monitor Program which helps monitor domestic drug distribution patterns and price/purity data at the retail level. Diversion control activities are supported through ballistics examinations (comparison of microscopic tool markings with those of authentic/reference material) of tablets, capsules and papers which provide information on illegal distribution of licitly produced drugs, identifying possible illegal activity by Controlled Substance Act registrants. This program also provides forensic drug laboratory support to the FBI and the Organized Crime Drug Enforcement Task Forces, which have concurrent jurisdiction for the enforcement of Federal drug laws, and provides support to other Federal law enforcement agencies that do not have their own forensic drug examination capability or that require the special expertise of DEA forensic scientists.

Accomplishments and Workload: DEA laboratories analyzed 34,771 exhibits of evidence during 1989, of which 4,044 were for the FBI and 1,806 were from other Federal efforts. DEA chemists testified in 1,472 trials, an increase of 21 percent over 1988, and conducted 1,082 ballistics examinations, an increase of 3.6 percent over the previous year. DEA also identified 26 new illegal prototypes of tablets, 12 new types of LSD blotter paper that have entered the illicit drug market and added 256 logos to the New Packaging Logo File in the ballistics data base.

DEA laboratories provided field assistance in clandestine laboratory investigations and vacuum searches for drug evidence on 292 occasions, an increase of 10.5 percent above the 266 in 1988. DEA chemists conducted 793 Heroin Signature analyses and developed or presented 17 new methods for the identification or analysis of drugs to the international forensic community. Work continued in 1989 on the identification of new controlled substance analogues.

Projected workloads for the DEA Laboratory Services program are as follows:

Item	1988 Actual	1989 Actual	1990 Estimate	1991 Estimate
Evidence Analyses				
Number of Exhibits	35,005	34,771	35,000	41,000
Court Appearances	1,216	1,472	1,500	1,600
Field Assistance Requests*	266	292	344	405
Ballistics Examinations**	1,048	1,082	1,161	1,161
Ballistics Reference Exams	197	134	187	187
Heroin Signature Analyses	1,058	793	800	950

* Field Assistance includes involvement by chemists in clandestine laboratory investigations and vacuum searches for controlled substances.

** Ballistics examinations include analysis of dye markings and other characteristics of tablets, capsules, blotter paper, etc.

Program Change:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
DEA Laboratory Services.....	247	246	$19,567	285	265	$22,854	38	19	$3,287

DEA requests an increase of 38 positions (20 chemists, 1 diversion investigator, and 17 support), 19 workyears, and $3,287,000 to support the Heroin Signature and the Laboratory Standards programs, to provide requisite technical assistance for evidence processing and safety monitoring, to provide support to the hazardous waste disposal program, and to support the additional Special Agents requested in this budget request.

Heroin Signature Program

DEA requires 3 positions (1 chemist and 2 technicians) and $209,000 to support the Heroin Signature Program. Identification of the source of a drug supply is critical to formulating policy decisions regarding deployment of drug control resources. DEA manages a program designed for collection of such information using data obtained through the analysis of heroin samples purchased by DEA's enforcement offices. DEA laboratories are responsible for analyzing these samples in order to determine price, purity, and source of supply.

Laboratory Standards

One chemist position, one support position and $167,000 will be required to implement the centralized Standards Program at the Special Testing and Research laboratory. All qualitative and quantitative analyses of controlled substances performed in DEA laboratories require direct comparison with a reliable standard. The laboratory system Quality Assurance Guidelines require laboratory system personnel to certify and identify the purity of each batch of standards; however, the Quality Assurance Program cited the authenticity of current laboratory standards as a problem.

Evidence and Safety Technicians

DEA requires one evidence technician and $42,000 to be assigned to the Mid-Atlantic laboratory to properly process evidence received by the laboratory.

Submissions to the DEA laboratory system have increased from 29,000 in 1979 to 35,000 in 1989. The average laboratory processes 5,000 to 6,000 exhibits per year. As a result of this increase in workload, evidence handling and safety concerns have become more critical.

DEA also requires eight safety technicians and $335,000, with one technician assigned to each of the eight DEA laboratories, to ensure that adequate safety precautions are maintained at all times. Besides enhancing employee safety and minimizing DEA liability in the areas of on-the-job injury and illness, assigning these duties to a full-time professional in occupational health and safety will free up the chemists to devote more time to the analysis of drug evidence. In addition, presence of this expertise will minimize the necessity for early disability retirements by laboratory employees through a program of hazard prevention.

Hazardous Waste Disposal

The two positions and $107,000 are requested will provide one diversion investigator and one hazardous waste specialist. The hazardous waste specialist will complement the existing specialist in dealing with the anticipated increase in clandestine laboratory seizures made by DEA and the rising public health and environmental issues associated with these seizures. The diversion investigator will share duties with the current diversion investigator, and will be responsible for conducting semi-annual site inspections and 10-15 unannounced inspections per year of the hazardous waste contractors.

The hazardous waste disposal program maintains contact with the Environmental Protection Agency (EPA) on public health and environmental issues. This program acquired additional responsibilities when Public Law 100-690 was enacted in 1988, requiring DEA and EPA to form a joint task force to protect public health and the environment with respect to illegal drug laboratories. DEA has a mandate to enforce the Controlled Substance Act, and a moral and legal obligation to protect public health and the environment. This requires constant monitoring of hazardous waste, contractors, and destruction sites.

During 1988, DEA established a new unit to address its hazardous waste disposal needs and is now in the process of awarding 12 separate contracts to qualified private hazardous waste disposal companies throughout the United States to safely and legally dispose of all hazardous waste generated during DEA enforcement activities. DEA must monitor these private disposal companies to provide tracking and accountability of the disposal of hazardous waste material. Such monitoring includes conducting semi-annual announced and approximately 10 to 15 unannounced on-site inspections of each hazardous waste company's financial records related to DEA transactions. It also includes entering all of the hazardous wastes listed on each manifest into an automated data system. This will provide DEA with readily retrievable information regarding the status of each hazardous waste from beginning to end. DEA anticipates approximately 4,000 to 5,000 entries in 1991.

Support for the 1991 Enhancement

DEA's 1991 enhancement request includes 384 investigative Special Agent positions. (This does not include the Technical Agents, Firearms Instructors, or 119 Agents requested for OCDE.) DEA is requesting that its modular staffing for chemists and derivative clerical support be applied. The current DEA staffing module provides one chemist for every 19 agents and one clerical support position for every five chemists. Applying DEA's staffing module to the number of agent positions destined for field enforcement operations yields a proportionate increase of 23 chemists. Applying the clerical staffing module yields an additional five support positions. However, because of the safety technicians requested above, an additional five chemist workyears will be available for evidence analysis. Therefore, DEA only requires an additional 22 positions (18 chemists and four clerical) and $2,427,000 to support the Special Agent enhancements requested in this budget.

	1990 Appropriation As Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
DEA Training.......	72	71	$14,375	72	71	$14,970	94	82	$16,883	22	11	$1,913

Long-Range Goal: Establish, maintain, and enhance the mission-related skills of DEA personnel to carry out their work responsibilities.

Major Objectives:

- Provide high quality entry-level training for all Special Agents, diversion investigators, intelligence analysts, and chemists.
- Provide advanced and specialized in-service training (including clandestine laboratory enforcement and asset removal training) to investigative and other agency personnel in order to be fully prepared for duty.
- Provide supervisory, mid-level management, and executive development training for appropriate agency personnel.
- Provide foreign language fluency training for all DEA personnel who are to be assigned overseas or in border offices in need of such training.
- Provide firearms training and appropriate weapons and supplies to DEA Special Agents.

Base Program Description: DEA's training center and programs currently are collocated with those of the Federal Bureau of Investigation at the FBI Academy in Quantico, Virginia. The DEA training program focuses on providing the DEA workforce with the skills and knowledge necessary to fulfill DEA's mission. DEA's specialized training courses include entry level recruit training; advanced and in-service specialty training such as marine law enforcement, clandestine laboratory safety, terrorism awareness, and intelligence collection and analysis; management and supervisory training; and foreign language training.

Accomplishments and Workload: Accomplishments of the DEA Training program are presented in the following table:

General Training	1988 Actual	1989 Actual	1990 Estimate	1991 Estimate
Basic Agent				
Number of Classes	8	4	8	15*
Number of Students	289	227	310	651*
Basic Diversion Invest.				
Number of Classes	2	3	1	2
Number of Students	66	82	40	68
Advanced Agent				
Number of Classes	8	7	0**	0
Number of Students	222	243	0	0
Intelligence Analyst				
Number of Classes	1	1	4	4
Number of Students	26	24	113	83
Forensic Chemist				
Number of Classes	3	4	4	4
Number of Students	54	69	72	72

*This includes all new Agent hires (including OCDE) and training spaces due to attrition. There is an assumption that the training facility will be able to accommodate this workload during the 1991 fiscal year. This number differs from the tables presented in the President's Budget Appendix.

** The Advanced Agent training course, beginning in 1990, is incorporated into the Basic Agent curriculum and other training courses.

Specialized DEA Training	1988 Actual	1989 Actual	1990 Estimate	1991 Estimate
Asset Removal Schools

Other Training				
Professional/Administrative, Technical/Clerical, & Other				
Number of Students	774	393	700	700
Other Core Training				
Number of Students	334	269	300	300

***Other Specialized Training includes: Method of Instruction; Individual Terrorism Awareness; Supervisory; M204; Executive Development; and Executive Management Schools.

DEA also conducted international drug enforcement training involving law enforcement personnel from 105 countries in 1989. The countries represented include Greece, Malaysia, Mexico, Nigeria, Pakistan, Peru, and Thailand. A total of 26,550 foreign officers and officials have been trained by DEA since the program's inception in 1969.

Program Change:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
DEA Training......................	72	71	$14,970	94	82	$16,883	22	11	$1,913

DEA requests 22 positions (14 Agent and 8 support), 11 workyears, and $1,913,000 to support the administration of DEA's training program and to add fulltime firearms instructors to the 14 field divisions that currently lack them.

Support Positions

DEA requests 8 support positions, 4 workyears, and $335,000 to provide administrative and clerical positions to enhance DEA's training program.

DEA's training program requires support personnel to process training documents and training-related vouchers, order and maintain supply inventories, type training documents, procure equipment and services, and perform other routine functions. Currently, the training program has only 27 such permanent professional/administrative and technical/clerical positions, including 11 secretaries. The training workload would completely overwhelm the training program if it were to operate with just these permanent positions.

The individuals filling these positions will perform the following functions:

- Process travel vouchers (which numbered 6,040 in 1988—a 92 percent increase from 1987), monitor undelivered orders, issue control numbers, approve invoices for payment, and perform related duties.
- Receive supplies, prepare receiving reports, store and deliver supplies, deliver mail, order all GSA supplies, perform property management and control functions, stock instructional materials, and arrange for shipment of training materials to DEA offices worldwide.
- Perform procurement functions, assisting the purchasing Agent, whose workload has more than doubled since 1986.
- Operate the crypto-room, assist the procurement clerk, assist the basic training program, and assist the practical applications training program.

- Assist in the administrative duties of DEA training and in its tactical training functions.
- Assist the firearms training program, the basic training program, and the field training program.

Firearms Training Program

DEA requests 14 full-time firearms instructors, 7 workyears, and $1,578,000 to provide full-time firearms instructors to those Divisions that lack them. These full time firearms training instructors will ensure that each Division has one Agent, without enforcement responsibilities, dedicated to and responsible for the firearms training program. This Agent will be fully trained in all aspects of the program, including tactical training, certification testing, weapons inspection and repair, firearms safety, DEA firearms policy, and methods of instruction.

DEA policy mandates strict firearms regulations. These policies, developed over time to ensure that shooting proficiency is adequately maintained, include the minimum number of rounds of ammunition that each Agent must fire per year per weapon, the number of times per year they are to be tested for firearms proficiency, and other basic firearms procedures. The workload this engenders demands significant levels of program support for oversight. DEA policy dictates that all DEA Special Agents must participate in quarterly firearms proficiency testing and semiannual certification testing for each type of weapon used (each Agent may have up to three weapons). Certification procedures require testing on seven independent firing courses. Fully automatic submachine guns, which are now being issued to field Divisions, require qualification every 60 days. In addition, all Special Agents routinely participate in judgmental shooting and simulated combat course tactical training to prepare them for emergency situations. All certifications and proficiency tests must be conducted in the presence of a trained DEA firearms instructor.

DEA's current firearms training program is inadequate in a number of areas, each of which must be remedied. Specific concerns include the following:

- Drug related violence necessitates increased tactical training as Agents are confronted with a variety of situations. In response, each Division has assigned firearms training duties to Agents as a collateral duty; however, on a part-time basis the Agents lack the time to develop and implement challenging tactical training courses in addition to scheduling range time and qualifications exercises.

- o Experienced instructors are the key to good firearms instruction. Given the field enforcement responsibilities of current part-time instructors, and constant advances in firearms technology, such specialized expertise is difficult to cultivate and maintain.

- o Because DEA does not have its own ranges, a major time-consuming activity for all instructors is obtaining range time at a local firing range for qualifications and tactical training exercises. Current part-time firearms instructors lack the time to maintain continuous liaison with State and local enforcement agencies to ensure that ranges are always available when needed.

	1990 Appropriation As Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Research Engineering & Technical Ops...	320	315	$41,683	320	315	$40,456	341	325	$79,940	21	10	$39,484

Long-Range Goal: Support DEA enforcement and intelligence programs through research, development, procurement, maintenance, and management of technical investigative equipment, and provide direct technical assistance to ensure maximum achievement of the agency's mission.

Major Objectives:

- o Provide high quality technical/investigative support, radio communications, and polygraph support that will lead to increased productivity and effectiveness in investigations. Provide technical support for an additional 150 major investigations and provide Digital Voice Privacy radio equipment for three additional Divisions.

- o Increase the efficiency of Agency field operations through the development of new or improved technical investigative devices, and the application of scientific research. In 1991, emphasis will be placed on satellite communications and the security of Special Agents in remote areas.

- o Provide scientific and technological information, training, coordination, and liaison services for DEA and the national and international drug law enforcement and intelligence communities.

- Increase the productivity and efficiency of DEA's operations by providing advanced scientific instrumentation, electronic laboratory support, testing equipment and services, and specialized microprocessor engineering support.

- Acquire, maintain, and operate an efficient aircraft fleet with sufficient capabilities to meet all operational requirements.

- Provide aircraft and aviation-trained Special Agents for domestic investigative support and foreign drug intelligence gathering and operational support.

Base Program Description: The Research, Engineering and Technical Operations program addresses the following major program areas:

- Research and Engineering Program: This program element provides new technology and scientific support to the operational elements of DEA.

- Technical Operations Program: This program element makes optimal use of DEA's technical equipment, aircraft and personnel resources in a manner that allows DEA investigative personnel to maximize their efforts, enhance their personal safety, and accomplish the agency's mission.

- Aviation Program: The Aviation Program is designed to increase the effectiveness of DEA's enforcement effort by offering speed, mobility, vantage and other qualities unique to aircraft operations. Such qualities permit the successful pursuit of drug investigations not possible with surface vehicles.

Accomplishments and Workload:

Technical Operations:

A major managerial accomplishment in 1989 was the consolidation of all programs within DEA that provide direct technical, research and development support to DEA investigations. This reorganization, approved by the Attorney General, led to the formation of the Technical Operations Section. The new section, comprising the Radio Communications, Investigative Equipment, and Technology Development Units, provides a coordinated and effective response in support of DEA operations. The technical training function has also been placed under the new section to ensure that basic Agents, advanced Agents, technical Agents, technicians, State and local personnel, and foreign officials receive the necessary instruction to properly and effectively utilize a wide range of technical support techniques.

In addition, the Technical Operations staff has been relocated to the same engineering facility occupied by the FBI's Engineering Section. This move will further DEA's efforts to produce improved technology while saving Federal manpower and monetary resources.

During 1989, DEA personnel in the Technical Operations Program participated in or chaired numerous committees and working groups consisting of Federal law enforcement and U.S. Military managers and technical experts to assure a more unified effort against drug trafficking.

Research and Engineering:

Workload statistics and projections for the Research and Engineering program are presented in the following table:

Item	1988 Actual	1989 Actual	1990 Estimate	199 Estimate
1. Research & Analytical Studies				
a. Demand	25	25	30	30
b. Planned	12	12	15	23
2. Technology Development Projects				
a. Demand	50	50	55	60
b. Planned	21	30	33	41

DEA is working directly with the Defense Advanced Research Project Agency (DARPA) to develop strategies and technologies to enhance drug law enforcement's capabilities. DARPA has already committed over $5,000,000 in joint projects to the anti-drug effort.

Enhanced point-to-point satellite voice and data communications are being developed to provide secure communications throughout the world. This system is being designed in a completely portable configuration to ensure ease of transport and use. Enhanced tracking capabilities are under development to provide real-time satellite tracking utilizing miniature transmitters. This system will be extremely beneficial for locating Agents assigned to remote areas, and equally important, to locate Agents in the event they are abducted by traffickers and terrorists.

In conjunction with EPIC and other law enforcement agencies, the Technical Operations program has initiated an enhanced Direction Finding (DF) program to identify and locate "motherships" and aircraft illegally transporting narcotics, dangerous drugs, and precursor products. This information is relayed by EPIC to DEA, Coast Guard, U.S. Customs and military units for interdiction of these vessels and aircraft. Crop identification programs are also underway to enable location and identification of illicit cannabis, heroin and coca growing areas by satellite. The growing areas will be pinpointed to within a few hundred feet.

In 1988-89, new Title III monitoring systems were provided to selected DEA offices for test and acceptance. The systems are second generation units developed to ensure better quality and reliability of recordings made as a result of court authorized wire intercepts. If successful, DEA will implement these new monitoring systems in all Divisions.

The Technical Operations program continues to work with the DEA Air Wing to upgrade airborne surveillance forward looking infrared systems to locate clandestine laboratories and growing areas. Included in the upgraded systems is the ability to transmit data directly to EPIC for quick response and dissemination.

Investigative Support and Radio Communications:

Below are the workload statistics and projections for Investigative Support and Radio Communications:

Item	1988 Actual	1989 Actual	1990 Estimate	1991 Estimate
Dialed Number Recorders	1,400	1,650	1,750	1,850
Title III's	79	188	200	250
DVP installed or on order	12	14	17	19
Polygraphs	310	419	430	450

Note: DVP stands for Digital Voice Privacy System which will include interconnection between the FBI and DEA.

Nine DEA Divisions (Los Angeles, San Diego, San Francisco, Seattle, Miami, Atlanta, New York, Boston and Newark) are operational on Voice Privacy (DVP/DES) radio systems. Installation has begun on the Washington, D.C., Philadelphia and Detroit Division systems and will be completed in 1990. The St. Louis, New Orleans and portions of the Chicago Division systems are being ordered for delivery in 1990. The remaining systems procurements for Houston, Dallas, Phoenix and Denver, and systems modifications will be accomplished by 1991 with installation completed in late 1992 or early 1993. In addition, over 1,700 dual band UHF/VHF mobile radios are now installed in DEA vehicles throughout the United States. These DVP/DES radios enable DEA personnel to communicate with other law enforcement agencies such as the FBI, U.S. Customs Service, U.S. Marshals Service, and State and local organizations.

DEA provided major technical support to Operation SNOWCAP. This support included tactical and emergency communications, HF/SSB long range communications, satellite communications and tracking systems, video and audio surveillance systems, monitoring equipment, and manpower support.

Over 400 polygraph examinations were conducted in 1989 on suspects, defendants and cooperating individuals. The polygraph has proven to be an extremely useful tool for the gathering of intelligence and verification of information. The polygraph prevents expenditures on unsubstantiated investigations and returns criminally gained resources to the Federal Government. In one investigation alone, an additional $800,000 in assets were uncovered and seized as a result of a DEA conducted polygraph in a plea bargain arrangement.

Air Wing:

The number of air missions flown by DEA totalled 7,433 in 1989, involving 19,976 aircraft flight hours. This represents an increase of 5 percent in the number of missions flown and an increase of almost 3.6 percent in the number of hours flown over 1988. In addition, there were 789 standby missions in 1989. Standby missions require a pilot and an aircraft to be ready for flight immediately upon notice. The time required for standby missions is not factored into Air Wing statistics.

In 1989, approximately 78 percent of the missions and 74 percent of the flight hours were for domestic purposes; 22 percent of the missions and 26 percent of the flight hours were in support of foreign operations; and 55 percent of the total missions were for surveillance, search and transport. A total of 1,284 arrests were made as a result of utilizing air support. Over 66 percent of the arrests were Class I and II. In 1989, DEA had a 19 percent negative mission rate (or 1,435 unfilled mission requests).

Program Change:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Research, Engineering, & Technical Operations..................	320	315	$40,456	341	325	$79,940	21	10	$39,484

DEA requests 21 positions (10 Technical Special Agent, 6 professional/administrative, and 5 technical/clerical), 10 workyears, and $39,484,000, including $37,878,000 in special funding, to purchase technical and radio equipment, to address a shortfall in existing operating accounts, and to purchase 11 replacement and 2 new aircraft. This request directly supports DEA's strategic planning initiative to expand DEA's investigative support in order to immobilize major traffickers and their trafficking organizations.

Research and Engineering

DEA's research and development program represents less than one half of one percent of DEA's budget and is the second smallest research and development budget of all Federal law enforcement agencies. Individual drug traffickers have more resources at their disposal than DEA has for its entire research and development program.

While DEA's research and development budget is only $1,200,000, the program actually manages funds totalling almost $6,000,000, most of which are supplied by other DEA programs or reimbursable agreements with other agencies. The Defense Advanced Research Project Agency (DARPA) is currently funding 11 of the 40 research and development projects being carried out by DEA's Research and Engineering Program. Regardless of the origin of the funds, DEA personnel must monitor the research and development contracts. The dramatic increase in the number of projects over the past few years has severely impacted the research and development program. The chart below shows the increase in projects and funding compared to the increase in personnel.

An increase of 8 additional support positions and $954,000 are required to keep pace with advancing technology. Of this amount $600,000 will be an increase in the base for research and development projects. A majority of the projects undertaken by DEA are joint projects with other agencies, and they require a minimum contribution to gain valuable technology or software. An additional six professional/administrative positions are required to properly monitor these contracts.

Investigative Support

- **Technical Support**: 10 additional Special Agent/Technical positions, 3 support positions and $1,252,000 will provide a minimally adequate level of technical investigative support in the domestic field offices and overseas. In addition, $1,300,000 is required for additional audio-visual investigative equipment necessary to provide the courts with adequate documentation of drug violations, and to ensure the safety of DEA Agents.

  DEA continues to procure and issue large amounts of technical investigative equipment to its field offices to enhance and support investigations. Much of this equipment, e.g. night video equipment, covertly installed audio and video devices, Title III equipment, etc., requires a specially trained Agent to install the equipment and to ensure that it is used to its maximum potential. Currently, DEA has 60 technical Agents (including ten coming on board in 1990). Four field Divisions have only one Special Agent/technician; several large Resident Offices have no technical Agents currently assigned to them. In these offices without adequate support, managers are forced to choose which of the many ongoing investigations will receive the required technical support. Note that the lack of technical support places the lives of these Agents not receiving the proper technical support in constant jeopardy.

- **Procurement & Installation of Cellular Telephone Intercept Equipment**: A total of $1,000,000 is required for the procurement of T-1 circuitry for 9 domestic Division offices. This budget requests $1,000,000 to satisfy the first half of the total requirement. This circuitry will connect the DEA offices with the local provider of cellular telephone service.

  The popularity of communications via cellular telephone has increased over the past several years. While DEA cannot estimate the total number of traffickers who use this method of communication, cellular telephone seizures have increased reflecting increased use. In 1988, DEA seized and placed into service 135 cellular telephones. In 1989 this number increased approximately 32 percent to 178. Cellular communication currently provides a very secure form of communication for drug traffickers, because the nature of the transmissions make it very difficult for law enforcement to intercept. Cellular communications consist of receiving stations or "cells" located throughout a city or region. Within these cells are numerous variations of the hundreds of frequencies available to transmit and receive cellular telephone calls. As a mobile telephone passes through or nears a cell, the frequencies used to transmit the telephone call automatically change to provide the best signal to the subscriber. Because of this constant changing of frequencies, it is extremely difficult to monitor cellular traffic. Common scanning devices previously used by law enforcement are ineffective.

Improved cellular telephone intercept capabilities are needed to keep pace with the drug traffickers. The method of interception now being examined by the DEA and the FBI provides for the lawful monitoring of cellular telephone conversations at local DEA offices. This will be accomplished by installing a Central Monitoring Facility in each of DEA's domestic Divisions. This monitoring facility will be connected directly to the local cellular telephone company facility by what is known as a T-1 circuit. This method will completely negate the need for a moving surveillance. This intercept equipment will provide each Division with the capability to intercept and monitor cellular conversations directly from the office listening post.

Radio Communications

- o Radio Operating Funds: DEA requests an enhancement of $1,300,000 for radio program operating expenses. This enhancement will maintain a minimally adequate level of service. While the Digital Voice Privacy System is necessary for efficient and effective investigative operations, it is an expensive system to install and maintain. The existing base for radio program operating funds is $5,100,000. This amount has remained constant for the past ten years. The current cost to install and maintain Voice Privacy equipment is $700,000 greater than the current budget base. The anticipated shortfall by 1991 will be $1,300,000.

  In 1986, DEA began installing new dual band Digital Voice Privacy equipment. Presently, over 50 percent of the new mobile radios (over 1,500) being utilized by DEA are dual band. These radios cost twice as much to maintain as the single band radios. Radio control line charges are twice as expensive because of the conditioning required to pass encrypted voice communications. Site lease costs also increase dramatically because of the increase in floor space required to house the equipment. An example of the dramatic increase in costs associated with this new equipment is the installation and removal costs. The previous clear voice system cost approximately $200 to remove and install, whereas, the new Digital Voice Privacy radios cost $450 per radio to remove and install.

- o Overseas Radio Equipment Base: DEA requests $1,800,000 to establish an overseas radio program base. DEA's increased presence overseas requires additional technical support; thus more funds are needed to ensure adequate communication capabilities for our Agents overseas. In order to continue to provide private, safe, and reliable radio communications to support major conspiratorial investigations, sufficient funds must be made available to operate the program. The $1,800,000 would provide a high frequency base station and mobile radios for Agents operating in the country of Peru.

Investigative and enforcement activity continues to increase dramatically overseas as a result of a generally increasing presence by DEA, but particularly as a result of DEA's Special Enforcement Operations/Programs. SEO/Ps require unprecedented technical support in the form of radio communications. There is currently no budget allocation for the procurement of High Frequency/Single Side Band (HF/SSB) and satellite communications equipment required for Agents overseas.

Air Wing

- Replacement Aircraft: DEA has a compelling need to replace 11 aircraft from the current fleet and therefore requests funding in the amount of $12,550,000. The cost of one single engine aircraft is approximately $250,000 and one twin engine aircraft is approximately $2,700,000. The purchase of seven single engine and four twin engine aircraft will cost approximately $12,550,000.

A fully productive aircraft fleet is essential to the success of DEA's most important operations. Both domestically and abroad, aviation support can be the key to the success of an enforcement mission, likewise the lack of support can be the cause of its failure. Air support is required for surveillance, intelligence gathering, undercover operations, and transport.

In 1988, the DEA fleet averaged just over 200 flight hours per year per aircraft—less than four flight hours per aircraft per week—whereas new aircraft averaged over 400 flight hours per year. Much of the difference can be accounted for by the maintenance required for older aircraft. In fact, over 50 percent of DEA's unfilled mission requirements in 1988 were the result of aircraft unavailability and maintenance. Only by replacing unproductive aircraft can DEA hope to make more effective utilization of its air fleet.

Over 30 percent of DEA's single engine fleet requires replacement. In 1987 there were over 650 unfilled domestic missions. This rose to over 1,200 unfilled missions in 1989 (excluding unfilled missions due to weather), an increase of 85 percent over 1987, the majority caused by inoperable or unavailable aircraft. A total of seven single engine aircraft are earmarked for replacement in 1991. Of the seven, five will be 15 years old and two will be 24 years old. Additionally, overhaul costs for these aircraft average $115,000 each, approximately half the cost to replace the aircraft. The replacement of these old and unproductive aircraft is essential to DEA's enforcement mission.
A total of four twin engine aircraft identified for replacement in 1991 have or will have in excess of 5,000 flight hours. Additionally, the aircraft range in age from 12 to 20 years old. Flying time in 1988 for these aircraft were generally less than 100 hours each, compared to 450 hours for a new aircraft. Overhaul costs could approach 50 percent of the replacement cost.

- New Aircraft for Foreign Support: DEA is requesting $8,000,000 for the purchase of two aircraft. DEA's planned expansion of Special Enforcement Operations/Programs (SEO/Ps) in source and transshipment countries requires significantly more aviation resources. The dramatic success of DEA's overseas air support in reconnaissance and intelligence gathering has led to greatly increased demands for such support.

  With the productivity increases associated with the replacement aircraft and the probability of utilizing seized aircraft to supplement foreign operations, DEA is requesting two turboprop aircraft at this time. The turboprops are necessary to transport troops, equipment, and food to remote locations in South America in addition to providing reconnaissance. The turboprops will be placed in South America in support of the planned expansion of Operation SNOWCAP to two additional countries.

- Aircraft Operating Costs: DEA requests an increase of $1,328,000 in operating funds to ensure that seized aircraft placed into service are being maintained adequately. Seized aircraft offer DEA a unique opportunity to supplement the existing air fleet without the initial expense required to purchase new aircraft. However, because they are seized the funds are not in the operating base to maintain them.

  In 1988, DEA seized and placed into service ten aircraft: two single engine, five turboprops, and three helicopters (one single engine, two twin engine). The cost of maintaining and operating these fleet additions needs to be funded.

- Relocation of the Air Wing: DEA requests $10,000,000 to partially fund the relocation of the DEA Aviation facility. The relocation of the DEA Aviation facility was authorized by Congress in the Anti-Drug Abuse Act of 1988 (P.L. 100-690). Although $10,000,000 was authorized, no funds were appropriated at that time. The current lease on the Air Wing facility will expire in May 1991. This, coupled with the inadequate space, security risks, and increased maintenance costs, supports the need to relocate to another facility.

  First, the size of the present maintenance hangar will not allow for an efficient use of manpower. The expansion of contract maintenance from 42 to 82 employees in 1989 will necessitate working two shifts which will increase labor costs, require additional DEA oversight personnel, and reduce the overall effectiveness and efficiency of the maintenance function.

Second, there is a critical shortage of ramp space at the Addison facility. DEA seized 10 aircraft in 1988 for which there is currently no storage space. Consequently, seized aircraft DEA plans to put into service are stored at various locations around the country at a greater cost to DEA. This also prevents DEA from providing the maintenance necessary to prevent deterioration.

Third, the Addison facility is faced with security problems. Measures have already been taken to enhance security to the maximum extent possible. Nonetheless, due to the present location of the Addison facility at a busy public airport, in a congested metropolitan area, it is impossible to provide adequate security for the hanger, ramp and office areas. It is impossible to fence the perimeter or to provide any meaningful security for aircraft left outside the hanger on the ramp.

	1990 Appropriation As Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
ADP and Telecommunications	109	104	$63,220	109	104	$63,739	96	87	$64,689	-13	-17	$950

Long-Range Goal: Provide high quality and timely automated data processing and telecommunications support sufficient to maximize achievement of the DEA mission.

Major Objectives:

- o Complete the installation of Office Automation equipment in the domestic (Phase III) and overseas offices.
- o Provide DEA agents and intelligence analysts with investigative information in a manner that is faster and more complete than is currently possible.
- o Enhance DEA's investigative efforts through development of a capability of automatically indexing and abstracting investigative reports into various DEA data bases.
- o Develop a prototype Free Text Search Data Base using hardware Free Text Search Data Base machine methods.

- Continue improving the quality of information within existing DEA systems in support of DEA's mission and increase productivity in the delivery of information.

- Ensure the security and integrity of data for all office, data processing, telecommunication and teleprocessing systems.

Base Program Description: This program provides all ADP services to DEA on a worldwide basis. This responsibility includes the maintenance of a modern Data Base Management System (DBMS) with retrieval capability that can establish relationships between various DEA data bases while also significantly improving the ability to query and file within those data bases. In addition to the DBMS, the ADP program is responsible for continually reviewing DEA's system needs in order to identify and develop systems applications that will result in the application of ADP technology to DEA's mission in an effort to maximize the efficiency and effectiveness of the agency. DEA maintains a number of permanent systems, including the following: Narcotics and Dangerous Drugs Information System (NADDIS), Enforcement Management Information System (EMIS), PATHFINDER II, Controlled Substances Act System (CSA), System to Retrieve Information from Drug Evidence (STRIDE), and DEA Accounting System (DEAAS). Additionally, microcomputer applications are frequently developed for specific enforcement operations.

DEA has a requirement to support investigations of illicit drug operations worldwide. The highly transient nature of subjects under investigation requires the support of a Secure Communication System, which includes, for both domestic and foreign offices, secure voice, facsimile, teletypewriter communications, Communication Security (COMSEC) accounts, Law Enforcement Information Access Systems, and paging systems.

Accomplishments and Workload:

- Office Automation: Office Automation (OA) training and installation were completed in the Philadelphia Division, Dallas Division and the El Paso Intelligence Center. The Washington Division was part of the Pilot Project, and installation and training there were previously completed. Installation of OA equipment in the new Lincoln Place Headquarters facility is nearly complete. DEA forwarded a request to DOJ on April 21, 1989, for a Delegation of Procurement Authority (DPA) to procure additional quantities of Office Automation equipment. These additional quantities of equipment are required in order to accommodate the growth of DEA and to provide Office Automation equipment to overseas DEA offices.

- Systems Development: Completed a system to support Mexican Marijuana Eradication program. Provided programming support to Operation Green Merchant, SNOWCAP, Operations in Bogota and other Special Enforcement Operations. System enhancements were made to NADDIS, STRIDE, Asset Forfeiture and other information support systems.

- Domestic Word Processing: The Office Automation (OA) System which is being installed will replace the existing Word Processing (WP) equipment. The installation of OA however, will take between two and three years to complete. In the mean time, it is necessary that the existing Exxon contract be extended for two more years. Approximately seventy-five word processors which were replaced by OA equipment have been shipped to new locations to satisfy new requirements. An additional nineteen word processors have been shipped overseas and overseas personnel have been trained in their use.

- Overseas Telecommunications: The number of overseas offices that have access to the DEA Automated Telecommunication System (DATS) has been increased from 47 to 53 locations.

- Secure Message System: The Secure Message System has been installed in all but a few domestic offices.

- Information Resource Management (IRM): The Strategic Information Resource Management Study was successfully completed. Work has now been started on the Information Systems Plan (ISP) phase.

- Computer Operations: There has been considerable activity in the area of computer operations. All DEA systems were successfully transferred from the DOJ Data Center at 425 I Street, N.W. to the new location in Rockville, Maryland. The IBM 4341 was replaced with an IBM 9375 remote job entry device resulting in an annual savings of $150,000. The maintenance for the Secure Teletype System was changed to a item and material contract resulting in a $600,000 savings in maintenance charges. Version 2 of Model 204 data base system has been tested and made operational which improved the efficiency and effectiveness of DEA's data base systems.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
ADP and Telecommunications....	109	104	$63,739	96	87	$64,689	-13	-17	$950

DEA requests a net of -13 positions, -17 workyears and $950,000. This request includes an enhancement of 8 positions, 4 workyears, and $1,072,000, to enhance its automated data processing (ADP) and telecommunications program. This enhancement directly supports DEA's strategic initiative to expand DEA's investigative and administrative support functions by eliminating the staff and funding shortfall that has developed in key areas of agency operations. There are two distinct components of this initiative: correcting base staffing and funding shortfalls and completion of 1990 initiatives. This request also reflects program decreases for management and productivity savings of 21 positions and $122,000 for field data entry and computer programming activities.

Correcting Base Shortfalls

DEA requests a total of 8 positions (7 professional/administrative and 1 technical/clerical), 4 workyears, and $489,000 in program funding to overcome staffing shortages. An additional $133,000 in program funding is requested for NLETS Terminals and equipment.

o Staffing Shortfall: DEA's systems contain vast amounts of data, which are too voluminous to process manually, that remain unexploited because systems applications have not been developed. Many processes are still performed manually, even though they could be handled much more productively through automation if ADP programs were available. Furthermore, insufficient oversight exists to avoid duplicative or outdated data; consequently, DEA's overall system utilizes more processing space and time than necessary.

Resolutions to these systemic problems cannot be accomplished without additional professional ADP staff. DEA requires additional personnel and contract support staff for systems development and programming of modified applications; for systems integration, security, and quality assurance of existing programs; for monitoring contract staff; and for database administration.

o Base Replenishment: With the exception of the Office Automation project, DEA's ADP and telecommunications program base has remained relatively static over the past several years. However, as the number of DEA personnel and offices increases, so do the requirements for such ADP services as word processors, facsimile machines, DATS terminals, secure teletype machines, and communications circuits.

Fixed costs comprise more than 93 percent of the ADP and telecommunications budget, leaving little leeway for unplanned requirements. Where possible, DEA is requesting program funding to secure contract ADP support since the majority of the positions within the ADP program fall under A-76 commercial categories. The positions requested are to monitor and oversee the ADP systems contracts and contract staff, initiate database administration functions, and to institute quality assurance programs on DEA systems. Approximately four of these positions will assume contract monitor and administration functions.

EPIC Computer Support

DEA requests $583,000 for EPIC computer support. These funds are required for maintenance of the existing Data Point computer system and for contract support.

	1990 Appropriation As Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Records Management	70	66	$4,907	70	66	$5,241	70	66	$5,241	...	...	...

Long-Range Goal: Provide effective and efficient records management and library support to ensure the optimum success of DEA's mission requirements.

Major Objectives:

- Upgrade the maintenance, retrievability, and disposition of DEA files through the application of records management practices and technology.
- Provide responsive directives to management services for prompt dissemination of policy and procedures.
- Provide effective reports management through cost benefit analysis, management of a reports information database, and periodic reviews of reporting requirements.
- Provide specialized forms design and analysis for drug enforcement programs and electronic data processing systems.
- Under the Freedom of Information and Privacy Act regulations, respond to all requests to DEA involving Freedom of Information and/or Privacy Act information.
- Provide efficient and responsive library services for all DEA elements.
- Provide information analysis using on-line database retrieval systems in support of overall enforcement requirements.

Base Program Description:

- Records Management: The Records Management program element provides development and implementation of policy and procedures for DEA records management programs and systems, including reports management, forms analysis and design, files maintenance, records disposition, directives disposition, correspondence management, and systems and procedures studies.

- Investigative Records: The Investigative Records program element maintains a large volume of hard copy files on drug investigations conducted by DEA worldwide, and drug intelligence reports received from the FBI and other agencies. Reports in these files are source documents for NADDIS, a computerized data base, and are used extensively by the DEA Headquarters staff. The Investigative Records Unit is responsible for extracting pertinent information from these reports and entering it into NADDIS.

  The program also maintains the Case Status subsystem of EMIS, an on-line information system that has been designed to store, organize and provide information about DEA case and general files on all DEA confidential informants. This information is entered into a highly secure, computerized data base (EMIS II), a central file of all disclosures of information to individuals and agencies outside the Department of Justice as required by the Privacy Act of 1974. Names in these hard copy records are extracted and recorded on microfiche to provide an audit trail.

- Library: The Library's on-line computer information services, Dialog and Nexis, contain over 300 different data bases with approximately 200 million records. These services provide information on a variety of subjects ranging from citations on corporations and individuals to bibliographic citations.

Accomplishments and Workload: DEA's accomplishments in the Records Management program for 1989 were as follows:

- Processed 464,191 investigative reports and opened 32,399 investigative files. Created and updated 910,178 NADDIS records, increasing the database to 2,501,166 records. Processed and reduced to microfiche 4,098 Disclosure Account Records.

- Revised and published DEA's Personnel and Administrative Manual (Volumes 1 & 2). Parts of the Laboratory Operations Manual and Diversion Investigator's Manual were revised and published.

- Processed 114 forms actions to include creation of new forms, revisions and replenishment to existing forms and applicable directives.
- Updated, published and distributed the DEA Forms Catalog for March 1989 requirements.
- Obtained OMB approval (under the Paperwork Reduction Act of 1980) for the reporting and recordkeeping requirements resulting from the passage of PL 100-690, the Chemical Diversion and Trafficking Act of 1988.
- Conducted surveys of 15 Headquarters offices/units to develop file plans for improving filing efficiency, reducing loss of time for retrieving files, disposing of non-essential records, and providing technical assistance and advice to Headquarters and field offices.
- Acquired three on-line computer systems for the library. Two of these systems, Dialogue and Nexis, together contain over 339 different databases with approximately 209 million records. Information from these systems has enabled DEA staff to accomplish more in-depth investigations and research. The third system, On-line Computer Library Center (OCLC), is a library system for cataloging and tracking inter-library loans. The Library maintains 175 special studies and reports for staff reference.

By 1991, the number of investigative reports will increase from 468,478 to 573,906, and input to NADDIS will increase from 263,869 to 302,000, a 13% increase based on a projected assignment of 484 additional agents and compliance investigators.

During 1989, the FOI Section reduced its backlog of FOI/PA requests from 298 to 188, a 37% reduction. Turnaround time for the majority of requests was less than 30 days.

	1990 Appropriation As Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount

State and local training.........	30	29	$3,232	30	29	$3,512	30	29	$3,512	...	...	...

Long-Range Goal: Increase the competency of personnel from organizations, other than DEA, involved in controlling drug trafficking.

Major Objectives:

- Provide training in basic, advanced, and specialized drug law investigative methods and techniques to State, local, military, and other Federal law enforcement personnel.
- Provide drug law enforcement professionals with the skills required to direct a comprehensive drug enforcement program within their area of responsibility for State, local, military, and other Federal agencies.

Base Program Description: DEA's State and Local Training program includes the following:

- Advanced and Specialized Drug Law Enforcement Training: This training includes the National Drug Enforcement Officer's Academy which provides investigator trainees skills in surveillance, undercover operations, search and seizure laws, drug identification and pharmacology, financial asset investigations, and firearms proficiency. Specialized training includes Cannabis Detection and Eradication Training to State and local officers throughout the United States. A variety of training exercises are conducted under the auspices of DEA's 19 field division training units. Field training varies from Basic Investigator's School to short seminars on specialized topics such as clandestine laboratory operations.

- Management and Supervisory Drug Enforcement Training: This training curriculum focuses on management techniques, priorities, interdepartmental cooperation, and available Federal support to provide management officials the skills required to direct a comprehensive drug enforcement program.

Accomplishments and Workload: Accomplishments of the State and Local Training program are presented in the following table:

State & Local Training	1988 Actual	1989 Actual	1990 Estimate	1991 Estimate
Task Force Officer				
Number of Classes	3	3	4	4
Number of Students	74	90	120	120

Number of Students	76	75	160	160
Basic Drug Enforcement				
Number of Classes	80	80	125	125
Number of Students	3,339	3,400	4,800	4,800
Marijuana Eradication				
Number of Classes	14	10	10	10
Number of Students	375	250	250	250
Clandestine Laboratory				
Number of Classes	1	8	5	5
Number of Students	30	292	150	150

Note: This chart includes military and other Federal agency training. Some of the training is conducted by the 19 DEA field divisions, and some is conducted at Quantico.

	1990 Appropriation As Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
State and local laboratory services	25	25	$1,994	25	25	$2,121	25	25	$2,121	...	...	...

Long-Range Goal: Provide support to State and local law enforcement agencies through supplemental laboratory analysis of drug evidence, thereby meeting the applicable State Speedy Trial Act provision, and encouraging State and local agencies to achieve forensic analytical self-sufficiency through provision of technical assistance.

Major Objectives:

- Assist State and local laboratories to achieve self-sufficiency through publishing technical information on a regular basis and participating in national and local forensic sciences meetings, as the need arises: provide training to forensic chemists on new techniques and procedures; and support programs that enhance State and local laboratory capabilities.
- Provide quantitative and qualitative analysis of drug evidence for those agencies that do not have the required expertise or facilities, primarily the Metropolitan Police Department, Washington, D.C. (MPDC).
- Provide expert testimony in court regarding analytical findings for prosecution purposes.
- Provide analytical drug reference standards where there is no commercial source.
- Conduct ballistics examinations to identify common origins of illicitly-manufactured tablets and capsules.

Base Program Description: The State and Local Laboratory Services program is responsible for providing State and local agencies with technical assistance, beyond the expertise of the forensic laboratory servicing the agency, and for helping State and local forensic laboratories achieve self-sufficiency in the analysis of drug evidence for criminal investigations and prosecutions. This program seeks to upgrade the analytical capabilities of State and local laboratories.

Accomplishments and Workload: In support of State and local agency drug investigations during 1989, DEA laboratories analyzed 7,625 drug exhibits, testified in 138 trials, conducted 48 ballistics examinations, published 12 issues of Microgram, and conducted four seminars to train 69 State and local forensic chemists. Additionally, DEA forensic chemists continued to participate in regional, national, and international forensic science organizations by holding officer positions, participating on committees, and presenting scientific papers. Representatives of the laboratory system held several meetings with officials of foreign law enforcement agencies to coordinate intergovernmental scientific activities.

The success of this program in fostering self-sufficiency of State and local agencies can be measured by the reduction of evidence submitted by State and local agencies to DEA for analyses from almost 16,000 exhibits in 1976 to just 7,625 exhibits in 1989.

However, workload generated by the Metropolitan Police Department, Washington, D.C. (MPDC) resulted in more than 7,200 exhibit analyses in 1989. The MPDC relies totally on DEA for analysis of its drug evidence. Since tabulation of MPDC evidence submissions began in 1978, the share of State and local exhibits analyzed by DEA on behalf of the MPDC has increased from 53 percent to 94 percent in 1989, when 7,208 MPDC exhibits were analyzed.

Workload projections for the State and Local Laboratory Services program are presented in the following table:

Item	1988 Actual	1989 Actual	1990 Estimate	1991 Estimate
Evidence Analysis	8,037	7,675	8,550	8,550
Evidence Backlog	401	358	966	2,490
Court Appearances	141	135	150	150
Ballistics Examination	42	50	50	50
Training Seminars	4	4	4	4

	1990 Appropriation As Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Executive direction and control......	367	362	$23,476	367	362	$25,702	371	357	$26,632	4	-5	$930

Long-Range Goal: Develop, maintain, and provide effective and efficient management, executive direction and control functions to ensure maximum achievement of the agency's mission.

Major Objectives:

- o Provide quality management direction and control through policy development. Provide accurate and timely information to Congressional requests, specific interest groups and the public regarding DEA's mission and activities. Provide a full range of legal services to the agency. Provide centralized program coordination and reporting of asset forfeiture.

- o Provide effective budget planning, formulation and execution. Provide an efficient DEA financial accounting and reporting system in compliance with OMB/GAO directives. Strengthen management procedures and internal controls through OMB Circulars A-123 and A-76.

- o Investigate instances of integrity misconduct within DEA. Maintain financial accuracy and timeliness through internal audits. Effectively monitor and evaluate all programs within DEA through inspections for mission accomplishment and operational performance. Provide physical, facility and information security to DEA. Continue an effective strategic planning process for DEA including the development of the Field Management Plan. Establish statistical systems for government-wide and DEA drug seizures, drug arrests, and asset seizures and serve as a clearinghouse for all DEA operational statistics.

- Develop agency-wide resources for drug abuse prevention and implement a nationwide program of demand reduction.

Base Program Description: This program is responsible for setting policy, and providing solutions to problems in program formulation, management functions and internal control as well as ensuring the effective development and uitlization of resources so that strategic goals and objectives continue to be met.

- Staff Operations: This area responds to Congressional, media and public inquiries, provides DEA officials with reports on Congresssional activities; issues press releases; prepares text of speeches, outlines, talking points, and Congressional testimony; and prepares legal briefs, opinions, presentations and provides technical legal training in regulatory and criminal matters, civil litigation, seizures, forfeiture of assets, personnel, Equal Employement Opportunity, procurement and international matters.

- Financial Management: This area prepares DEA's budget, which is integrated with the DEA Strategic Planning process; develops and maintains DEA's resource allocation plans; and provides the operation and supervision of DEA's accounting system.

- Planning and Inspection: This area advises management on all matters pertaining to planning, policy analysis, organization control, statistical systems, personnel, document and plant security and integrity/misconduct matters.

Accomplishments and Workload:

- Legal Services: During 1989, DEA accomplished 1,192 civil administrative actions, an increase of 16.3 percent over 1988. Enhanced enforcement activity was the principal cause of this increase; 131 employee discipline actions (a 46 percent increase) were reviewed. Projecting modest increases of 15 percent in 1990 and 1991, the total workload will increase to 1,526, a 75 percent over 1988. In addition, legal advice was provided during the development of DEA programs for drug deterrence and hazardous waste disposal.

DEA's criminal law program was responsible for the review of 148 applications to conduct electronic surveillance, 20 requests for exemptions to the undercover operations guidelines. In addition, 45 formal legal opinions were drafted and 45 complex discovery requests were processed. Requests for legal assistance by the Office of Intelligence also increased dramatically in 1989.

Legal workload associated with diversion and regulatory activities is increasing by 25 percent annually. Due to the preponderance of Section 823(f) public interest cases involving practitioners, approximately 70 percent of all cases initiated result in hearings docketed with DEA's administrative law judges. Participation in the drafting of rules to implement the Chemical Diversion and Trafficking Act (CDTA) and reviewing other CDTA mandated activities has accounted for a substantial portion of the increased regulatory workload.

In 1989, DEA processed over 18,919 asset seizures having a total appraised value in excess of $973 million. In addition, DEA administratively forfeited 8,395 assets valued at over $97.8 million. Further, requests for State and local revenue sharing were processed and approved resulting in a total sharing of $149.8 million resulting from DEA initiated cases.

o Congressional and Public Affairs: In 1989, DEA coordinated the preparation and appearance of DEA officials in 29 Congressional hearings and 90 formal Congressional briefings; prepared responses for 948 letter inquiries from Congress and responded to 1,056 Congressional telephone inquiries; prepared and distributed 32 legislative summaries; processed responses to 10,000 media inquiries and distributed 227,000 publications; represented the agency and participated in 2,400 drug-related workshops and conferences throughout the country; prepared approximately 44 major speeches for the Administrator and the Deputy Administrator; and coordinated and processed 132 public appearances/speech requests.

o Planning and Inspection: In 1989 DEA conducted inspections of 10 Divisions, one foreign office, one laboratory, five Headquarters offices, and one pre-inspection survey. Eighteen audits were conducted concurrent with these inspections, along with two audits of Special Enforcement Operations and 12 special reviews. These inspections and audits resulted in the issuance of 216 recommendations that, when fully implemented, will increase the efficiency and effectiveness of DEA operations, assure management of compliance with applicable laws, regulations and rules, and assure the adequacy of internal controls over agency programs.

During 1989, DEA continued to produce and distribute editions of its comprehensive Quarterly/Annual Statistical Report series. A major review and redesign of the methodology for summarizing statistical information on drug seizures has been completed, producing significant improvements in the timeliness, accuracy, thoroughness, and usefulness of such management information. During the year, DEA has also continued to work with the National Insititute on Drug Abuse on the redesign of the Drug Abuse Warning Network, a project that is near completion and that will greatly increase the scientific validity of drug abuse data collected by that system.

DEA continued to provide security assistance to DEA facilities worldwide. Because of new facility construction during 1988 and 1989, a Physical Security Specialist was assigned on-site to monitor the construction of the EPIC and DEA Headquarters facilities.

ADP security remained a priority and necessitated development of new security requirements and policies concurrent with the transition to the M-204 system. Extensive support was required in terms of formulating security requirements and policies for the Office Automation system.

Item	1988 Actual	1989* Actual	1990 Estimate	1991 Estimate

*Many of the Inspection and Audit functions were transferred to the Office of the Inspector General in 1989.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Executive direction and control....................	367	362	$25,702	371	357	$26,632	4	-5	$930

DEA requests a net of 4 positions, -5 workyears and $930,000. This request includes 18 positions (8 Attorneys and 10 support positions), 9 workyears, and $1,011,000, to enhance DEA's Legal Services, Financial Management and Planning and Inspection activities to meet increasing workload demands and reflects program decreases for management and productivity savings of 14 positions and $81,000 for accounting and asset forfeiture fund functions.

Legal Activities

DEA requests 10 positions (8 attorneys and 2 support positions), 5 workyears, and $444,000 to respond to workload requirements for asset forfeiture processing, which have resulted from increases in agent staffing and increased workload. This request directly supports DEA's strategic planning initiative to expand DEA's investigative and administrative support function by augmenting field administrative support in key areas of shortage.

Over the past several years, DEA has placed increased focus on identifying and seizing the proceeds of drug crime and investigating the fiduciary relationships that enable trafficking organizations to function. These efforts have resulted in a 64 percent increase in the value of DEA asset seizures since 1986. A primary cause of this success is the implementation of Asset Removal Teams in each of the 19 field divisions that have enhanced DEA capabilities to seize assets and property, through increased investigative activity. DEA anticipates that the number of seizure actions will total 40,000 annually in 1991. While these statistics are impressive, seizures are of limited value unless the assets are subsequently forfeited to the government; unfortunately, DEA has not been as successful in accomplishing the latter.

The Anti-Drug Abuse Act of 1988 amended the prior foreign sharing provisions and now permits the sharing of forfeited assets with foreign governments in basically the same manner as DEA now has with the State and local police. This will also add asset forfeiture processing requirements.

In addition to processing forfeitures, the program is also responsible for training, assisting the field, reviewing sharing requests, responding to inquiries from interested third parties, and meeting the increased demand from State and local agencies for equitable sharing which have resulted in a considerable increase in sharing requests filed.

As asset seizure cases become increasingly complex and traffickers become more adept at hiding assets and litigating against the government, DEA's legal authority and administrative handling of seizure and forfeiture is under closer scrutiny. A recent evaluation of the Department's asset forfeiture program by the Justice Management Division recommended increased legal review of DEA seizures and forfeitures. The current Asset Forfeiture Unit now has five attorneys to review every case, advise and train DEA field staff and to assist the United States Attorneys. Because DEA's forfeiture program has grown significantly, by 1991, DEA anticipates nearly 100 headquarters and 300 field employees and contractors will be involved in forfeiture activities. DEA anticipates that all functions except legal review and training will be contracted out utilizing funding from the Asset Forfeiture program.

Planning and Inspections

DEA requests 5 support positions, and 2 workyears, and $222,000 to eliminate staffing shortfalls in DEA's security program. This request is in direct support of the strategic initiative to expand DEA's investigative and support function by eliminating the staff and funding shortfall that has developed in key areas of agency operations.

o ADP Security: DEA is requesting 1 support position. DEA's Security Program is responsible for the formulation and implementation of policies and procedures to prevent the misuse, abuse and unauthorized dissemination of DEA's computerized data. This function entails the maintenance of more than 5,000 computer access codes for DEA personnel, personnel of other Federal agencies, State/local task force officers, and contractors working on various DEA data processing projects. Assistance in uncovering possible leaks of information from DEA's sensitive computer data base and other time-consuming efforts such as attending meetings for the purpose of providing input associated with the security of DEA's sensitive data files and other data processing related assets is required. Currently, one individual is responsible for these activities and as such has not been able to take over routine responsibilities such as password maintenance, and the increasing work on related assignments from the Office of Professional Responsibility. The Computer Security Act of 1987 has created another area of responsibility for this function. Training in computer security practices is now required for all employees involved with systems containing sensitive data.

- Personnel Security: DEA requests 3 personnel security specialists, 1 ADP security specialist, and 1 support position to enhance the current staffing and to reduce and eliminate current backlogs within the security program. Without these additional positions the efficiency, productivity and effectiveness will continue to be negatively impacted by increased backlogs and delays. Personnel Security specialists perform functions relating to hiring and granting of security clearances for all DEA positions. In addition, they coordinate appropriate background investigations for the private contractors performing these functions for DEA. There is a variety of in-service functions performed by these specialists such as upgrading clearances, updating background investigations and passing clearances to appropriate agencies.

  DEA is facing a broad need to hire a significant number of special agents, diversion investigators, chemists, and support personnel. There is also a significant trend toward increased domestic contractor and overseas contract hiring activity requiring personnel security support. Review of the overall hiring process by personnel security indicates that the lack of sufficient staffing causes delays and backlogs in the hiring process. DEA recently engaged a private company to conduct field background investigations on non-core support employees. This essentially removed this function from Special Agents in the field. However, in implementing this contract, personnel security specialists have had to perform additional case organization functions increasing their per case work time.

  Proper support in all other areas such as updates, upgrading's and initial clearances must be enhanced to provide an efficient and effective level of support.

Financial Management

DEA requests 3 support positions, 2 workyears, and $345,000, including $210,000 in program funding, to eliminate staffing and funding shortfalls in DEA's accounting and voucher processing functions. This request is in direct support of DEA's strategic planning initiative to expand DEA's investigative and administrative support functions by eliminating staffing and funding shortfalls that have developed in key areas of operations.

With the expansion of DEA's domestic and foreign drug suppression/enforcement programs, there has been a steady increase in the number of transactions affecting cash over the years.

Since 1985, DEA has experienced substantial growth in the area of voucher processing. Commensurate with DEA's further growth and expansion, the voucher processing activity will continue to increase beyond DEA's capability to respond.

This request seeks to eliminate the staffing and funding shortfalls in financial management support staff. DEA requests three positions (two accountant and one support) to improve current activities. This request includes one operating accountant and one support position to improve the financial reporting of accounting, budgeting, property, procurement, payroll, and seized and forfeited assets. In addition, this enhancement will improve monitoring and reconciliation of DEA cash revenue and outlays for DEA's appropriated accounts, and accounting for Asset Forfeiture Fund outlays to ensure accurate billing. One systems accountant will review, revise, and establish sound internal financial controls in the financial system.

In addition, $210,000 is requested to fund DEA's share of implementation costs associated with the Attorney General approved Department-wide accounting system. This request provides initial funding to merge DEA's accounting system with the Department's Financial Management Information System. Specifically, it funds contractor support to identify requirements for modifying the existing system, document specialized user policies and procedures, train users, identify and resolve implementation issues, and for any other tasks associated with successful conversion from independent systems to the Department's system.

	1990 Appropriation As Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Administrative services	228	226	$18,738	228	226	$19,870	226	224	$19,858	-2	-2	$-12

Long-Range Goal: Provide effective and efficient administrative support to ensure maximum achievement of DEA's mission.

Major Objectives:

- Provide effective position management and appropriate compensation of employees, including merit pay, benefits, awards, and retirement services.
- Guide and assist in processing all disciplinary actions and grievances, and establish policy and advise on performance appraisals.
- Validate personnel procedures and practices in areas of employee performance appraisal, selection, promotion, and discipline.
- Provide necessary health services, including employee assistance on personal and behavioral problems affecting performance and well-being, including drug testing.
- Manage office and special purpose space to meet various DEA requirements.
- Provide effective management in administrative areas for employees concerning relocation, procurement, contracting, and office services.
- Recruit, staff, and manage DEA employees according to Equal Employment Opportunity regulations and procedures.

Base Program Description:

- Personnel Operations: An efficient personnel program is required to recruit and bring on-board a variety of dedicated and proficient staff in order to carry out the difficult and diversified functions inherent in DEA mission responsibilities. The need for a highly mobile force located in every State and in over forty countries throughout the world, adds to personnel operations problems and workload. All personnel work, other than limited clerical functions, is centralized in Washington, D.C.

  DEA personnel operations require comprehensive attention to: classification; pay and position management, employee relations, assistance and benefits; recruitment and placement; health and safety; personnel systems automation development; and validation and analysis of personnel procedures. The Office of Personnel advises and assists managers and employees on personnel matters, develops policy and provides guidance for the effective management of the workforce.

- Equal Employment Opportunity: EEO programs ensure that DEA focuses on legal and moral responsibilities in acquiring and managing its workforce. This prevents discrimination and morale problems and assures the equitable treatment of all DEA employees.

- General Services: The General Services staff responds to all of DEA's administrative support requirements, including: the acquisition and utilization of space; permanent change of station orders; relocation benefits; office supplies; formal procurement contracts and requisitions; office furniture and equipment; and DEA's motor vehicle fleet.

Accomplishments and Workload: During 1989, the Administrative Services program accomplished the following:

- Personnel Operations: Provided technical assistance and advice on issues related to health and safety, classification, position management, pay administration (including time and attendance), awards, performance appraisals, performance standard revisions, performance-based actions (adverse actions, grievance and appeals), and the Federal Employee Retirement System (FERS).

  Processed 2,513 applications for Agent positions, hired 180 Agent trainees for four training classes, including 35 pilots, 65 minorities and 25 women.

  Conducted 1,168 drug tests including 1,031 random tests and 132 Agent trainee tests.

  Processed and entered 27,056 personnel actions into the computerized personnel data system. Completed 2,450 physical examinations, examination packets and medical clearances,and conducted 1,138 Agent medical reviews.

  Assisted 526 employees and family members through employee assistance counseling and services.

  Processed 160 retirements and 1,498 award actions.

- General Services: In 1989, four new domestic offices and two foreign offices were established. Facilities initiated 69 major actions to expand, relocate, or reconfigure space to accommodate changing requirements; monitored, co-ordinated and revised where necessary 54 major projects which were still in progress from the previous year; designed, revised or expanded telephone systems at 55 locations; initiated 64 security system installations or upgrades and initiated eight major heating, ventilation and air conditioning (HVAC) projects for the Laboratories.

In 1990, Facilities has requirements for 46 relocations and/or expansions; modifications and/or installations to 61 security systems; 58 telephone system revisions, new systems or relocations; 6 new office packages; and 13 miscellaneous alteration projects.

DEA has been delegated Lease Management authority for 51 locations totaling approximately 526,000 square feet. DEA is responsible for the operation, maintenance and repair of its solely owned El Paso Intelligence Center (EPIC) which covers ten acres and 57,615 square feet of office space; and operates and maintains two twelve story office buildings of approximately 400,000 square feet at Lincoln Place. DEA was formerly a tenant of GSA in all occupied space. It is now taking the place of GSA in the management and operation of more than half of its occupied space.

During 1989, the DEA awarded 78 contracts and/or modifications and issued 2,247 purchase orders. It is projected that DEA will complete approximately 120 contractual awards and modifications with approximately 2,100 purchase orders for 1990.

In 1988, DEA issued 802 Permanent Change of Duty Station (PCS) orders, 809 passports and 1,000 visas and provided 2,639 tickets and reservations for Headquarters personnel. During 1989, DEA issued 417 PCS orders, 544 passports and 595 visas.

In 1989 system improvements were made in the automated motor vehicle inventory to better monitor maintenance, utilization, and condition of the fleet.

- Equal Employment Opportunity: During 1988, the function of investigating DEA discrimination complaint cases was transferred to the EEO Staff. As a result, two additional full-time investigators were assigned to the EEO Staff to assist with the timely processing of complaints. EEO continued to perform its normal duties including providing assistance in minority recruiting at annual Special Emphasis Conferences; training programs for managers, supervisors, and employees; and a seminar for DEA field Special Emphasis Program Coordinators.

Program Change:

Justification of Adjustments to Base

(Dollars in thousands)

	Pos.	WY	Amount
Mandatory increases:			
1. Annualization of positions requested in 1990	...	165	$7,741
2. One additional compensable day	...	...	977

The annual salary rate for Federal employees is based on 260 paid days. During 1991, there is one more compensable day (261) than 1990 (260). (Permanent personnel compensation $197,222,000/260 = $759,000 plus $218,000 for benefits.)

	Approved 1990 Increase	Annualization Required
Annual salary rate of 332 approved positions	$12,001	
Less lapse (50 percent)	5,990	$5,990
Net compensation	6,011	
Associated employee benefits	1,751	1,751
Total	7,762	7,741

	Pos.	WY	Amount
3. 1990 Full-year pay increase impact on 1991	...	...	11,442

This request provides for the full-year pay increase of 3.6 percent as contained in the general provisions of the U. S. Treasury, Postal Services and General Government Appropriations Bill, 1990, for civilian and military personnel to be effective January of 1990. The Department will be required to absorb the total pay raise in 1990. The requested increase of $11,442,000 is the amount required for full-year funding in 1991.

	Pos.	WY	Amount
4. 1991 pay increase For the first time, the Administration is proposing to include the costs of the pay increase effective in the budget year with the initial budget request. This request provides for 50 percent of the proposed 3.5 percent pay increase effective in January of 1991. The Department will be required to absorb half of the costs of this pay raise. The amount requested, $4,291,000, is the cost of the pay increase for approximately three-quarters of the year assuming a 50-percent absorption.	...	...	$4,291
5. Special salary rates This request provides increases as authorized by law in 5 U.S.C. 5303. The Office of Personnel Management (OPM) has approved these rates for positions where retention and recruitment of qualified applicants is a problem. The Department's request represents coverage of 27 authorized special rates and 5 special rate surveys in progress. This request also includes an estimate for all positions GS-2 through GS-9 and certain job specific positions GS-10 through GS-14, in the counties of Suffolk and and New York City, New York.	...	...	634
6. Administratively Uncontrollable Overtime (AUO) P. L. 101-173 increased the limit on AUO payments from 25 percent of a GS-10 step 1 to 25 percent of base compensation. Since most law enforcement agents in the Department are compensated at levels above a GS-10 step 1, this act increases the Department's AUO payments substantially. Total increased costs for the Drug Enforcement Administration are $13,826,000.	...	...	13,826
7. Health Benefits The Federal Employees' Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1990, the actual contribution to health insurance increased 26 percent. The requested increase of $1,786,000 provides funds for actual increased costs from pay period 1 to pay period 2, projected for a full year.	...	...	1,786
8. Federal Employees' Compensation Act (FECA) - Workers' Compensation This increase reflects the billing provided by the Department of Labor for the actual costs in 1989 of employees' accident compensation. The 1991 amount will be $5,428,000 or $342,000 over the 1990 base.	...	...	342
9. GSA Rent GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. A mandatory increase of $1,707,000 is required to meet our recurring commitment to GSA.	...	...	1,707

	Pos.	WY	Amount
10. GSA recurring reimbursable services Reimbursable payments are made to GSA for heating, ventilation and air conditioning provided in excess of normal working hours and for guard services. An estimated 1.1 percent increase of $69,000 for these services in 1991 over the 1990 charges of $6,273,000 is required.	...	...	$69
11. GPO printing costs The Government Printing Office (GPO) is currently projecting a seven-percent increase over the 1990 printing costs of $472,000. An additional $33,000 will be required in 1991.	...	...	33
12. Employee data and payroll services Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems, maintenance and payroll accounting, are based on the number of employee records maintained. The rate of $188.23 per record in 1990 will be raised to $199.52 per record for 1991. The change is based on anticipated uncontrollable costs increases of 6 percent for the operation of the Justice Employee Data Service. An increase of $56,000 will be required in 1991.	...	...	56
13. Foreign allowances Allowances for Government employees in foreign areas are determined by the Department of State (DOS). The DOS anticipates a 10-percent increase in 1991. The requested increase of $799,000 provides 10-percent more than the $7,990,000 budgeted for 1990.	...	...	799
14. General pricing level adjustments This request applies OMB pricing guidance as of December 6, 1989, to selected expense categories. The increased costs identified result from applying a factor of 4.2 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, transportation costs and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1991 estimates.	...	...	6,713
Total, mandatory increases	...	165	50,416

Mr. SMITH. We welcome back the Administrator of the DEA, John C. Lawn. I understand that this will be your last appearance before our Committee?

Mr. LAWN. Yes, sir.

Mr. SMITH. I am sorry to hear that you are leaving, but you have to do what you have to do. You have been very cooperative with the Committee, and I think you have had an excellent tenure in this very demanding and important position. Do you have a statement to make?

Mr. LAWN. Yes, sir, I do.

Mr. SMITH. Please proceed.

OPENING STATEMENT

Mr. LAWN. Thank you.

Once again, I am pleased to appear before this Committee in support of the Drug Enforcement Administration's budget request for fiscal year 1991.

Just a few weeks ago, the President returned from an historic meeting in Cartagena, Colombia, where he met with the leaders of all the major drug-producing countries in South America. This meeting was one in a series of extraordinary events that have demonstrated the global commitment to combating the trafficking and use of illicit drugs. These events include the resolve and extreme courage of the Colombian Government in confronting the Medellin Cartel; the arrest of Manuel Noriega; and the conviction of many involved in the murder of DEA Agent Kiki Camarena in Mexico.

Notwithstanding these positive events, and the encouragement they give us, we still see daily the corrosive effects of drug abuse on our entire society at all economic and social levels, from urban inner cities to isolated rural towns. Lives are wasted. Families are destroyed. Children are sacrificed.

The latest Household Survey indicated that the number of persons using cocaine once a week or more from 1985 to 1988 has more than doubled. In our American population over the age of 12, one in every 14 uses an illicit drug at least monthly. Workplace drug abuse by employees costs United States businesses and the economy an estimated $60 billion or more each year.

This chain of abuse is creating a shocking new problem, drug-addicted newborn babies, throughout the entire Nation. For example, over half of the women in the pre-natal program at the District of Columbia's General Hospital in recent months tested positive for drugs. The percentage of children born to drug addicts at the hospital has almost doubled in the past year, and neo-natal units around the city are being swamped with the children of drug addicts. An estimated 375,000 babies were born last year to drug-addicted mothers throughout the United States.

ACCOMPLISHMENTS

In response, we have strengthened our resolve to combat drug trafficking, and we have made progress. Nationwide, DEA's enforcement initiatives once again established record levels for arrests, convictions, and asset seizures.

The other personnel compensation workyears reported in the 1991 President's Appendix represented DEA's best estimate at the time that document was prepared.

Drug Enforcement Administration

Salaries and Expenses

Consulting and Related Services
(Dollars in thousands)

	1988 Actual	1989 Actual	1990 Estimate
Consulting Services........................	...	...	...
Management and Professional Studies........	...	...	$162
Special Studies and Analysis...............	...	...	$ 75
Total..................................	...	...	$237

Consulting and related services are used in the Drug Enforcement Administration only for services which cannot be performed in-house. Services are required for the following:

Management and Professional Studies

A contract will be awarded in 1990 to develop observation scales for Special Agent Performance Work Plans. The contract will cost approximately $130,000. The Office of Personnel is requesting the study; however, it will benefit all Special Agents.

A contract will be awarded in 1990 for consulting services for international students. The contract will cost approximately $32,000. This contract is requested by the Office of Training and will also benefit DEA's foreign counterparts that attend drug law enforcement training.

Special Studies and Analysis

A contract will be awarded in 1990 for consulting services for a DEA Threat Analysis. The contract will cost approximately $75,000. This contract is requested by the Office of Investigative Support.

In 1989, DEA arrested 25,618 violators, an increase of 6.8 percent from the prior year. Convictions totalled 15,492, an increase of 18.2 percent over 1988. Further, the value of assets seized by DEA nearly doubled to $976 million in 1989, a 46 percent increase over 1988.

COMMITMENT TO GROWTH

At the same time, DEA's cost of doing business has steadily increased over the past few years. The level of demand and degree of sophistication required of our operations has also grown tremendously. The result is that although the agency has received resource enhancements, DEA has been unable to keep pace with the major drug trafficking organizations in operation today.

DEA is still a small agency with an extremely large and important mission. Throughout the last decade, DEA has stated that long-term success against drug trafficking and abuse requires a sustained commitment to the steady growth and modernization of the agency. Given the dynamic environment within which drug law enforcement must operate, growth and modernization of the agency are critical components of a comprehensive drug strategy. DEA has planned for this growth by considering all core needs as well as technical and administrative support requirements.

1991 BUDGET REQUEST

The President's 1991 budget currently before you provides the groundwork for this effort. This budget contains the largest program increase in DEA history. It includes program enhancements of 744 positions and $121.9 million in direct funds as well as a net program increase of 126 positions and $20.5 million in reimbursable funds for DEA's participation in the Organized Crime Drug Enforcement (OCDE) task force program. All together, these enhancements provide an additional 501 Special Agents for drug law enforcement. DEA's request is divided into three basic funding initiatives.

The first is to expand all facets of DEA's investigative and administrative support infrastructure. DEA requests 121 positions and $46 million to ensure that the agency can provide adequate and responsive support to DEA's investigative operations.

As the size of DEA's agent staffing has increased, the workload for professional, administrative and technical support has increased simultaneously. To keep up with the workload demands, agents and other core personnel have had to assume many collateral administrative duties that do not fully utilize their talents and, more importantly, take them away from their primary investigative tasks. The DEA cannot operate at its most effective level without adequate infrastructure support. This funding initiative seeks to alleviate these fundamental needs created by rapid growth in the enforcement programs. In addition, this initiative includes funding for the construction of a new aviation facility, authorized in the Anti-Drug Abuse Act of 1988.

The second initiative addresses DEA's primary investigative mission and the resource requirements of the enforcement program. DEA requests 601 positions and $71.1 million to target and immobilize major trafficking organizations.

This initiative includes a request for 366 Special Agents. Of this amount, 300 Special Agents are requested for priority domestic drug trafficking areas. DEA has categorized its domestic divisions into three levels with regard to the drug threat they represent and has developed staggered resource requirements based on this classification. Accordingly, the highest category of need includes five major cities: Houston, Los Angeles, Miami, New York and San Diego—as part of the Southwest border—that have also been identified as High Intensity Drug Trafficking Areas by the Office of National Drug Control Policy. Ten divisions in the second level of need also will receive additional Special Agent resources. The remaining Agents will be assigned to nine new State and local task forces, and to Special Enforcement Operations. In addition, this initiative includes enhancements to fight against the production of illicit drugs through DEA's domestic cannabis eradication and chemical control programs. The Department's Consolidated Organized Crime Drug Enforcement budget request will also provide a net increase of 93 DEA Special Agents who will be dedicated to major investigations throughout the country. Furthermore, this initiative includes an increase of 54 intelligence analysts to support DEA Agents and other investigative personnel.

The third and final initiative is the expansion of DEA's foreign drug suppression and enforcement program. This initiative includes 22 positions, 18 of whom are Special Agents, and $4.9 million.

International drug control remains a major issue of concern to DEA. Foreign countries are the principal producers of the cocaine, heroin and marijuana consumed in the United States. Recent intelligence estimates indicate that marijuana and opium cultivation has increased substantially in Mexico. The number of hectares of coca currently in South America point to a banner cocaine production year. Southeast Asia is also realizing an alarmingly substantial increase in opium cultivation. The enhancement for DEA's international efforts seeks the establishment of a new office in Salta, Argentina, and staffing increases in 13 existing offices around the world.

COOPERATIVE EFFORTS

The resources in this request will lead to additional statistical validation of DEA's accomplishments. But often it is those accomplishments that cannot be measured by numbers that have the greatest impact. For example, through DEA's active international agenda in 1989, the International Drug Enforcement Conference, IDEC, once again served as a catalyst for close cooperation between 20 countries in North, Central and South America. Simultaneous enforcement operations conducted in all 20 countries effectively squeezed trafficking networks throughout the Americas. In addition, DEA now has entered into Memoranda of Understanding with the Soviet Union and Laos which we hope will have a marked impact on drug trafficking in those areas of the world.

DEA has coordinated extensively with the Office of National Drug Control Policy in the development and implementation of the Administration's National Drug Control Strategy. DEA is fully committed to achieving its share of the challenging goals outlined in the strategy and in coordinating its activities with all others involved in the national drug control effort.

DEA's enforcement achievements in our Nation's efforts to reduce drug trafficking and abuse continue; however, drug abuse remains a critical problem of enormous global dimensions. This underscores our belief that enforcement is only one part—albeit an essential one—of a multi-faceted strategy.

DEMAND REDUCTION

One of the programs that we at DEA feel strongly about is Demand Reduction. DEA has been successful in spreading the anti-drug message to youth, sporting, and educational groups. In 1989, DEA conducted drug education workshops, seminars, and clinics throughout the country to more than 700 high school coaches, counselors, and school administrators. More than 200,000 young persons attended Sports Drug Awareness presentations.

REQUEST FOR SUPPORT

We are making progress in the war on drugs. However, we at DEA recognize, probably better than most others, just how much more remains to be done. With our 1991 enhancement, DEA's budget will total $700 million, approximately 0.05 percent of the proposed Federal budget. We know that we can make a difference. We know that we have made a difference. Our agents are a highly motivated and skilled group of dedicated professionals who have clearly demonstrated their effectiveness and want to do more to win the fight against drug traffickers. An investment in DEA will be money well spent.

The recent and tragic deaths of DEA Special Agents Everett Hatcher in New York and Rick Finley in Bolivia attest to the risks and sacrifices DEA faces daily. Their deaths will not be in vain, nor will the efforts of DEA personnel worldwide. DEA will continue to fight; however, the degree of success is greatly dependent on your support.

Mr. Chairman, I appreciate your giving me the opportunity to make this statement. I will now be happy to answer any questions.

[Mr. Lawn's prepared statement and Mr. Burke's biography follow:]

DEPARTMENT OF JUSTICE
DRUG ENFORCEMENT ADMINISTRATION

STATEMENT OF THE ADMINISTRATOR
JOHN C. LAWN
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON
THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE,
THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to appear before you today in support of the Drug Enforcement Administration's budget request for fiscal year 1991.

Just a few weeks ago, the President returned from a historic meeting in Cartagena, Colombia, where he met with the leaders of all the major drug producing countries in South America. This meeting was one in a series of extraordinary events that have demonstrated the global commitment to combating the trafficking and use of illicit drugs. These events include the resolve and extreme courage of the Colombian government in confronting the Medellin Cartel; the arrest of Manuel Noriega; and the conviction of many involved in the murder of DEA Agent Kiki Camarena.

Notwithstanding these positive events, and the encouragement they give us, we still see daily the corrosive effects of drug abuse on our entire society--at all economic and social levels, from urban inner-cities to isolated rural towns.

Lives are wasted. Families are destroyed. Children are sacrificed.

The latest Household Survey indicated that the number of persons using cocaine once a week or more from 1985 to 1988 doubled. In our American population over the age of 12, 1 in every 14 uses an illicit drug at least monthly.

Workplace drug abuse by employees costs United States businesses and the economy an estimated $60 billion or more each year.

This chain of abuse is creating a shocking new problem--drug-addicted newborn babies--for the entire Nation. For example, over half of the women in the pre-natal program at the District of Columbia's General Hospital in recent months tested positive for drugs. The percentage of children born to drug addicts at the hospital has almost doubled in the last year, and neo-natal units around the city are being swamped with the children of drug addicts. An estimated 375,000 babies were born last year to drug-addicted mothers in the United States.

ACCOMPLISHMENTS

In response, we have strengthened our resolve to combat drug trafficking, and we have made progress. Nationwide, DEA's enforcement initiatives once again established record levels for arrests, convictions, and asset seizures. In 1989, DEA arrested 25,618 violators, an increase of 6.8 percent from the previous year. Convictions totalled 15,492, an increase of 18.2 percent over 1988. Further, the value of assets seized by DEA nearly doubled to $976 million in 1989, a 45.6 percent increase over 1988.

COMMITMENT TO GROWTH

At the same time, DEA's cost of doing business has steadily increased over the past few years. The level of demand and degree of sophistication required of our operations has also grown tremendously. The result is that although the agency has received resource enhancements, DEA has been unable to keep pace with the major drug trafficking organizations in operation today.

DEA is still a small agency with an extremely large and important mission. Throughout the last decade, DEA has stated that long-term success against drug trafficking and abuse requires a sustained commitment to the steady growth and modernization of the agency. Given the dynamic environment within which drug law enforcement must operate, growth and modernization of the agency are critical components of a comprehensive drug strategy. DEA has planned for this growth by considering all core needs as well as technical and administrative support requirements.

1991 BUDGET REQUEST

The President's 1991 budget currently before you provides the groundwork for this effort. This budget contains the largest program increase in DEA history. It includes program enhancements of 744 positions and $121.9 million in direct funds as well as a net program increase of 126 positions and $20.5 million in reimbursable funds for DEA's participation in the Organized Crime Drug Enforcement (OCDE) task force program. All together, these enhancements provide an additional 501 Special Agents for drug law enforcement. DEA's request is divided into three basic funding initiatives, which I will describe briefly.

The first is to expand all facets of DEA's investigative and administrative support infrastructure. DEA requests 121 positions and $46.0 million to ensure that the agency can provide adequate and responsive support to DEA's investigative operations.

As the size of DEA's agent staffing has increased, the workload for professional, administrative, and technical support has increased simultaneously. To keep up with the workload demands, agents and other core personnel have had to assume many collateral administrative duties that do not fully utilize their talents and, more importantly, take them away from the primary investigative tasks. The agency cannot operate at its most effective level without adequate infrastructure support. This funding initiative seeks to alleviate these fundamental needs created by rapid growth in the enforcement program.

In addition, this initiative includes funding for the construction of a new aviation facility, authorized in the Anti-Drug Abuse Act of 1988.

The second initiative addresses DEA's primary investigative mission and the resource requirements of the enforcement programs. DEA requests 601 positions and $71.1 million to target and immobilize major trafficking organizations.

This initiative includes a request for 366 Special Agents. Of this amount, 300 Special Agents are requested for priority domestic drug trafficking areas. DEA has categorized it's domestic divisions into three levels with regard to the drug threat they represent and has developed staggered resource requirements based on this classification. Accordingly, the highest category of need includes the five cities--Houston, Los Angeles, Miami, New York, and San Diego (as part of the Southwest border)--that have also been identified as High Intensity Drug Trafficking Areas by the Office of National Drug Control Policy. Ten divisions in the second level of need also will receive additional Special Agent resources. The remaining Agents will be assigned to nine new State and local task forces, and to Special Enforcement Operations. In addition, this initiative includes enhancements to fight against the production of illicit drugs through DEA's domestic cannabis eradication and chemical control programs The Department's Consolidated Organized Crime Drug Enforcement budget request will also provide a net increase of 93

DEA Special Agents that will be dedicated to major investigations throughout the country.

Furthermore, this initiative includes an increase of 54 intelligence analysts to support Agents and other investigative personnel.

The third initiative is the expansion of DEA's foreign drug suppression and enforcement program. This initiative includes 22 positions and $4.9 million.

International drug control remains a major issue of concern to DEA. Foreign countries are the principal producers of the cocaine, heroin, and marijuana consumed in the United States. Recent intelligence estimates indicate that marijuana and opium cultivation is up substantially in Mexico. The number of hectares of coca currently under cultivation in South America point to a banner cocaine production year. Southeast Asia is also realizing an alarmingly substantial increase in opium cultivation. The enhancement for DEA's international efforts seeks the establishment of a new office in Salta, Argentina, and staffing increases for 13 existing offices around the world.

COOPERATIVE EFFORTS

The resources in this request will lead to additional statistical validation of DEA's accomplishments. But often it is those accomplishments that cannot be measured by numbers that have the greatest impact. For example, through DEA's active international agenda in 1989, the International Enforcement Conference (IDEC) once again served as a catalyst for close cooperation between 20 countries in North, Central, and South America. Simultaneous enforcement operations conducted in all 20 countries effectively squeezed trafficking networks throughout the Americas. In addition, DEA now has entered into Memoranda of Understanding with the Soviet Union and Laos which we hope will have a marked impact on drug trafficking in those areas of the world.

DEA has coordinated extensively with the Office of National Drug Control Policy in the development and implementation of the Administration's National Drug Control Strategy. DEA is fully committed to achieving its share of the challenging goals outlined in the Strategy and in coordinating its activities with all others involved in national drug control effort.

DEA's enforcement achievements in our Nation's efforts to reduce drug trafficking and abuse continue; however, drug abuse remains a critical problem of enormous global dimensions. This underscores our belief that enforcement is only one part--albeit an essential one--of a multi-faceted strategy.

DEMAND REDUCTION

One of the programs that we at DEA feel strongly about is Demand Reduction. DEA has been successful in spreading the anti-drug message to youth, sporting, and educational groups. In 1989, DEA conducted drug education workshops, seminars, and clinics throughout the country to more than 700 high school coaches, counselors, and school administrators. More than 200,000 children attended Sports Drug Awareness presentations.

REQUEST FOR SUPPORT

We are making progress in the war on drugs. However, we at DEA recognize, probably better than anyone else, just how much more remains to be done. With our 1991 enhancement, DEA's budget will total $700 million--approximately 0.05 percent of the proposed Federal budget. We know that we can make a difference. Our agents are a highly motivated and skilled group of dedicated professionals who have clearly demonstrated this effectiveness and want to do more to win the fight against drug traffickers. An investment in DEA will be money will spent.

The recent and tragic deaths of DEA Special Agents Hatcher in New York and Finley in Bolivia attest to the risks and sacrifices DEA faces daily. Their deaths will not be in vain--nor will the efforts of DEA personnel worldwide. DEA will continue to fight; however, the degree of success is greatly dependent on your support.

Mr. Chairman, I appreciate this opportunity to discuss DEA's budget request and would be pleased to answer any questions you and the other Members may have.

Terrence M. Burke, Acting Deputy Administrator, Drug Enforcement Administration

Terrence M. Burke was designated the Acting Deputy Administrator of the Drug Enforcement Administration by Attorney General Dick Thornburgh on October 11, 1989. As such he directs the overall day to day management of the Drug Enforcement Administration.

Prior to his present assignment, Mr. Burke was the Deputy Assistant Administrator for Operations, directing the day to day enforcement and intelligence operations of the agency worldwide. From 1985 to 1986, he was the Special Agent in Charge of the DEA Phoenix Division.

Mr. Burke's 30 years of Federal service have included foreign assignments in Italy, Laos, Thailand, the Philippines, Afghanistan and the Netherlands. He has also served in Washington, D.C., Denver, and Miami.

From 1960–1970, Mr. Burke was employed by the Central Intelligence Agency where he was awarded the Intelligence Star of Valor, the civilian equivalent of the Medal of Honor. Prior to that, he served for three years in the United States Marine Corps.

1991 REQUEST

Mr. **Smith**. You are asking for $700 million for 1991.

Mr. **Lawn**. Yes, sir.

Mr. **Smith**. What was your original request to the Department?

Mr. **Lawn**. Our original request to the Department Resources Board was about that number. The Department Resources Board was most generous in their support.

Mr. **Smith**. You say about that number?

Mr. **Lawn**. I don't know exactly, but it was close.

Mr. **Smith**. Nothing that you feel is really essential was cut out, then? Or is there something you feel you really need to do that is not included in the $700 million?

Mr. **Lawn**. No, sir. Based upon my many years in speaking before the Department Resources Board and OMB, they understand that I try not to balloon any requests in anticipation that there will be cuts. I ask for what I believe I need, and in this case, both the Department and OMB agreed to those needs.

GRAMM-RUDMAN-HOLLINGS SEQUESTRATION

Mr. **Smith**. What was your sequestration?

Mr. **Lawn**. Our sequestration was $7.8 million.

Mr. **Smith**. How did you handle that?

Mr. **Lawn**. We took cuts in all our programs short of salaries. We reduced our programs by about 2.8 percent. It certainly had a short-term impact on us. We were unable to do some things in the technical support and ADP areas. But we did not affect any of our salaries.

Mr. **Smith**. You delayed the implementation of ADP?

Mr. **Lawn**. Yes, we delayed the implementation of ADP and the training of some of our new agents. We also delayed the purchase of technical equipment.

ADMINISTRATIVELY UNCONTROLLABLE OVERTIME

Mr. **Smith**. How did you handle administratively uncontrollable overtime (AUO)?

Mr. **Lawn**. Administrative overtime will be funded by deferring support requirements, like equipment, for new agents until 1992.

Mr. **Smith**. How much did that amount to?

Mr. LAWN. Just over $13 million. Next year, it will be a greater problem because our total budget is more than 65 percent fixed expenses, like rent and the rest. So, in fact, we have an operating budget of just 35 percent of the total budget.

Mr. SMITH. You say you have a 20-percent increase, and that is over a base that included the reduction of $13 million for AUO plus the sequestration of $7.8 million?

Mr. LAWN. Yes, sir.

Mr. SMITH. So, compared to your appropriation for 1990, and the program you originally intended—it is still an increase, but it is nowhere near your 20 percent?

Mr. LAWN. Yes, sir.

DEA AUDIT

Mr. SMITH. Tell us about the recent audit.

Mr. LAWN. Yes, sir, I will be delighted to talk about the audit. I think it is unfortunate that a reporter who lacked either the integrity to find out what the story was or the initiative to research a little further, would talk about an audit in terms of there being waste and fraud in the Drug Enforcement Administration.

Point of fact: In 1988, the Audit Staff from the Department of Justice came to conduct a routine audit. As you know, throughout DEA and other organizations, there is an audit team. In our case, we call it the Inspection Staff, that audits all of our functions. We have asked, in areas where our inspection team doesn't have the expertise, for other experts to audit and to give DEA management their assessment as to the effectiveness or lack thereof of certain programs.

We have had individuals in from the Intelligence Community to review how we deal with intelligence. We currently have individuals, military officers, in to review our long-range planning procedures.

In the case of this audit, it began in 1988. The audit team, because of other priorities, left the audit unfinished. We then asked the Department to continue the audit through their management procurement team. The management procurement team came over and finished the audit.

The results paralleled the initial results of the IG audit, and that is that there are some 13 recommendations for us to tighten up our procedures. Since that time, we have sent our responses and have tightened up those procedures in 12 of the 13 areas; the 13th, we are working on.

The criticism was that we didn't use low bids in making some purchases. One of the areas that is of particular concern to us is clandestine labs in the United States. Because of the language of NEPA, the National Environmental Protection Act, when we seize a clandestine laboratory and seize the chemicals in that laboratory, we become the generator of toxic waste.

It is our responsibility to be accountable for the waste seized over the foreseeable future since we are the first legitimate people involved in the seizure.

There is no national contract for waste disposal, because no one wants to bid on a national contract to destroy these chemicals. We instructed our offices to negotiate purchase orders with companies at the local level to destroy those chemicals on a case-by-case basis. This was one of the areas where they said we didn't go with the open market, low-bid contract.

CRITICISMS OF PROCUREMENT PROCEDURE

Mr. **Smith**. Before you leave that issue, is there competition in that area? Could you have competed that contract?

Mr. **Lawn**. No, sir. At this point, we still don't have a national contract, because chemical companies don't want to share the responsibility for becoming a generator of toxic waste. A week ago, I spoke to the Chemical Manufacturers Association, who suffer the same reality. Now, we are in the process of negotiating 12 separate contracts throughout the country to destroy those chemicals which are seized. But there is no national contract.

In another area, there was a GSA contract to repair our radio systems. The GSA contract ran out, which required that we negotiate with the company to repair our radios. We, in fact, negotiated with that company to repair our radios at a cheaper price than what we were charged under the GSA contract.

The auditors said that had we not had the GSA contract, we probably could have saved more money using our own contract. That was hindsight, but there was a GSA national contract, and we did what we were supposed to do by following it.

I guess the auditors felt if we didn't abide by the national contract, we could have saved money.

In another area, with increased activities in South America, we found our agents who were in the jungle were in great jeopardy because they had no capability of maintaining contact with the organization.

We went to the military for assistance. The military told us that if we could buy a piece of equipment that was compatible with their satellites, we could distribute this equipment to our agents in the jungles so that, on a real-time basis, they could type messages into a machine, and we would receive whatever message they had to send at the El Paso Intelligence Center and at our headquarters.

There was no private sector company that was interested in making three or four of these pieces of equipment, so in fact, we went out under a special contract to purchase that equipment in order to protect our personnel in South America.

Certainly, we could have negotiated. But in that case, I thought the jeopardy that the agents were facing in South America was more critical than waiting two years to get the equipment which was required to keep the agents safe.

Mr. **Smith**. The process takes two years?

Mr. **Lawn**. I would say yes, sir, two years is a very conservative figure if we go through the full contracting process. As a growing organization, our personnel have had to go from being generalists to specialists. Where there were problems and indeed, there were administrative problems in handling some of these contracts, those have been corrected or are in the process of being corrected.

This is what an audit function is all about. If I send my inspectors out to inspect a given office, and they come back and tell me there are no flaws in the running of that office, then I change my inspectors. While we try to do a good job, I think we might lack perfection. We lack perfection in the contracting area.

But where there were problems, many were problems created because of an exigent need of our personnel.

Another area was language capability. In 1988, we finally received approval for a major enforcement activity in Latin America known as Operation SNOWCAP. This required immediate language training for the volunteers who wanted to participate in SNOWCAP.

We had to get that language training done quickly, because it serves no purpose to send an experienced agent to a foreign country unless he can converse with the local police in that country. We negotiated a special contract for language training as an exigent circumstance.

Since 1988, we have an agreement with the Army Language School in Monterey, California. So again, we had the exigent need. We responded to that exigent need while we pursued the procedures for getting a long-term contract.

CHANGE IN DEA PROCEDURES

Mr. SMITH. Have you changed your internal rules or regulations?

Mr. LAWN. Yes, sir, we have.

Mr. SMITH. In which regards?

Mr. LAWN. Any contracts in excess of $25,000 must be approved at the headquarters level by both the Contracting Officer and Chief Counsel. All contracts in excess of $100,000 are approved by the Department of Justice.

NEW DRUG INTELLIGENCE CENTER

Mr. SMITH. Now, the Drug Czar proposed a new Drug Intelligence Center. How do you see that?

Mr. LAWN. We feel very strongly that a new strategic drug center is necessary. We have the military very actively involved in this war. We have the intelligence community actively involved because of the National Security Directive.

We have a need for strategic intelligence. We must be able to gather the intelligence from all of those components for strategic purposes.

Mr. SMITH. Have the various intelligence agencies been cooperating with you?

Mr. LAWN. Yes, sir. It has taken some time for us to clear areas where there have been problems. The Intelligence Community is most concerned about sources and methods. So, it has been a long process.

Mr. SMITH. Do you think they are really sharing all the intelligence they should be sharing?

Mr. LAWN. I believe they are sharing the intelligence that they can share, yes, sir. We have DEA personnel assigned to the CIA intelligence center in Langley, and we have CIA personnel assigned on a full-time basis to DEA headquarters.

Mr. SMITH. This has improved a lot in the last year?

Mr. **Lawn**. Yes, sir, immeasurably in the last year. Now, we would like to have all of our components working together, with representatives located in a common center. For example, if a priority of DEA's is heroin coming from Southeast Asia, if we were in one center we could ask all of those components to go back and target their intelligence-gathering on the heroin problem in Southeast Asia.

Mr. **Smith**. I understand the need for protecting sources, but some of these agencies were overprotective, weren't they, of intelligence they had?

Mr. **Lawn**. I would say yes, sir.

Mr. **Smith**. But you think that has been remedied?

Mr. **Lawn**. Yes, sir. I have worked very closely with the CIA and with the National Security Council.

Mr. **Smith**. If that has been remedied, why do they need this new intelligence center?

Mr. **Lawn**. As I say, we want representatives from each of these areas to be in a common setting so that in reviewing intelligence needs, we can be in a better position to share those needs.

Mr. **Smith**. You mean be able to speed up the dissemination of intelligence?

Mr. **Lawn**. Clearly, yes, sir.

EL PASO INTELLIGENCE CENTER

Mr. **Smith**. Well, what about—EPIC?

Mr. **Lawn**. The El Paso Intelligence Center was created for tactical interdiction intelligence.

Mr. **Smith**. It is not quite satisfactory to handle this problem?

Mr. **Lawn**. It is a different type of intelligence, sir. EPIC is predominantly looking at the interdiction efforts, guns, aliens, as well as drugs entering our country.

Mr. **Smith**. You don't think that the new Drug Intelligence Center and EPIC can be combined?

Mr. **Lawn**. One of the proposals, sir, was that they could be in the same general area; however, the missions are a little different, strategic intelligence being a little different from interdiction intelligence. My sense is that it doesn't overlap.

Mr. **Smith**. Mr. Rogers.

COST AND STAFFING OF THE DRUG INTELLIGENCE CENTER

Mr. **Rogers**. Thank you, Mr. Chairman.

Mr. Lawn, good to see you again. You are getting an increase, if approved, of $151.3 million. That will take you up to $700 million. That is a whale of an increase, of course, for a whale of a responsibility that you have.

Let me follow up briefly on the proposed Drug Intelligence Center. What would be the cost of the center, your portion of it? That is not in your request, is it?

Mr. **Lawn**. No, sir.

Mr. **Rogers**. Is it being handled by the Office of National Drug Control Policy?

Mr. **Burke**. Yes. I might add, the Department of Justice right now has a team that is surveying the needs of an entire community in the development of that center. Some of these resources, intelligence analyst positions and so forth, on the strategic side of the house in DEA's request would be dedicated to that center.

There is input from DEA's budget into that center for staffing, but not in a defined manner at this time, because the numbers have not been worked out yet.

Mr. **Rogers**. Well, DEA has its own system already, and there has been some criticism that DEA was really incapable of donating assets, intelligence assets to a pool, because all of your information is in investigative files, all on paper, not automated and, therefore, not available for entry into a standardized computer base.

Is that a generally accurate statement?

Mr. **Lawn**. No, sir. It is accurate that as far as our intelligence analysts are concerned, we have a critical shortfall. Historically, an agent-analyst ratio might be 1 to 10, one analyst for every 10 Special Agents. Because our budget enhancements have been in Special Agent categories, that ratio was not continued.

The ratio of Special Agent to intelligence analysts prior to the 1990 budget was perhaps 1 to 21. We do not have the personnel to send to another center. As far as our own intelligence is concerned, it is a computerized index system with substantive case files as backup.

INTER-AGENCY AUTOMATED DATA BASE

Mr. **Rogers**. Would there be any difficulty, technically, to link your system up with a multi-agency system?

Mr. **Lawn**. I am not a computer expert. I am sure that aside from the legal problems, it could be done, yes, sir.

Mr. **Rogers**. Legal problems?

Mr. **Lawn**. Yes, sir, because these are law enforcement records they must be shared only in the law enforcement environment. So, while many individuals would have an interest in looking at information in our files, there is a legal prohibition against sharing that information.

Mr. **Rogers**. Assumedly, the National Drug Intelligence Center would have proper clearances to receive your inflow?

Mr. **Lawn**. Yes, sir.

Mr. **Rogers**. Do you see any problem there?

Mr. **Lawn**. No, sir.

Mr. **Rogers**. And you are enthusiastic about doing it?

Mr. **Lawn**. Yes, sir.

Mr. **Rogers**. And receiving inflow from other agencies that would be helpful in your quests?

Mr. **Lawn**. Yes, sir.

Mr. **Rogers**. It seems to me that it has to be done, for DEA, the FBI and other agencies. The FBI has a system with which you are surely aware, and that I have had a chance to observe. I have not seen yours, but I am sure it is equally as good. It is foolish not to link these sources together.

Mr. **Lawn**. Yes, sir. We have asked the FBI over the last few years to link up the systems, and the FBI has no interest in doing that.

Mr. Burke. I might be able to clarify one thing. The strategic center will be taking information that is coming in on production and major trafficking patterns throughout the world in a strategic sense—an overall macro sense, if you would.

What our files basically are being used for are criminal investigations. The strategic center will bring in new information. Our computerized index system would be able to handle that information.

So, we will be able to relate to a strategic center in the sense that the information would be on line. We are talking about information that is not directly investigative-related. It may be some time down the line before our system and the strategic center can be merged.

I think there is a compatability there. Regarding the FBI data base, they did establish their system, but we brought them over to DEA over a year ago. They spent close to a year taking all the information from our files on the two major Colombian cartels, the Cali Cartel and the Medellin Cartel, and putting it into their system. Their data base is primarily what they were able to draw out of our computer system and file system. That, with what limited information they had of their own on the cartels, is the data base which they are now showing.

Mr. Rogers. Well, on this subcommittee, which funds both of those agencies, we don't care whose tool is being played with. We want that information in one place. If we need to tell the FBI that, so be it. But we will not tolerate any divisions on this war. We can't afford to squabble among ourselves when we have the wolf at the door.

I may be preaching to the wrong people here, but others may hear. If we find out that there is some sort of reticence on anybody's part, wherever that may be, to pitch into a common system, they will pay a price.

HIGH-INTENSITY DRUG TRAFFICKING AREAS

Let me switch gears now a bit. You have designated high-intensity drug trafficking areas, apparently where the concentration of distribution and importation is greatest.

That is where you are going to put your agents. I wonder how you arrived at those six areas.

Mr. Lawn. The High-Intensity areas are the areas where the trafficking networks have been established. Those five areas, New York, Miami, Houston, San Diego and Los Angeles, are also areas that have been reviewed by Mr. Bennett and his staff, who concur that these are the High-Intensity Drug Trafficking Areas. It is in those areas that we intend to, with the approval of this budget, place two groups in each one of those five areas, two groups of 15 agents per group, to address the drug problem.

Mr. Rogers. Give us a thumbnail sketch within the confines of a public hearing of what that would amount to.

Mr. Lawn. In terms of our enforcement activity, it will give us 150 additional agents in those areas with the wherewithal to put greater enforcement pressure against the major cartels. This will include greater utilization of Title IIIs, surveillances, informant techniques, and enforcement techniques which are required to dismantle major organizations within those areas.

Mr. Rogers. And how will you handle the normal jealousies between agencies in those high-intensity areas you are going to now?

Mr. Lawn. We don't see normal jealousies between or among agencies. I think that there is a great deal of rhetoric about battles between agencies, but I think that is history.

I believe there is a recognition certainly in the Department of Justice, and my sense is with Mr. Bennett's efforts, there are minimal turf issues and maximum professional pride.

But, I don't sense the same turf issues that we saw in years past.

FUTURE OF DEA IN THE DRUG WAR

Mr. Regula. In your statement, you mentioned your belief that any sustained success in the drug war requires a sustained commitment.

Mr. Lawn. Yes, sir.

Mr. Regula. What kind of direction would you like to see the DEA take after you leave, and over the years; your vision of where it should be going?

Mr. Lawn. Well, at the current time, about 65 percent of our investigative resources are attacking the cocaine problem. Mr. Burke and I have talked about the growing phenomenon of the problems in Southeast Asia. Over the past two years, we have initiated several Special Enforcement Operations to prepare us to attack the problems with the increasing cultivation of opium and the increasing availability of heroin.

That is one area where we see that we must expand in order to continue to be reactive. At the same time, as we point out in this budget, we as a country must do a better job on the domestic eradication of marijuana. We have great difficulty in encouraging foreign source countries, marijuana source countries, to do a better job when we produce 25 percent of the marijuana consumed in the United States.

At the same time, we have a clandestine lab problem. If we miraculously could eliminate the importation of cocaine and heroin into our society, we have the wherewithal in our own clandestine labs to satisfy every illicit drug addict.

So, those are areas where we are going to have to concentrate over the next five years.

HEROIN USAGE

Mr. Regula. Do you see heroin making a comeback in its use in this country?

Mr. Lawn. Yes, sir, I do. And unfortunately. I hope my prognostication is not a good one. We are concerned that in the future, we may see the smoking of heroin. We are the only society in the world that doesn't smoke heroin. We inject it.

With the concern about the spread of AIDS, we are now seeing limited quantities of smokable heroin entering the United States. There is a world glut of opium. There are some 300 metric tons of heroin available in the world market. The purity of the heroin seized is startling. Where in years past, seizures made on the street might have been 3 or 5 percent purity, now we are seeing heroin purity levels of 38, 40 percent, 50 percent in our cities.

We are most concerned about the heroin situation, and the growth of the heroin addict population.

DRUG DISTRIBUTION SYSTEM

Mr. **Rogers**. Let me ask you about the distribution system. Are we seeing the advent of the so-called Asian Mafia in this country?

Mr. **Lawn**. Yes, sir. We have seen a complete change in the distribution networks of heroin, specifically in the Northeast of our country. Where in times past, the distributors were the members of traditional organized crime, La Costa Nostra, now we see the heroin networks are made up of Asian organized crime figures.

Point of fact: The LCN in New York and in the Northeast are increasingly buying from these organizations rather than distributing through their own networks as they had once done.

Mr. **Rogers**. Does that include cocaine?

Mr. **Lawn**. To a much lesser degree, cocaine, because the cartels, the Cali Cartel and the Medellin Cartel, have a very good fix on cocaine. Unfortunately, the European Community is now receiving the brunt of the increased cultivation of coca from Latin America.

In each country in Western Europe, there is more cocaine seized and there are more arrests for cocaine than heroin. There was a recent seizure in The Hague of 3,000 kilos of cocaine. This is in a society that purports not to have a drug problem.

GANG INVOLVEMENT IN DRUG TRAFFICKING

Mr. **Rogers**. Where are the so-called Asian gangs headquartered? Where do they operate out of?

Mr. **Lawn**. The major area, of course, is Burma. Approximately, 45 percent of the heroin in the United States comes from Southeast Asia, from Burma, through Thailand, through the People's Republic of China, through Hong Kong, and into the United States.

Mr. **Rogers**. Where are the brains behind that?

Mr. **Lawn**. The predominant force behind Southeast Asia heroin is a man called Chaing Chi Fu, known as Khun Sa, head of the Shan Army in Burma. I can expand upon that a little more in closed session.

Mr. **Burke**. There is a new emerging gang ironically in New York City in Chinatown that has even the dreaded TRIAD groups afraid. It is called "Born to Kill," BTK. It is made up, according to a New York Times article, primarily of North Vietnamese who have settled in the Chinatown area. They are getting very much into the drug trafficking, particularly the heroin trafficking, and taking over from what has been predominantly the Chinese-organized part of New York City.

GENERAL COMMENTS

Mr. **Rogers**. Well, I think I can deal with the rest of my questions in closed session. Let me say this in closing, Mr. Lawn, it has been a long, tough road. You brought this agency a long way in your tenure, and you have done a superb job, in my opinion, in the worst possible atmosphere in this country, during an increasing demand of drugs.

Your agency has made tremendous strides in trying to cut off the supply, making record seizures every day, I guess. Yet, we are not seeming to whip the problem, though the statistics are indicating that the peripheral user is diminishing, and that we are getting down to the hard core user. At least it looks like we are making some progress in one arena there.

You are going to be leaving us, I guess, after next week.

Mr. LAWN. Yes, sir.

Mr. ROGERS. Next week is your last week. We bid you a fond farewell and good luck. You have been called to the big leagues, I understand.

Mr. LAWN. The oldest rookie in the big leagues.

Mr. ROGERS. So you are going from the Bush leagues to the big leagues.

Mr. LAWN. Thank you very much for those comments, sir. Unfortunately, I won't be leaving, declaring victory, but I do have a sense that the resolve with the American people and this Congress will result ultimately in that victory.

Perhaps I will come back for the victory parade.

Mr. ROGERS. We hope you do. Thank you.

DEMAND REDUCTION THROUGH EDUCATION

Mr. SMITH. Mr. Regula.

Mr. REGULA. Thank you, Mr. Chairman, a couple of questions.

You talk about demand reduction in your statement. You say you have been successful in spreading the message. It seems to me this is where we have to make some gains, because no matter how hard you work at interception, as long as there is a demand, money to be made, somebody will try to satisfy it.

Since you are leaving, what is your thinking as to what more can be done on the demand reduction side?

Mr. LAWN. Well, sir, we began our demand reduction program, through no wisdom of ours. A high school coach in the District of Columbia came to us and said that he was the father figure to some youngsters who continually asked why not marijuana, why not heroin, why not PCP? He said if he had those answers, he may be able to help one or two young people a year. We took that request to the National High School Coaches Association, and thereby in 1984 began our program.

Very recently, we brought together the service groups to meet with Congress. Each of the service groups, the Rotary, the Lions, the Kiwanis Clubs, were trying to contribute somehow, but there was no national strategy for them.

We tried to get them together to give them a picture of what they could do as a unified army instead of as a separate strike force. Those types of things, I think, are critically important. We have, over the years, been most anxious to get the churches involved. Unfortunately, they have been reluctant participants in this matter. More has to be done in that regard.

The Attorney General has said many times that if, in spite of the heroic efforts of law enforcement, if we want to lose the war, leave it to law enforcement alone. Law enforcement is doing a critical job, we can dismantle organizations, but we must turn this unwholesome appetite that our citizens have for drugs.

That can only be done by this coordinated effort, family effort, school effort, church effort. It must be a unified effort.

Mr. REGULA. Within the Federal structure, what agencies are involved in the demand reduction side? DEA is, I presume the Department of Education has a piece of the action?

Mr. LAWN. Yes, sir, when Bill Bennett was in the Department of Education, he published a book, "Schools Without Drugs." The FBI had begun a demand reduction program as does the Immigration and Naturalization Service. DARE, the program initiated by the police in Los Angeles. The prior police Commissioner in New York City began a program paralleling the DARE program.

So, there are any number of individuals and organizations in the law enforcement community that recognize that there is a burden upon society, not just upon law enforcement, to do something. So there are a number of efforts in the private sector in this regard as well.

[The information follows:]

PROVISION FOR DARE FUNDING BY FEDERAL GOVERNMENT

The expansion of the Drug Abuse Resistance Education (DARE) program has become an ongoing program of the Office of Justice Programs' Bureau of Justice Assistance. Following its introduction in Los Angeles, the Bureau of Justice Assistance funded both demonstration and training programs. Current efforts are directed mainly at making more communities aware of the DARE program and providing grants directed at training.

COORDINATION AMONG FEDERAL AGENCIES

Mr. REGULA. Is there any coordination at this point on demand reduction among the Federal agencies?

Mr. LAWN. Yes, sir. The coordination began with the Office of National Drug Control Policy with Mr. Bennett's shop. Dr. Kleber and Judge Walton are working toward the coordination so we don't duplicate the efforts of other components.

COOPERATION FROM INTERNATIONAL ORGANIZATIONS

Mr. REGULA. I think your statistics on the neo-natal problems, the number of babies born to drug-addicted mothers, are shocking. Certainly it represents a long-term serious problem for society. I assume that only through demand reduction can you reach that problem.

The last question I have is, are you getting good cooperation and maybe growing in its quality from other international organizations?

Mr. LAWN. Yes, sir.

Mr. REGULA. You mentioned Europe having a problem. It seems to me that there would be some interest in coordinating.

Mr. LAWN. Yes, sir, five years ago we would generate little interest in the international community because there was a perception that the United States was the consuming nation. Since that time, we have had the United Nations Convention signed by 101 nations.

We have IDEC, an organization that we formed in Latin America among law enforcement counterparts. It spans countries where traditionally they do not even talk to one another because of border disputes going back 100 years. Now we have formed a coalition. We have cross-border operations. We have exchanges of equipment and exchanges of intelligence.

The Soviets came to us in 1987 and asked for our help because their drug problem was overwhelming. I traveled to Moscow to meet with my law enforcement counterparts of the KGB to discuss the drug problem. They said they were overwhelmed with the problem. They face the reality of their soldiers coming back from Afghanistan not unlike what we experienced in Vietnam.

The People's Republic of China is in close cooperation with us. The new Government of Burma has asked to cooperate with us. I don't think the level of cooperation has ever been higher in the international community.

Mr. REGULA. Thank you.

USER ACCOUNTABILITY

Mr. SMITH. Just a couple of more questions before we go to closed hearing.

You have spoken of the need to do more about demand. The DEA has been largely on the supply reduction end of it, but you have had an opportunity to observe the overall program. When we talk about reducing demand, a lot of people immediately think about teaching something in the classroom. Generally that is what they mean, just talking to people.

Are we doing enough to discourage users? Whether it be boot camps or involuntary rehabilitation, or penalizing them in some way. Are we doing enough to users?

Mr. LAWN. No, sir, we are not. We in fact have de facto legalization in our country because we have not focused on the users. It is starting to be done. Communities are starting to recognize that there must be user accountability.

In Maricopa County, in Phoenix, Arizona, the community has gotten together and the police will go to a given area and if they find anybody with illicit drugs, those people are arrested, brought to the cell, fingerprinted and photographed. They are asked to admit to the fact that they have an illicit substance. If they do and are first-time offenders, they may leave the confines of the jail. And if they agree to go to treatment, which they will pay for, after one year's time that arrest is stricken from their records.

Programs like this, where we are holding the user accountable without tying up the judicial system, do have an effect. I would like to see more efforts like Johns Hopkins Hospital, where they are testing their doctors. I would like to see more efforts as far as the testing of pilots.

We in law enforcement test our personnel not because we think we have a problem, but because we want to take a leadership role. We must do a better job.

Mr. SMITH. I am being told the same thing by sheriffs and Chiefs of Police. As long as you exempt users from any discouragement at all, they know that they won't be arrested and they won't have any embarrassment of any kind. We can't tie up the judicial system, but there are many other things that could be done.

But that would mean spending a lot more than tens of millions of dollars on classroom education and things like that. Do you agree?

Mr. **Lawn**. Yes, sir. It means more than just education. One program, that I ran by my two older children, had to do with programs in two States where if young people in the schools are found to be discipline problems or drug users, they are denied the right to have a driver's license for one year. My two older children thought that was cruel and unusual punishment. But I reminded them that this is a privilege, having a driver's license is a privilege.

Those types of programs can work and will have an effect and will make our people, young and old, recognize that there are penalties to be paid if you are a drug user.

Mr. **Smith**. I think there has obviously been some reduction in casual use, however, it is not at the high school level. I talked to one drug user, and I asked him how many in his high school had not experimented with drugs. He said, "I don't think there are a dozen that haven't experienced drugs in some way or another, and a few of them, right away, they are hooked."

It is at that level that we are really lacking. As long as there is no penalty against drugs, it is just like drinking beer or something.

DEA'S AIR WING

Explain your request for a new air wing facility and for replacing fixed wing aircraft with four turboprop aircraft.

Mr. **Lawn**. It authorizes us to seek a new facility because, in May of 1991, the lease on our current facility at Addison, Texas expires. Addison, if the lease were to be continued, is too small to house our increasing aviation demands. Our fleet has more than doubled in the past five years.

There is a major security problem at Addison. We have found a facility outside of Dallas which would give us the security we need, and would allow us to continue maintenance of our own aircraft.

Actually, we contract out our own maintenance but it is done on site under the supervision of DEA employees. We have an outstanding safety record with those aircraft.

Mr. **Smith**. Is this in the immediate Dallas area?

Mr. **Lawn**. Yes, sir, in the immediate Dallas area, in a non-commercial airport, an airport that is currently used for cargo aircraft so we can get the equipment.

HIRING FIREARM INSTRUCTORS

Mr. **Smith**. You have a request to hire firearms instructors.

Mr. **Lawn**. Yes, sir. With our increasing work force, and with the increasing violence in our cities, it is imperative that we conduct firearms training.

Mr. **Smith**. Why don't you use your agents to do it, or have the FBI do it?

Mr. **Lawn**. Our agents currently do the training, and we need more of them to conduct the training.

Mr. **Smith**. It would still be your agents doing that?

Mr. **Lawn**. Yes, sir, our agents are doing that training.

Mr. **Smith**. We will now go into executive session.

[Discussion off the record.]

[The following questions were submitted to be answered for the record:]

QUESTIONS SUBMITTED BY CONGRESSMAN SMITH

Drug Enforcement Administration

Overseas Operations

QUESTION: Concerns have been raised about the cost effectiveness of special operations by the Drug Enforcement Administration (DEA) agents in South America. What types of operations are these agents performing?

ANSWER: Operation SNOWCAP targets the illicit production of coca at the source in South America. Agents involved in SNOWCAP are primarily advisors to host country agents in chemical interdiction on roads and rivers and destruction of clandestine labs, airstrips, and coca products. They are not empowered with arrest authority or legal jurisdiction in any countries in which they operate.

QUESTION: The effectiveness of these operations have been marginal as best. Can you document their effectiveness?

ANSWER: The following 1989 statistical accomplishments of Operation SNOWCAP are approximate, they will, however, provide an idea of the success that the operation has had within the last year:

Arrests: 447
Laboratories destroyed: 2,358
Cocaine seizures (Cocaine HCL, Cocaine Base, Cocaine Paste): 9,508 kilograms
Precursor Chemicals seizures: 72,566 liters and 125,671 kilograms
Airstrips seized: 12
Aircraft seized: 10
Weapons seized: 45
Vehicles seized: 34
Communications Equipment seized: 66
Generators seized: 15

QUESTION: One of the most telling arguments against this operation is the fact that agents operate out of base camps in the middle of coca regions, yet the cartels have never bothered to attack their camps or the agents. If the drug lords don't consider the operation worthy of concern, why should we be expected to fund it, especially when there are so many other effective programs begging for more money?

ANSWER: The drug lords are very concerned about drug enforcement operations. This is the very reason why they have not attacked camps or agents. The drug lords fear reprisal and an intensive investigative effort to find the perpetrators of such an attack. This has been evidenced by the Camarena case in Mexico.

QUESTION: What is the total request for this operation in 1991, excluding compensation for agents?

ANSWER: Estimated costs for Operation SNOWCAP through 1989 were $21,322,000. This figure includes costs of salaries, overtime, hazardous duty pay, benefits, operating and PE/PI funds, aircraft operation, technical operations, training, communications and Department of State involvement. These costs are expected to remain constant through 1990. In addition, resources of $5,300,000 were received in 1990 as part of the 1990 Emergency Drug Funding and were targeted by the National Drug Strategy to the Andean initiative. Furthermore, the 1991 President's Budget Request includes an enhancement of $8,000,000 for aircraft which will support Operation SNOWCAP.

EPIC

QUESTION: In 1990, Congress provided $1 million for DEA to procure a new computer at EPIC. Is it true that DOJ has directed you not to procure the computer, but instead utilize excess capacity at the Dallas Regional Data Center?

ANSWER: Yes, the Department has determined that utilizing the excess capacity at the Dallas Data Center would be the most efficient and cost effective method of providing enhanced computer support to EPIC.

QUESTION: Is it your understanding that this decision was made by Justice primarily based on cost considerations?

ANSWER: The decision to seek computer support via the DOJ Data Center in Dallas was based on economic, technical and operational justifications.

In addition, the decision is based on the Attorney General's guidance encouraging uniform, centralized computer support for all Department systems.

QUESTION: It has come to our attention that NSA recommended that DEA not utilize shared computers in order to preclude the possible compromise of classified and sensitive information. Is that true and was NSA's recommendation given the proper consideration when this decision was made?

ANSWER: Much of the information stored in DEA computer systems is unclassified but sensitive. DEA's concern for security stems from the requirements outlined in the Computer Security Act of 1987.

The concerns raised by NSA while valid, have for the most part become moot, as the Department has moved its Data Service Center to Rockville, Maryland. DEA does not share computer resources with any other Department component at the new Data Center. Instead the DEA computing complex at Rockville is dedicated solely to DEA requirements, including backup. The Data Center in Dallas will support EPIC in the same secure manner as DEA applications are supported in Rockville.

QUESTION: As you interface more and more with the intelligence community, won't you begin to process higher levels of classified material and does that not make NSA's recommendation more meaningful?

ANSWER: As other Federal agencies, such as the Department of Defense become more involved in the War on Drugs, the possibility exists that information processed may have higher security classifications than is currently processed.

The information obtained from the NSA Information Security Assessment will be taken into consideration as DEA continues to work with the Department's Systems Policy Staff to ensure that all security requirements are given proper consideration.

State and Local Training

QUESTION: Would you agree that one of DEA's most important duties is utilizing the expertise of its agents to train State and local law enforcement personnel on drug investigative techniques?

ANSWER: Training State and local law enforcement personnel remains one of DEA's highest training priorities.

QUESTION: Why then do you not spend the funds appropriated for this purpose? I am speaking specifically of the $3.1 million appropriated in 1989 for which you obligated only $2.2 million.

ANSWER: It is difficult to match funds appropriated to a decision unit with actual expenditures at the operating level. The latter does not include overhead costs (such as salaries).

DEA's State and local training expenditures were greater than the $2.2 million reflected in 1989 obligations. State and local training received funding through specific programs such as the Domestic Cannabis Eradication, Asset Forfeiture, and Clandestine Laboratory programs.

QUESTION: At a time when we are expanding our efforts in the war on drugs, should you not be increasing, not decreasing State and local training?

ANSWER: DEA is doing what it can to increase the training of State and local law enforcement officers.

DEA's Office of Training's first priority is the training of new Special Agents in the Basic Agent Training Course. The Office anticipates training 651 students in 1991. This number includes the new special agent positions requested in the 1991 budget and replacements for agents lost to attrition. Fifteen Basic Agent classes must be scheduled to train this number of new agents. The most classes offered in a previous year was 11.

This training requirement will have a decided impact on the DEA staff and on the DEA and FBI shared facilities at Quantico. State and local training courses will use the facilities at Quantico as available. Due to lack of sufficient classroom and dormitory space at Quantico, these classes will likely be taught off-site or in the field.

DEA currently is investigating the possibility of converting Camp Upshur at Quantico for use in increasing State and local training.

Domestic Enforcement

QUESTION: You requested an increase of $39 million and 413 positions for Domestic Enforcement. DEA will also receive an increase of $21 million and 126 positions under OCDE if that request is approved. In your personal and professional opinion, is the war on drugs better served by adding resources directly to the DEA for your ongoing programs or to joint operations such as OCDE?

ANSWER: Resources are needed in both areas. Many DEA programs operate independently of OCDE cases, but are the catalyst for OCDE cases.

QUESTION: $37 million is requested to enhance efforts in 15 major drug centers. Please describe these efforts and how the additional funds will be utilized?

ANSWER: The $37 million requested will support 300 additional Special Agents. These agents will be engaged in the full realm of DEA enforcement activities, such as drug and financial investigations, wire taps and surveillances, Task Force operations, etc.

DEA proposes to allocate these additional agents by adding additional enforcement groups in 15 major drug trafficking centers. Two new Agent groups consisting of 15 Agents per group will be allocated to the High Intensity Drug Trafficking Areas as identified by the Office of National Drug Control Policy. These cities are Miami, New York, Los Angeles, Houston, and San Diego (as a part of the Southwest Border High Intensity Drug Trafficking Area.) One new agent group will be allocated to each of the following ten cities: Atlanta, Chicago, Dallas, Detroit, Philadelphia, Phoenix, Seattle, Washington, San Francisco, and Denver. The targeted cities are among the most significant in terms of the overall National drug trafficking picture and efforts here should have collateral effects on cities Nationwide.

QUESTION: Is it not true that as you improve enforcement efforts at a site such as one of these drug centers, that the drug activity shifts to a new location? How can you counter this shifting of activity?

ANSWER: Yes, it is true that drug activity shifts as we improve enforcement efforts. But this is most prevalent at the local level, that is between suburbs. Rarely will a concentrated enforcement effort in a major trafficking city like New York cause trafficking organizations to completely transfer their base of operations to a smaller city.

QUESTION: It appears that you are focusing all your new resources on metropolitan areas and not on rural areas. Is that true?

ANSWER: We are focusing our resources on the areas most crucial in terms of demand and supply nationwide. Rural areas will also benefit indirectly from the focus on metropolitan areas as the supply of drugs to rural communities originates from these metropolitan areas.

Our request includes resources for field divisions that contain large rural areas as well as enhancements for the State and Local Task Force program, which are located primarily in smaller cities.

QUESTION: Are rural areas not experiencing the same explosion of drug use as urban areas?

ANSWER: Rural areas are experiencing dramatic increases in drug usage, but it is difficult to compare it to that of urban areas.

In rural areas, the problem is more sporadic. A few deals can double or triple the drug problem in that area.

For the most part, trafficking organizations are centered in major cities and it is through these major areas that the drugs or drug-related money pass prior to making the local market.

DEA Air Wing

QUESTION: Why are you replacing seven fixed-wing and four turbo-prop aircraft? What would be the impact if these replacement aircraft were delayed a year?

ANSWER: By 1991, 60 percent of DEA's aircraft will be 10 years old or older. The normal replacement cycle for an aircraft is 10 years and 5,000 flight hours.

Delaying the replacement of these aircraft would severely hamper the productivity of the airwing. Unfilled missions and maintenance requests will continue to increase. It would be counter-productive and not cost effective to delay the replacement of these aircraft.

Statistics show that older aircraft are less productive and require more maintenance than new aircraft.

Maintenance problems and unavailability of aircraft frequently make air support for investigations and enforcement operations impossible.

QUESTION: Describe the need for two new turboprop aircraft?

ANSWER: The turboprop aircraft is used primarily in foreign special enforcement operations for transporting cargo, evidence, personnel and to provide communication links and intelligence platforms.

Aircraft for foreign operations must be capable of flying long distances without stopping. Turboprops can fly 2,000 miles non-stop at a flying altitude of 31,000 feet with a hauling capacity of 3,000 pounds. These aircraft will be used principally for Operation SNOWCAP.

Other 1991 Increases

QUESTION: The Committee is aware of criticism that some DEA agents assigned to foreign offices are not able to converse in that foreign language and have not been properly trained in drug intelligence gathering and dissemination. Are you aware of this problem and what actions are you taking to correct it?

ANSWER: Every Special Agent sent to a foreign post receives the necessary language training. Some Agents already are proficient in a foreign language and do not require additional training. Those Agents who do need training receive instruction through courses taught by such organizations as the State Department's Foreign Service Institute and the Defense Language Institute.

Agents also are able to maintain their language proficiency by in-country language training. Courses or private tutors often are arranged by Embassy or Consulate personnel.

All Agents are trained in drug intelligence gathering and dissemination in the Basic Agent Training course and through select in-service training courses. DEA now provides a Foreign Orientation Program course specifically designed for Agents going overseas. Two and one-half days of this course are devoted to intelligence gathering and dissemination topics.

QUESTION: Will the 22 personnel requested for foreign cooperative investigations be fully prepared for their assignment?

ANSWER: All 22 personnel will be 100 percent prepared for their overseas assignments.

Four of the 22 personnel assigned overseas will fill technical or clerical positions. DEA does not require language proficiency for these positions. DEA's overseas offices are encouraged to offer these employees in-country language training, if it is requested and needed. Lead secretaries do undergo a two-week training program before embarking overseas.

QUESTION: You request $2 million for Diversion Control. Please describe your efforts in this area and how the additional funds will be utilized.

ANSWER: The additional resources will provide for an additional 28 diversion investigators to enhance our efforts in implementing the Chemical Diversion and Trafficking Act.

These additional diversion investigators will:

- -- conduct audits of chemical handlers required by the Act;
- -- investigate requests for "regular customer" status by U.S. chemical companies for their foreign clients;
- -- evaluate foreign importers for legitimacy;
- -- verify legitimacy of chemical shipments;
- -- follow-up clandestine lab seizures to ascertain the source of the chemicals; and
- -- serve as liaison with the chemical industry to encourage voluntary compliance with the Chemical Act.

QUESTION: Does the FBI currently have such firearms instructors and would it be possible to utilize their resources on a reimbursable basis?

ANSWER: Yes, the FBI has full-time professional firearms instructors in each division.

The FBI's firearms training resources, including staff, already are overtaxed.

DEA and the FBI have different firearms policies and use different types of weapons. The FBI allows an Agent to shoot at a fleeing suspect; DEA does not. The FBI still is training Agents with revolvers while DEA uses a semi-automatic 9 mm pistol. Likewise, DEA and the FBI do not use the same type of machine guns. It would be difficult for DEA to use FBI resources given these considerations.

QUESTIONS SUBMITTED BY CONGRESSMAN DWYER

Drug Enforcement Administration

Demand Reduction Through Education

QUESTION: On page 8 of your statement you discuss demand reduction. And I, like you, feel strongly about this. You state that the DEA has been successful in spreading the anti-drug message to youth, sporting and educational groups; and that in 1989, DEA conducted drug education workshops, seminars, and clinics throughout the country to more than 700 high school coaches, counselors, and school administrators; and that more than 200,000 children attended Sports Drug Awareness presentations.

Wouldn't you agree that this is the real answer to combatting drug abuse?

ANSWER: There is no one answer to the enormous drug situation facing this Nation. Stopping drug abuse can only be accomplished when effective drug education is linked with drug law enforcement and prevention for our youth, our parents, and our community leaders.

QUESTION: And, how is DEA going to increase these crucial kinds of activities if this 1991 budget is approved?

ANSWER: DEA has made great strides in the area of demand reduction. In 1989, DEA in conjunction with the National Association of Broadcasters developed and produced anti-drug public announcements in English and Spanish. DEA has continued to sponsor seminars and technical assistance on the Drug Free Workplace, user accountability, drug education, drug prevention, and sports drug awareness. In addition, DEA's demand reduction program is involved in International Demand Reduction programs to include the sixth annual International Drug Enforcement Conference (IDEC). DEA will continue to enhance these programs and other demand reduction efforts in 1991.

Foreign DEA Offices

QUESTION: Page 31 - 33 (of DEA's Congressional Budget Submission) outlines expansion of your 13 existing foreign/field offices and the establishment of a new office in Salta, Argentina.

What kind of relationship do you have with State and other members of the intelligence community located in these countries?

ANSWER: DEA maintains close and cooperative relations with both the State Department and the Intelligence Community in each of the countries slated for DEA expansion.

DEA's presence in every foreign post falls under the full authority of the U.S. Ambassador to that country. The Ambassador is regularly briefed on DEA activities and is the approving official on important issues.

It is the State Department, through the Ambassador's office, which approves the staffing of DEA Special Agents within a country and negotiates working agreements with host governments.

DEA Agents stationed overseas routinely exchange information on narcotics matters with the State Department's political officer, the station-chief for intelligence, and with representatives of U.S. military intelligence.

Chemical Control/Clandestine Labs

QUESTION: Your justification indicates how the increasing problems of prescription drug abuse now accounts for almost half of the total U.S. drug abuse problem and the growing problem of steroid abuse by young people. To ensure industry compliance with regulations, DEA conducts liaison activities with the pharmaceutical industry to explain the purpose and intent of the law and to provide clarification of its provisions.

Could you give us some examples of these types of liaison activities?

ANSWER: DEA's Office of Diversion Control is actively involved in liaison activities with both States and the pharmaceutical industry. DEA hosts seminars for both the chemical and pharmaceutical industries, provides speakers for the more than 30 National organizations, distributes information through manuals and other publications, and participates in four DEA/industry committees which meet twice a year to discuss current issues, problems and legislation. DEA has established similar liaison activities for the chemical industry as part of implementing the Chemical Diversion and Trafficking Act.

QUESTION: How many pharmaceutical companies participate?

ANSWER: DEA deals with not only pharmaceutical companies but also manufacturers, distributors, dispensers, prescribers and, since passage of the Chemical Diversion and Trafficking Act, the chemical manufacturers and distributors. Every other year DEA hosts a National Conference to interpret legislation, assist industry with security measures to avert diversion of controlled substances, and to encourage voluntary compliance beyond the minimum requirements of law. More than 85 companies and representatives from five National organizations participated in DEA's last National Conference.

QUESTION: Do you have adequate resources in this area to regulate this industry under the Chemical Control and Diversion Act of 1988?

ANSWER: DEA is requesting 28 Diversion Investigators in the 1991 Budget to implement the Chemical Diversion and Trafficking Act. These resources will be dedicated to initiating DEA's Chemical Control program as outlined in the Chemical Diversion and Trafficking Act.

QUESTION: What efforts/headway is DEA making in reducing production of designer drugs?

ANSWER: The Controlled Substance Analogue Enforcement Act of 1986 provided DEA with an effective tool in combating the production of analogues or designer drugs. One of the provisions allows an analogue to be considered a controlled substance if the physical structure and physiological effect are similar to that of a controlled substance. An individual who traffics an analogue is no longer protected by that analogue's physical structure, as they were prior to implementation of the Act.

QUESTION: What about "Ice"?

ANSWER: To be clear, Ice is not a designer drug, nor is it a new analogue of methamphetamine. It is merely methamphetamine hydrochloride in the form of large crystals.

Ice usage and trafficking is still primarily restricted to Hawaii. Small amounts and a few Ice laboratories have been found on the West Coast, but there is no signal of a major influx on the U.S. mainland. To attack the Ice problem in Hawaii and to prevent the opening of a major market on the mainland, the DEA has established a major enforcement program through its West Coast Field Offices, the Honolulu Resident Office and various foreign offices that will target Ice trafficking from its' main source in Korea.

Controlling the Drug War by Controlling the Availability of Firearms

QUESTION: According to the Bureau of Alcohol Tobacco and Firearms (BATF), in 1988, 59 percent of BATF firearm defendants were narcotics traffickers, and 84 percent of criminals prosecuted under BATF's Armed Career Criminal program were narcotics traffickers. In light of these numbers, I assume that firearms are also seized in a significant percentage of the narcotics cases DEA prosecuted.

I also understand that DEA keeps accurate records of the drugs and assets it seizes and the arrests it makes each year.

Does the DEA also keep records of the numbers, types, and locations of firearms it seizes? If not, why not?

Please provide for the record a breakdown of the numbers types (e.g., fully automatic weapons, military style semi-automatic assault weapons, rifles, pistols, revolvers, shotguns) and the general locations of the firearms DEA seized in each of the last three years.

ANSWER: The DEA does keep, and updates quarterly, comprehensive statistics on the firearms that it seizes. These statistics reflect the number, type and location of the seized firearms. Provided is a copy of the Firearms Seizure Report for 1989. Please note that the data included in these reports refer to firearms seized by DEA Special Agents and State/Local Task Force officers during the conduct of criminal investigations and are directly related to those investigations. Firearms seized as assets that are not directly related to the criminal investigation (i.e., gun collection) are not included in the data.

QUESTION: What percentage of DEA drug cases involve firearms?

ANSWER: In 1989, the number of cases involving firearms was 1,504. This represents approximately 10 percent of domestic criminal cases initiated by DEA in 1989.

QUESTION: I understand that DEA has testified that in 1987 through 1988, the seizure of machine guns declined.

Is that trend continuing? Please provide for the record information on the numbers of machine guns DEA seized in 1988, 1989 and 1990.

ANSWER: DEA has seen a slight decrease in the number of machine guns seized since 1987. The following is a breakdown of the number of machine guns seized from 1987 to the first quarter of 1990.

1987	1988	1989	1990 (1st qtr.)
248	215	206	34

QUESTION: Are any of the machine guns DEA has seized registered with the Federal Government?

ANSWER: All weapons seized by DEA are reported to BATF. DEA does not keep information on registration.

QUESTION: I understand that DEA Administrator John Lawn has stated publicly on CBS's "Face the Nation," on September 10, 1989, that as a member of the law

enforcement community he was concerned about the unfettered sale of semi-automatic weapons here in the U.S.

In DEA's opinion, would a ban on the domestic manufacture and sale of semi-automatic assault weapons assist the law enforcement community to fight the drug war? If so, how would it help?

ANSWER: From a law enforcement perspective, DEA is clearly concerned about Agent safety and believes that semi-automatic weapons pose a great threat to the lives and safety of our personnel.

QUESTION: Has DEA seen a trend in recent years toward the use of more sophisticated assault weapons by drug traffickers?

ANSWER: DEA statistics do not distinguish semi-automatic assault weapons separately; however, they are included under two statistical categories that were added in 1989- semi-automatic rifles and semi-automatic shotguns.

In the category of semi-automatic firearms, DEA has seen an alarming trend from 1987 to 1989. While total firearms seizures have increased 16 percent during this time frame, semi-automatic firearms seizures have increased 53 percent.

QUESTION: In the DEA's opinion, how much of a problem are these semi-automatic assault weapons?

ANSWER: Again, these weapons pose a significant hazard to Agent safety. Naturally this is a concern to the law enforcement community.

QUESTION: In an appearance before the House Select Committee on Narcotics last November, DEA acknowledged that assault guns were being illegally exported to drug traffickers in Mexico, Columbia and other Latin American countries. What is DEA's current assessment of this growing problem?

ANSWER: The DEA still acknowledges that assault weapons are being illegally exported to drug traffickers in Latin America and South America. However, these instances are not common and, to DEA's knowledge, there are no major networks exporting these weapons out of the United States.

QUESTIONS SUBMITTED BY CONGRESSMAN KOLBE

Drug Enforcement Administration

Agency Feuds in Drug Wars

QUESTION: With the emergence of the war on drugs as a national priority, many Federal agencies are looking to

benefit from a role in this effort. Everyone wants on the bandwagon. The DOD is proposing new roles, as well as other agencies. I'm concerned with reports of inter-agency feuding that has resulted from this. It suggests that perhaps we are throwing significant additional resources without clear direction on who has the lead, and how agencies should coordinate.

This problem was highlighted in Arizona last fall when reports circulated of a "turf" war between the DEA and Customs and local law enforcement agencies.

Could you comment on any problems you have observed in this regard?

What is the DEA doing to address the need for coordination with other State and Federal agencies which have a secondary role, such as Customs and INS?

How can similar problems, which disrupt the success of drug fighting efforts, be avoided in the future?

ANSWER: The DEA has occasionally experienced a few problems in this regard. Fortunately, they are not very common. Whenever there are multiple agencies involved in a single law enforcement effort, there will undoubtedly be some competition among them. When that competition adversely affects drug enforcement operations, it is a major concern to the DEA.

While the Office of National Drug Control Policy has identified DEA as the lead agency in drug law enforcement efforts, DEA recognizes and values the very real contributions of other agencies, such as the U.S. Customs Service, in the war on drugs and is working to increase cooperation with these agencies.

A recent major step in this direction occurred on January 10, 1990. The DEA and Customs, along with the Deputy Attorney General and the Deputy Secretary of the Treasury, signed a memorandum of understanding that will improve coordination of narcotics investigations through the use of the cross-designation authority provided to the Attorney General in 21 U.S.C. 873 (b).

Other DEA coordination efforts include the establishment of additional multi-agency task forces, special enforcement operations and training programs. These efforts are providing the groundwork for future cooperation among agencies.

Discrimination in DEA

QUESTION: I understand that a class action discrimination suit has been brought against the DEA on behalf of Hispanic Agents who allege discrimination in promotions. What is the status of the case?

ANSWER: The Muniz vs. Meese case is in the pre-trial discovery stage of litigation. DEA is being represented by the U.S. Attorney's Office in the District of Columbia.

QUESTION: If in fact there are concerns that Hispanic Agents have been held back, what is the DEA doing to address these concerns?

ANSWER: Because this matter is in litigation it would be improper for DEA to comment on the merits of the case. DEA has a longstanding commitment to Hispanic American concerns. As you may know, Hispanic Americans are under-represented in the Federal workforce, being concentrated in only a few Federal agencies. DEA is proud to say that it is one of those few Federal agencies. DEA gives careful consideration to problems and issues raised by its employees, including its Hispanic American agents.

QUESTION: Are any in-house programs being implemented to recruit, retain, and develop minority candidates by the DEA?

ANSWER: DEA's Office of Equal Employment Opportunity is developing several internal programs which are targeted at identifying areas within DEA that are under-represented in terms of minorities and women. DEA is developing an outreach program for minority and women Special Agent candidates that includes on-site visits and advertising. DEA is also developing an internal skills inventory to target minorities and women already employed by DEA for areas that are under-represented.

QUESTION: What cooperation have you had with the EEOC, or other agencies, to promote opportunities for minorities within the Agency?

ANSWER: Utilizing guidelines provided by the EEOC, DEA is drafting a Civilian Labor Force Study to develop those areas within DEA that are under-represented by minorities and women. The results of this study will be used to target those specific areas. In addition, DEA submits an annual Affirmative Action Plan to the Department of Justice.

THURSDAY, MARCH 15, 1990.

1991 BUDGET REQUEST

Mr. SMITH. We will now hear testimony concerning the Organized Crime Drug Enforcement (OCDE) appropriation. The Department recommends $330,000,000 for this account for FY 1991. These funds will then be used almost totally to reimburse Federal agencies for OCDE support. We will insert in the record at this point the OCDE fiscal year 1991.

Interagency Law Enforcement
Organized Crime Drug Enforcement
Summary Statement
Fiscal Year 1991

Synopsis

The Organized Crime Drug Enforcement (OCDE) Task Force Program is requesting, for 1991, a total of $330,000,000, 3,962 permanent positions, and 3,544 workyears. This request represents an increase of $115,079,000, 1,044 positions, and 789 workyears over the 1990 appropriation anticipated.

In 1983 and 1984, the OCDETF Program operated as a single appropriation reimbursing participating agencies for their involvement. Beginning in 1985, the resources were appropriated directly to the participating agencies. Pursuant to Section 1055 of the Anti-Drug Abuse Act of 1988 (P.L. 100-690), a single appropriation request for the OCDE Task Force Program was established in 1990. The agencies participating in the OCDE Task Force Program will be reimbursed for their involvement in the initiative from the single OCDE appropriation.

Background

The OCDE Task Force Program constitutes a nationwide structure of 13 regional Task Forces which utilize the combined resources and expertise of its 11 member Federal agencies in cooperation with State and local investigators and prosecutors to target and destroy major narcotic trafficking and money laundering organizations. A multifaceted attack on highly sophisticated drug cartels requires unique capabilities combined into a comprehensive and orchestrated investigation and prosecution. Thus, for example, by uniting the physical and electronic surveillance abilities of the Federal Bureau of Investigation (FBI), the drug intelligence data and drug investigative skills of the Drug Enforcement Administration (DEA), the tax and financial knowledge of the Internal Revenue Service (IRS), the Bureau of Alcohol Tobacco, and Firearms (BATF) skills in weapons investigations, the resources of the U.S. Customs Service for tracking international movements of people and funds, the intelligence gained from the U.S. Coast Guard maritime activities, the Immigration and Naturalization Service's (INS) expertise in tracking and deporting illegal aliens, and the U.S. Marshals Service's (USMS) authorities, the full forces of the drug enforcement community are brought to an investigation. The OCDE Task Force Program further broadens this base with the local intelligence resources of State and local law enforcement agencies and adds to the impact by utilizing attorney's skills at the earliest stages of investigations. Contributing resources to the prosecution of OCDE Task Force Program cases are the U.S. Attorneys, Criminal Division and the Tax Division.

The goal of the OCDETF Program is to identify, investigate and prosecute members of high-level drug trafficking enterprises and to destroy the operations of those organizations. Four objectives continue to guide the selection and conduct of investigations:

- To target, investigate and prosecute individuals who organize, direct, finance, or are otherwise engaged in high-level illegal drug trafficking enterprises; including large-scale money laundering organizations;

- To promote a coordinated drug enforcement effort in each Task Force region and encourage maximum cooperation among all drug enforcement agencies;

- To work fully and effectively with State and local drug law enforcement agencies; and

- To make full use of financial investigative techniques, including tax law enforcement and forfeiture actions.

Those who are targeted for Task Force cases include: criminal groups formed for the purpose of importing, distributing and financing large amounts of controlled substances; criminal groups that are trafficking in drugs as well as engaging in other crimes; traditional organized crime figures; major outlaw motorcycle gangs; prison gangs or prison-associated organizations; and physicians, pharmacists and other persons registered to legally dispense drugs but who engage in illicit distribution.

The FY 1991 Program

The 1991 request for the OCDE Task Force Program consists of three budget activities incorporating the resources of the 11 member agencies. The budget activities are Drug Law Enforcement, Prosecutions, and Administrative Support. The major initiatives and resource requests for 1991 for these activities are summarized below.

Drug Law Enforcement

This activity provides resources for the investigations conducted by the 13 regional OCDE Task Forces. The total resources requested in 1991 for this budget activity are 2,973 positions, 2,724 workyears and $260,716,000. This represents 79.0 percent of the funding request for the OCDE Task Force Program in 1991.

The focus of Task Force investigations is on the organized criminal enterprise leadership involved in drug trafficking and the breakup of the infrastructure of organized criminal enterprises. This includes the seizure and forfeiture of assets of organized criminal enterprises involved in narcotics trafficking. This activity provides resources to reimburse law enforcement agencies in the Department of Justice, Department of the Treasury and the Department of Transportation for investigative activities related to the OCDE Task Forces.

Program increases of 744 positions (502 agents), 532 workyears and $88,306,000 are requested. A summary of increases requested follows:

- Several member agencies have historically experienced an erosion of their direct appropriated OCDETF funds or overburn in this program. Previously, agencies were able to divert resources from their non-OCDETF budget to augment their effort in the OCDETF program. However, the current stringent fiscal environment and escalating demands placed upon these agencies as a result of the Anti-Drug Abuse Act of 1988 and other internal operational mandates, have virtually eliminated this supplementary source of funding. Agencies simply can no longer over utilize resources for the OCDETF program at the expense of other critical requirements. Additional resources are essential to maintain the current level of OCDETF effort. Increases are requested to address this problem for the following agencies: Federal Bureau of Investigation - 274 positions (154 agents), 224 workyears, and $35,476,000; Internal Revenue Service - 190 positions (139 agents), 154 workyears, and $18,729,000 and the Immigration and Naturalization Service - 29 positions (24 agents), 14 workyears and $2,423,000. Since 1984 the USCS has supported the OCDETF program with appropriated funds of about $14,000,000 and 226 positions. The USCS request of 125 positions (92 agents), 90 workyears and $10,316,000 will provide for an enhancement of international money laundering investigations.

- An increase of $812,000 is requested for the Bureau of Alcohol, Tobacco and Firearms to implement new electronic interception authority related to firearms investigations.

- Increased resources of 126 positions (93 agents), 50 workyears, and $20,550,000 are requested for the Drug Enforcement Administration to increase its investigative support to the OCDETF program. Included within the DEA request is an increase of $1,800,000 to augment the State and local Overtime program. Currently, $3,200,000 is available to meet requests from the fifty states.

Prosecutions

The prosecution activity request for the OCDE Task Force Program in 1991 totals 976 positions, 808 workyears and $68,068,000. This represents 20.6 percent of the OCDE Task Force Program funding request for 1991. This funding is used for the U.S. Attorneys, the Criminal Division and the Tax Division for their investigative support and prosecutorial efforts toward OCDE Task Force cases. Litigation efforts are targeted selectively on the criminal leadership involved in drug trafficking and are intended to dissolve organized illicit enterprises. This includes activities designed to secure the seizure and forfeiture of the assets of these enterprises.

Program increases of 297 positions (151 attorneys), 148 workyears and $18,866,000 are requested for the prosecution activity.

- This increase will provide the necessary resources to establish a 1:4 ratio of prosecutors to investigators in the OCDETF program. This ratio was substantiated in a Caseload Study of the OCDETF program published in August 1985.

Administrative Support

The Administrative support activity request for the OCDE Task Force Program in 1991 totals 13 positions, 12 workyears, and $1,216,000. This represents just .4 percent of the total funding request for the OCDE Task Force Program in 1991.

This activity provides policy guidance, central coordination, and administrative support to the headquarters of the eleven member agencies and the thirteen regional task forces. The OCDETF Administrative Staff has day to day responsibility for providing administrative support to the Task Forces and is responsible for financial management, records management, and maintenance of the Case Management System. This staff serves as the first-echelon point of contact for the Task Forces when Washington intervention or assistance is required.

The OCDETF Program has avoided the creation of a large, Washington-based bureaucracy. Cooperation at the field-office level is encouraged by marshaling the efforts of agency personnel within local districts and making the 13 OCDETF Coordination Groups and the core-city United States Attorney responsible for the management of the several Task Forces. The Program is not designed to be administered centrally from Washington, however, establishment of the consolidated OCDETF appropriation in 1990 has significantly increased the administrative and analysis responsibilities associated with the monitoring, tracking, and reporting of OCDETF activities by eleven separate agencies and the reimbursement of OCDETF resources on a quarterly basis to those agencies. The added responsibility of developing and presenting the consolidated OCDETF budget was mandated by P.L. 100-690. In response to this function, 3 positions, 2 workyears, and $123,000 are requested for 1991.

Interagency Law Enforcement

Organized Crime Drug Enforcement

Justification of Proposed Changes In Appropriation Language

The 1991 Budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Organized Crime Drug Enforcement

For necessary expenses for the detection, investigation, and prosecution of individuals involved in organized crime drug trafficking not otherwise provided for, [$168,560,000]; Provided, That any amounts obligated from $330,000,000 appropriations under this heading may be used under authorities available to the organizations reimbursed from this appropriation[: Provided further, That appropriations under this heading may be used to reimburse agencies for any costs incurred by Organized Crime Drug Enforcement Task Forces between October 1, 1989, and the date of enactment of this Act: Provided further, That section 506 (a)(1) of Part E of title I of the Omnibus Crime Control and Safe Streets Act of 1968, as amended by Section 6091 of the Anti-Drug Abuse Act of 1988, is amended by adding "or 0.25 percent, whichever is greater," after "$500,000"].
(Department of Justice Appropriations Act, 1990; additional authorizing legislation to be proposed.)

[For carrying out efforts at National Drug Control $46,361,000 to strengthen the ability of the Federal Government to attack drug cartels and other organized crime groups through the eleven cooperating Federal agencies which participate in the organized crime drug enforcement task forces.]
(Department of Transportation and Related Agencies Appropriations Act, 1990.)

Explanation of changes

1. The first change deletes authority which permitted this appropriation to be used to reimburse agencies for costs incurred between October 1, 1989 and the date of enactment of the Department's regular appropriation which did not occur until November 21, 1989. Since fiscal year 1990 was the first year for this consolidated appropriation, this language was necessary for operation under a continuing resolution. This situation will not present itself again, and the language is therefore unnecessary.

2. The second deletion relates to the authority under which the Office of Justice Programs allocates its formula grants to States. This provision was added to the Organized Crime Drug Enforcement appropriation by the conferees solely for technical reasons and is not germane to the pending request.

Administrative Support:											
12. Task Force Administrative Staff	...	...	...	...	...	10	10	836	10	10	836
Total	2,826	2,741	214,921	92	14	...	...	...	2,918	2,755	214,921

Adjustment in Permanent Positions and Workyears. The absorption of the 1990 pay increase will not allow support for all of the positions and workyears that Congress may have expected. Member agencies impacted are U.S. Attorneys and U.S. Customs Service.

The requested change in positions and workyears for the Drug Enforcement Administration is designed to permit the most effective utilization of resources. The assignment of special agents at a lower grade level than anticipated will allow the DEA to increase the number of agents in the program if position and workyear ceilings are increased.

The 1990 Congressional Submission erroneously reported 260 positions for IRS and a total of 2,826 for the OCDETF program. The correct figures should have been 277 for IRS and a total of 2,843 for the OCDETF program.

Reprogrammings. This proposed action establishes a separate decision unit for the OCDETF Administrative Unit. Under the supervision of the Director, the unit consists of professional and support staff required for the performance of a broad range of management and administrative functions. The Administrative Staff serves as the first-echelon point of contact for the Task Forces when Washington intervention or assistance is required. This staff is also responsible for financial management, records management, maintenance of the Case Management System and supports field operations in the thirteen OCDETF regions.

Funding for personnel costs for the permanent staff have been provided under the auspices of the Executive Office for United States Attorneys. Additionally, operational funding in support of administrative activities for the Task Force program have been provided by the Executive Office for United States Attorneys, Drug Enforcement Administration, and the Federal Bureau of Investigations on a reimbursable basis.

This budget activity includes resources to reimburse law enforcement agencies in the Department of Justice, Department of the Treasury and the Department of Transportation for investigative activities related to the thirteen OCDE Task Forces. The focus of Task Force investigations is on the organized criminal enterprise leadership involved in drug trafficking and the breakup of the infrastructure of organized criminal enterprises. This includes the seizure and forfeiture of assets of organized criminal enterprises involved in narcotics trafficking.

Long-Range Goal: To identify and investigate members of high-level organized criminal enterprises engaged in drug trafficking and to destroy the operations of those organizations.

Major Objectives:

To target and investigate individuals who organize, direct and finance high-level illegal narcotics trafficking enterprises.

To make full use of financial investigative techniques and forfeiture actions, thereby enabling the Federal Government to seize assets and profits derived from narcotics trafficking.

To promote a coordinated drug enforcement effort in each of the 13 Task Force regions.

To encourage maximum cooperation among all drug enforcement agencies.

To work fully and effectively with State and local law enforcement agencies investigating illegal narcotics trafficking.

Base Program Description:

Headquarters and Field Organization

The OCDETF Program has avoided the creation of a large, Washington-based bureaucracy. The Executive Review Board (ERB), chaired by the Deputy Attorney General, is composed of senior officials from agencies of the Treasury, Transportation, and Justice Departments. The ERB provides oversight nationally by articulating policy, reviewing the allocation of resources, and resolving outstanding issues that cannot be settled in the field. The Washington Agency Representatives Group, comprised of high-level section managers from each member agency, provides problem resolution research for the Board. A small administrative staff is based at the Justice Department headquarters in Washington. The administrative staff serves as the first-echelon point of contact for the Task Forces when Washington intervention or assistance is required. This staff is also responsible for financial management, records management, maintenance of the Case Management System and supports field operations in the 13 OCDETF regions. Each region's headquarters is located in a "core city."

The organization of each region has two principal structural components: the Task Force Advisory Committee and the Task Force Coordination Group. The Advisory Committee oversees the Task Force, while the Coordination Group shares intelligence among the agencies, decides which cases are selected, coordinates the allocation of assets among cases, and facilitates cooperation among the agencies and between regions.

Each regional Advisory Committee is comprised of all of the region's U.S. Attorneys, the Assistant U.S. Attorney (AUSA) Task Force Coordinator and the coordinators for each participating agency, and the senior regional representatives of those agencies. As the senior official responsible for each Task Force's performance, the core city U.S. Attorney chairs the committee and supervises the AUSA Coordinator.

The Task Force Coordination Group plays a central role in coordinating the OCDETF Program within its region. Consisting of the AUSA Task Force Coordinator and coordinators from each participating Federal agency, the Coordination Group evaluates cases proposed for Task Force designation. The group also reviews the use of Task Force resources, resolves disputes between member agencies, and designates specialists within the Task Force to appropriate case-related functions.

In the non-core cities, District Drug Enforcement Coordination Groups review investigation selection, resource allocation, and the progress of Task Force efforts. Each non-core city U.S. Attorney selects an AUSA to serve as lead Task Force Attorney for the district. This Lead Task Force Attorney coordinates case selection with representatives of the participating agencies, is responsible for district reporting tasks, and serves as liaison with the core city Task Force office.

State and Local Participation

From the Program's inception, State and local law enforcement elements have worked closely with the Task Forces. The OCDETF "Guidelines" promote joint involvement of State and local authorities in the investigation, apprehension, and prosecution of major drug traffickers and their organizations.

Several elements of the OCDETF Program facilitates State and local participation. Congressionally appropriated funds are available to reimburse the States and localities for overtime and expenses incurred by their personnel while participating in Task Force cases. There have been more than 2,500 active reimbursement agreements between Task Forces and State, county, or local agencies. These local agencies continue to pay the salaries of their investigators who are working on Task Force cases but are assisted in meeting the costs of overtime, travel, and per diem expenses resulting from their participation.

State and local participation is further facilitated, when appropriate to a case, by the deputation of State or local law enforcement officials. Upon deputation, State and local officers adhere to the requirements of the Federal Rules of Criminal Procedure as well as the policies and procedures of the sponsoring Federal agency.

Finally, the OCDETF Program provides for the equitable sharing of assets forfeited by drug traffickers. Sharing of assets provides a bonus to participating State and local agencies in the form of vehicles, aircraft, boats, weapons, and cash.

Member Agencies

According to the OCDETF "Guidelines," one of the program's main objectives is "...to promote a coordinated drug enforcement effort in each Task Force region, and to encourage maximum cooperation among all drug enforcement agencies...." Throughout its six years of operation, the OCDETF Program has pursued this objective.

Many of the Task Force investigations are so complex and labor intensive that they could not have been conducted without cooperation among the OCDETF Program agencies. Most, if not all, of these investigations require a mix of skills, experience, and jurisdiction possessed by no single agency.

Each of the Federal Task Force members brings its own special skills and methods to the Program. Members come from three Cabinet-level departments: Justice, Transportation, and Treasury.

1. The U.S. Department of Justice. The Deputy Attorney General is the chairperson of the OCDETF Program Executive Review Board (ERB). The Justice Department provides central administrative support and, through Assistant U.S. Attorneys in core cities, supports coordinated field-level operations. Participating Justice agencies include the Drug Enforcement Administration (DEA), the Federal Bureau of Investigation (FBI), the Immigration and Naturalization Service (INS), the U.S. Attorneys' offices, and the U.S. Marshals Service. Support for the Program is also provided by the Department's Tax and Criminal Divisions.

   The effective use of the expertise of these components is an indispensable tool in the OCDETF Program. Thus, DEA's narcotics investigative experience, knowledge of drug distribution organizations, and close working relations with State and local authorities make this agency essential to every Task Force. The same holds true for the FBI which brings to the Program the ability to gather and analyze intelligence data and to deploy and manage sophisticated electronic surveillance and undercover techniques.

   The Immigration and Naturalization Service (INS) has statutory responsibility for the admission, control, and removal of aliens. Pursuant to this authority, INS identifies and screens high-risk persons entering the United States to curtail alien involvement in illicit narcotics enterprises.

   The U.S. Marshals Service is charged with safeguarding the integrity of the judicial process by preventing jury tampering and disruption in the courtroom. The Marshals Service also manages seized assets and those assets forfeited by drug traffickers, and has a major responsibility in bringing fugitives to Justice.

2. The U.S. Department of Transportation. The Transportation Department participates in the OCDETF Program through the U.S. Coast Guard. Primarily an interdictive agency in a program mainly comprised of investigators and prosecutors, the Coast Guard has assumed a variety of functions that meld with the work of the other Task Force agencies. Coast Guard coordinators participate in case selection, analysis, and review; serve as liaison with the military services; and provide valuable intelligence and guidance on cases with maritime connections. The Coast Guard shares responsibility with the U.S. Customs Service for enforcing Federal drug smuggling statutes and for air and sea interdiction.

3. The U.S. Department of the Treasury. Participating Treasury agencies are the Bureau of Alcohol, Tobacco and Firearms (BATF), the Internal Revenue Service (IRS), and the U.S. Customs Service.

BATF's special role in enforcing Federal firearms, explosives, and arson laws gives the Program access to special expertise in dealing with drug traffickers who are well armed and increasingly prone to violence. BATF's jurisdiction and capabilities make it a well-suited partner to other agencies participating in the war against illegal drugs.

The IRS actively participates in Task Force cases through its investigation of tax-related violations of the Internal Revenue Code. The IRS's Criminal Investigation Division also investigates money laundering operations, enforces major provisions of the Bank Secrecy Act, and assists in asset seizure and forfeiture actions. Additionally, the IRS's Examination Division may initiate jeopardy and termination tax assessments in cases where the collection of a tax may be in jeopardy.

Along with the IRS, the U.S. Customs Service has been especially effective in conducting financial investigations. Through the analysis of computer data collected under the Bank Secrecy Act, Customs identifies drug traffickers and money-launderers for Task Force investigations. Customs' capacity to track the international movement of cash, persons, and commodities complements the drug trafficking investigations of other Task Force agencies. The Customs Service is also a major interdictive agency. Its mission includes the interdiction of drug shipments through all ports of entry into the United States.

Accomplishments and Workload: The OCDETF Program's synchronization of multiple investigations against common target organizations; its effective use of attorneys at the early stages of investigations; its use of financial investigations to reach otherwise invulnerable targets; and its unprecedented success in fostering collaboration among law enforcement agencies from all jurisdictions above has demonstrated the efficacy of OCDETF's operational model.

In the years since its creation, OCDETF has established itself as the "flag ship" of the Federal drug enforcement effort. The National Drug Control Strategy, submitted to Congress on September 5 by President Bush, recognizes the success of the OCDETF model. It reports that,

> "...OCDETF is able to direct thorough, imaginative, and wide-ranging assaults on the movements and activities of drug dealers. Through its 13 regional task forces, the OCDETF program also provides one of the crucial links between Federal and State authorities, enhancing the exchange of information and enforcement strategies. These programs should serve as a model of interagency coordination and be a priority for future expansion in Federal drug enforcement."

After six years, it has become apparent that the most promising strategy for combating major illicit drug traffickers is the OCDETF type of investigation and prosecution. The OCDETF Program prosecution strategy is to immobilize drug trafficking and money laundering organizations by incarcerating organization members; causing forfeiture of organization and individual assets, thus, divesting them of their power; and, where appropriate, extraditing, deporting, and excluding organization members. To achieve these ends, the Task Forces have directed their resources at those significant national and international targets against whom successful prosecution has the greatest impact.

From its inception late in 1982 through the end of 1988, the Task Forces:

- initiated 2,352 investigations, resulting in 4,917 indictments and criminal informations,
- charged over 8,200 top-and mid-level leaders and major suppliers,
- charged 784 persons with CCE violations and 934 individuals with RICO violations, and
- seized cash and property assets totaling $917 million.

During this period, about 10,000 individual defendants were found, or pled, guilty to at least one charge. More than 80 percent of these were handed prison sentences, with many imprisoned for life.

The major focus of OCDETF investigations continues to be on organizations whose primary purpose is drug trafficking or on organizations, involved in felony crimes, whose members also engage in drug trafficking (89 percent), with a secondary focus on traditional organized crime (5.1 percent).

Clearly demonstrating the success of the Program's strategy of devoting the time and resources needed for indepth investigations is the fact that nearly two-thirds of those charged during the Program's first six years have been major figures. These figures range from top and mid-level leaders through the suppliers, enforcers, and money launders who grease the wheels of the drug organizations.

Over the first six years of Task Force development, results have reflected the success of the OCDETF's targeting strategy: reaching above the retail and "middleman" levels of the drug trade. Most of the charges brought in OCDETF indictments were against leaders, lenders, launderers, and major suppliers as opposed to smugglers, enforcers, and other lesser transportation and distribution functionaries. In 1988 approximately 80 percent of criminal organizations targeted were believed to spread beyond a single judicial district. About one-third of targeted organizations had apparent links to international interests and assets.

Illustrative of OCDETF's success in targeting high-level drug traffickers is the fact that high-level targets accounted for approximately 80 percent of all prison time sentenced during the OCDETF's first six years. Top leaders accounted for 29.5 percent of those years behind bars. These top leaders drew an average prison sentence of 13.6 years. During this period, top leaders were sentenced to a total of nearly 16,000 years in prison. Major suppliers and mid-level leaders drew average sentences of 6.6 and 6.5 years, respectively.

Another indicator of the significant target level reached by the Task Forces is the fact that, more than 2,500 separate OCDETF investigations targeted drug financing and drug importation organizations.

. Consolidated Workload of the OCDE Task Force Program is presented in the following table: (Selected investigative case examples are available in the 1988 Annual Report).

Item	1988	1989	Estimates 1990	Estimates 1991
Investigations	471	500	566	699
Indictments	1,332	1,629	1,850	2,284
Individuals indicted	4,749	5,484	6,236	7,699
Convictions	2,234	2,498	2,869	3,542
Seizures (in millions of dollars	$350	$544	$600	$745
Forfeitures (in millions of dollars)	$107	$49	$120	$149

Note: Workload statistics for the OCDE appropriation were developed by the OCDE Task Force Administrative Staff and represent the entire program. Workload statistics for each agency's involvement in the OCDE Task Force Program are reflected in their own budgets. The estimates for 1990 and 1991 have been revised based on the most current information available, and differ from those shown in the President's Budget.

Program Changes:

Activity: Drug Law Enforcement	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Drug Enforcement Administration..........	837	824	$70,766	963	874	$91,316	126	50	$20,550

A program increase of 126 positions (93 Special Agents and 33 support), 50 workyears, and $20,550,000 is requested for DEA. This includes $1,800,000 in program funding for State and local overtime costs. The request directly supports DEA's strategic planning initiative to target and immobilize major drug trafficking organizations.

Special Agents

An additional 126 positions (93 Special Agents and 33 support), 50 workyears, and $18,750,000 are requested to enhance DEA's program participation. The Nation's problem of drug trafficking and abuse requires a comprehensive strategy addressing suppression, interdiction, investigations at all level, education, demand reduction, and user accountability. While all aspects of the strategy are required to wage a successful war against drug trafficking, DEA's highest priority remains the destruction of the sources of drug supply. DEA is in a unique position to draw upon its domestic and foreign resources as well as its intelligence capabilities to target investigations designed to produce the maximum impact on drug traffickers and drug trafficking organizations. Since early 1983, DEA has been a principal component of the comprehensive approach to drug law enforcement embodied in the OCDETF program.

Currently, 20 percent of DEA's workforce is dedicated to OCDETF investigations. These investigations include some of DEA's most significant enforcement efforts and have been responsible for 31 percent of the agency's asset seizures. However, it should be noted that these investigations are not spontaneously developed; they are a function of the complex interrelationship of all of DEA's investigative activities.

For example, DEA has been increasingly focusing its efforts in its Special Enforcement Operations/Programs (SEO/Ps). SEO/Ps are among DEA's highest priority enforcement initiatives. Through the strict allocation of centrally managed resources, SEO/Ps are developed for a specific purpose, are designed with specific investigative and program goals, and are limited in duration. Because of their multi-jurisdictional and often international nature, SEO/Ps typically are controlled, managed, and reported by a Headquarters drug investigations section, thereby providing specific, high-level program expertise to several ongoing enforcement initiatives simultaneously. For example, an SEO initiated in May of 1989 is targeting various organized crime figures in Europe who have established heroin laboratories throughout France and Western Europe for the conversion of morphine base. Several other SEO/P's are targeting street gangs responsible for the distribution of crack, enforcement/interdiction efforts in coordination with the

National Guard, and enforcement against the retail diversion of Dilaudid nationwide. The overwhelming majority of DEA's SEO/Ps eventually lead to successful OCDETF investigations. Consequently, the requested increase will be used in supporting the OCDETF designated investigations which flow out of the SEO/Ps as well as other more traditional investigative activities.

The requested funding will allow DEA to expand it's already extensive participation in the OCDETF program. Other DEA programs, including SEO/Ps have proven their value by generating complex investigations of violators and their networks while continuing the development and exploitation of DEA's intelligence capabilities. As a result, the increases are needed to support the OCDETF investigations which flow out of the DEA Base programs. Heretofore this support has been drawn from the DEA Domestic Enforcement operations (overburn) or have not been addressed.

In 1989, DEA funded 16 new SEO/Ps and is anticipating doubling the number in 1990. In light of recent experience, and with the renewed emphasis placed upon the OCDETF program by the Attorney General, it is most likely that these new SEO/Ps will generate a far greater number of OCDETF cases by 1991 that must be supported by the requested increase. In addition, additional agents requested in its direct 1991 budget request will also develop cases that will increase the workload of the OCDETF program.

State and Local Overtime

An increase of $1,800,000 is requested for this beneficial program. The Organized Crime Drug Enforcement Task Force Program encourages the joint involvement and participation of State and local law enforcement personnel in the investigation, apprehension and prosecution of major drug traffickers and drug trafficking organizations. Experience shows state and local law enforcement personnel can play a vital role in OCDE Task Force cases. To support and continue such joint participation, funding of $3.2 million is currently available to reimburse state and local law enforcement agencies for overtime costs and authorized travel and per diem expenses incurred by state and local law enforcement personnel assigned to work on Task Force cases. Additional resources have been requested by every region and by each agency participating in the OCDETF program. The request will increase the amount available for this effort in 1991 to $5 million.

The OCDETF Administrative Staff is the coordination and policy office for this effort. The Administrative Staff coordinates: (1) all state and local agreements and reimbursement requests with the Drug Enforcement Administration; and (2) requests for deputation. The Administrative Staff develops the policy and procedures for the program with support from OCDE Task Forces and the OCDE Task Force Agencies. The Assistant U.S. Attorney Task Force Coordinator coordinates and manages the funding and deputation requests for each Task Force Region. The Agency Task Force Coordinator(s) requesting overtime, travel and per diem funds for state and local law enforcement personnel submits the individual agreements and reimbursement requests which have been forwarded to them by their agency's field Special Agent in Charge (SAC) to the Assistant U.S. Attorney Task Force Coordinator. The Task Force Coordination Group, chaired by the Assistant U.S. Attorney Task Force Coordinator, reviews and approves or disapproves each request to obligate overtime, travel and/or per diem funds for each specific agreement.

There have been more than 2,500 active reimbursement agreements between Task Forces and State, County, or local agencies. These local agencies continue to pay the salaries of their investigators who are working on Task Force cases but are assisted in meeting the costs of overtime, travel, and per diem expenses resulting from their participation.

The State and local overtime program helps to facilitate a maximum contribution from state and local governments and elevates their efforts toward higher-level multi-jurisdictional investigations. By working together, member agencies and State and local police officers achieve increased cooperation and communication that aids the investigative process at the working level to help make OCDETF cases more productive. In addition, the program expands the available workforce with a resulting increase in arrests and convictions.

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Federal Bureau of Investigation.	637	637	$53,311	911	861	$88,787	274	224	$35,476

A program increase of 274 positions (154 agents, 120 support), 224 workyears and $35,476,000 is requested to support OCDETF activities.

OCDE Field Request

The FBI is requesting an increase of 261 positions (152 field agents and 109 general support), 217 workyears, and $28,236,000 in its OCDETF resources. This enhancement would bring the FBI's OCDETF funded level closer to the existing utilization level, thereby insuring that the FBI would be able to continue to devote investigative resources near its current level of commitment.

The FBI has been funded for 414 OCDETF agent positions since 1985 and has consistently reflected a utilization rate of approximately 20 percent above its funded level. Currently, an estimated 586 agent workyears or 172 agent workyears over the funded level are being used by the FBI in OCDETF investigations. This over-obligation of FBI resources to OCDETF matters has been to the detriment of other high priority investigative programs, such as Organized Crime and White-Collar Crime, and cannot continue. Without this minimal increase in personnel resources, the FBI will be forced to severely reduce its level of commitment to OCDETF at a time when the drug trafficking problem has become epidemic, touching virtually every citizen's life in some way.

The FBI's OCDETF effort addresses Colombian/South American, European/Italian, Asian, and other emerging drug trafficking organizations such as the "Bloods," "Crips," and Jamaican Posses. Agent and support resources directed at these groups utilize physical and electronic surveillances; Racketeering Enterprise Investigations (REIs); money-laundering investigations; Undercover Operations (UCOs); asset seizures; and provide analytical functions to enhance the intelligence base. These sophisticated investigative techniques provide the most effective means for identifying and penetrating principle drug trafficking organizations and their networks.

The FBI is currently addressing, in part through OCDETF cases, approximately 40 percent of the identified drug trafficking groups. Targeting these organizations is in furtherance of the OCDETF objectives of reducing the incidence of illegal drug trafficking and the criminal and societal problems attendant to drug trafficking.

FBI intelligence has revealed that Colombian/South American trafficking organizations have expanded their operations from southern Florida to the southwest, eastern seaboard, and the Gulf Coast states. The Miami FBI Field Office alone has identified approximately 200 Colombian/South American drug trafficking organizations operating within southern Florida, all of which cannot be addressed due to insufficient resources. New York City and Los Angeles have also been identified as major distribution centers for these drug trafficking groups.

Additionally, intelligence has also disclosed that Mexican drug trafficking organizations, once operating primarily in the southwest United States and southern California, have now spread across the entire country. This problem is not being addressed adequately due to insufficient resources. Current personnel utilization levels, much less funded levels do not permit investigation of all the identified organizations. The Southwest U.S. border has been identified as a strategic drug trafficking region. Given that more than one-third of all heroin entering the U.S. comes from Mexico and that the Mexican Organizations play an increasing role as a conduit for South American cocaine, the FBI must at least maintain, if not enhance, its investigative commitment to this growing threat.

The 109 general support positions are required to perform clerical and related functions in support of OCDETF FBI drug investigations. Critical word processing, file maintenance, evidence control, trial preparation, and other non-investigative administrative functions, must be performed to support investigations. Without proper support, agents are relegated to performing these clerical functions.

Confidential Case Funding

Due to the increasing costs of leased lines and the increase in the number of pen registers and Title III's being used, additional confidential case funding in the amount of $3,411,000 to support new and ongoing investigations is required. Electronic surveillance techniques are frequently necessary to identify members of distribution networks, trace funds and identify members of distribution assets for forfeiture. In addition to an increase in the number of telephone lines leased, these lines must be leased for increasingly longer periods of time due to the complex and international aspects of these investigations.

Radio Communications

Two electronics technician positions (one workyear) and $795,000 are required to augment FBI radio communications support of drug investigations. Included in this request is $500,000 for special case radio equipment, $250,000 for high-frequency (HF) radio equipment, and two electronics technician positions (one workyear) and $45,000 for frequency management and equipment maintenance and repair.

Major drug investigations often require that additional radio equipment be provided to involved field offices to enhance surveillance and operational communications capabilities for the duration of the investigation. The requirement for radio communications support is usually made on short notice, thus requiring that equipment be available for deployment without delay. Additionally, the multi-jurisdictional and multi-agency nature of Organized Crime Drug Enforcement task force investigations, surveillances, and operations require that participants have compatible communications capabilities. Oftentimes, the FBI has been requested to lend hand-held radio and other equipment to other Federal, State, and local law enforcement agencies involved in joint investigations.

An increase of $500,000 in equipment funding is required to acquire additional tactical radio equipment for drug investigations needing supplemental communications capabilities. The existing inventory of special case radio equipment is limited and deployed on a nearly continuous basis. Moreover, due to a steadily growing number of requests for supplemental equipment, the FBI is unable to satisfy all field office requirements.

High-frequency (HF) radio is used for long distance communications, such as ship-to-ship, ship-to-shore, aircraft, and land points both inside and outside the boundaries of the United States, which are beyond the range of normal agency very high frequency radio communications. HF radio is used as a common means of communicating with other Government agencies, such as the Drug Enforcement Administration, United States Customs Service, Federal Aviation Administration, United States Coast Guard, and United States armed forces. This interoperability is critical to supporting and participating in joint investigative and interdiction efforts.

The National Telecommunications Master Plan for Drug Enforcement found that a significant number of HF assets within the drug enforcement community could be more effectively used to support requirements during joint operations. Equipment funding totaling $250,000 is needed to initiate the acquisition of automatic link establishment HF radio equipment for the FBI to support its involvement in joint drug investigative efforts.

Two electronics technician positions (one workyear) and $45,000 in personnel funding is required to provide additional frequency management support for drug investigations and to service and maintain radio communications equipment deployed to field offices. The additional communications workload resulting from the establishment of drug task forces requires increased radio frequency management support to identify available spectrum resources, coordinate and process frequency use applications with other agencies, resolve interference problems, research legitimate/illegitimate licenses associated with suspected drug activity, and set up frequency management plans for field offices.

Physical Surveillance

An increase of two agent and two electronic technician positions (one agent workyear and one electronics technician workyear) and $1,304,000 is required to enhance FBI physical surveillance capabilities in drug-related investigations, including two electronics technicians positions (one workyear) and $45,000 in personnel funding and $500,000 for closed circuit television equipment; $250,000 for day/night vision equipment; $250,000 for radio frequency tracking devices; $111,000 for equipment to outfit surveillance vans used during drug investigations; and two agent positions (one workyear) and $148,000 to conduct court-approved surreptitious entries to install and retrieve electronic surveillance equipment.

Closed circuit television (CCTV) is a key investigative and prosecutive tool in drug investigations. CCTV is a key investigative and prosecutive tool in drug cases to maintain discreet surveillances of subjects, buildings, and other locations used for transacting illegal drug activities. Recordings of drug deals and meetings between traffickers and associates are used by agents to help direct investigations and by prosecutors to aid in the prosecution of subjects by providing juries with visual evidence of illegal acts. Additionally, CCTV is used to monitor the safety of agents engaged in undercover operations. Equipment funding totaling $500,000 is requested to acquire CCTV equipment and systems for use in drug investigations. Two electronic technicians positions (one workyear) and $45,000 are requested to service and maintain CCTV equipment deployed for drug investigations.

Day/night vision equipment, such as night-vision goggles, night-vision starlight scopes, night-vision pocketscopes, covert light sources, telescopes, and binoculars, are needed for agents engaged in surveillance activities. Oftentimes, surveillances of drug traffickers and associates must be performed during the night-time, when traffickers believe there is the least chance of being discovered or detected. Funding totaling $250,000 is needed to augment the inventory of day/night vision equipment available for deployment to agents conducting drug investigations.

Tracking devices emitting radio signals, such as vehicle tracking systems and satellite tracking beacons, are used in surveillances of drug traffickers and others involved in illegal drug activities. Devices are used to track the movement of subjects, vehicles, aircraft, vessels, and packages. Funding totaling $250,000 is needed to acquire additional radio tracking devices for deployment in drug investigations.

Specially modified and equipped surveillance vehicles are instrumental to conducting moving and stationary surveillances of drug traffickers. To prevent discovery of surveillance vehicles and personnel conducting surveillances by criminals, a variety of modified and equipped vehicles must be available for use by agents. Funding totaling $111,000 is required to convert and modify non-traditional vehicles for use as surveillance vehicles and acquire technical equipment and environment systems to support surveillance activities.

Surreptitious entries are an essential requirement to deploy electronic and physical surveillance devices against increasingly sophisticated drug traffickers. An increase of two agent positions (one workyears) and $148,000 is needed to perform court-approved entries in drug investigations.

Electronic Surveillance

To augment the electronic surveillance capabilities of the FBI, an increase of three positions (one workyear) and $1,045,000 is requested. This request includes: $100,000 for cellular telephone intercept; two positions (one workyear) and $245,000 for digital telephone intercept; $250,000 for facsimile intercept and pen registers; $100,000 for microphones; $200,000 for radio frequency (RF) transmitters; and one position and $150,000 for open-reel, cassette, and other recorders and duplicators.

The increasing use of court-approved electronic surveillance in drug cases generates a requirement for additional technical equipment to effect the intercept of conversations. Without question, the evidence gathered and recorded using electronic surveillance equipment and techniques is one of the strongest tools available to investigators and prosecutors. This evidence directly places subjects as participants in drug deals and related criminal activities.

Criminals involved in selling illegal drugs use cellular telephones to conduct trafficking business and related activities knowing, in part, that the intercept of this type of communication by law enforcement is more difficult. It is projected that 76 requests to intercept cellular telephone conversations in drug investigations will be made in 1991; however, funding is available to conduct only 37 of the intercepts. Funding totaling $100,000 is requested to perform an additional 22 cellular intercepts in support of drug investigations.

Integrated services digital network (ISDN) is the first world-wide advance in the art of telephony since direct distance dialing. This new communications scheme consists of many aspects - transmission, common channel signaling, protocol conversion, and services. The expansion of ISDN poses a significant threat to the FBI's ability to conduct electronic surveillances and collect dialed-digit information. Funding totaling $200,000 is required to initiate the development of new intercept techniques and equipment to interface with ISDN technology so that court-approved electronic surveillances can be conducted on telephone systems using ISDN. Two electronics technician positions (one workyear) and $45,000 are requested to support the development of digital intercept techniques.

Requests to intercept facsimile transmissions between drug traffickers are increasing as criminals embrace and exploit the latest high-technology communications capabilities to control and support drug networks and activities. The FBI has developed a facsimile intercept capability to support drug investigative operations and money-laundering cases. Additionally, the recording and analysis of telephone number information collected by pen registers is valuable in identifying associates, contacts, and customers of drug traffickers. The FBI has developed the capability to directly download telephone call record information into its Field Office Information Management System (FOIMS). This automatic downloading capability eliminates the need to manually enter telephone call records and can be accomplished on a more timely and accurate basis. Funding totaling $250,000 is needed to acquire additional facsimile intercept systems, dialed number recorders, and consolidated dialed number recorder software.

Nearly every major drug investigation involves the use of court-approved electronic surveillance. Consequently, there is a continued demand for microphones and receiver systems to conduct such surveillances. An inventory of 300 microphones is needed to support drug investigations; however, only 53 microphones would be available in 1991. Funding totaling $100,000 is requested to acquire an additional 45 microphones and 11 receivers for deployment during drug investigations.

Radio frequency (RF) transmitters are used in drug investigations to gather evidence of illegal criminal activities. These devices can be concealed in an item, such as a lamp or a book, or worn on the body of an informant, cooperating witness, or undercover agent. Because conversations are remotely monitored in a real-time mode, RF transmitters help insure the protection and safety of undercover agents penetrating drug trafficking organizations. Funding totaling $200,000 is needed to acquire additional RF transmitters and concealments for RF transmitters.

The successful conduct of court-approved electronic surveillance requires sufficient quantities of open reel and cassette tape recorders, as well as tape duplicating and related devices. The FBI's inventory of recording equipment is inadequate to support the growing requirements associated with an increasing number of drug-related electronic surveillances. There is also a constantly growing demand for miniature body recorders used to record conversations between cooperating witnesses and undercover agents meeting with drug traffickers. An increase of $150,000 is needed to replace open reel and cassette recorders and additional miniature body recorders and tape duplication equipment. One electronics technician position is also required to service and maintain field recording equipment.

Research and Developments

An increase of 2 positions, 2 workyears and $390,000 is requested for technical support.

One of the most vexing problems being encountered in drug investigations is the increasing use of open areas, such as park and streets, by drug traffickers to conduct illegal business. Such open areas do not lend themselves to the use of traditional court-approved electronic surveillances. Consequently, techniques and equipment to remotely intercept conversations conducted in open spaces must be developed if law enforcement is to effectively combat the illicit use of drugs. Funding totaling $100,000 is required to support the development of a prototype sensitive directional microphone system for use in conducting court-approved electronic surveillances in open areas.

The fast-paced nature of drug investigations requires the capability to produce specialized technical collection devices on a quick turn-around basis. The FBI has successfully applied rapid-prototyping technology, such as computer-aided design, computer-aided manufacturing, and computer aided-engineering, to reduce by 75 percent the time required to fabricate specialized devices for drug and other investigations. As a result, the FBI is able to exploit "windows of opportunity" in drug cases on a more expedited basis. Funding totaling $100,000 is needed to augment computer-aided capabilities for the design of custom integrated circuits used in concealments and to provide added mechanical design and computer performance simulation. Additionally, one electronics engineer position and workyear and $45,000 is required to provide system management and design capability. These enhanced design capabilities are essential to serving FBI agents who require on short notice specialized technical devices to achieve investigative goals.

Complimenting the successful design of custom integrated circuits and devices is the actual fabrication of mechanical brackets, fixtures, enclosures, and concealments in metal, wood, plastic, and composite materials. These devices support communications and surveillance activities. Antenna development and testing insures custom devices perform properly to covertly transmit or receive surveillance information and for direction-finding and tracking of vehicles and narcotics shipments. Fabrication and antenna activities are critical to the successful deployment of technical equipment in drug cases since many of the devices deployed are one of a kind, not commercially available, and must be assembled in response to tight deadlines. Funding totalling $100,000 is requested to acquire machine tools needed for mechanical fabrication of devices and for antenna development. One engineering technician position (one workyear) and $45,000 is required for fabrication support.

Electronic analysis

Two positions, one workyear and $295,000 is sought for enhanced electronic analysis.

Drug traffickers are known to extensively use radio communications to direct and control the smuggling and distribution of drugs in the United States.

Often, coded messages are passed in order not to disclose the true purpose of the communication. Broadcast schedules are altered in time and frequency to thwart the efforts of law enforcement to interdict drug transactions and deliveries. Successful interception and location of drug trafficker radio base stations in the United States which direct smuggling activities could provide the FBI with a valuable weapon to further identify drug networks. Funding totaling $250,000 would allow the FBI to begin the acquisition and deployment of sophisticated radio interception, identification, and location equipment that could be used from fixed and mobile locations to intercept, identify, and locate the sources of drug traffickers radio communications. Two electronics technician positions (one workyear) and $45,000 are required to support the development and deployment of radio communications interception systems.

The drug problem today touches the lives of every person in this country. The FBI has attempted to balance its commitment to OCDETF in all regions of the program. Expanding drug investigative resources in the principal drug importation and distribution cities - Miami, Los Angeles, and New York - is a most efficient method of cutting the chain of supply to smaller inland and rural areas. Yet, despite the major emphasis on the metropolitan areas, the FBI maintains, to a limited degree, its drug investigative role in attacking regional drug trafficking groups in concert with state and local law enforcement. The requested increase of 179 agent workyears would enable the FBI to maintain only its commitment to OCDETF in the principal and secondary drug distribution cities. Without this increase, the FBI would be forced to virtually eliminate its participation in the less critical OCDETF regions and severely reduce its OCDETF resource commitments in secondary drug distribution cities, such as Detroit, Boston, Atlanta, and Baltimore. It is not solely FBI resources that would be lost to the OCDETF program in those areas. With the requested resources comes the years of expertise in conducting the quality of investigations that are required to dismantle the major, multi-national, drug trafficking conglomerates.

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Immigration and Naturalization Service...........	94	94	$7,599	123	108	$10,022	29	14	$2,423

A program increase of 29 positions (24 agents, 5 support), 14 workyears and $2,423,000 is requested to support the INS OCDETF effort as the increasing presence of criminal aliens involved in organized drug trafficking continues to pose a threat to the United States.

The program increase, which, along with the 94 positions provided by Congress in 1990 would finally provide funding for the INS OCDETF staff overburn. That overburn was funded entirely from the basic appropriation for the period covering 1987 to 1989. The 1990 request provided for 77 special agent and 17 support positions. The additional 24 special agent and 6 support positions would finally compensate for the current agency commitment to the OCDETF program.

In 1987, INS committed 100 special agent positions to the OCDETF program: 13 Core City Coordinators for the Task Force Regions; and 87 field agents assigned full-time to OCDETF duties within the INS district offices. Additionally, INS has assigned one Senior Special Agent at headquarters as the INS OCDETF program coordinator and alternate representative to the OCDETF Washington Area Representative Group. These positions were distributed from agency allocations obtained under the Immigration Reform and Control Act of 1986. Recognizing the critical importance of the War on Drugs and the significance of full participatory membership in the OCDETF Program, INS determined that these resources merited initial diversion to the OCDETF Program. Although not specifically designated, the agent positions have been supported by clerical support also charged to the base appropriation.

Proactive investigations of narcotic enterprises have established that most of the criminal organizations threatening this nation are composed of aliens or utilize the services of aliens to engage in the full gamut of violations under INS jurisdiction. Therefore, almost by definition, international narcotics trafficking involves aliens. The unique jurisdiction and the expertise exercised by INS Special Agents in the investigation of aliens is a valuable tool in efforts used to combat illicit narcotics trafficking.

INS, in spite of its relatively brief period of participation, has become an important component of the OCDETF program. Contributions made to the program for 1989 include participation in 187 OCDETF investigations; lead or co-lead in 90 investigations; responsible for or assisted in drug-related seizures and/or forfeitures that include almost $20 million in cash, 308 vehicles, over 900 weapons, large amounts of ammunition and explosives, drugs (cocaine, heroin, marijuana, crack, etc.); and INS Special Agents arrested 1,825 aliens involved in illegal drug activities as a result of OCDETF initiatives.

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
U.S. Customs Service............................	226	226	$14,984	351	316	$25,300	125	90	$10,316

Since 1984 Customs has supported the OCDETF program with appropriated funds of around $14 million and 226 positions. No increases have been received and none were requested for 1990. In fact, Customs has experienced "erosion" in that 226 workyears have been maintained since 1984 with no increases.

An increase of 125 positions (92 agents, 33 support), 90 workyears and $10,316,000 is requested to assist in meeting the USCS primary mission in OCDETF-the destruction of major drug trafficking organizations by disrupting the laundering of their drug proceeds.

The items of increase are as follows:

1. An increase of 125 positions, 90 workyears, and $6,704,000 will enable the Customs Service to pursue joint money-laundering initiatives with its foreign counterparts. The additional 125 positions would allow Customs to remain a participant in narcotics smuggling and international money laundering investigations initiated by other agencies. Customs would pursue the international money laundering aspects thus allowing the other agencies (DEA and FBI primarily) to devote their resources to the narcotics trafficking aspects of the case.

   Also, the requested positions would permit Customs to pursue through the Task Forces those additional international money laundering investigations which are expected to be developed as a result of new initiatives with foreign counterparts. To follow up on the successes of Operation C-Chase and Operation Polar Cap, and to build upon Customs considerable expertise in the international law enforcement area, a Customs Financial Enforcement Strategy has been developed. The leading initiative in the Strategy is the development of international money laundering intelligence and the initiation of international money laundering investigations with the assistance of foreign police agencies. Channels for exchange of financial intelligence through an informal Customs-to-Customs money laundering information and investigations network are already in place with various foreign counterparts. The expected increase in joint international financial investigations will be coordinated with Federal and State/local agencies through the Task Forces.

2. With an increase of $208,000 in equipment funds, Customs will install TECS II terminals in spaces occupied by coordinators in each of the thirteen core cities.

3. An increase of $2,000,000 is requested for Purchase of Information/Purchase of Evidence (PI/PE) funds, and $1,200,000 to support task force special operations or to fund Title III wire intercepts.

4. An increase of $204,000 will enable Customs OCDETF Coordinators, regional program managers, and selected SACs to meet at least quarterly with Headquarters managers to confer on drug smuggling trends, new money laundering methods encountered, and policy matters.

With approval of this request, long term undercover money laundering operations with the assistance and cooperation of law enforcement agencies in several foreign countries would be implemented. The informal Customs-to-Customs money laundering investigations network will facilitate expeditious exchange of financial intelligence information and promote cooperative investigations with foreign counterparts, hereby bringing foreign counterparts under the OCDETF umbrella.

Requested funding will allow more Customs participation in drug smuggling and money laundering investigations being conducted by the task forces. Currently, due to other priorities, Customs field managers must decline to participate in numerous task force investigations initiated by other agencies, many of which should have Customs involvement. With the requested funding increase, Customs will be able to participate in additional investigations initiated by other task force agencies.

Increased funding for quarterly conferences between Customs field personnel and headquarters staff will result in Customs Coordinators being better equipped to act as the focal point with other OCDETF agencies in the area of major drug and money laundering investigations.

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Bureau of Alcohol, Tobacco and Firearms.	135	128	$8,885	135	128	$9,697	...	...	$812

An increase of $812,000 is requested for FY 1991 to support the Bureau of Alcohol, Tobacco and Firearms' efforts within OCDE. No increase in workyears or positions is being requested.

This funding increase (overtime-$750,000; mission travel-$62,000) is requested to support court ordered wiretaps based on firearms investigations.

The Anti-Drug Abuse Act of 1988 (ADA) amended 18 U.S.C. section 2516 to include as predicate offenses all felony violations of 18 U.S.C. sections 922 and 924 and 26 U.S.C. section 5861. This amendment granted BATF the authority to obtain court orders authorizing electronic interception of oral or wire communications in firearms investigations. Prior to the passage of the ADA act, the Bureau's authority to conduct electronic interception of oral or wire communications was limited to certain violations of Federal explosives laws. This new amendment enables the Bureau to expand the usage of this valuable investigative tool to firearms investigations which are a part of (OCDETF).

In order to implement this new authority provided by Congress, BATF is requesting a budget enhancement. The increase in funds is required to support these long-term, expensive and labor-intensive investigations. Since most of BATF's districts are relatively small in staffing, much of the cost will be in travel and overtime expenses.

During FY 1991, it is expected that three (3) conspiracy-type firearms trafficking OCDETF investigations will be completed utilizing this investigative tool. These types of investigations are major undertakings and require intense effort and coordination. The use of court-ordered electronic interception has proven an effective tool against organized criminal groups. The most sophisticated criminals take careful steps to hide their criminal activities. They are often shielded by very close associates or even family members. This amendment will greatly affect BATF's ability to investigate and apprehend major career criminals who are not vulnerable to routine undercover investigations due to the insulated environment in which they conduct their operations. The authority to use electronic interception in Federal firearms investigations will also elevate the quality of such investigations and will multiply opportunities to prosecute criminal "kingpins". The long range goal of dismantling these organized criminal groups is thereby enhanced by the use of electronic interception.

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Internal Revenue Service................	277	260	$14,951	467	414	$33,680	190	154	$18,729

A program increase of 190 positions, 154 workyears, and $18,729,000 is requested. Included within this request is $2,659,000 to establish a secure radio network system. For FY 1991, 139 special agents and 51 support positions are requested to attack the money laundering and financial crimes associated with the massive drug and contraband smuggling across the Southwest Border.

In 1989, Internal Revenue Service devoted 811 staff years and $44.8 million to support OCDETF investigations; the agency was budgeted only 260 staff years and $14.4 million. This creates an overburn of 551 staff years and $30.4 million. During 1989, the Criminal Investigation Division of the Internal Revenue Service minimally committed twenty-five percent of its total resources to the investigation of narcotics-related crimes, of which 65% was devoted to support the OCDETF Program. The Internal Revenue Service has participated in nearly 70% of all OCDETF investigations initiated, which is second only to DEA. Since the inception of the OCDETF Task Force Program, IRS has provided nearly fifty percent of Treasury's effort to it.

Ninety (90) IRS Special Agent workyears currently utilized in OCDETF investigations along the Southwest Border have been funded in fact, from other functions within IRS. These agents were assigned to the region as part of the Operation Alliance initiative commenced on August 14, 1986.

Because the type of investigations conducted by IRS are complex and long term, virtually all of the border related money laundering and financial crimes investigations in which IRS-Criminal Investigation Division has participated have been accepted into the OCDETF program principally in the Gulf Coast and Southwest Border OCDE Task Forces.

The net result is that all of the IRS resources designated as Operation Alliance are in fact an OCDETF "overburn." This request will correctly assign personnel currently working on OCDETF investigations, some of which are the direct result of Operation Alliance interdictions, to the OCDETF program.

The IRS investigations to date have shown there is a blatant disregard, by narcotics trafficking and money laundering organizations operating along the border, of federal tax laws and financial reporting requirements under the Bank Secrecy Act.

In addition, the IRS expects to direct more attention and resources along the Southwest Border at investigating legitimate business entities. These entities, including money exchange houses, substantially support the narcotics trade through their services. They do so by conducting large amounts of cash transactions and reporting only a small portion of them on the required forms. This enables narcotics traffickers to launder their drug proceeds out of the country. At the present time, there is a sustained effort in identifying and investigating these businesses. These resources will continue the detection of narcotics trafficking organizations by identifying and investigating upper echelon narcotics traffickers, financiers, money laundering specialists, and corrupt bankers, and foster increased compliance with the Bank Secrecy Act though the detection of non-filing of currency transaction reports.

The Internal Revenue Service (IRS) agents have been recognized as the Task Force financial experts. One of the main reasons for this reputation has been the Service's unique ability to identify the "professional" members of society who profit from involvement in narcotics trafficking. This classification includes the lawyers that finance and advise the organizations and in many instances help launder the illicit narcotics money. It also includes the accountants who keep the books and many times help disguise the source of narcotics proceeds; doctors, engineers, stockbrokers, and other wealthy businessmen who have helped finance loads of narcotics and who are the silent partners. This class of criminals have rarely, in the past, been prosecuted and most of the time never identified. Historically, these individuals are rarely targeted by the drug enforcement agencies since there is usually never a link between the individual and the hard narcotics. The only way to attack and identify this class of criminal is through the use of financial investigations wherein the money earned from the sale of narcotics is traced back to individuals.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
Activity: Prosecutions	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
U.S. Attorneys....................	659	626	$45,205	659	642	$47,316	956	790	$66,182	297	148	$18,866

Tax Division......................	14	12	1,141	14	12	1,188	[illegible]	12	1,188	...	...	...
Total...........................	679	644	47,008	679	660	49,202	976	808	68,068	297	148	$18,866

This funding is used to reimburse the U.S. Attorneys, the Criminal Division and the Tax Division for their investigative support and prosecutorial efforts towards OCDE Task Force cases. Litigation efforts are targeted selectively on the criminal leadership involved in drug trafficking and are intended to dissolve organized illicit enterprises. This includes activities designed to secure the seizure and forfeiture of the assets of these enterprises.

Each of the 13 regional OCDE Task Forces is coordinated by a senior U.S. Attorney. The thrust of the OCDE Task Force prosecution activity is to encourage the maximum level of cooperation at the district level by marshaling the efforts of Federal and local prosecutors in these organized crime drug trafficking cases.

Long-Range Goal: To reduce the incidence of organized criminal involvement in all aspects of illicit drug activity in the United States through the prosecution of members of high-level drug trafficking enterprises.

Major Objectives:

To prosecute individuals who organize, direct, finance or are otherwise engaged in high-level illegal drug trafficking enterprises, including large scale money laundering organizations.

To promote a coordinated drug enforcement effort in each task force area, and to encourage maximum cooperation among all drug enforcement agencies.

To work fully and effectively with State and local drug enforcement agencies.

To make use of financial investigative techniques, including tax law enforcement and forfeiture actions, to make possible Government seizure of assets and profits derived from high-level drug trafficking cartels.

Base Program Description: Each of the 13 Task Force prosecution units consists of attorneys and support staff coordinated by a core-city U.S. Attorney who is accountable to the Deputy Attorney General on matters pertaining to conduct of the Task Force. The thrust of the OCDE Task Force prosecution program is to encourage the maximum level of cooperation at the district level by marshaling the efforts of Federal and local prosecutors and making the core-city U.S. Attorney responsible for the coordination of the Task Force.

The OCDE Task Force Program implements a major Administration initiative to combat organized crime and drug trafficking. The program represents the utmost degree of cooperation and coordination among Federal, State and local law enforcement agencies. One of the key elements of the program is the sharing of resources among drug law enforcement agencies to fight drug trafficking. The 13 regions identify, investigate and prosecute members of high-level drug trafficking enterprises to destroy the operation of those organizations. The range and nature of the investigative techniques requires continuing and intensive participation by Assistant U.S. Attorneys in the development of investigative strategy and in the provision of continuing counsel to ensure that the evidence growing out of investigations will be complete, conclusive, proper and admissible.

Task Force prosecutions benefit from the Program's broad, thorough and careful approaches. The "Guidelines" lay down distinctive principles for task

Force prosecutions:

- -- an increased emphasis on forfeitures, either in civil actions or under the criminal forfeiture provisions of the law;

- -- the use of any of a wide range of statutes, not just drug statutes, to put drug trafficking organizations out of business; and
- -- a concerted coordination of prosecutorial activities among various jurisdictions in order to achieve maximum impact on entire organizations.

When a grand jury returns an indictment or an information is filed, the case moves from the investigative to the prosecutorial phase. The prosecution of an OCDE Task Force case is qualitatively different from that of any other drug prosecution. The continual involvement of a Task Force AUSA during the investigation results in the construction of a sounder case. Prosecuting attorneys are provided with the information necessary to be familiar with all aspects of the case thereby enabling them to develop a stronger prosecution strategy.
The AUSA's specific function is to ensure that the evidence obtained is complete and admissible. The participation of agencies with a wide range of areas of expertise ensures that specific statutory violations are appropriately charged and documented. This coordination of efforts also results in a strategy that orders and times the prosecution of cases to provide not just the prosecution of individual defendants, but maximum disruption of the drug trafficking organizations involved.

The Task Force emphasis on collaboration with State and local law enforcement agencies and on the cross-designation of attorneys affords a greater choice of venues in which a case may be brought to trial. With the option of taking a case to a Federal or a State court, the prosecutors can take best advantage of the available statutory relief afforded by the two systems. Where a State's penalties for criminal possession of small amounts of drugs are more severe than the Federal penalties, prosecutors can bring the case to the jurisdiction with the more punitive statutes.

The United States Attorneys

One of the cornerstone principles of the OCDETF Program is early attorney involvement in the development of case strategy. The Task Force Program affords prosecutors the time they need to participate in the development of this strategy and to provide the necessary legal services and counsel that investigators require. They are not expected to rush cases to completion, but rather to move deliberately toward successful and comprehensive conclusions. And while Task Force attorneys carry a caseload of fewer cases, theirs are typically more intricate and long-term than those of their non-Task Force counterparts.

A second point worth noting is the development of skills by Task Force attorneys in the course of their work. For investigators and attorneys alike, the use of electronic surveillance or the mounting of undercover operations are especially time-consuming since they require extensive legal paperwork. A wiretap, for example, requires a detailed application for initial approval and repeated affidavits for renewal. The preparation of the necessary documents has become a virtual art form, and the Task Forces have proved equal to the challenge. The number of attorneys experienced in handling these matters has increased, a significant development in an area where maintaining investigative momentum is crucial. Another feature cited by attorneys themselves is the increase in their knowledge of matters relating to narcotics dealing. The courts now recognize them for their greater acumen in interpreting the narcotics environment. When applying for warrants for wiretaps, searches, or arrests, they can now more authoritatively articulate the information contained in the supportive affidavits of the investigative agencies; for example, the probability of finding narcotics ledgers or financial books and records that will show the fruits of drug trafficking, even in locations where drugs themselves are not likely to be found. Similarly, they can better represent drug dealers' cryptic conversations in support of applications for extensions of ongoing court-authorized electronic surveillance or for new supplementary surveillance. The development of such expertise in offices of the U.S. Attorneys is primarily attributable to the close working relationship among OCDETF Attorneys and experts from the investigative agencies under the aegis of the OCDETF Program.

Criminal Division

The Administration's OCDE Task Force initiative against organized drug traffickers has increased the demands on the Criminal Division to provide certain types of prosecutorial assistance and to participate directly in the development of particular cases. For example, many OCDE Task Force investigations depend upon electronic surveillance to obtain evidence on the activities of wrongdoers. By law (28 USC 2516), all electronic surveillance must be authorized by the Attorney General or a designated Assistant Attorney General. Before authorization, each application is reviewed by Criminal Division personnel, and a recommendation is made to the Assistant Attorney General. Then, following authorization of either a wiretap or the wireless interception of communications, reports must be collected and reviewed on the fruits of the surveillance. In addition to employing electronic surveillance techniques, many OCDE Task Force prosecutions rely on witnesses whose personal safety is endangered by criminal elements. A prosecutor seeking to arrange for the protection of a witness, e.g., by providing guards, by relocating the witness out of the danger area, by securing a new identity for the witness, etc., must submit a request to the Criminal Division for review as to the qualification of the witness for the program and a determination as to the level of protection to be afforded to the witness.

Tax Division

The Tax Division attorneys serve as liaison to the 13 regional OCDE Task Forces and provide litigation support, advice, and drug/tax related legal expertise in OCDE Task Force cases. Tax Division attorneys monitor the drug/tax related docket of the OCDE Task Forces to ensure that timely assistance is provided in investigations and prosecutions of major narcotics dealers. Tax Division OCDE attorneys also assist the OCDE Task Forces in financial/tax investigations and in cases under appeal which involve extremely technical and complex tax-related issues. The involvement of Tax Division OCDE attorneys in these drug/tax-related cases is extensive as these cases typically require lengthy grand jury investigations and numerous defendants each of whom is charged with multiple criminal violations.

Accomplishments and Workload: Workload statistics for the United States Attorneys activity have been combined and are reflected in the Drug Law Enforcement budget activity on page 18. Examples of OCDETF case activity can be found in the 1988 Annual Report of the OCDETF program. Accomplishments for the Criminal and Tax Divisions follow:

Criminal Division:

Item	1988	1989	Estimates 1990	Estimates 1991
Electronic surveillance applications reviewed...........	160	160	206	206
Witnesses accepted in protection program................	163	214	314	464
Extradition requests transmitted.........................	132	145	175	205
Judicial assistance requests submitted..................	88	95	125	150

Tax Division:

	1988	1989	Estimates 1990	Estimates 1991
1. OCDE Case Receipts				
a. Complex Cases..................................	141	178	195	205
b. Outgrowths.....................................	108	96	101	106
Subtotal.......................................	249	274	296	311
c. Grand Jury Investigations..............................	65	55	60	63
Total Case Receipts.............................	314	329	356	374
2. OCDE Case Closings				
a. Complex Cases..................................	85	87	92	95
b. Outgrowths.....................................	108	70	75	80
Subtotal.......................................	193	157	167	175
c. Grand Jury Investigations..............................	42	35	40	42
Total Case Closings.............................	235	192	207	217

Explanation:

Workload statistics were obtained from the Criminal Appeals and Tax Enforcement Policy Section in the Division's Criminal Section. The Section maintains its own automated case reporting/tracking system for criminal tax matters which is used to prepare case information reports on a monthly basis for Division policy management officials. 1988 and 1989 data reflect actual caseload for each fiscal year. Estimates for the outyears are based upon past years experience of workload trends and current information available from the Section regarding new IRS enforcement emphasis.

Program Changes

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
U.S. Attorneys..........................	659	642	$47,316	956	790	$66,182	297	148	$18,866

An increase of 297 positions (151 attorneys, 45 paralegals, 101 support positions), 148 workyears and $18,866,000 is requested to strengthen the prosecutional efforts of the OCDE program. Personnel increases are required due to an increase in drug trafficking, especially "crack" cocaine. There has been a corresponding increase in violent crime attributable to the increase in drug trafficking. Youth gangs are developing rapidly resulting in an alarming increase in murders. As reported by the Department of State comparing 1988 to 1987, worldwide production of marijuana, opium and hashish has increased, by about 18,283 metric tons. Emergency room mentions are up by 11,383 comparing the same two fiscal years. In response, United States Attorneys' offices are establishing mini-task forces in major drug problem areas within their districts.

Through federal, state and local coordination efforts, the OCDE workload is expected to increase in 1991. The Administration is committed to ending drug abuse in America. The Administration calls for the strict application of the penalties contained in the Anti-Drug Abuse Act of 1988, which provides for the death penalty for those who commit drug-related murders and for increased prison sentences for other drug-related crime. To achieve this goal, more trial preparation will be required, trials will be greater in length and a greater number of appeals are expected. In order for the U.S. Attorneys to effectively handle existing cases, seize assets of drug dealers when obtained with drug profits and in addition handle new investigations, the requested resources must be authorized.

The legislative intent of Congress to prosecute, to the full extent of the law, individuals distributing drugs will be achieved. Convictions will increase with the expectation that the defendants will be removed from society under the mandatory sentencing guidelines. Finally, drug dealers' assets will be seized and forfeited with a potential impact to be realized by all forces of the government, ultimately benefiting the American citizen.

Approval of the resources requested will enable the U.S. Attorneys to maintain an aggressive posture in the war against drugs, the federal precursor drug legislation will be exploited, the Federal Government's leadership role in the investigation and prosecution of organized crack cocaine organizations will be enhanced and investigations targeting the major suppliers, organizers, and distributors of other illicit drugs will be expanded.

A Caseload Study of the OCDETF Program was commissioned late in 1984. A final report was published August 1985. Regarding the level of attorney support, the findings of this study reflected the following.

1. Involvement of attorneys early in the development of investigative strategies in major drug trafficking cases is critical to their full exploitation.

2. The prevalence of drug trafficking rings that triggered creation of the OCDETF Program has not been so significantly reduced as to limit the availability of substantial cases in all Task Force regions.

3. Task Force cases are more complex and more time-consuming than other Federal criminal or Federal drug cases, and their results are comparably greater in terms of conviction rates and penalties.

4. The greater duration of Task Force cases means that resources are committed--or needed--over a longer period of time. The availability of resources to continue to meet this requirement is critical to the program's continued success.

5. The good cases in the Caseflow Study involved agents to attorneys in a ratio of less than 4.5 to one.

Approval of the above resources will enable the OCDETF program to establish a ratio of one attorney for every four agents. If this request is not allowed, the following adverse conditions will result:

- investigations will be slowed, due to the unavailability of attorney time, resulting in an increasing backlog of unindicted cases;
- investigations will proceed to indictment with less participation by attorneys, resulting in cases that are less well prepared, with less desirable outcomes;
- investigators will lose their ability to respond promptly and appropriately to tactical and strategic demands, as attorneys are less able to provide needed services, adding to costs and reducing the effectiveness of investigations; or
- all of these effects will present themselves, in combination, resulting in the outcome that Task Force prosecutions will not have an impact on reducing the supply and demand for drugs.

Activity: Administrative Support	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Task Force Administrative Staff....	10	10	$836	10	10	$1,093	13	12	$1,216	3	2	$123

This activity provides policy guidance, central coordination, and administrative support to the headquarters of the eleven member agencies and the thirteen regional task forces. The OCDETF Administrative Staff has day to day responsibility for providing administrative support to the Task Forces and is responsible for financial management, records management, and maintenance of the Case Management System. This staff serves as the first-echelon point of contact for the Task Forces when Washington intervention or assistance is required.

Long-Range Goal: To provide policy guidance, central coordination and administrative support to the thirteen regional drug task forces.

Major Objectives:

To perform as the support and monitoring body between the individual task force Coordinating Groups and the Office of the Deputy Attorney General.

To track and monitor task force cases and resources.

To perform budget analysis, program analysis and evaluation.

To prepare testimony and information for the Attorney General, the Deputy Attorney General, the Congress, the media, and others concerning Task Force issues.

To perform research in support of Task Force requirements.

To manage the State and Local Law Enforcement Overtime Fund, State and local deputation and federal officer cross-designation programs.

Base Program Description: Although the administrative support tasks for the OCDETF Program have grown, the creation of a large, Washington-based bureaucracy has been avoided. The thrust of the Task Force Program is to encourage more cooperation at the field-office level by marshaling the efforts of agency personnel within local districts and making the core-city United States Attorney responsible for the coordination of the Task Force. The Program is not designed to be administered centrally from Washington but rather, supported by the Washington based Administrative Staff.

In the Justice Department, the OCDETF Administrative Staff has day-to-day responsibility for providing administrative support to the Task Forces and is responsible for financial management, records management, and maintenance of the Case Management System. The Administrative Staff serves as the first-echelon point of contact for the Task Forces when Washington intervention or assistance is required.

Under the supervision of the Director, the Staff consists of professional and support staff deemed necessary for the performance of a broad range of management and administrative functions.

1. Scheduling and staffing the meetings of the Executive Review Board; the Washington Agency Representatives Group; the Core City United States Attorneys and Assistant United States Attorney Coordinators; and national OCDETF Conferences;

2. Providing coordination of the legal and administrative services provided to the Task Forces by the Criminal Division, Executive Office for United States Attorneys, Justice Management Division, Tax Division, and the investigative agencies, etc.;

3. Collecting, analyzing and reporting on caseload and other statistical data for the Task Forces;

4. Producing periodic informational memoranda to keep the Executive Review Board, Washington Agency Representatives Group and Task Force personnel apprised of events occurring throughout the program;

5. Producing reports for the Attorney General and United States Attorneys, annual reports for the President and Congress, and other analyses as required; and

6. Coordinating and authorizing state and local reimbursable agreements and special deputations.

The Task Force administrative functions are conducted to the greatest extent possible through existing Departmental systems. This includes conducting training through the Attorney General's Advocacy Institute and the Quantico and Glynco Training Centers, providing legal advice through the various sections of the Criminal Division and other equivalent units, etc.

The Director of the Administrative Staff works with Departmental units and Task Force investigative agencies to ensure that needed seminars, conferences, and other training is provided in the following areas:

1. Task Force orientation and administrative procedures for managers of Task Force offices;

2. In-service training for Task Force attorneys and agents in such areas as financial investigations, forfeiture actions, and specialized drug investigative techniques;

3. Specialized training for new attorneys in narcotics prosecutions, CCE and RICO statues, forfeiture actions, financial investigations, and related areas; and

4. Pre-service and in-service training for Task Force administrative staff.

The consolidated appropriation account requires an enhanced tracking and monitoring process to provide effective budget planning, formulation and execution and it is managed by the Administrative Staff.

Accomplishments and Workload: The Administrative Staff, as the central repository of the case data, is able to provide the national focus necessary for the Deputy Attorney General to manage and assess the Task Force Program.

The Case Monitoring System is designed to meet the management needs of the Deputy Attorney General, U.S. Attorneys, the Executive Review Board, the Member Agency Headquarters and the regional Task Forces. In addition, the information system provides the data necessary to evaluate Task Force program performance which is used in reports to the Attorney General, President, the Congress, and the public. The Case Monitoring System consists of three standard reports: the Investigation Initiation; the Indictment; and the Disposition Sentencing. Other monitoring reports include but are not limited to Investigations/Prosecution Status Reports and various activity reports.

In addition to comprehensive activities involved in the maintenance of the Case Monitoring System and other recurring administrative responsibilities, the Administrative Staff has performed the following activities:

- preparation of the annual reports as required by Congress;
- design, coordination, and management of the Annual National Conferences;
- preparation of a five-year summary report;
- preparation of a six-year impact analysis report;
- modernization of data base from C-3 equipment to modern high speed digital software/hardware;
- performed site visits to all core cities regarding preparation of the Annual Reports, the five-year Summary Report and the six-year impact analysis report;
- conducted site visits and inspections to numerous non-core districts;

- provided critical staff support and coordination in the preparation of speeches, presentations, and related activities required for all regional conferences, all Washington Agency Representatives meetings and all Executive Review Board Meetings;
- attended and generally provided speeches at all regional conferences, advisory committee meetings, and national conferences;
- coordinated and processed all State/local federal agreements for cooperative investigations, and all overtime contracts and Deputation requests;
- served on numerous Committees and special projects (i.e., the NDPB Lead Agency/Strategy project); and
- in accordance with required taskings from the Attorney General, Deputy Attorney General, member agencies, and the United States Attorneys, responded to all information requests and issue/problem resolution requirements, and prepared special analyses and performed liaison activities with affected agencies.

Program Changes:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Task Force Administrative Staff.........	10	10	$1,093	13	12	$1,216	3	2	$123

In order to respond to increased requirements to more effectively manage and track resources contributed by the eleven member agencies, a minimum of two professional/administrative positions and one support position, two workyears and $123,000 is requested.

To effectively manage resources, the Executive Review Board requires (1) knowledge of the tasks performed; (2) information on resources used to accomplish the tasks in order to recommend to the Attorney General needed changes in the level, mix, and allocation of resources.

While the Executive Review Board has a Case Monitoring System which provides information on Task Force cases, it does not have a system that provides needed information on attorney and agent resources. Data needed to ensure efficient management of the individual Task Forces and to provide a basis for program evaluation generally fall into two categories: case monitoring information and personnel/funding information. Case monitoring and resource data from each Task Force would essentially serve three purposes.

-- First, the data would provide core-city U.S. Attorneys with the information needed to coordinate the planning and management of Task Force resources in their regions. To carry out their responsibilities, core-city U.S. Attorneys, through their Task Force Coordinators, must be able to track the progress of cases, the resources applied to each case, and the results of their efforts.

-- Second, collecting such information would provide the data needed by the Executive Review Board to carry out its oversight responsibilities for Task Force operations nationwide. The Executive Review Board needs sufficiently detailed information to determine when a reallocation of resources among Task Forces might be necessary, whether cases are meeting promulgated standards, and whether other programwide management concerns are being met.

-- Third, the information, and any necessary special analyses, should allow evaluation of the program's effectiveness and enable the Attorney General to make the required reports to the President, the Congress, and the public. The most immediate use of information at this level would be to support budget requests for the Task Forces by demonstrating that they are a viable enforcement response to the national drug problem.

According to OCDETF Program guidelines, the Attorney General is responsible for determining if a reallocation of Task Force resources is necessary. He is to annually review the allocation of attorneys and agents among the Task Forces and districts considering recommendations of the Executive Review Board. Consideration will also be given to insuring proper interagency balance and the optimal use of resources in the OCDETF drug program.

Carrying out such budget reviews and insuring that the resources of the agencies involved in drug law enforcement are properly balanced and used is consistent with (1) the Executive Review Board responsibility for developing budgetary priorities and (2) the Attorney General's authority, in carrying out his responsibilities as manager of the OCDETF appropriation to review and approve the reprogramming of funds relating to the established budgetary priorities. It is also consistent with providing strong central oversight of OCDETF programs, including the development of a unified budget that reflects all federal resources devoted to drug enforcement and that provides recommendations for rationalizing these efforts in terms of budgetary priorities.

An additional three positions (two budget analysts, and one budget assistant (typing)) are required to provide the requisite administrative support for the allocation and control of OCDETF financial resources through financial planning, budget formulation, resource justification, budget report preparation, special analysis, appropriation accountability, financial data collection and dissemination, and financial audits. It is anticipated that the 11 member agencies will report on a monthly basis regarding their expenditure of funds for the thirteen regional task forces.

[1] The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

Interagency Law Enforcement

Organized Crime Drug Enforcement

Justification of Adjustments to Base

(Dollars in thousands)

	Pos.	WY	Amount
Adjustment in permanent positions and workyears	...	61	...

The absorption of the 1990 pay raise increase will not allow support for all of the positions and workyears that Congress may have expected. Restoration of 24 workyears to the 1991 base is requested. An additional 37 workyears is required to annualize an increase in the Drug Enforcement Administration position and workyear ceilings.

Mandatory increases:

	Pos.	WY	Amount
1. Annualization of 94 new positions for Immigration Naturalization Service	...	46	$2,061

	Approved 1990 Increase	Annualization Required
Annual salary rate of 94 approved positions	$3,220,000	
Less lapse (50 percent)	-1,578,000	$1,578,000
Other compensation (AUO)	207,000	207,000
Net compensation	1,849,000	1,785,000
Associated employee benefits	647,000	276,000
Total costs subject to annualization	2,496,000	2,061,000

	Pos.	WY	Amount
2. Additional compensable day	...	...	557

The annual salary rate for Federal employees is based on 260 paid days. During 1991 there is one more compensable day (261) than 1990 (260). Appropriate personnel benefits are included in this figure.

	Pos.	WY	Amount
3. 1990 Full-year pay increase impact on 1991	...	...	$5,378

This request provides for the full-year pay increase of 3.6 percent as contained in the general provisions of the U.S. Treasury, Postal Service and General Government Appropriations Bill, 1990, for civilian and military personnel to be effective in January of 1990. The OCDE appropriation is required to absorb the total pay raise in 1990. The requested increase of $5,378,000 is the amount required for full year funding in 1991. NOTE: The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

	Pos.	WY	Amount
4. Within-grade increase (WGI)	...	...	82

This request provides for the expected increase in the cost of within-grade increases. This increase represents WGI costs based on a dynamic model of the Department's employee population.

	Pos.	WY	Amount
5. Federal Employees Compensation Act (FECA) - Unemployment Compensation	...	...	10

This increase reflects the billing provided by the Department of Labor for the actual costs in 1989 of employees' unemployment compensation. For 1991, $10,000 over the 1990 base will be required.

	Pos.	WY	Amount
6. GSA Rent	...	...	565

GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $565,000 is required to meet the commitment to GSA.

	Pos.	WY	Amount
7. Employee data and payroll services	...	...	$5

Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems, maintenance and payroll accounting, are based on the number of employee records maintained. The rate of $188.23 per record in 1990 will be raised to $199.52 per record in 1991. The change is based on anticipated uncontrollable cost increases of 6 percent for the operation of the Justice Employee Data Service. An increase of $5,000 will be required in 1991.

	Pos.	WY	Amount
8. General pricing level adjustments	...	...	1,843

This request applies OMB pricing guidance as of December 6, 1989, to selected expense categories. The increased costs identified result from applying a factor of 4.2 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, transportation costs and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1991 estimates.

	Pos.	WY	Amount
Total mandatory increases	...	46	10,501

Mr. SMITH. Testifying on behalf of the Justice Department is Deputy Attorney General Donald Ayer. Mr. Ayer, you may proceed with your statement.

OPENING REMARKS

Mr. AYER. I will make it brief. I am happy to be here to discuss with you what I think is perhaps the most successful law enforcement program that has come along in a long time.

Before I do that, there are a number of people here who are affiliated with the program, and I would like to introduce two of them. Seated at my right is one of the associate deputies in my office, Margaret Love, who has been working over the last year in connection with overseeing the program; and also here, right behind me, is Frederick Kramer, who, since the beginning of the program, has been in charge of the administrative staff within the Department of Justice.

REIMBURSEMENT PROCESS

The current fiscal year, 1990, is the first year during which Congress appropriated funds directly to the OCDETF program. Prior to that, from 1985 through 1989, the resources were appropriated separately to the 11 agencies involved in the program.

The way the consolidated budget works presently, and the way it will work as it is refined over the next months and years, is through a series of operating plans that are submitted by the individual agencies and are reviewed by the administrative staff under the supervision of my office and under the supervision of the Executive Review Board, a body made up of the highest level of representatives of all the agencies.

Plans laying out the intended expenditures and the uses to which funds will be put are followed up by monthly reports on what is actually being done as it is being done. A reimbursement arrangement is required under the 1988 statute, the Anti-Drug Abuse Act, which was set up as a reimbursement ratio. The agencies will receive funding through that reimbursement arrangement. We are in the process now of refining that reimbursement process. I think it is presently working quite well, although it isn't all the way to where it needs to be yet.

1991 RFQUEST

Our proposed budget for fiscal year 1991 involves a total of 3,962 reimbursable positions and $330 million. That is a gross increase of 53.5 percent in the budget. It is a slightly smaller increase, 48 percent or $107.3 million over the base, if mandatory increases are included.

That program increase includes 502 new investigators and 151 attorneys and a total number of new positions of 1,044. That 48-percent increase over base is, however, not indicative of the total actual increase of drug resources affiliated with the OCDETF program. It is actually a smaller number than that. In the past, under the old arrangement, we experienced a phenomenon which has been referred to as overburn, where agencies would commit more resources to the OCDETF activities in many instances than were programmed.

This year's budget essentially recognizes that, and puts into the OCDETF program the resources which were found necessary in the past. That shows up as part of the overall increase, even though the increases were previously expended——

ACTUAL RATE OF GROWTH

Mr. SMITH. How can you expand 48 percent one year and do it effectively?

Mr. AYER. It is very close to the increase for the DEA. The OCDETF real increase is about 23 percent, or $51 million, less than half of the actual program increase that we are showing in the proposal.

The real increases, in terms of new resources newly committed, come within the Drug Enforcement Administration where we are asking for 126 new positions, of which 93 are agents, and $20.5 million; within the Customs Service, where we are asking for 125 new positions, 92 of which are agents, and a total of about $10.3 million; about $1 million for the Bureau of Alcohol, Tobacco and Firearms funding; and an additional $18—almost $19 million—and 297 positions for the United States Attorney's Offices. Of those 297 positions, 151 for attorneys. Those are the real actual increases in terms of new resources that will be working on OCDETF cases.

OCDETF SUCCESS

The reason I say that the OCDETF program is perhaps the most successful law enforcement program we have ever seen has a great deal to do with its conception. The conception has been borne out in the practice that has been followed.

Back in 1982, I was a U.S. Attorney and I know what the concept was, and I know that the program actually was carried out the way it was intended to be carried out. The point was to target high-level offenders. It was recognized that high-level offenders are not limited to a local area. They move in a broad operational area. They also are engaged in a wide range of activities that any one particular law enforcement expertise is not necessarily going to be able to deal with.

So, the concept was to bring together and synchronize a number of different agencies. We now have 11 agencies affiliated with OCDETF that bring different expertise and geographic deployment.

They bring, since we are operating primarily on the Federal level, a broad geographic coverage and ability to coordinate not only with each other in the local area, but nationally and internationally as well, with the DEA, FBI, and other arms of law enforcement.

CO-LOCATION

They also bring the concept, implicit in the synchronization, of a team that operates. One of the things we have been working with recently is the issue of co-location and the best way to coordinate these efforts. We are convinced that co-location of the coördinators is critical.

Some places we have co-location of agents as well—the agents who are doing all the work—not just the coordinators. It is difficult. We are not able to do it everywhere. Maximizing communication, interaction and cooperation between agencies is the key. Bringing attorneys in—U.S. Attorneys and Assistant U.S. Attorneys—into these cases early and intensely is a very important part of it.

ATTORNEY-AGENT RATIO

When you are dealing with a big, complicated, sophisticated organization, you need to be planning as you go along. There is a much higher ratio of lawyers to agents in the OCDETF program than there is throughout the rest of Federal law enforcement, approximately one to four. This is very helpful, because it allows legal guidance at the stages when you need it, as the cases are being developed.

Financial investigation is a critical part of this. The IRS and Postal Inspectors to some degree, though they are not actually part of the program, help out. The FBI and a number of other agencies play roles from time to time.

The whole money-laundering focus is very important, and focusing on the flow of money as a means of getting into these organizations.

Just to give you a sense of how broad-based the cases we are dealing with are, 80 percent of the designated OCDETF cases involve more than one Federal judicial district, and one-third of them have some significant international involvement as well.

PROGRAM ACCOMPLISHMENTS

Just briefly on the accomplishments of the program. My written remarks have a summary of what has been done in the life of the program. For fiscal year 1989, the OCDETF program overall initiated a total of 500 investigations, 1,629 indictments or informations were issued against a total of 5,484 defendants; 2,498 defendants were found guilty either entering a plea or after a trial; and, seizures totaling $544 million in assets were effected. Those seizures represent more than half of the total seizures effected under the OCDETF program since 1983—I am sorry, they represent more than half of the total seized prior to 1989. So, in one year we did better than 50 percent of what we had done in the previous seven years.

Just to close this out, the OCDETF program is one of the Attorney General's very highest priorities. It is getting intensive oversight by the Department of Justice. We believe that the consolidated budget approach is a very effective mechanism to assure accountability of the agencies to the program and to the priority that has been put forward by Congress and the Administration on looking at major drug trafficking cases.

We are stepping up our effort at management in terms of monitoring what the different agencies are doing, making sure they actually are putting all those resources in, and making sure that the overall balance of resources is correct among the agencies and that we are pursuing the right kind of cases.

We are very optimistic about the program. I think we are in full agreement with Director Bennett's comment in the first strategy last fall, that the OCDETF program really is a model for drug enforcement programs, and we hope to make it even better than it is now.

[Mr. Ayer's prepared statement and Ms. Love's biography follow:]

DEPARTMENT OF JUSTICE
ORGANIZED CRIME DRUG ENFORCEMENT

STATEMENT OF THE
DEPUTY ATTORNEY GENERAL
DONALD B. AYER
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE AND STATE, THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the subcommittee:

I am very pleased to be here today to testify before you in support of what the Administration considers to be one of the most successful Federal law enforcement programs available today --- the Organized Crime Drug Enforcement (OCDE) Task Force program. I would like to take this opportunity to express our appreciation for the support Congress has provided in the past.

Before beginning, I would like to introduce my associates.

Ms. Margaret C. Love, Associate Deputy Attorney General is responsible for tactical oversight of the OCDETF program. Frederick W. Kramer is the Director of the OCDETF Administrative Staff which serves as the secretariat and coordinating office for all eleven of the participating OCDETF agencies. Mr. Kramer has been in that position since 1984. Mr. Lyle Newton is the Deputy Director of the Administrative Staff and has been involved with the program since 1983. Both of these gentlemen have a comprehensive institutional knowledge of the OCDETF program. In addition, I have with me Mr. Gene Hausler and Mr. John Gnorski, Financial Managers for the program who have been instrumental in the development of the proposal before you today.

In FY 1989 and prior years, resources for the Organized Crime Drug Enforcement (OCDE) Task Forces were appropriated directly to the eleven participating agencies. Beginning in FY 1990, Congress appropriated Task Force resources directly to an OCDE appropriation. OCDE resources are now provided to the eleven agencies from this appropriation through a reimbursable arrangement. At the present time, each agency's reimbursement is expected to be consistent with plans presented in the Administration's request. For 1991, the Administration is requesting a total of $330,000,000, which can fund 3,962 reimbursable positions and 3,544 reimbursable workyears. This request represents a program increase of $107,295,000, which can fund 1,044 reimbursable positions and 682 reimbursable workyears, over the 1991 base. Before going into the details of our request, I would like to take a few minutes to provide you with some background regarding the OCDE Task Force program approach and to describe the nature of the program.

BACKGROUND

The OCDETF Program began in response to an increasingly serious problem. For 20 years prior to the Program's creation, Federal agencies and task forces experimented with a variety of approaches to combating drug trafficking. It became increasingly apparent that the attack on drug-related crime could not be confined by city lines, State boundaries, or international borders. Those involved in the fight against drug-related crime became aware that the "drug trafficking problem" involved a web of organized crime groups, whose top leaders were often insulated from the day-to-day activities of their organizations.

Full scale teamwork, involving many Federal agencies with unique skills, was needed to implement a comprehensive strategy for dealing with the crisis. In 1982, the OCDE Task Force program was initiated to mount a comprehensive attack against organized crime and drug traffickers. In its first seven years of operation, the OCDE Task Force program has been an effective and powerful force to combat drug trafficking.

TASK FORCE STRUCTURE

Today the OCDE Task Force program constitutes a nationwide structure of 13 regional task forces that takes advantage of the combined resources and expertise of its 11 member Federal agencies, in cooperation with State and local investigators and prosecutors, to target and destroy major narcotics trafficking and money laundering organizations. The following are the 13 Task Force regions: Florida/Caribbean; Great Lakes; Gulf Coast; Los Angeles/Nevada; Mid-Atlantic; Mountain; New England; New York/New Jersey; North Central; Northwest; South Central; Southeast; and Southwest Border.

Each region has a Task Force Advisory Committee, the region's policy group, composed of all of the region's United States Attorneys as well as senior representatives of the investigative agencies throughout the region.

The Task Force Coordination Group, composed of an Assistant United States Attorney (AUSA) and senior investigators from participating Federal, State, and local agencies, is central to the operation of each of 13 Task Forces. The Coordination Group serves all districts within a Task Force. It is by decision of this body that cases throughout the region are selected; it is in response to their judgment that investigative and prosecutorial assets are allocated among cases; and it is through their activities that interagency, inter-district, and inter-regional cooperation is obtained and coordinated.

The final level of oversight is the Executive Review Board (ERB). Unlike the Coordination Group and Advisory Committees based in each region, the ERB is located in Washington and is composed of the head of each Federal agency or his designate, and is chaired by the Deputy Attorney General. The ERB provides national oversight by articulating policy, reviewing the allocation of resources, and resolving outstanding issues that cannot be settled in the field. The Washington Agency Representatives Group (WARG), comprised of high-level section managers from each participating agency, provides problem resolution research for the Board. A small administrative staff provides policy guidance, central coordination, and administrative support. This staff is responsible for financial management, records management, and maintenance of the Case Management System. The administrative staff serves as the first-echelon point when Washington intervention or assistance is required.

PARTICIPATING FEDERAL AGENCIES

A multi-faceted attack on highly sophisticated drug cartels requires unique capabilities combined into a comprehensive and

orchestrated investigation and prosecution beyond the capacity of a single organization. Each of the Federal agencies participating in the program brings it's own special skills and methods to the effort.

For example, the Drug Enforcement Administration, the only Federal agency that has narcotics law enforcement as its sole responsibility, brings its knowledge of national and international drug distribution networks, and its close working relationships with State and local authorities, making DEA essential to every task force. Similarly, the Federal Bureau of Investigation offers its experience in the investigation of traditional organized crime, and financial crimes, as well as its proven ability to gather and analyze intelligence data and deploy and manage sophisticated physical and electronic surveillances in the OCDE Task Force Program. The Immigration and Naturalization Service's authority to parole individuals into the United States and its expertise in the investigation and deportation of illegal aliens has strengthened the ability of the task forces to prosecute and remove criminal aliens from the United States. The United States Marshal's Service, in concert with participating Federal and local law enforcement agencies provides a multiplicity of expertise and support services in a variety of fields including but not limited to Witness Security, Domestic and International Fugitive Investigations, Judicial Security, and Asset Seizure and Disposal Management, all of which have been invaluable in OCDETF cases.

Agencies outside the Department of Justice have proven just as important to the success of the OCDETF effort. The United States Coast Guard has served as maritime experts for the task forces, providing valuable intelligence and guidance on cases with maritime connections and implications. The Bureau of Alcohol, Tobacco and Firearms expertise in firearms, explosives and arson has made it a well-suited partner to other agencies participating in the war against illegal drugs. As the task forces financial experts, the Internal Revenue Service often provides the only viable means of attacking drug traffickers. Their expertise in financial investigations traces the proceeds of illicit narcotics trafficking. The United States Customs Service provides investigative expertise in attacking drug smuggling organizations and seeks to destroy drug trafficking organizations by seizing their proceeds through international money laundering investigations. The Treasury Department utilizes data collected under the Bank Secrecy Act to identify and refer money laundering cases for OCDETF investigation.

Investigative work is supported through prosecution advice provided by the United States Attorneys, and the Department's Tax and Criminal Divisions. Early attorney involvement in the development of case strategy is a major factor in the success of the program.

STATE AND LOCAL PARTICIPATION

From the program's inception, State and local law enforcement agencies have worked closely with the task forces.

Several elements of the OCDE Task Force program facilitate State and local participation. Over $3 million is being provided to State and local jurisdictions in 1990 for overtime and expenses incurred by their personnel participating in task force cases.

State and local participation is further facilitated by the deputation of State and local law enforcement officials when appropriate. Deputation provides non-Federal agencies with the capacity to extend investigations outside their normal jurisdictions, thus emphasizing the joint role that Federal, State and local officials must play in combatting the drug problem. Under this arrangement, it is possible for a local police officer from Denver to legally participate in a drug investigation in California. Similarly, cross designation of attorneys makes it possible for Federal attorneys to participate in State court prosecutions or for State attorneys to participate in a Federal prosecution.

Perhaps one of the most advantageous benefits of the OCDE Task Force program to State and local agencies is the resources they obtain through the asset forfeiture provisions made available since passage of the Comprehensive Crime Control Act of 1984. Sharing of forfeited assets, with our non-Federal partners, provides a bonus to participating State and local agencies in the form of vehicles, aircraft, boats, weapons, and cash. Since its inception in mid-1985, the Equitable Sharing Program has expanded rapidly. Through the program, the Department of Justice has distributed more than $364.8 million to

State and local agencies in property and cash. In 1989, over $174 million was shared in forfeited property and cash with State and local law enforcement agencies. In 1990, over $190 million is expected to be shared with payments rising to $200 million in 1991. Additionally, the United States Customs Service has shared $54.5 million with State and local agencies since its inception of the Customs Equitable Sharing Program. This includes $32.5 million in 1989. Customs expects to share $40.0 million in 1990 and $48.0 million in 1991. A large portion of these shared resources were obtained through the efforts of the OCDE Task Force program.

NATURE OF THE ENEMY

Today's drug trafficking organizations cannot be characterized by any one organizational or operational model. Rather, they must be seen as sharing certain characteristics which are related to the nature of their unifying purpose: the production, distribution, and sale of illicit drugs.

The large organizations, which have national or international scopes of operation, have developed sophisticated mechanisms for protecting their leaders, laundering their profits, assuring the availability of alternate supply lines, and developing protected networks of outlets for their products. Smaller, often newer, drug trafficking organizations are sometimes less sophisticated but are engaged in the same patterns of development.

Among the most violent and sophisticated criminal drug cartels operating in the United States are those with a seemingly impregnable base in Colombia. These cartels are vertically integrated organizations engaged in the production, processing, smuggling, distribution, and sale of cocaine and other dangerous drugs in the United States.

La Cosa Nostra (LCN) has streamlined its operations to adapt itself to the changing drug trafficking environment. LCN has entered into distribution and marketing arrangements with the Sicilian Mafia and with newer groups such as the Colombian cartels. On both coasts, Asian organized crime groups have become major players in the American drug trafficking scene. These groups have ties to established organizations in Asia, and their growth has been facilitated by the increase in Asian immigration into the United States. Economic and political pressures are leading many Hong Kong drug operations to funnel money and resources into the United States in an attempt to provide an alternative base to Hong Kong, in the light of that colony's uncertain future.

Overlaying the drive toward increased organizational and operational sophistication is an equally omnipresent tendency to use force and intimidation to achieve objectives.

Newer and even more violent groups operating under the rubric "Jamaican posses" have established a firm foothold in the United States and are expanding their operations. They specialize in cocaine, especially crack, the distribution of which is the focus of turf wars between Jamaican groups and between Jamaicans and other established trafficking organizations.

Outlaw motorcycle groups have evolved into nationwide distribution and retail sales organizations whose activities also include the processing and manufacture of such dangerous drugs as methamphetamine. These groups are "motorcycle gangs" in origin but have become business organizations with sophisticated internal hierarchies and networks of distribution.

California street gangs have grown to become more structured and are expanding from their historic geographic base to deal in a variety of new locations across the nation.

Smaller domestically based organizations ranging from informal urban networks, to upscale former college associates, to rural family-based organizations descended from moonshiners are bringing organized drug trafficking to segments of our society which have hitherto been relatively isolated from the drug trafficking scene.

These developments, among many diverse drug trafficking organizations, create a disturbing pattern. These organizations are broadening and deepening their penetration of U.S. society. At each level of activity there is evidence of more sophisticated organizational structures; more sophisticated use of technology, more sophisticated development of methods for protection of the leaders of the organizations; and, in many cases, more violent confrontations between competing groups.

ACCOMPLISHMENTS

The OCDETF Program strategy has been able to immobilize drug trafficking and money laundering organizations by prosecuting and incarcerating organization members or, where appropriate, extraditing or deporting them; and by divesting them of their power through forfeiture of organization and individual assets. The OCDETF Program has attacked organized drug trafficking from the top, instituting in-depth investigations leading to the prosecution and conviction of the highest level drug traffickers. The Program's eleven member agencies, acting in concert with numerous State and local agencies, have disabled major drug trafficking organizations by removing the key individuals who provided these organizations with leadership, capital, and expertise.

The OCDETF Program's synchronization of multiple investigations against common target organizations; its effective use of attorneys at the early stages of investigations; its use of financial investigations to reach otherwise invulnerable targets; and its unprecedented success in fostering collaboration among law enforcement agencies from all jurisdictions have demonstrated the efficacy of OCDETF's operational model.

In the years since its creation, OCDETF has established itself as the "flag ship" of the Federal drug enforcement effort. The National Drug Control Strategy, submitted to Congress on September 5 by President Bush, recognized the success of the OCDETF model. It reported that,

> "...OCDETF is able to direct thorough, imaginative, and wide-ranging assaults on the movements and activities of drug dealers. Through its 13 regional task forces, the OCDETF Program also provides one of the crucial links between Federal and State authorities, enhancing the exchange of information and enforcement strategies. These programs should serve as a model of interagency coordination and be a priority for future expansion in Federal drug enforcement."

Prior studies have documented that OCDETF results surpassed those of non-OCDETF narcotics investigations and prosecutions. A 1985 report, A Caseload Study of The Organized Crime Drug Enforcement Task Force Program, found that:

> "The outcomes of Task Force cases are demonstratively superior to those of other Federal cases, and other Federal drug cases. The rate of dismissal and acquittal are lower; guilty pleas and trial convictions are higher; sentences are longer; seizures and forfeitures are more substantial."

The Caseload Study further found that,

> "The high rate of convictions in Task Force trials (90.3%) is a statement of the quality of investigations and prosecutions. Similarly, the Task Force rate of acquittals is just half that found in other Federal criminal cases."

General Accounting Office (GAO) reports in 1986 and 1987 generally confirmed the validity of the OCDETF Program's claimed statistical success.

After seven years, it has become apparent that the most promising strategy for combating major illicit drug traffickers is that of the OCDETF Program. From its inception late in 1982 through the end of FY 1988, the Task Forces:

- initiated 2,352 investigations, resulting in 4,917 indictments and criminal informations, against 16,859 defendants;
- charged over 8,208 top and mid-level leaders and major suppliers;
- charged 784 persons with CCE violations and 934 individuals with RICO violations; and
- seized cash and property assets totaling $916 million.

During this period, over 10,000 individuals were found, or pled, guilty to at least one charge. More than 80 percent of those were handed prison sentences, with many imprisoned for life.

Results of task force investigations continued to be successful in 1989, when 500 investigations were initiated, 1,629 indictments involving 5,484 individuals were brought, 2,498 convictions were obtained and seizures of cash and property totaling $544 million were obtained. At this time, I would like to point out an example of a noteworthy case displaying the close cooperation among OCDETF participating agencies.

"Operation Polar Cap" demonstrates how coordinated interagency intelligence-sharing and cooperation have resulted in a great success against drug traffickers with direct links to the Colombian Medellin cartel. In Operation Polar Cap, the FBI, DEA, Customs Service, and IRS, assisted by State and local law enforcement agencies, pooled intelligence that was gathered in what were originally thought to be unrelated drug and money laundering investigations in Los Angeles, New York, Houston, Miami, and five other cities. Further investigation by this intergovernmental effort revealed that a large-scale money laundering organization was operating nationally and internationally. Two wholesale jewelry companies located in downtown Los Angeles were critical to this criminal enterprise.

As a result of the high level of cooperation among all of the agencies, 127 defendants were charged with conspiracy to aid and abet the sale and distribution of cocaine and with illegally laundering the proceeds of drug sales -- over $1 billion generated from cocaine sales. The defendants were also charged with conspiring to violate the Money Laundering Control Act and with conspiring to avoid the reporting requirements of the Bank Secrecy Act and the Internal Revenue Code, which requires banks and businesses to report to the IRS all currency transactions that are $10,000 or more. Federal agents seized bank accounts at 16 banks in Atlanta, Miami, New York, and San Francisco. Actions by the U.S. Attorney from the Northern District of Georgia led the Federal District Court in Atlanta to direct the domestic branches of the foreign banks that were named in the Atlanta indictment to freeze the drug assets in their foreign branches and to return the deposits to the United States for forfeiture. The U.S. Attorney for the Southern District of New York filed a civil lawsuit asking the court to freeze money from the first phase of the investigation and to return the money to the United States for civil forfeiture. By the time all three phases of Operation Polar Cap were completed, more than one-half ton of cocaine and over $45 million in cash, jewelry, and real estate had been seized.

MANAGEMENT IMPROVEMENTS

A management study was commissioned by the Attorney General with the support of all of the OCDETF participating agencies to identify those practices which are associated with the highest levels of Task Force success and those which are impediments to maximum accomplishment.

This study was conducted between November 1988 and April 1989. The final report was issued on November 6, 1989. The study analyzed cumulative outcome and resource data for the period FY 1983 through FY 1988. The Task Force practices examined were those that were reported and observed in December 1988 and January 1989.

The OCDETF Management Study and the many debriefings of the results of that study have had a significant positive impact on the management practices of OCDETF field offices. Many improvements in OCDETF operations and enhancements in communication processes have occurred in the year since the completion of the Management Study.

The Executive Review Board (ERB) and the Washington Agency Representatives Group (WARG) are also being revitalized to meet their responsibility for policy development, implementation, and oversight of the OCDETF program.

Further, the Administrative Staff, as the body performing the "secretariat" function for the ERB as well as day-to-day administration of the OCDETF Program, now reports directly to the Office of the Deputy Attorney General.

The results of the internal management study validate the efficacy of the OCDETF model. A recent organizational study of the Department's drug control programs conducted by the Office of National Drug Control Policy also confirmed the success of the OCDETF Program as a model of interagency coordination and cooperation.

ADMINISTRATION REQUEST

The 1991 request for the OCDE Task Force program totals 3,962 reimbursable positions, 3,544 reimbursable FTE and $330.0 million. This includes resources for drug law enforcement, prosecution, and administrative support for the 11 member agencies. A 54 percent increase in OCDETF funds for the next fiscal year will provide more investigators for undercover operations; more agents to track aliens involved in drug trafficking; additional personnel to work on the money laundering and financial crimes that go hand in hand with drug activities;

additional funding to perform conspiracy-type firearms investigations; more officers to capture narcotics fugitives, more attorneys to prosecute those caught by task force activity; and more resources to support State and local participation. Included within OCDETF's FY 1991 increase of $115 million are net mandatory adjustments totaling $7.8 million and program increases totaling $107.3 million, which will fund 1,044 reimbursable positions. The program increases provide:

(1) 744 reimbursable positions (502 agents) and $88.3 million for drug law enforcement related purposes. A significant portion of these resources will be used to fund "overburn" situations where resources appropriated for other purposes were diverted to fund critical OCDETF cases when OCDETF funding was not available;

(2) 297 reimbursable positions (151 prosecutors) and $18.9 million to keep pace with the level of agents assigned to the OCDE Task Force Program, and to maintain a 1:4 ratio of prosecutors to investigators; and,

(3) 3 reimbursable positions and $0.1 million for administrative support purposes.

Drug Law Enforcement

This activity provides resources for the investigations conducted by the 13 regional OCDE Task Forces.

A summary of the program increases by agency follows:

-- Drug Enforcement Administration (DEA): A program increase of 126 reimbursable positions (93 Agents), 50 reimbursable

FTE and $20.6 million is requested for DEA. DEA is focusing more of its efforts in its Special Enforcement Operations/Programs (SEO/Ps). SEO/Ps, together with other DEA programs, have proven their value by generating complex investigations of violators and their networks while continuing the development and exploitation of DEA's intelligence capabilities. As a result, these increases are required to support the OCDETF investigations which flow from the DEA base program. Currently, this support has been drawn from the DEA Domestic Enforcement Operations, or has not been addressed.

Also, within the overall increase, $1.8 million is requested to augment the overtime pay of State and local law enforcement officers participating in the OCDETF program. There have been more than 3,000 active reimbursement agreements between OCDE Task Forces and State, county, or local agencies. These local agencies continue to pay the salaries of their investigators who are working on Task Force cases, but are assisted in meeting the costs of overtime, travel, and per diem expenses resulting from their participation.

-- Federal Bureau of Investigation (FBI): A program increase of 274 reimbursable positions (154 Agents), 224 reimbursable FTE and $35.5 million would bring the FBI's OCDETF funded level closer to the existing utilization level, thereby insuring that the FBI would be able to continue to devote investigative resources near its current level of commitment. This increase in personnel resources will allow the FBI to approximate its present level of commitment to OCDETF at a time when the drug trafficking problem has become epidemic, touching virtually every citizen's life in some way.

The FBI's OCDETF effort addresses Colombian/South American, European/Italian, Asian, and other emerging drug trafficking organizations such as the "Bloods," "Crips," and Jamaican Posses. Agent and support resources directed at these groups utilize physical and electronic surveillances; Racketeering Enterprise Investigations (REIs); money-laundering investigations; Undercover Operations (UCOs); and asset seizures. These sophisticated investigative techniques provide the most effective means for identifying and penetrating principle drug trafficking organizations and their networks.

-- Immigration and Naturalization Service (INS): A program increase of 29 reimbursable positions (24 Agents), 14 reimbursable FTE and $2.4 million is requested for INS. This enhancement will address the burgeoning problem of criminal alien involvement in illegal drug activities by providing investigative resources to all OCDETF agencies in the identification, location, investigation and parole of aliens involved in narcotics enterprises.

-- Internal Revenue Service (IRS): A program increase of 190 reimbursable positions, 154 reimbursable FTE (139 Agents), and $18.7 million is requested to attack the money laundering and financial crimes associated with drug and contraband smuggling across the Southwest Border. In addition, the IRS will direct more resources to investigate "legitimate" business enterprises along the border. These entities, including money exchange houses, substantially support the narcotics trade through their services. They do so by conducting large amounts of cash transactions and reporting only a small portion of them on the required forms, thus enabling narcotics traffickers to launder their drug proceeds.

-- Customs Service: A program increase of 125 reimbursable positions (92 Agents), 90 reimbursable FTE and $10.3 million is requested for Customs. This enhancement will provide additional agents and support personnel to pursue joint money laundering investigative initiatives with its foreign counterparts; and will allow Customs to remain a participant in narcotics smuggling and international money laundering cases initiated by other OCDETF agencies. Currently, due to other priorities and insufficient funding, Customs field managers must decline to participate in numerous drug smuggling and money laundering investigations initiated by other agencies.

-- Bureau of Alcohol, Tobacco and Firearms (BATF): A program increase of $0.8 million is requested to implement new electronic interception authority related to firearms investigations. During FY 1991, it is expected that three (3) conspiracy-type firearms trafficking OCDETF investigations will be completed utilizing this investigative tool. These types of investigations are major undertakings and require intense effort and coordination. The use of court-ordered electronic interception has proven an effective tool against organized criminal groups. This new tool will greatly enhance BATF's ability to investigate and apprehend major career criminals who are not vulnerable to routine undercover investigations due to the insulated environment in which they conduct their operations. The authority to use electronic interception in Federal firearms investigations will also elevate the quality of such investigations and will multiply opportunities to prosecute criminal "kingpins".

Prosecutions

Litigation efforts selectively target the criminal leadership involved in drug trafficking, and are intended to dissolve organized illicit enterprises. This includes activities designed to secure the seizure and forfeiture of the assets of these enterprises.

The requested program increase for U.S. Attorneys is 297 reimbursable positions (151 Attorneys), 148 reimbursable FTE and

$18.9 million. This enhancement will respond to the escalating OCDETF workload caused by the initiation of complex long-term investigations; the expanding use of labor intensive investigative tools, such as the Title III electronic surveillance; and rapidly increasing appeals encouraged by the penalties in the Anti-Drug Abuse Act of 1988. Approval of these additional resources will enable the OCDETF program to establish a ratio of one attorney for every four agents.

Administrative Support

The Administrative Staff provides policy guidance, central coordination, and administrative support to the headquarters of the eleven member agencies and the thirteen task forces. A program increase of 3 reimbursable positions, 2 reimbursable FTE and $0.1 million is requested for this activity. The establishment of a consolidated OCDETF appropriation in FY 1990 has increased significantly the administrative oversight and analysis responsibilities associated with the monitoring, tracking, and reporting of OCDETF activities.

CLOSING COMMENTS

By targeting high-level figures and powerful drug organizations, the OCDETF Program has shown a determination to strike at the heart of illegal drug trafficking. By initiating investigations that demanded a high degree of interagency collaboration, OCDETF has drawn on the expertise of its members in a way that none of its predecessors had. By making the fullest use of all of the techniques of financial investigations, the Task Forces have worked to bring down traffickers who could have been reached in no other way.

The ongoing threat of international drug trafficking cannot be minimized. The war is by no means over and increased resources are required. Many difficult battles lie ahead. Yet, the OCDETF Program approach has produced the best results of any concerted effort to date. The evidence is persuasive that use of this model and its strategy can undermine, damage, and even destroy major drug trafficking organizations.

Finally, I would like to assure you that the Attorney General is fully behind the successful coordination of this program, and he looks forward to assisting the agency heads in effectively expending the OCDE resources to assure they are used to maximize the accomplishments of the program. I want to acknowledge the support of this Subcommittee and thank each of you for your interest. I will be pleased to answer any questions at this time.

MARGARET COLGATE LOVE

BIOGRAPHICAL SKETCH

Born in Baltimore, Maryland, in 1942. Sarah Lawrence College (B.A. 1963); University of Pennsylvania (M.A. 1969, Medieval and Early Modern European History); Yale Law School (J.D. 1977). Following graduation from law school worked for two years as an associate with the Washington law firm of Shea & Gardner in a general regulatory and litigation practice. Came to the Department of Justice in 1979 as an attorney-adviser in the Office of Legal Counsel. Made Special Counsel to the Assistant Attorney General in 1987, with principal responsibility for conflict of interest and professional ethics issues. Appointed Deputy Associate Attorney General in July 1988 and Associate deputy Attorney General in July 1989. Prior to law school served as Associate Secretary of the American Association of University Professors (1969–1974), and taught French language and European History at a private secondary school in Philadelphia (1968–1969). Completed all requirements for Ph.D. in Medieval and Early Modern European History except dissertation (1965–1969). Married to Woodley B. Osborne since 1977; daughter, Jenny, age 8.

Principal areas of responsibility in the Office of the Deputy Attorney General include the Organized Crime Drug Enforcement Task Force Program, the Organized Crime Strike Force Program, the Federal Prison System, conflict of interest and professional ethics, ABA liaison on criminal justice issues, presidential pardons and a variety of other criminal and civil litigation matters as assigned.

U.S. ATTORNEY INVOLVEMENT

Mr. SMITH. You are working with 11 agencies?

Mr. AYER. Eleven agencies within three Departments of government: Justice, Treasury, and the Department of Transportation.

Mr. SMITH. Okay, let's just take U.S. Attorneys. Explain specifically how it works.

Mr. AYER. Well, the U.S. Attorneys are an integral part and have been all the way along. There is an OCDETF coordinator, who is an Assistant U.S. Attorney, in each of the 93 districts.

Mr. SMITH. They are on the U.S. Attorney's payroll?

Mr. AYER. Yes. The Assistant U.S. Attorneys are on the payroll of the United States Attorneys. The United States Attorneys receive funding from OCDETF but they are definitely part of the U.S. Attorney's Office.

FULL-TIME DEDICATION

Mr. SMITH. So, are they full-time for OCDETF?

Mr. AYER. The coordinators are full-time for OCDETF in the core city districts, that is the 13 larger cities around the country. In other districts, some of them are full-time and some of them are not, depending on the situation.

Mr. SMITH. In some cases, they get part of their costs reimbursed then, is that correct?

Ms. LOVE. In some districts, the Assistant United States Attorneys are dedicated full-time to OCDETF cases.

Mr. SMITH. In that case, you get full reimbursement?

Ms. LOVE. Yes. In others, it is done on an FTE basis.

FTE BASIS

Mr. SMITH. Take Customs, then. How does it work with Customs?

Ms. LOVE. For the most part, the investigating agencies, DEA, FBI and Customs, devote their resources on an FTE basis. In the original OCDETF guidelines, it was thought that it would be better practice to devote agents full-time, to have people doing only OCDETF investigations.

We have studied this issue carefully. It was discussed recently by the Executive Review Board (ERB). The ERB concluded that this practice works for some agencies and for others it does not.

For an agency like DEA, for example, when they start a case, they don't know whether it will turn out to be an OCDETF case of not. They begin it with their agents, and they feel that to stop midway in the investigation when the case has been developed by the investigators, and it suddenly becomes an OCDETF case, to pull that team off and put a brand new team on, would be a bad use of resources.

Mr. **Smith**. Mr. Rogers?

REGIONAL STRUCTURE

Mr. **Rogers**. Now, you are organized into what, 13 regions?

Mr. **Ayer**. Thirteen regions, yes.

Mr. **Rogers**. But then you keep referring to these 13 cities.

Mr. **Ayer**. They are core cities—the core city of each region is a headquarters city.

Mr. **Rogers**. For your office?

Mr. **Ayer**. For the OCDETF program. There is a core city U.S. Attorney who has oversight of the regional program, and he in turn has an Assistant U.S. Attorney coordinator who, on a full-time basis, oversees it. His role is to coordinate the activities of the agencies that, in turn, have full-time coordinators.

Mr. **Rogers**. It all sounds very complicated to me.

Mr. **Ayer**. It actually works very well. We had a study done within the last year—the data was collected in December and January of 1988 and 1989. The report indicated that it is a very successful program. There were certain areas where suggested improvements were made and, frankly, within the last year, we have gone ahead and worked on those areas.

More recently, we have surveyed the country and concluded, with only a couple of exceptions, most of the problems pointed out in the report have been remedied.

So, it is a complicated structure when you first come to it, but the underlying principle is that a number of agencies are coming together to work in a cooperative way. It works very well.

MANAGEMENT STUDY

Mr. **Rogers**. That report that you mentioned, can we get a copy of it?

Mr. **Ayer**. Yes, sir, we will get that for you.

I. INTRODUCTION

A. Background

On October 14, 1982, the President announced the initiative which established the Organized Crime Drug Enforcement Task Force Program (OCDETF). Regional Task Forces were created to coordinate the activities of Justice, Transportation, and Treasury Department agencies.

The OCDETF Program strategy has been to immobilize drug trafficking and money laundering organizations by prosecuting and incarcerating organization members or, where appropriate, extraditing or deporting them; by and divesting them of their power through forfeiture of organization and individual assets. The OCDETF Program has attacked organized drug trafficking from the top, instituting in-depth investigations leading to the prosecution and conviction of the highest level drug traffickers. The Program's nine Federal agencies, acting in concert with numerous State and local agencies, have disabled major drug trafficking organizations by removing the key individuals who provided these organizations with leadership, capital, and expertise.

The OCDETF Program's synchronization of multiple investigations against common target organizations; its effective use of attorneys at the early stages of investigations; its use of financial investigations to reach otherwise invulnerable targets; and its unprecedented success in fostering collaboration among law enforcement agencies from all jurisdictions have demonstrated the efficacy of OCDETF's operational model.

In the few years since its creation, OCDETF has established itself as the "flag ship" of the Federal drug enforcement effort. The National Drug Control Strategy, submitted to Congress on September 5 by President Bush, recognizes the success of the OCDETF model. It reports that,

> "...OCDETF is able to direct thorough, imaginative, and wide-ranging assaults on the movements and activities of drug dealers. Through its 13 regional task forces, the OCDETF program also provides one of the crucial links between Federal and State authorities, enhancing the exchange of information and enforcement strategies. These programs should serve as a model of interagency coordination and be a priority for future expansion in Federal drug enforcement."

Prior studies had documented that OCDETF results surpassed those of non-OCDETF narcotics investigations and prosecutions. A 1985 report, A Caseload Study of The Organized Crime Drug Enforcement Task Force Program, found that:

> "The outcomes of Task Force cases are demonstrably superior to those of other Federal cases, and other Federal drug cases. The rate of dismissal and acquittal are lower; guilty pleas and trial convictions are higher; sentences are longer; seizures and forfeitures are more substantial."

The Caseload Study further found that,

> "The high rate of convictions in Task Force trials (90.3%) is a statement of the quality of investigations and prosecutions. Similarly, the Task Force rate of acquittals is just half that found in other Federal criminal cases."

General Accounting Office (GAO) reports in 1986 and 1987 generally confirmed the validity of the OCDETF Program's claimed statistical success.

After six years, it has become apparent that the most promising strategy for combating major illicit drug traffickers is that of the OCDETF Program. From its inception late in 1982 through the end of FY 1988, the Task Forces:

- initiated 2,352 investigations, resulting in 4,917 indictments and criminal informations, against 16,859 defendants;
- charged over 8,208 top- and mid-level leaders and major suppliers;
- charged 784 persons with CCE violations and 934 individuals with RICO violations; and
- seized cash and property assets totaling $916 million.

During this period, over 10,000 individual defendants were found, or pled, guilty to at least one charge. More than 80 percent of those were handed prison sentences, with many imprisoned for life.

OCDETF was designed to avoid many of the pitfalls of other attempts at coordination among Federal law enforcement agencies. One aspect of this design was a decentralized operational structure with each of the 13 Task Forces granted considerable latitude to develop independently. The 13 Task Forces have, in fact, taken advantage of the flexibility of the OCDETF Guidelines with a resultant 13 different Task Force models.

Although the OCDETF Program, as a whole, had produced extremely impressive outcomes, it was not possible to attribute this success to any particular programmatic model. Furthermore, the level of success within OCDETF has not been equal among all of the Task Forces. This study was commissioned by the Attorney General with the support of all of the OCDETF participating agencies to identify those practices which are associated with the highest levels of Task Force success and those which are impediments to maximum accomplishment.

B. Overview of the Study

This study was conducted between November 1988 and April 1989. The study analyzed cumulative outcome and resource data for the period FY 1983 through FY 1988. The Task Force practices examined were those that were reported and observed in December 1988 and January 1989. Thus, some of the problems found in particular Task Forces have already been remedied.

OCDETF output data was analyzed to determine which were the most successful core city districts. The differences among districts were significant. On a scale that ranged from a maximum possible composite score of 195 to a minimum of 15, the top core city district scored 165 while the low district scored only 53. The average score of the top five core city districts was 112.2. The average for the bottom five core city districts was 59.2.

Site visits to the Task Force core cities were conducted to examine the relative use of over 200 practices to see whether any of these differentially appeared in the five core cities having the best overall results in contrast to those having the lowest output rankings. This analysis revealed over 30 practices in which the "top" and "bottom" five core cities differed.

Generally, it was found that the top five districts follow more closely the letter and certainly the spirit of the Task Force Program Guidelines than do the bottom five core cities. This conformance to the Guidelines has had the intended effect of increasing coordination and cooperation in the top five core cities. This has resulted in an enhanced capacity to resolve conflicts over such issues as case selection, Title 21 jurisdiction, cross-designation, and the withholding of cases.

Although all of the core city districts report shortages of both agents and Assistant U.S. Attorneys (AUSAs), the AUSA shortage is particularly acute in the bottom five districts. In some instances the agent-to-attorney ratio is approaching two and one half times the advisable ratio for OCDETF cases. This distortion has resulted, in part, from a flaw that was built into the OCDETF system. In its desire to create no new bureaucracy, OCDETF has lacked the capacity fully to perform all of the system-wide management functions that a program of this size and complexity requires.

Another OCDETF design problem involves the regional concept with a core city district having a series of responsibilities for the other districts in the Task Force. The non-core city districts, as a group, are performing well. Yet, this is apparently not generally attributable to the contributions of the core cities. The lack of an orientation for the U.S. Attorneys, the single district focus of some of them, and the collegial relationship among them have mitigated against their assurance of compliance with the Task Force regionalized model.

Notwithstanding these several design elements which should perhaps be reconsidered, the OCDETF Program model has proven its validity. Some "find tuning," an increase in management capacity, and more stringent compliance enforcement are all that are required to maximize the effectiveness of the program and assure its continued vitality.

OCDETF ROLE

Mr. ROGERS. I am an old State's Attorney, and I know how sometimes different law enforcement agencies claim credit for the same kill, sort of like in World War II, there were a lot of aces, but not too many planes were shot down. They were shooting down the same plane. It is sometimes easy to draw statistics to favor a particular point of view. You are doing your share of drawing statistics in your statement.

As I say, I am having a little bit of difficulty deciphering your organizational structure, and what it is mechanically that you do. What are you doing that the local FBI regional office or the DEA office or the State Attorney General, or whatever, what are you doing that they are not doing already?

Mr. AYER. Number one, they, of course, are part of this program, so it isn't a matter of duplicating effort with those agencies. They are all a part of it. Each one is a participant in this; FBI, DEA, Customs, IRS, et cetera.

What we are mainly doing is targeting major organizations. There is a screening process to designating an OCDETF case which is participated in by all of the agencies involved. There is also an approval process in order to make an investigation an OCDETF case. Once it is made an OCDETF case, the objective is to target the appropriate resources, use the expertise of the appropriate agencies in order to develop that case as effectively as possible.

The point of it is that you are trying to target major organizations. You are trying to put major organizations out of business as effectively as you can. You are trying to incarcerate and punish major offenders.

Mr. ROGERS. Well, who is head of a regional office? Is that a U.S. Attorney?

Mr. AYER. The U.S. Attorney. The core city U.S. Attorney is in charge of the region.

Mr. ROGERS. So, in my region now, the Great Lakes, Kentucky is in the Great Lakes Division. That shows how relevant we are.

Mr. SMITH. You have a lot of lakes.

STATE AND LOCAL COOPERATION

Mr. ROGERS. We have some great lakes, but not the ones you are thinking about. So, let me get this straight now. The Police Department in Lexington, Kentucky, are they aware that you exist?

Mr. AYER. I would think so. There is another arm, another organization that has existed since about 1982, and that is the Law Enforcement Coordinating Committee, which the Department set up to establish a formal way of trying to make sure that law enforcement is in communication.

Many places——

Mr. ROGERS. So, the Chief of Police in Lexington has what he thinks is a piece of a tentacle to a larger organized crime type of activity, would he than know who to contact to try to track this thing down?

Mr. AYER. We would hope that he would.

Mr. ROGERS. How would he know that?

Mr. AYER. He would know that if we have been effective through the LECC, which I just described—if the law enforcement community has been effective in achieving good communication among its branches. One thing I should say is that State and local law enforcement organizations are significant players in the OCDEFT program.

Where I was the U.S. Attorney——

Mr. ROGERS. Stay with me now. The Lexington Chief of Police would know about your agency?

Mr. AYER. I would hope so.

Mr. ROGERS. Then who would he make his case to?

Mr. AYER. Number one, it is not an agency. It is a confederation, if you will, of law enforcement agencies. He would do it any one of a number of ways. He could go to a DEA agent, he could work through the U.S. Attorney, or he could work through the AUSA coordinator.

I think he could go through any law enforcement agency that had a role to play and say he thinks he has this case that might be the right kind of a case. This could then be fed into the process for designation as an OCDETF case. It would be scrutinized to see if it had the earmarks of the kind of a case to merit the intensive targeting of resources.

OCDETF CASE STANDARDS

Mr. ROGERS. What kind of criteria is that?

Mr. AYER. Number one, it has to do with the size of the organization and the nature of the trafficking that is involved. Also, the amount of drugs would be a part of it. The geographic spread would be a factor to consider. The need for this sort of an organization is greater when you have a broad geographic area to cover.

Part of the reason to make an OCDETF case would be to deal with problems even if they go outside of a city, a county, or State. Another aspect would be the complexity of the organization, as best you can tell. One question would be whether we need to conduct a money-laundering investigation which would justify bringing in Treasury people and FBI and other agenices familiar with that.

The point is to bring in the cases and investigate the cases where the intense expertise and the significant resources really will be of benefit and will, in fact, add something significant.

Mr. ROGERS. So he passes the test, then what does he get out of it?

Mr. AYER. You mean his actual agency?

Mr. ROGERS. No, what happens?

Mr. AYER. The case would become the target of that task force. It might be either in a core city or in another district not in the core city. And agencies, other than the Police Department, would get involved in investigating it along with whoever it was that originated it. The targeting of resources would essentially be tailored to the nature of the case. You wouldn't put a bunch of IRS agents on a case with no financial aspects.

STATE AND LOCAL OVERTIME

One very concrete thing that he might get would be overtime money for his own law enforcement people. There is a $5 million request in the OCDETF budget, the part that goes to DEA, for overtime money for local law enforcement people to participate in OCDETF cases. He would get a lot out of the effective handling of that case.

1991 INCREASES

Mr. ROGERS. You are requesting $330 million, which is almost double, by 11——

Mr. AYER. It is 56 percent—54 percent more, I think, in gross terms than last year's.

Mr. ROGERS. How will that be used?

Mr. AYER. First of all, we have to look at an adjustment to the base, which arises from uncontrollable costs that we are already committed to and which is about $8 million.

That brings us up to a base of $223 million. So, the increase over that base is actually only 48 percent. A 25-percent increase is necessary in order to put within the OCDETF budget resources that already are being committed by the FBI, the INS, and the IRS. They are already committing agents and oher personnel to the OCDETF program from their non-OCDETF appropriations.

The reason they are doing that is because they found that necessary in order to answer the need of the investigations that are out there. So, if you just fund these increases that are listed in our request for FBI, INS and IRS, there would be an increase of $56, almost $57 million, which would be an increase of 25 percent. That would actually not increase the resources committed to OCDETF. You would be up at about $280 million right there without increasing the number of people on the ground doing OCDETF work.

The actual increase in terms of real resources being added to the program comes in the appropriations for DEA, Customs, BATF, and U.S. Attorneys. That is where virtually all of it comes. That is a 23-percent increase, or $50.7 million.

REIMBURSEMENT PROCESS

Mr. ROGERS. For example, the DEA, you list $19 million-plus for the DEA portion of your request, right?

Mr. AYER. Right.

Mr. ROGERS. Now, what does that mean? Does that mean that you would have that amount of money that you would be able to reimburse DEA for borrowing their manpower, so to speak?

Mr. AYER. You could say that, but I wouldn't think of it in terms of borrowing. The point of the reimbursement is accountability. That was the reason why I think Congress did it. They wanted to make sure that this money didn't get sent into some other activities, but made sure it is targeted on important, intensive OCDETF drug investigations.

So, what we are setting up, and have now almost virtually completed, is a reimbursement process whereby each agency that participates submits an operating plan. This is what they plan to spend in each month. By the end of this year, we will have that all on a regional or a task force basis.

They then submit a monthly report as to what they actually did during each month. This is all taken to the OCDETF administrative staff—which is 10 people, and we are requesting three more here in Washington. Quarterly, they request the reimbursement, which is the funding of the program.

All current indications are that we are effectively reaching the reimbursements at the rate intended. You could say borrow, but really these people are committed to the OCDETF program. These resources are committed. The point of the reimbursement is to act as a management check to make sure that these resources are properly used. It looks like it is working well.

Mr. SMITH. I think that is all. We have some questions we will ask you to answer for the record.

[The following questions were submitted to be answered for the record:]

QUESTIONS SUBMITTED BY CONGRESSMAN SMITH

Organized Crime Drug Enforcement

Program Effectiveness

QUESTION: How effective has the OCDE program been in its first year of operation?

ANSWER: The Anti-Drug Abuse Act of 1988, in addition to mandating the creation of a single appropriation to reimburse agencies for their participation in the Organized Crime Drug Enforcement Task Force (OCDETF) program, provides a clear statement of what would be achieved by this change:

> "(b) Enhancement of Field Activities. - The appropriation and reimbursement procedure described under subsection (a) shall -
>
> (1) provide for the flexibility of the Task Forces which is vital to success;
>
> (2) permit Federal law enforcement resources to be shifted in response to changing patterns of organized criminal drug activities;
>
> (3) permit the Attorney General to reallocate resources among the organizational components of the Task Forces and between regions without undue delay; and
>
> (4) ensure that the Task Forces function as a unit, without the competition for resources among the participating agencies that would undermine the overall effort."

(Section 1055 (b), Public Law 100-690, The Anti-Drug Abuse Act of 1988, 102 STAT. 4191)

It is apparent from the language of this section that Congress had three purposes in mind in creating the new process: accountability, control, and flexibility.

The process has been very effective in the implementation stages. We have had the full and unrestricted cooperation of all of the participating agencies and have developed a budget request for 1991 that is based on a collective analysis of the needs of the program.

Admittedly we have some way to go before full effectiveness is achieved, because we must have the resource utilization and productivity data that will be generated as a part of the 1990 budget execution process. Here, also, all of the participating agencies as well as the field offices have been truly responsive to our requests for information which will make the OCDETF budget process as much a model for replication as is the substantive program.

Reimbursements to Participating Agencies

QUESTION: Did all agencies receive the full reimbursement requested in your 1990 budget?

ANSWER: The initial funding for the OCDE consolidated appropriation was contained in two 1990 appropriations bills -the Department of Justice bill and the Department of Transportation bill. Immediately after the enactment of these bills, reimbursable agreements with each of the 11 OCDETF participating agencies were executed. The amounts specified in each of these agreements are consistent with the levels referenced in the reports issued by this Committee and its counterpart in the Senate.

These agreements establish the maximum amount each agency can receive in return for providing the specified services. As with any reimbursable arrangement, agencies are required to document actual costs incurred and submit periodic billings.

The budget execution process we have established for the OCDETF program requires that each participating agency submit a monthly report on obligations incurred in support of the program. Billings are submitted quarterly. We have recently received billings for the first quarter of 1990, and they are being processed.

There is nothing in the agency operating plans, the first quarter billings, or the obligation data from the month of January to indicate that any of the 11 agencies will fail to earn the full amount of their reimbursable agreement. In fact, for most agencies the opposite is true--resources being dedicated to the program will exceed the amounts available through the reimbursable agreements.

Measuring Program Success

QUESTION: Can you measure the success you have had under the expanded OCDE program compared to the old program?

ANSWER: For the past five years each participating agency included the resources necessary for the OCDETF program in its own budget. Now these agencies, from the Departments of Justice, Treasury and Transportation, must seek reimbursement for their contribution to the program.

By placing all of the resources for Federal agency participation in the OCDETF program into a consolidated appropriation, accountability is achieved. Instead of gathering resource information from 11 separate agencies, we now need only look to the Attorney General for an accounting of the level of resource dedication to this program.

It is clear that accountability could not be achieved without vesting control of the resources for this program in one place. The establishment of the new appropriation account in the Department of Justice, under the direct control of the Attorney General, accomplishes this goal.

The process of reimbursements to participating agencies, and the authority to reallocate resources among agencies and Task Forces provides the Attorney General with the flexibility needed to efficiently and effectively manage the OCDETF program.

We believe that the execution process we have established for 1990 will not only satisfy the normal budgetary requirements, but will also serve as the basis for development of a resource allocation and monitoring system which will serve as an important program management tool. As the year progresses, we will gather more detailed information from each agency and will develop a system of reporting obligations by geographic area (Task Force). When fully implemented, our budget execution process will prove to be an invaluable tool for program managers. Not only will we know how much has been obligated for investigations and prosecutions, we will also know how much each participating agency has obligated for these purposes and in which Task Force locations.

Interagency cooperation and assistance were instrumental to development of what I believe was a most successful 1991 Consolidated Budget. Beginning with an Executive Review Board (ERB) meeting on April 6, 1989 which initiated the OCDETF Budget process for 1991, through final negotiations with the Office of Management and Budget and the Office of National Drug Control Policy in late December, agency heads and their representatives have been integral participants.

The enhancement of policy development and strengthening of the oversight function of the OCDETF program through a revitalization of the ERB and the Washington Agency Representatives Group (WARG) will contribute further to the interaction and participation of the agency heads in the consolidated budget process.

Plans for the 1992 budget process call for the ERB to perform a review of each member agency budget request. The implementation of a comprehensive, program-wide budget review system for 1992 will serve several purposes:

- the ERB's ability to carry out its responsibilities in connection with resource allocation decisions for Task Force operations nationwide will be strengthened;

- the high-level management review will ensure that substantive cross-organizational resource issues and concerns are addressed appropriately; and

- it will ensure that the requisite resource background information and supporting data to assist the Attorney General in providing strong central oversight of the OCDETF program is provided.

Direct Funding of OCDE Effort

QUESTION: Why should the Committee provide an additional $107 million to this program instead of providing it directly to the organizations for their regular drug program?

ANSWER: The main reason would be to comply with the mandate contained in the Anti-Drug Abuse Act of 1988. That legislation states that the Attorney General shall submit a separate appropriation request, beginning in 1990, for expenses relating to all Federal agencies participating in OCDETF. Since the language is not discretionary, we believe that the consolidated appropriation is intended to include all resources dedicated to the program.

Beyond this, however, there are several very practical reasons not to appropriate the $107 million in requested program increases directly to the organizations for their regular drug program or for OCDETF. The OCDETF program has proven itself to be the most effective means of combatting major organized crime drug organizations. The $107 million will result in the greatest return on the dollar in the OCDETF program.

At the same time, all of the advantages of the consolidated appropriation will be minimized or entirely lost if only part of the required program funding is included. To be sure, the agencies would continue to devote resources to the OCDETF effort, but accountability and coordination would fall by the wayside. Finally, the Attorney General's ability to insure the most efficient and effective utilization of OCDETF resources would be diminished.

We truly believe that in addition to being a model for interagency cooperation, as the program has been described in the National Drug Control Strategy, we are well along the way to creating a model for fiscal coordination which will be replicated in many areas.

Ratio of Prosecutors to Investigators

QUESTION: You request $19 million for additional prosecutorial resources in order to maintain a 1 to 4 ratio of prosecutors to investigators. How did you arrive at this ratio? Is it comparable to the ratio of Assistant U.S. Attorneys to investigators throughout the Federal government?

ANSWER: A few years ago, a caseload study of the OCDETF program was conducted by an outside consultant in which a detailed examination was made of eighteen of the very best and most successful OCDETF investigations/prosecutions. In this study, the consultant considered all of the factors that resulted in these very complicated cases reaching their successful conclusions. One of the most important factors was that an adequate number of attorneys were assigned to the investigations along with the investigators at a very early stage and that they all worked as a cohesive team from the very beginning. In addition, we are finding that because of the long-term sentences a very large percentage of convicted defendants are appealing their convictions, which obviously requires significant amounts of attorney time.

The well-documented result was then, and continues to be, that OCDETF quality investigations and prosecutions demand a multi-agency team approach in which the prosecutor has the time to contribute to the total process. This translated then to one prosecutor for every four Federal investigators and we have seen nothing to suggest that this finding is not still valid.

It should be noted however, that while we have striven over the past few years to maintain the 1:4 ratio for Federal personnel we have had increasing numbers of State and local officers working in the Task Forces. This personnel increase has not been factored into the ratio resulting in a ratio of investigators to prosecutors which is higher than the base of 4 to 1.

Regular, non-OCDETF prosecutions are not as attorney labor intensive and a smaller number of attorney workyears can support a larger number of investigatory field personnel. Drawing from the data provided in the Office of National Drug Control Policy's National Drug Control Strategy-Budget Summary, January 1990, we estimate the non-OCDETF ratio to be approximately 1 to 12.

Prosecutorial Resources - Impact of Denial

QUESTION: What impact would it have on your ability to prosecute if this $19 million is denied?

ANSWER: The $19 million increase requested for the United States Attorneys would provide an additional 151 prosecutors for the OCDETF program, plus the related critical support positions. These resources will enable the U.S. Attorneys to:

- maintain an aggressive posture in the war against drugs;

- enhance the Federal Government's leadership role in the investigation and prosecution of major crack cocaine organizations;

- expand investigations targeting the major suppliers, organizers, and distributors of other illicit drugs: and

- establish a ratio of one attorney for every four agents in the OCDETF program.

Denial of the entire increase for U.S. Attorneys would cause serious harm to the program. Examples of the adverse results follow:

- Investigations will be slowed, due to the unavailability of attorney time, resulting in an increasing backlog of unindicted cases;

- Investigations will proceed to indictment with less participation by attorneys, resulting in cases that are less well prepared, with less desirable outcomes; and

- Investigators will lose their ability to respond promptly and appropriately to tactical and strategic demands, as attorneys are less able to provide needed services, adding to costs and reducing the effectiveness of investigations.

Administratively Uncontrollable Overtime Costs

QUESTION: Do your estimates include amounts sufficient to reimburse agent personnel for the additional cost associated with Administratively Uncontrollable Overtime?

ANSWER: The enactment of P.L. 101-173, which changes the basis on which administratively uncontrollable overtime payments are calculated, will require an additional $7 million in the OCDETF program in 1991. It is anticipated that the participating agencies will absorb these costs largely in non-personnel areas. No reductions in agents will be required. The OCDETF appropriation will reflect a net increase of 502 reimbursable agent positions and 348 agent workyears over the 1990 level.

THURSDAY, MARCH 15, 1990.

GENERAL ADMINISTRATION/FEES AND EXPENSES OF WITNESSES

WITNESSES

HARRY H. FLICKINGER, ASSISTANT ATTORNEY GENERAL FOR ADMINISTRATION

DAVID L. MILHOLLAN, DIRECTOR, EXECUTIVE OFFICE FOR IMMIGRATION REVIEW

Summary Statement
Fiscal Year 1991

The General Administration appropriation is requesting, for 1991, a total of $101,061,000, 1,098 permanent positions, and 1,138 workyears. This request represents an increase of $4,611,000 and 30 workyears and a decrease of four permanent positions from the 1990 appropriation.

The primary mission of the General Administration appropriation is to support the Attorney General and the senior policy level officials of the Department in the development of policy objectives and the management of the Department. In addition, selective administrative support is provided to the legal divisions and other components within the Department. This appropriation also supports two organizations responsible for the administrative review and appeal of decisions relating to individuals, and the Administrative Law Judge function resulting from the passage of the Immigration Reform and Control Act. The mission of the General Administration appropriation is accomplished through the programs contained in two budget activities: (1) Program Direction and Policy Coordination and (2) Administrative Review and Appeals. The major initiatives and resource requests for these activities and programs are summarized below.

Program Direction and Policy Coordination

This budget activity includes resources for the primary missions of the Offices supported by the following programs: Department Leadership, Executive Support, Intelligence Policy and Professional Review, and the Justice Management Division and Facilities 2000. These programs consist of the following:

The Department Leadership program consists of the Offices of the Attorney General and the Deputy Attorney General. These Offices are responsible for developing appropriate policies regarding the administration of justice in the United States; effectively representing the United States in justice-related matters; and providing advice and opinions on legal matters to the President, members of the Congress and heads of Executive departments and agencies. The 1991 budget request no longer reflects the Office of the Associate Attorney General. A program decrease of $208,000 is requested in support of Administration effrots to reduce Federal spending.

The Executive Support program consists of the Offices of Policy Development, Public Affairs, Legislative Affairs and Liaison Services. Its primary missions are to study the issues central to the Department's policy agenda and to provide the thorough legal and policy analysis to undergird new Department initiatives for legal reform in a wide variety of areas; to ensure that the Department operates effectively with the Congress and the Office of Management and Budget to advance its legislative goals; to inform Department personnel, the media and the public of Department activities expeditiously and accurately; to counsel the Attorney General and other Department officials in their dealings with the media and Congress; and to coordinate and facilitate the flow of information applicable to Federal, state, county and local governments, related interest groups, special interest groups, and other private entities. A program decrease of $286,000 is requested in support of Administration efforts to reduce Federal spending.

The Intelligence Policy and Professional Review program consists of the Office of Intelligence Policy and Review and the Office of Professional Responsibility. This program is responsible for the coordination, development and implementation of Departmental policy on intelligence and national security matters. It is also responsible for strengthening the integrity of and maintaining public confidence in the Department of Justice, and in fostering among all Department employees a commitment to professional responsibility. A program decrease of $80,000 is requested in support of Administration efforts to reduce Federal spending.

The Justice Management Division (JMD) is responsible for ensuring that the management initiatives of the President, the Attorney General, and the Congress are implemented soundly and that administrative support services are delivered efficiently and effectively. Specifically, JMD provides organizations with policy guidance and/or direct support in the area of personnel, training, procurement, information processing, management, budget, facilities and security. Also included in JMD is a pilot project to retain private counsel in ten judicial districts to collect debts owed to the United States. A net program decrease of four positions, six workyears and $1,143,000 is requested. Program changes include the following: Program increases of five positions and $580,000 are needed to the support the Office of the General Counsel's Ethics and Program Fraud activities; address the Department's Equal Employment Opportunity Complaints processing workload; and support productivity improvement activities. Offsetting program decreases totaling nine positions and $1,723,000 represent reductions associated with productivity savings and Administration efforts to reduce Federal spending.

Facilities 2000 is a new activity established to implement plans for the consolidation of Department components located in the Washington metropolitan area. Current plans for Facilities Program 2000 are to consolidate nineteen components into three office buildings (including the International Cultural and Trade Center/Federal Office Building) over the next ten years. The $970,000 request in 1991 is to initiate engineering and design activities. (These resources are requested as no-year monies.)

Administrative Review and Appeals

This program includes the Office of the Pardon Attorney and the Executive Office for Immigration Review (EOIR). The Office of the Pardon Attorney is the focal point for the receipt, investigation and consideration of petitions for all forms of Executive clemency and serves as the principal liaison with the general public in clemency matters. The major staffs of the Executive Office for Immigration Review are: the Office of the Chief Immigration Judge where immigration judges hold hearings to determine the status of aliens; the Board of Immigration Appeals which hears appeals from certain decisions of the Immigration and Naturalization Service and immigration judges; and the Office of the Chief Administrative Hearing Officer which provides overall program direction and establishes priorities for the Administrative Law Judges. A program decrease of $1,328,000 is requested in support of Administration efforts to reduce Federal spending.

General Administration

Salaries and Expenses

Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses

For expenses necessary for the administration of the Department of Justice, [$100,925,000]; $101,061,000, of which $970,000 shall remain available until expended.
(8 U.S.C. 1103(A); 28 U.S.C. 501, 502, 504, 507-526, 1929; Department of Justice Appropriation Act, 1990; additional authorizing legislation to be proposed).
[For carrying out efforts at National Drug Control and the President's initiative to combat violent crime, $10,261,000 to enhance drug and criminal law enforcement efforts with special emphasis on improving drug law enforcement efforts among the various Justice Department agencies and on expedited deportation proceedings of convicted criminal agencies.]
(Department of Transporation and Related Agencies Appropriatons Act, 1990.)

Explanation of changes

The proposal will establish no-year funding for the Facilities Program 2000 within a separate program. The no-year account structure will provide the fiscal flexibility needed over the life span of the project.

Congressional Appropriations Actions. Congress approved the Department's request that 20 positions and $1.3 million not be transferred from the Office of Inspector General to the Office of Professional Responsibility at this time. Congress reduced the Justice Managment Division's program increase for Debt Collection activities and failed to provide resources requested for transfer to the Commission on Catastrophic Nuclear Accidents. Congress also approved a reduced level of program increase associated with the Executive Office for Immigration Review's Office of the Chief Administrative Hearing Officer.

1990 Sequestration. Amounts shown represent permanent reductions imposed by the Omnibus Budget Reconciliation Act of 1989.

---

[1] The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

General Administration
Salaries and Expenses
Justification of Adjustments to Base
(Dollars in thousands)

	Work-years	Amount
Mandatory increases:		
1. Annualization of 1990 new positions	36	$2,022

This provides for full annualization of 67 additional positions approved in the 1990 President's Budget, of which 50 are associated with the President's Crime Initiative. The remaining 17 positions are associated with the Private Counsel for Debt Collection initiative and the Immigration Reform and Control Act of 1986.

	Approved 1990 Increases	Annualization Required
Annual salary rate of 67 approved positions	$2,110,000	
Less lapse (40%)	-830,000	$830,000
Net compensation	1,280,000	830,000
Associated employee benefits	226,000	179,000
Non-personnel costs	3,133,000	1,013,000
Total costs subject to annualization	$4,639,000	$2,022,000

	Work-years	Amount
2. Additional compensable day	...	237

The annual salary rate for Federal employees is based on 260 paid days. 1991 has one more compensable day (261) than 1990 (260). Appropriate personnel benefits are included in this figure.

	Work-years	Amount
3. 1990 Full-year pay increase impact on 1991	...	2,303

This request provides for the full-year pay increase of 3.6 percent as contained in the general provisions of the U.S. Treasury, Postal Services and General Government Appropriations Bill, 1990, for civilian and military personnel to be effective in January of 1990. The Department will be required to absorb the total pay raise in 1990. The requested increase $2,303,000 is the amount required for full-year funding in 1991. NOTE: The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

		Work-years	Amount
4.	1991 pay increase..........	...	$882
	For the first time, the Administration is proposing to include the costs of the pay increase effective in the budget year with the initial budget request. This request provides for 50 percent of the proposed 4.0 percent pay increase effective in January of 1991. The Department will be required to absorb half of the costs of this pay raise. The amount requested, $882,000, is the cost of the pay increase for approximately three-quarters of the year assuming a 50-percent absorption.		
5.	Senior Executive Service salary increase..........	...	311
	This request represents the 1991 costs of the pay increase for Senior Executive Service Employees. This pay raise is to be effective in January of 1990, but will be absorbed completely for the first year. In 1991, an increase of $311,000 is necessary for this requirement. Funding for the executive level employees pay raise is completely absorbed in both years.		
6.	Special salary rates..........	...	69
	This request provides increases as authorized by law in 5 U.S.C. 5303. The Office of Personnel Management has approved these rates for positions where retention and recruitment of qualified applicants is a problem. The Department's request represents coverage of 33 authorized special rates.		
7.	Health benefits..........	...	396
	The Federal Employees Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1990, the actual contribution to health insurance increased 12 percent. The requested increase of $396,000 provides funds for actual increased costs from pay period 1 to pay period 2, projected for a full year.		
8.	GSA rent..........	...	388
	GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $388,000 is required to meet our commitment to GSA.		
9.	GPO printing..........	...	20
	The Government Printing Office (GPO) is currently projecting a seven-percent increase over the 1990 printing costs. An additional $20,000 will be required in 1991.		
10.	Employee data and payroll services..........	...	19
	Centralized employee data and payroll services are provided to all Departmental organizations except the		

	Work-years	Amount
record in 1990 will be raised to $199.52 per record for 1991. The change is based on anticipated uncontrollable cost increases of 6 percent for the operation of the Justice Employee Data Service. An increase of $19,000 will be required in 1991.		
11. Distributed administrative support Under the Foreign Affairs Administrative Support agreement, an annual charge is made by the Department of State (DOS) for administrative support items. The amount of this charge is determined by the DOS. The DOS advises that a 10 percent increase in foreign operation costs is anticipated. The increase of of $18,000 is based on a 1990 base availability of $93,000.	...	$18
12. National Security Emergency Preparedness (NSEP) National Security Decision Directive 201, "National Security and Emergency Preparedness (NSEP) Telecommunications Funding," directed that implementation and recurring costs for the National Level NSEP Telecommunications Program be shared on a pro rata basis. The Department's assessed share of the NSEP will increase by $172,000 in 1991.	...	172
Total, mandatory increases	...	7,317
Decreases:		
1. Federal Telecommunications System (FTS) In 1991, the General Services Administration (GSA) is to have the FTS 2000 system fully implemented. At present GSA projections indicate costs for current FTS minute usage charges will decrease from 34 cents per minute to 18 cents per minute. The requested reduction of $259,000 from a 1990 base of $531,000 reflects this decrease.	...	-259
2. Nonrecurring costs for equipment and training for 30 new positions authorized in 1990 for the President's Crime Initiative	...	-372
Total, adjustments to base	36	6,686

Long Range Goal: To develop appropriate policies regarding the administration of justice in the United States; to represent the United States effectively justice-related matters; and to provide advice and opinions of legal matters to the President, and heads of Executive departments and agencies.

Major Objectives:

- To formulate and implement major Departmental policies and programs.
- To provide overall supervision and direction to the organizational units of the Department of Justice.
- To coordinate criminal justice matters with Fedpral, state and local law enforcement and criminal justice agencies.
- To maintain and supervise the Attorney General's Honor Law Graduate and Attorney Employment programs.
- To prepare and disseminate an Annual Report to the Congress and the public regarding the current status of efforts against organized crime drug enforcement.
- To investigate, process and make recommendations to the President on all prospective candidates for judicial and Justice Department Presidential appointments.

Base Program Description: The Attorney General is responsible primarily for developing and implementing the policy objectives of the Department and for overseeing the Department's programs and resources. He is supported by staff members who coordinate various program activities to ensure consistency with current Department guidelines and policies. Staff members also serve as liaison between Department organizations and the Attorney General when matters of importance require his direct involvement. The Attorney General keeps the public informed of Department activities by appearing before a wide range of citizens' groups and professional associations. He also meets regularly with the President and members of the White House staff, other Federal agency officials, and members of the Congress on Department policy and program matters.

In supporting the policies of the Attorney General, the Deputy Attorney General provides testimony before Congressional committees on legislation affecting the Department and acts as the Department's liaison with the White House staff and the Executive Office of the President. In addition, the Deputy Attorney General exercises the power and authority invested in the Attorney General, to take final action in matters pertaining to: employment, separation and general administration of personnel in the Senior Executive Services and of attorneys. The Deputy Attorney General oversees the Attorney General's employment program for Honor Law Graduates and Judicial Law Clerks. In the Attorney General's absence, the Deputy Attorney General serves as the acting official for the Department.

The Deputy Attorney General is also responsible for assisting the Attorney General in formulating and implementing Departmental policies and programs pertaining to criminal and civil matters, providing overall guidance and direction to the Bureau of Prisons, the U.S. Marshals Service, and INTERPOL; and overseeing criminal justice, pardon, parole and community relations issues. The Deputy Attorney General also provides guidance and direction on antitrust, civil rights, foreign claims, environmental, tax and bankruptcy matters. The aforementioned responsibilities were previously carried out by the Associate Attorney General. In 1991, the Office of the Associate Attorney General function will be abolished.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease

Long Range Goal: To initiate, develop and coordinate major policy initiatives of high priority to the Department and to the Administration in the areas of civil and criminal justice; to ensure that the Department operates most effectively with the Congress and the Office of Management and Budget to advance its legislative goals; to improve coordination with State and local governments and the business community on regulatory and legislative issues of importance to the Department; and to inform Department personnel, the media and the public of Department activities expeditiously and accurately and to counsel the Attorney General and other Department officials in their dealings with the media.

Major Objectives:

- To develop a more coherent process for determining legislative policy.
- To coordinate joint Department efforts to secure enactment of legislation and other policy proposals of special interest to the Department and the Administration on selected issues.
- To coordinate policy development and encourage consistent implementation of the Freedom of Information Act responsibility within the Executive Branch, and to oversee and supervise the disposition of appeals to denials of information requested from the Department under the Freedom of Information and Privacy Acts.
- To represent the Department on the Administrative Conference of the United States, and where appropriate, to represent the Department on regulatory reform matters.
- To inform the Attorney General, Department officials, and rank and file personnel of the Department regarding statements about the Department in the daily and periodical press and the broadcasting media.
- To promote staff support for the Attorney General on matters under consideration by the Cabinet and National Security Council.
- To coordinate appropriate public policy announcements with the White House, other Federal Departments and Agencies, the media, and the public.
- To coordinate and facilitate the flow of information relating to DOJ policies applicable to Departmental intergovernmental relations.
- To maintain a steady flow of information between the Department of Justice and the following principal points of liaison: state and local government entities; Federal, State, and local judicial conferences and judicial administrative bodies; foreign law enforcement ministers and judiciaries; national and international associations and societies of the law enforcement professions; and academic institutions with substantive interests in justice fields.
- To provide public affairs services, as appropriate, for domestic and international travel, public appearances, and Departmental ceremonies for the Attorney General and other senior officials.

- To coordinate with Federal, State, and local officials on law enforcement and legal issues relating to program, regulatory, and legislative reform.

Base Program Description: Executive Support consists of the Offices of Policy Development, Public Affairs, Legislative Affairs, and Liaison Services.

The Office of Policy Development (OPD) serves as the Attorney General's principal policy development staff, and is involved in a wide range of issues central to the Department's mission. OPD performs a high-level coordination role within the Department, including the necessary legal research and policy analysis to support major Department initiatives. OPD assists the Attorney General in settling disputes among the divisions and components, as well as developing policy initiatives and options for action by the Attorney General in specific subject areas. The Office coordinates with other agencies in the development of Administration positions, and works closely with other offices and divisions in the Department in reviewing pending legislative proposals, and in providing comments on selected pending litigation.

The Office of Public Affairs (PAO) is the principal point of contact for the Department of Justice with the public and the news media. Its mission is twofold: (1) to inform the public about Department of Justice activities and developments, and (2) to provide similar information internally to Department personnel. The staff coordinates the public affairs effort of all Department organizations and maintains close liaison with their top executives as well as media representatives. The Office of Public Affairs disseminates information about the Department of Justice through the news media and by personal contact with the public. The office also prepares concise reports of sensitive issues for the Attorney General for major meetings with the news media.

The Office of Legislative Affairs (OLA) is responsibile for developing, and articulating and coordinating the Department's official policies with respect to legislation initiated inside the Department, by other parts of the Executive Branch, or by members of Congress. The Office prepares legislative reports on bills each year for submission to the Office of Management and Budget or to Congressional committees. OLA is responsible for coordinating and assisting all federal judicial nominees, U.S. Attorneys, U.S. Marshals and all Presidential nominees for Department positions that require confirmation through the Senate confirmation process. Finally, the Office analyzes enrolled bills which are sent to the Department for review prior to submission to the President for his signature or veto.

The Office of Liaison Services (OLS) is responsible for maintaining liaison and representing the Attorney General and the Department in dealings with foreign, Federal, State and local governments, and with nongovernmental organizations interested in the justice field. OLS provides these governments and organizations with a central point of communication with the Department.

Accomplishments and Workload: Accomplishments of the **Office of Policy Development** during 1989 include:

- Undertook extensive work on court reform projects, including the Judicial Improvements and Access to Justice Act. Supported enactment of the Supreme Court Mandatory Jurisdiction Act, eliminating technical requirements from the Supreme Court's jurisdiction to give the Court greater discretion in controlling its docket.

- Produced a major policy paper, *Using and Misusing Legislative History: A Re-evaluation of the Status of Legislative History in Statutory Construction*.

- Exerted substantial effort during the year to secure passage of the Anti-Drug Abuse Act. In addition, the "Truth in Criminal Justice Project" identified and analyzed features of contemporary criminal procedure that unduly hinder the search for truth. This project provided analyses of the law of federal habeas corpus review of state court judgements, adverse_inferences from a defendant's failure to testify, and criminal pretrial discovery.

During the 100th Congress, the Office of Legislative Affairs' significant accomplishments included:

- Enactment of a number of key Administration-sponsored law enforcement initiatives, many of which were ultimately incorporated into the Anti-Drug Abuse Act of 1988.

- Enactment of the Federal Employees Liability Reform and Tort Compensation Act of 1988, which provides that suits against the United States under the Federal Tort Claims Act shall be the exclusive remedy for ordinary torts committed by federal government employees acting within the scope of their employment.

- Enactment of legislation to toughen the enforcement of the Fair Housing provisions of Title VIII by the Department of Housing and Urban Development. The legislation makes it unlawful to discriminate in providing housing on the basis of race, color, religion, sex, handicap, familiar status or national origin.

- Enactment of the Major Frauds Act of 1988, which provides federal prosecutors with a significantly enhanced mechanism for rooting out and prosecuting procurement fraud against the United States government in contracts of $1 million or greater.

The Office of Legislative Affairs responded to approximately 10,000 telephone inquiries and over 10,000 letters from the Congress, as well as over 3,000 requests for comments from Congressional Committees and the Office of Management and Budget. The Office coordinated the testimony of 480 Department witnesses at 326 congressional hearings, provided supplemental materials for the record in 240 instances, and monitored an additional 146 hearings or markup sessions of importance to the Department.

In addition, the Office handled the confirmation of 152 nominations. The federal judiciary gained 87 new judges and the Department filled 65 non-judicial appointments, including 18 Washington-based Justice Department Officials, 26 United States Attorneys, and 21 United States Marshals. One of the new judges was confirmed to a seat on the Supreme Court of the United States, 17 assumed positions in the U.S. Courts of Appeals, 67 were appointed to U.S. District Courts, one joined the U.S. Claims Court, and one was admitted to the U.S. Court of International Trade.

Accomplishments of the Office of Public Affairs include:

- Coordinated trips and numerous public appearances by the Attorney General including his visit to several nations to confer on narcotics, refugee resettlement and international terrorism.
- Communicated the policy and goals in the drug enforcement and organized crime efforts administerd by the Department.
- Answered approximately 30,000 telephone and 1,000 mail requests for information.
- Provided editors of papers throughout the nation with detailed information packets on complex legal issues of bail reform, drug enforcement, civil rights, immigration, and constitutional issues.

Accomplishments of the Office of Liaison Services during 1989 include:

- Coordinated visits and exchanges with legal, law enforcement, and judicial officials from the People's Republic of China; and the Republic of China (Taiwan).

- Developed a dialogue and information sharing with legitimate biomedical researchers and others concerned about terrorism. In addition, initiated DOJ dialogue with the American Medical Association on adolescent health, drug abuse and drug trafficking, and other issues.

- Negotiations, in furtherance of the DOJ's initiative on Undetectable Firearms Legislation, with law enforcement advocacy groups and other federal agencies.

- Establishment of the National Calendar of Events of Interest to the Justice Community.

Long Range Goal: To assist the Attorney General in strengthening the integrity of and maintaining public confidence in the Department of Justice, and in fostering and further developing among all Department employees a commitment to the highest professional standards. Also, to assist the development of national security related policies and maintain confidence in the lawfulness of United States intelligence activities, consistent with the need of the United States to obtain, produce, and disseminate foreign intelligence information, and the need for effective counter-intelligence.

Major Objectives:

To provide legal advice concerning intelligence and national security matters to the Attorney General and to the executive branch of the government.

To participate in the development of legal aspects of national security and intelligence policy.

To prepare FBI and other applications for intelligence searches and surveillance and approve other counterintelligence investigative activities.

To represent intelligence agencies as legal counsel before the United States Foreign Intelligence Surveillance Court.

To participate in pre-trial litigation involving the Foreign Intelligence Surveillance Act in criminal prosecutions for espionage and international terrorism.

To maintain liaison with the Senate Select Committee on Intelligence and the House Permanent Select Committee on Intelligence to ensure they are apprised of Departmental views on national security and intelligence policy and are appropriately informed regarding operational intelligence and counterintelligence activities.

To implement the changes mandated by the Inspector General Act Amendments of 1988 which will require OPR to assume a more direct role in investigations of misconduct in the Department's components.

To improve and refine the Department-wide reporting system in which allegations of criminal or administrative misconduct against Department employees are reported, investigated and monitored.

To establish a comprehensive, efficient and effective internal inspection system throughout the Department by periodically evaluating organizations and programs involved with employee integrity.

To conduct, oversee and coordinate all internal investigations of serious allegations concerning the conduct of Department employees that may be in violation of law, Department regulations or orders, or applicable standards of conduct.

To ensure the effective operation of a program which facilitates the reporting of allegations of fraud, mismanagement and waste of funds.

Base Program Description: The Office of Intelligence Policy and Review (OIPR) participates directly in the interpretation and application of national intelligence law and national security policy as the Department's representative to the National Intelligence Council. It also participates through regular meetings and consultation with senior staff of the National Security Council in considering significant operational aspects of intelligence and counterintelligence activities and through participation in ad hoc resolution of intelligence and national security questions. OIPR reviews Federal Bureau of Investigation (FBI) and other agency requests that the Attorney General approve applications for electronic surveillance. Other intelligence and counterintelligence activities are also reviewed by OIPR. Based on the findings of legal sufficiency and compliance with applicable guidelines and directives, recommendations are made to the Attorney General to approve or disapprove these requests.

Guided by the Office of Professional Responsibility (OPR), the Attorney General issues an annual statement to all employees of the Department reminding them of their responsibility to report misconduct encountered in the course of their duties. Efforts are also taken to ensure that all employees are reminded of the "whistle-blower" protections contained in the Civil Service Reform Act and Departmental regulations. OPR conducts investigations involving attorneys or senior Department officials against whom allegations of misconduct have been made. OPR serves as direct Office liaison with internal inspection units in the Department to oversee and coordinate all internal investigations of allegations concerning the conduct of Department employees. In addition, the Office engages in a number of additional activities directed toward maintaining the high standards of professional conduct expected of Department employees. Also, the Office and its Counsel serve as a special adviser to the Attorney General and the Deputy Attorney General in regard to integrity and other matters in the Department.

Accomplishment: The principal accomplishments of the OIPR in the policy area during the past year have included participation in the new Administration's total review of covert actions world-wide. Final negotiations on revised procedures for bi-lateral treaties involving science and technology were completed with substantial assistance from OIPR which also assisted in the negotiation of one of the treaties. Also, the Office participated in efforts to enhance the Government's capabilities to protect against foreign intelligence collection in the United States, international terrorism, illegal technology transfer and international narcotics activities. The Office chairs the Department Review Committee setting policy on classification and declassification of documents. It has issued legal and policy advice to a number of departments and agencies on national security topics both in broad-range and on specific intelligence operations.

Concomitant with electronic surveillance matters, OIPR has handled a proportional increase in other operational intelligence activities which require staff and field review on behalf of the Attorney General. This includes counterintelligence investigations, undercover activities and other highly sensitive matters. Similarly, a program has been instituted to monitor FBI implementation of Domestic Security investigations under guidelines promulgated by former Attorney General William French Smith. On request of the FBI Director, review of the counterintelligence guidelines, involving significant revisions is underway.

The Office of Professional Responsibility continues to conduct or oversee an increasing number of investigations involving attorneys or senior Department officials against whom allegations of misconduct have been made. Most of these cases are highly sensitive and some involve matters of national significance. In addition, the Office's attorneys serve as direct Office liaison with internal inspection units in the Department to oversee and coordinate all internal investigations of allegations concerning the conduct of Department employees. In addition, OPR continued its program which facilitates the reporting, investigation, and resolution of allegations of fraud, mismanagement, and waste of funds.

Long-Range Goal: To ensure that the management initiatives of the President, the Attorney General and the Congress are implemented soundly and responsibly and that administrative support services are delivered efficiently and effectively. This decision unit includes the the Debt Collection Management function (which coordinates the Debt Collection Private Counsel initiative mandated by the Debt Recovery Act of 1986).

Major Objectives:

- To ensure that Department management activities are provided central direction and control.
- To serve as the principal point of contact, as appropriate, with various federal agencies, including the Office of Management and Budget (OMB), the Office of Personnel Management (OPM), the General Services Administration (GSA), the General Accounting Office (GAO), and the authorization and appropriation committees of Congress in conjunction with the Office of Legislative Affairs.
- To provide legal support and legislative advice in administrative/management areas.
- To provide for the security, safety and health of Departmental personnel, and safeguard property and information; ensure a high degree of responsiveness to the continuity of government during peacetime and wartime national emergencies.
- To ensure that all National Security Information used by all Independent Counsel is protected as mandated by Executive Order 12356 and the regulations for Sensitive Compartmented Information, to include physical and personnel security.
- To provide Department-wide direction and staff leadership for the development and implementation of Equal Employment Opportunity (EEO) policy as well as improved methods and procedures.
- To ensure the development of adequate policies and procedures on a Department-wide basis for all procurement matters, and to administer a highly visible and aggressive competition advocacy program which institutionalizes the principal goals of the Competition In Contracting Act (CICA) and related statutes.
- To ensure that personnel management responsibilities throughout the Department are carried out in accordance with the applicable laws, Executive Orders, rules, regulations and policies.

- To establish Departmental policy, standards, and directives covering motor vehicle management operations and employ state-of-art technologies and other management improvements to lower operating costs and improve control over the Department's employee transportation and parking allocation programs.

- To develop the Department's projected housing requirements for GSA and Department of Justice (DOJ) controlled space and related cost estimates, as required by GSA and OMB.

- To represent the Department in financial matters with the Department of Treasury, OMB, GAO, the Joint Financial Management Improvement Program, and other government agencies.

- To design, develop and implement standards and systems for measuring productivity in Department of Justice programs and operations.

- To implement and coordinate the provisions of the Debt Recovery Act of 1986 which requires the use of Private Counsel for Debt Collection.

- To maintain a central intake facility that centralizes control of debts sent to the Department for litigation and provide the required audit and internal controls over the debt collection process

Base Program Description: The Assistant Attorney General for Administration (AAG/A) provides direct supervision for areas of management responsibility within the Justice Management Division (JMD). These areas provide legal counsel, equal employment opportunity, security programs of the Department, and a knowledge of the legal, regulatory and policy framework governing information processing.

Information and Administrative Services activities include personnel and property management; professional systems analyses, identification/validation of Department-wide information and communications requirements, and review of Departmental data processing budget forecasts; management and oversight of all Departmental buildings and space assignments.

Budget, Procurement, and Financial Services activities include comprehensive analyses of Department budget estimates, appropriation and authorization requests; and operation and review of financial accounting systems; review and processing of procurement actions.

Debt Collection Management activities include controlling and improving the litigation required to collect delinquent debts owed to the United States, and implementation and oversight of the pilot project contract with private counsel to assist the U.S. Attorneys in the collection of debts owed to the United States in ten Judicial Districts.

Other significant activities include:

Legal and legislative advice on all administrative and management matters development, administration, and evaluation of Department regulations and procedures for processing requests under the FOIA/PA and the Ethics in Government Act.

Development and implementation of Departmental security programs and emergency preparedness policies.

Oversight of the Department's EEO program.

Formulation, implementation and review of Departmental procurement policy and oversight of the Department's procurement system.

Development of Department-wide policies, plans and procedures for management and productivity improvement.

Formulation and promulgation of Department-wide policies, standards and procedures for the management of automated information processing resources. Conduct of long-range planning for Departmental use of automated information processing and communications systems resources.

Accomplishments and Workload:

Provided extensive security services to the Iran/Contra Independent Counsel (I/CIC) Investigation. Conducted Sensitive Compartmented Information (SCI) briefings and granted approximately 95 security clearances for the I/CIC, its staff, and defense counsel; assisted in the planning and construction of a five suite, 14,000 square foot, SCI Facility. Initiated over 200 background investigations; and protected over one million pages of National Security Information (NSI).

Actively participated in over 29 Classified Information Procedures Act (CIPA) cases and five civil cases involving NSI which required designating a Court Security Officer who provided physical, personnel and document security advice to U.S. District Court Judges. Provided storage and custodial services for sensitive NSI involved in all of these cases.

Developed a centralized computer based Accident and Injury Management Information System for the Department, enabling Department components to: identify the primary causes of occupational injuries; identify claimants who are not employees of the Department; and possess better control of compensation costs.

Developed an exhaustive treatise on Basic Considerations in Investigating Computer-Related Federal Crimes to assist Federal investigators and prosecutors in dealing with this increasing area of relatively new criminal activity.

Coordinated the Department's implementation of the Computer Security Act of 1987, in response to OMB Bulletin 88-16, entitled "Guidance for Preparation and Submission of Security Plan for Federal Computer Systems containing Sensitive Information." Also, conducted the Information Resources Management Review Program as required by the Paperwork Reduction Reauthorization Act of 1986.

As of January 1990, contracts had been awarded to private counsel in nine pilot judicial districts: Detroit, Michigan; Brooklyn, New York; Houston, Texas; Miami, Florida; Los Angeles, California; District of columbia; Newark, New Jersey; Shreveport, Louisiana; and Tampa, Florida.

Installed the Automated Debt Collection System "COLLECTOR" in the U.S. Attorneys' Offices and private law firms in Detroit, Brooklyn, Hourton, Miami, and Los Angeles.

In conjunction with "COLLECTOR," operated a Central Intake Facility (CIF) to receive and screen referrals of debts from Federal agencies and send final demand letters before cases are forwarded for litigation. The CIF also serves as a clearinghouse for information about debt collection activities conducted by the Department pursuant to its responsibilities under the Federal Debt Recovery Act.

Evaluated bids from private counsel in the tenth pilot judicial district (San Francisco, California) for award during 1990.

- Developed an audio/visual library of tapes and cassettes concerning a variety of subjects relevant to Employee Assistance Program, (e.g. women and stress, substance abuse, Employee Assistance Program as a Management Resource).

- Prepared the Attorney General's annual competition advocacy report to each House of Congress, as required by CICA.

- Established Department policy and guidance on Acquired Immune Deficiency Syndrome (AIDS) in the Workplace and implemented a Department-wide AIDS education and training program, including employee briefings and training for supervisors and managers on their role in managing employees who are Human Immunodeficiency Virus-infected.

- Prepared numerous and varied assessments of Anti-drug legislation proposed by Congress. Also, prepared special reports on the following topics: Detention/Incarceration costs; AIDS in the Federal Prison System; DNA Fingerprint Identification; Cuban Migration to the United States; and the United States Refugee Program.

- Completed an automated tracking system for existing contracts that allows the expiration dates of contracts to be closely monitored. This provides a safeguard against lapsed contracts and permits us to negotiate and award replacement contracts within realistic time frames.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Justice Management Division.........	422	477	$46,678	418	441	$45,535	-4	-6	-$1,143

An increase of five positions, three workyears and $580,000 are requested for the Justice Management Division. The increase will assist the Justice Management Division (JMD) in accomplishing its requirements in this critical area of responsibility. Specifically, resources are requested to support the following initiatives:

- Three positions, two workyears and $139,000 are requested to support the Office of General Counsel's Ethics and Program Fraud functions;

- Two positions, one workyear and $291,000 are requested to address workload requirements associated with the review of the Department's Equal Employment Opportunity (EEO) complaints;

- Contractual resources of $150,000 are requested to support the Management and Planning Staff's development of a productivity improvement training and awareness program for Department managers.

Program decreases of nine positions and workyears and $1,723,000 are also requested. A reduction of four positions and $129,000 is associated with savings resulting from greater use of private contractors for services. In addition, a further program reduction of five positions and $1,396,000 is requested in support of Administration efforts to reduce spending.

Facilities Program 2000
Salaries and Expenses, General Administration
Justification of Program and Performance
Activity Resource Summary
(Dollars in Thousand)

Long Range Goal: To consolidate the major Washington area components of the Department into three new buildings: the new International Cultural and Trade Center/Federal Office Building (ICTC/FOB) to be located in the Federal Triangle; a portion of the Ariel Rios Building (ARB) on Pennsylvania Avenue; a newly acquired leased building within 6 blocks of the MAIN Justice Building (MAIN); and to renovate MAIN and the Home Owners Loan Corporation building (HOLC) to provide adequate heating, air conditioning, ventilation, electrical power, and emergency electrical service.

Major Objectives:

- Consolidate approximately 19 Departmental components within the ICTC/FOB, the ARB, and a newly leased facility.
- Replace inadequate utility systems in MAIN and HOLC while ensuring uninterrupted use of the buildings, and continuous operations of vital Departmental functions.
- Provide the engineering and technical services necessary to insure proper design of the ICTC/FOB, ARB reconfiguration, and the new leased facility.
- Provide for the special construction necessary to the Department's occupancy of each of the five major new facilities and renovations, such a computer rooms, structurally altered space, and libraries.
- Provide for the systems furnishings, telecommunications, and security necessary for the new facilities, HOLC and MAIN renovations.

Base Program Description: This project consists of five elements: the buildout of space in the ICTC/FOB, ARB, a major newly leased facility; and renovations of MAIN and HOLC. The elements are inseparable because of the necessity to maintain operations throughout the construction. It also will minimize costs through the use of space vacated by some Department functions as temporary "swing" space during the renovations of MAIN and HOLC. The Department of Justice is currently housed in over 30 locations in the Washington area. The construction and occupancy of the three new buildings provides an opportunity to dramatically reduce this fragmentation by consolidating and releasing 17 of these locations and thereby increase operational integrity and productivity. Department components from most of these locations will partially or fully consolidate in these new buildings. Savings, directly accrued by the Department though not quantified, will result from reduced lease costs due to more efficient design and improved utilization of space, improved working conditions, lower operational and administrative costs, and increased productivity due to allocation of elements.

The construction of the ICTC/FOB will be under the overall guidance of the Pennsylvania Avenue Development Corporation and the General Services Administration (GSA). The projected occupancy date of the building is September 1996. The ARB is a Government-owned building and its reconfiguration for the Department's needs will be under the overall control of GSA. The projected occupancy of the ARB is June 1996. The new leased facility will be constructed under the guidance of GSA. Its projected occupancy is October 1993. The Department's responsibilities for all three of these facilities include the provision of a design requirements program; computer network, security, and the telecommunications design and installation; move and occupancy planning, and systems furniture planning and acquisition.

The renovations of MAIN and HOLC are in response to the following needs: improvement of the environmental conditions; provision of additional cooling capacity for increasing computer electronic loads; removal of asbestos hazards; provision of concealed wireways for telecommunications and computer network systems; and replacement and upgrading of the electrical power distrubution systems and office lighting.

Among the specific elements of the MAIN renovation that will be accomplished are the installation of a cooling tower, replacing the building's reliance for cooling water from the Tidal Basin; replacement of the building's boiler and chillers; replacement of the heating/cooling units in all of the offices; repair of all windows to operating condition; and replacement of power distribution panels in electric closets.

The MAIN renovation is currently estimated to cost approximately $84 million. These costs have been identified to GSA and are incorporated in a prospectus study being submitted for Congressional approval and funding. The present schedule calls for construction to begin in mid 1993 and be complete in 1999. Move-in would be complete in 1999. During the construction, approximately one half of the occupants of MAIN would be relocated. The planning for the ICTC/FOB, ARB, and the new leased facility take into aeccount this temporary relocation.

The total estimated cost (including base building construction and the MAIN and HOLC renovation construction costs) for all elements of this program (ICTC/FOB, ARB, the new leased facility, and MAIN and HOLC renovations) is $330 million to $375 million. This is the total cost to the government. The estimate of the Department's share of these costs, over a ten year period, is $70 million. This amount is subject to negotiations with the GSA.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Facilities Program 2000	...	...	...	...	...	$970	...	...	$970

A total increase of $970,000 in "no-year funds" is requested for the Facilities Program 2000 to provide resources to begin space requirements reprogramming, prospectus development, and design intent documentation for the project.

On June 24, 1989, the Attorney General identified the major facility acquisition requirements for the Department of Justice to the Administrator of General Services. These are the five key elements of the Facilities Program 2000: 350,000 s.f. in the ICTC/FOB, 280,000 s.f. in the ARB, 300,000 to 400,000 s.f. in a new leased facility, and the renovations of MAIN and HOLC. The Administrator accepted these requirements on July 28, 1989. The schedules for each of these major elements requires beginning the Department's planning and contractual obligations in the first quarter of FY 1990.

The requested funding would be used to develop the Department's "Requirements Program" which identify offices to be relocated, their personnel and equipment needs, and any special functional requirements. Additionally, the funding would provide the contract architectural and engineering support needed to begin the "Concept Design" showing office layouts, equipment location, furniture placement, and finishes. This will be needed by the lessors in order to begin the construction drawings. Preliminary engineering for the specialized security systems will also be accomplished. These engineering activities are crucial to the design/construction process and must be accomplished without delay if the Department is to sustain its commitments to GSA.

Long Range Goal: To provide a uniform interpretation and application of immigration law, and to provide the President with the necessary advice to enable the informed exercise of his pardoning authority.

Major Objectives:

To expedite all immigration cases, for which EOIR is responsible, including those received pursuant to the provisions of the Immigration Reform and Control Act (IRCA) of 1986, while ensuring fair treatment for all parties involved.

To evaluate, manage and expedite the processing of the steadily increasing caseload receipts and reduce the existing backlog.

To expand the body of immigration case law.

To establish and manage the Administrative Law Judge program for the Department of Justice as required by the provisions of Sections 101 and 102 of the Immigration Reform and Control Act of 1986 (P.L. 99-603).

To increase productivity by streamlining procedures and implementing management improvements.

To receive, process and investigate all Executive clemency applications.

To prepare the Deputy Attorney General's recommendations of clemency to the President.

Base Program Description: The **Executive Office for Immigration Review** (EOIR) is comprised of five major entities: the Board of Immigration Appeals, the Office of the Chief Immigration Judge, the Office of the Chief Administrative Hearing Officer, the Office of Management and Administration, and the Office of the Director. The following provides more detailed information on the responsibilities of these entities:

Base Program Description. The Executive Office for Immigration Review (EOIR) is comprised of five major entities: the Board of Immigration Appeals, the Office of the Chief Immigration Judge, the Office of the Chief Administrative Hearing Officer, the Office of Management and Administration, and the Office of the Director. The following provides more detailed information on the responsibilities of these entities:

Board of Immigration Appeals (BIA). Under the direction of the Chairman, the Board hears appeals from decisions of Immigration Judges and certain decisions of INS officers in a wide variety of proceedings in which the Government of the United States is one party and the other party is either an alien, or a citizen or a business firm. The Board is directed to exercise its independent judgment in hearing appeals for the Attorney General and provides a nationally uniform application of the immigration laws, both in terms of the interpretation of the law and the exercise of the significant discretion vested in the Attorney General. The Board also renders decisions on applications by organizations that have requested permission to practice before the Board, the immigration judges, and INS renders decisions on individual applications by employees of such organizations.

Office of the Chief Immigration Judge (OCIJ). Under the general direction of the Director of EOIR, it is the responsibility of the Chief Immigration Judge to provide overall program direction, articulate policy and establish priorities for the immigration judges located in 21 field offices throughout the United States. Generally, immigration judges hold hearings to determine the status of an alien. Exclusion hearings are held when aliens are believed by the examining inspector at the port of entry to be inadmissable to the United States. The immigration judge's order may admit or exclude an alien, or permit withdrawal of the application for admission. Deportation hearings are held in cases where an alien's status is challenged after entry into the United States.

Office of the Chief Administrative Hearing Officer (OCAHO). Under the general direction of the Director of EOIR, it is the responsibility of the Chief Administrative Hearing Officer to provide overall program direction, articulate policies and procedures, and establish priorities for the Administrative Law Judges (ALJs) appointed pursuant to 5 U.S.C 3015 to adjudicate cases arising under Sections 101 and 102 of the IRCA.
Management and Administration (Office of the Director). EOIR is headed by a Director who is responsible for the general supervision of the Board of Immigration Appeals, the Office of the Chief Immigration Judge, and the Office of the Chief Administrative Hearing Officer in the execution of their duties. The Director exercises the authority delegated by the Attorney General and represents the position and policies of the Executive Office for Immigration Review to the Attorney General, the Deputy Attorney General, members of Congress and other governmental bodies, the press, the bar and private groups interested in immigration matters. The Office of Management and Administration, provides support to the D.rector and all operating components of EOIR in the areas of procurement, facilities, personnel, space management, budget, evaluation, automated systems and other administrative matters. The direction, supervision and final actions in these matters rests with the Director.

The President exercises the pardon power, conferred on him by Article II, Section 2, Clause 1 of the Constitution, upon formal application and the recommendation of the Deputy Attorney General, who has been delegated this function by the Attorney General. The Office of the Pardon Attorney (OPA) assists the Deputy Attorney General in providing whatever information is deemed necessary and desirable to make a fair and informed decision in each case. OPA is the focal point for the receipt, investigation and consideration of petitions for all forms of Executive clemency and serves as the principal liaison with the general public in clemency matters.

Accomplishments and Workload.

In 1989 the Executive Office for Immigration Review EOIR received over 168,000 appeals, motions, hearings, and related matters and completed over 144,000. EOIR experienced record high workload receipts in all three of its adjudicating components.

In addition to Board of Immigration Appeals (BIA's) case completions of approximately 8,500 in 1989, the Board published 63 precedent-setting decisions dealing with issues of first impression and resolving unsettled areas of law. These decisions include significant interpretations of statutory provisions enacted in the Refugee Act of 1980 and the Immigration Reform and Control Act of 1986 (IRCA). In response to IRCA, the Board has instituted innovative procedures for screening cases which involve aliens who appear to be eligible for relief under the legalization provisions of the law. These procedures have cleared several thousand cases, with concurrence from all parties involved, from the appeals docket. Another innovation, instituted in 1988 and continued to the present, involves the appointment of immigration judges, on a rotational basis, to serve as Board Members, thereby allowing the consideration of appeals using multiple panels. This program has resulted in the more efficient and effective use of EOIR personnel in the adjudication of appeals.

The Board is responsible for recognizing and accrediting religious and other charitable organizations to provide representation at little or no cost to individuals in their dealings with INS and EOIR. During 1989, 15 new organizations were recognized, 133 representatives were accredited, and 12 applications for recognition were denied.

Appeal receipts (11,082) and completions (8,560) for 1989 reflect the highest workload demand and productivity in Board history.

Beginning in 1986 and continuing to the present, virtually all pending immigration judge cases have been placed on active court calendars. This is also true of all new cases received to date in 1989. The length of time from the initial receipt of cases to their hearing on the merits has been reduced from one to two years in certain instances to a five-month average. These caseload management and productivity accomplishments enhanced the ability of immigration judges to cope with the significant increases in caseload experienced in 1989 and anticipated in 1990 and beyond. Actual workload data reported in 1989 (157,164 matter received) indicates an increase in case receipts of over fifty percent over 1988 levels, resulting in the highest level of case receipts in EOIR history. During 1989, EOIR's Criminal Alien Program, operating within the Office of the Chief Immigration Judge, expanded activities to include establishment of programs with correctional authorities in all 50 states, Puerto Rici, the District of Columbia, selected municipalities and Bureau of Prisons facilities to coordinate the hearing of criminal alien cases. During 1989, 1,450 criminal alien cases were filed with EOIR involving 40 of the programs coordinated by the Office of the Chief Immigration Judge. Cases were adjudicated or pending in 63 hearing locations. Further, in 1989, 38 immigration judges participated in the Criminal Alien Program, completing over 1,000 criminal alien cases. The program also involved liaison with various bar and legal associations to coordinate pro bono programs in conjunction with hearings in penal institutions.

EOIR's Criminal Alien Program has become an integral part of the President's overall program to combat violent crime. As such, EOIR received 30 positions, 25 workyears and $1,600,000 in 1990 to assist in the expedited deportation of convicted criminal aliens. Increased resources provided to various Federal enforcement agencies, including the INS and Bureau of Prisons, have and will continue to result in the increased identification, conviction and incarceration of criminal aliens. EOIR will use the resources provided in 1990 through the President's Anti-Violent Crime Initiative to expand established criminal alien programs nationwide, process increasing criminal alien litigation costs, i.e., immigration judge travel to correctional facilities.

Accomplishments to date for the Office of the Chief Administrative Hearing Officer (OCAHO) include: the publication in the Federal Register, of Rules of Practice and Procedures for Administrative Hearings before Administative Law Judges (ALJ); establishment and staffing of 25 positions, include three full-time permanent ALJ positions; establishment and staffing of a field office in San Diego, CA; the training and designating of 35 ALJs to meet the statutory requirement of 8 U.S.C 1324b(e)(2) -- only ALJs who are specifically designated by the Attorney General as having received special training vis a vis employment discrimination may preside over Section 102 cases; and completion of a requirements analysis to determine staffing, equipment and space needs for 1991. In addition, EOIR currently utilizes 15 ALJs on loan from other Federal agencies through the Office of Personnel Management's ALJ loan program. During 1989, OCAHO received 626 complaints and ALJ's rendered decisions in 467 cases, some involving fully litigated hearings. In addition to complaints being filed with OCAHO, approximately 150 matters have been received to date. These matters include: the issuing of investigatory subpoenas, requests for the initiation of Federal court enforcement of investigatory subpoenas, and, the adjudication of motions filed in response to subpoenas.

With responsibility for organizational automation needs, the Office of the Director completed in June 1988, implementation of the Automated Nationwide System for Immigration Review (ANSIR) begun in 1985. ANSIR meets all of the information needs of the organization including case management, office automation and access to JURIS, the legal research data base. Automation of the Immigration Judge field offices located throughout the country was the first priority, due to the overwhelming volume of work generated in these offices. Recently, the system was expanded to include all segments of the organization. The second and final phase of software development for the Board of Immigration Appeals was successfully implemented in March 1989, thus completing development of the fully integrated system.

Also in March 1989, EOIR awarded a new transcription contract through the competitive process. A substantial reduction in price from the previous contract was negotiated, thereby allowing EOIR to significantly reduce the transcription backlog without requiring an increase in funding.

The following chart includes the combined workload of the Board of Immigration Appeals, Immigration Judges and Administrative Law Judges.

Appeals, motions, hearings and petitions	1989 Actual	1990 Estimate	1991 Estimate
Pending, beginning of year	28,888	53,264	75,264
Received	168,852	182,000	182,000
Completed	144,476	160,000	170,000
Pending, end of year	53,264	75,264	87,264

The Office of the Pardon Attorney (OPA) processes a very large caseload and a sizable correspondence workload with a relatively small staff of attorneys and administrative support personnel. During 1989, 373 new petitions were received, making a total of 1,046 petitions available for consideration. At the close of 1989, there were 612 petitions for various forms of Executive clemency pending -- 61 cases fewer than at the close of the 1988 fiscal year. In 1989 OPA processed 41 grants of pardon, an increase over FY 1988. In 1989, OPA also handled 392 petitions which, after careful consideration, necessitated denial or no further action. In 1988, OPA mailed out 12,967 items of correspondence, reports and memoranda, including 224 formal responses, referrals or reports made in connection with the Freedom of Information and Privacy Acts (FOI/PA). A significant amount of the correspondence was in response to inquiries from Members of Congress (269) and correspondence to the President and Vice President (2,281). The relatively small number of pardon and commutation grants in recent years has been largely the result of the increasingly exacting approach which has been taken in determining the worthiness of applicants. This has entailed more careful screening of applicants and more thorough background investigations, as well as the application of stricter standards for granting clemency.

	1988 Actual	1989 Estimate	1990 Estimate
Cases:			
Grants of pardon	38	45	55
Grants of commutition	0	1	2
Denials & no actions	497	365	375

Summary Statement

Fees and Expenses of Witnesses

For 1991, the Department is requesting a total of $70,628,000 for the Fees and Expenses of Witnesses appropriation. The request includes program enhancements of $10,891,000 for expert witnesses; $3,310,000 for protection of witnesses; and $400,000 for private counsel.

The Fees and Expenses of Witnesses activity provides for all fees and expenses associated with the provision of testimony on behalf of the Government. Specifically, there are two types of witnesses that are compensated under this activity. Fact witnesses testify as to events or facts about which they have personal knowledge. These witnesses are paid a statutorily established rate of $30 per day plus reasonable amounts for travel and certain other costs associated with their appearance. Expert witnesses provide technical or scientific testimony and are compensated based on negotiations with the government attorney who is responsible for the case. This activity also pays the fees of physicians and psychiatrists who examine accused persons upon order of the court to determine their mental competency. Additional funding of $10,891,000 is needed in this program area to meet the spiralling costs associated with retaining expert witness services and to address the extraordinary demand for expert witnesses required in litigation generated by the Exxon-Valdez accident. It is important to note here that demand for such services is directly related to the litigation workload of the various users of expert witness funds.

The Protection of Witnesses activity provides for the security of Government witnesses or potential Government witnesses and their families when their testimony concerning organized criminal activity may jeopardize their personal security. This program provides for their: subsistence expenses, housing, medical and dental expenses, travel, documentation expenses, identity changes, one-time relocation, costs for obtaining employment, and other miscellaneous expenses. A program enhancement of $3,310,000 is sought for this program area primarily to address proposed changes in the housing, relocation and subsistence rate schedule and to pay construction and maintenance costs of additional safesites.

The Victim Compensation Fund was established by Section 1208 of the Comprehensive Crime Control Act (Title II of P.L. 98-473). The Fund is used by the Attorney General to "pay restitution to, or in the case of death, compensation for the death of any victim of a crime that causes or threatens death or serious bodily injury and that is committed by any person during a period in which that person is provided protection under this chapter." In the case of death, an amount not to exceed [illegible],000 may be paid to the victim's estate. Moreover, the act authorizes payment of an amount not to exceed $25,000 to the estate of any individual whose death was caused by a protected witness before the enactment of this law. No additional resources are sought for this program.

The Private Counsel activity is provided for under 28 C.F.R. 50.15 and 50.16, whereby, the Civil Division is authorized to retain private counsel to represent Government officers and employees who are sued for actions taken while performing their official duties. Furthermore, payments for these services shall be made from Department of Justice appropriations. To defray the increased costs associated with retaining private counsel, the Department requests a modest program increase of $400,000.

Fees and Expenses of Witnesses

Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Fees and Expenses of Witnesses

For expenses, mileage, compensation, and per diems of witnesses, for private counsel
expenses, and for per diems in lieu of subsistence, as authorized by law, including
advances [: $56,784,000], to remain available until expended, of which not to exceed $70,628,000
[$1,693,000] may be available for planning, construction, renovation, maintenance, $2,000,000
remodeling and repair of buildings and the purchase of equipment incident thereto for
protected witness safesites [: Provided, That for fiscal year 1990 and hereafter the
Attorney General may enter into reimbursable agreements with other Federal Government
agencies or components within the Department of Justice to pay expenses of private
counsel to defend Federal Government employees for actions while performing their
official duties: Provided further, That for fiscal year 1990 and hereafter the
Attorney General, upon notification to the Committees on Appropriations of the House
of Representatives and the Senate in compliance with provisions set forth in section
606 of this Act, may authorize litigating components to reimburse this account for
expert witness expenses when it appears current allocations will be exhausted for
cases scheduled for trial in the current fiscal year].

(5 U.S.C. 503(b), 5537, 5751; 18 U.S.C. 3495-96, 3525, 4203, 4241, 4242;
28 U.S.C. 524, 1783, 1821, 1825, 1915, 1922; Department of Justice
Appropriations Act, 1990; additional authorizing legislation to be proposed.)

Explanation of Changes

The proposed change deletes language enacted for "1990 and hereafter" in the Department's 1990 appropriations act. Therefore, it is no longer necessary to restate these provisions.

Fees and Expenses of Witnesses

Crosswalk of 1990 Changes

(In thousands of dollars)

Activity/Program	1990 Pres. Budget [1]	1990 Program Sequestration	1990 Reprogrammings	1990 Appropriation Enacted
1. Fees and Expenses of Witnesses	$39,074	($521)	---	$38,553
2. Protection of Witnesses	15,120	(202)	---	14,918
3. Victim Compensation Fund	590	(8)	---	582
4. Private Counsel	2,000	(26)	---	1,974
	56,784	(757)	---	56,027

Sequestration

This adjustment is made in compliance with the Omnibus Budget Reconciliation Act of 1989, which requires a reduction of approximately 1.3 percent. This reduction limits the Department's ability to hire fact and expert witnesses; to provide housing and subsistence for protected witnesses; and to retain private counsel to represent Government employees.

---

[1] This column reflects the amounts contained in the 1990 President's Budget adjusted to correct a typographical error. The bottom line is not changed.

Legal Activities

[1] These amounts do not tie to amounts reflected in the 1991 galleys because of the redistribution of funding restored as provided by the reconciliation of the 1990 sequestration. The amounts presented here reflect the accurate distribution of funds enacted and requested for this appropriation.

[2] These amounts also do not tie to amounts presented in the 1991 galleys. They have been revised to accurately bridge from the 1991 base amounts.

LEGAL ACTIVITIES

JUSTIFICATION FOR PROGRAM AND PERFORMANCE

Activity Resource Summary
(In thousands of dollars)

	1990 Enacted	1991 Base	1991 Estimate	Increase/Decrease
Fees and Expenses of Witnesses....	$38,553	$38,553	$49,444	$10,891

Long-Range Goal. To provide funding for payment of fees and related expenses incurred by those individuals who provide factual, technical or scientific testimony on behalf of the United States or court designated indigents, as provided by law. Funds provided for this activity also guarantee the right of accused persons to a fair and impartial trial by ensuring that the accused is mentally competent to stand trial and that the court has testimony regarding the mental competency of the accused at the time of the offense.

Major Objectives.

To provide an adequate number of expert witnesses for the United States when legal proceedings require testimony of a scientific or technical nature.

To provide reasonable compensation for expert witnesses at rates established by the Attorney General or the Assistant Attorney General for Administration, pursuant to 28 U.S.C. 524.

To provide adequate resources to compensate fact witnesses who testify on behalf of the government for the expenses associated with the attendance at legal proceedings. The court-attendance fee paid to fact witnesses is set by law (28 U.S.C. 1821). As a result of Public Law 96-346 (September 10, 1980), the amounts authorized for travel, per diem and mileage are set by regulations governing official travel by federal employees and promulgated by the Administrator of the General Services Administration.

To provide adequate resources to compensate fact witnesses used by those defendants designated as indigent by the courts. Expenses are paid to those witnesses who appear in criminal proceedings in federal court for the indigent defendants.

To provide for the fees and expenses of physicians or psychiatrists who perform court-ordered examinations to determine the mental competency of an accused person, pursuant to 18 U.S.C. 4241 and 4242.

Base Program Description. This program provides for payment of fees and expenses of expert witnesses who appear on behalf of the government when scientific or technical expertise is required in the prosecution or defense of a case. The pursuit of complex litigation by the

Department would not be possible without qualified experts to testify and to refute the non-legal particulars of individual cases. The testimony of expert witnesses is essential to the successful outcome of such litigation. While a wide array of specialized disciplines are involved in the Department's litigation, experts from certain disciplines are used extensively. For example, approximately sixty percent of expert witnesses used by the Department in 1987 were either physicians, psychiatrists, appraisers, engineers, or economists. Also, the testimony of fact witnesses is used in court proceedings by the Department's legal divisions and the U.S. Attorneys. Fact witnesses are needed in a wide range of court proceedings, as well as pre-trial conferences. Fees and expenses paid to witnesses are intended to defray the costs of appearing to testify and are set by law and/or regulation. Further, the importance of this program is underlined by the need to protect the rights of accused individuals. Courts often order the government to pay the costs associated with mental competency examinations conducted by physicians or psychiatrists. These examinations are performed in an attempt to determine whether an accused person is mentally competent to stand trial and/or was mentally competent at the time of the offense.

Accomplishments. Funding allocated for this activity has been sufficient to allow the Department to handle the continuing growth in expert witness requirements. These resources have also provided adequate protection of the rights of accused individuals through performance of mental competency examinations. The following table illustrates the growth in requirements for these services.

	1988	1989	1990	1991
Total expert witnesses used	3,073	3,000	3,500	4,000
Average fee per expert witness	$7,515	$8,570	$9,000	$11,375
Total expert witness obligations	$23,116,361	$25,710,000	$31,500,000	$45,500,000
Total number of psychiatric examinations	143	145	150	150
Average cost per psychiatric examination	$3,512	$4,500	$4,550	$4,550

Workload. The following table illustrates the pattern of growth in the types of cases that generally require expert witness services:

	1988	1989	1990	1991
Cases pending, beginning of year	234,027	229,891	230,589	229,711
Cases received	152,758	164,950	172,087	182,026
Cases closed	156,894	164,252	172,965	184,310
Cases pending, end of year	229,891	230,589	229,711	227,427

Program Changes:	1991 Base	1991 Estimate	Increase/Decrease
Fees and Expenses of Witnesses.............	$38,553	$49,444	$10,891

The requested program increase will allow the Department to handle an expected increase in the number of expert witnesses as well as the increased cost of expert witness testimony. Although several users of expert witnesses funding indicate slight increases in the projected number of witnesses to be used, the primary reason for the increase in expert witness expenses appears to be the high costs associated with sophisticated techniques for testimony preparation in complex cases. Along with the higher cost of technical services, expert witnesses are also demanding a higher rate of personal compensation for the time they spend on the preparation and presentation of testimony.

One of the most egregious examples of the rising costs of expert witness services can be cited in the medical profession. In recent years, the cost of medical services and the rate of compensation for physicians has continued to increase more rapidly than the general rate of inflation. For example, the average fee paid to medical experts in 1985 was $1,100. The average fee for 1989 increased almost four times to $4,200. Although medical experts are not the most requested category of witnesses, this example is cited as proof of the significant growth in expenses across all witness categories. The upward trend is expected to continue through 1991.

The gradual increase in expert witness costs is better represented through an analysis of actual witness expenses. In 1985, only 10 percent of all witness expenses exceeded $10,000. In 1988, approximately 14 percent of all witness expenses exceeded $10,000. In 1989, almost 19 percent of all witnesses requested fees in excess of $10,000. Currently, there is no indication that this trend will reverse itself in the immediate future. Subsequently, by 1991, it is conceivable that more than 20 percent of the Department's expert witnesses will demand compensation that exceeds $10,000. Based on the anticipated number of witness requests in 1991 (4,000), over 800 experts will be paid $10,000 or more, for a total of more than $8 million. This shift toward the higher expense categories has resulted in a significant increase in the overall average cost of expert witness services. For the period 1985 through 1989, the average expert witness fee increased from $5,497 to $8,570 (approximately 56 percent). For 1990, the average is expected to approach $9,000.

Further, it is reasonable to expect the demand for expert witnesses to increase as additional litigative resources are provided to the various user organizations. Historical data supports this assertion. In 1986, the Department had 4,497 authorized attorney positions and subsequently retained the services of 3,076 witnesses. In 1988, the number of attorneys increased by 2 percent to 4,583 and the number of experts hired increased to 3,154, approximately 2.5 percent. By 1991, the Department's attorney staffing will expand to 5,955 authorized positions (an increase of approximately 30 percent over 1988). Such a resource increase is likely to generate a concomitant increase in demand for expert witnesses that could result in an additional 946 requests for expert services. Based on the 1988 average cost of hiring expert witnesses, the additional 1991 demand associated with the increased attorney staffing levels alone will cost approximately $8 million dollars.

Aggregate caseload data further supports the projected rise in demand for experts. The number of cases handled by Department attorneys that generally require some form of support by expert witnesses is expected to increase by 19 percent from 152,758 in 1988 to 182,026 in 1991. Much of the additional workload includes litigation of cases involving toxic torts, radiation, fraud, natural resource damage claims and federal facility contribution actions.

Finally, another major factor behind the expected surge in demand for expert witnesses is the Exxon-Valdez litigation. The scope of this case will require a number of highly specified witnesses such as biostatisticians, hydrodynamicists and autogyro steering experts, who, in a sellers' market, will demand premium fees for their services. The importance of successful litigation in this case is further exacerbated by reported claims of Exxon's reluctance to continue clean-up activities. If Exxon's clean-up effort is less than acceptable to the Alaskan and Federal Governments, protracted litigation will be necessary to determine an adequate level of costs to be recovered by the Federal Government for its participation in treating the polluted areas.

If the Department's front-line attorneys are unable to successfully litigate the various types of cases that require the services of expert witnesses because of a shortage of expert witness funds, the Federal fisc could potentially be exposed to real dollar losses totalling in the billions. According to the FBI, approximately $10.5 billion are at stake in bank fraud cases alone. Provision of the requested program enhancements will ensure that the Government's interests are adequately represented in court.

	1990 Enacted	1991 Base	1991 Estimate	Increase/Decrease
Protection of Witnesses...........	$14,918	$14,918	$18,228	$3,310

Long-Range Goal: To increase the effectiveness of the Department's efforts to combat criminal activity in such areas as organized crime, drugs or narcotics, and murder or conspiracy to commit murder, by obtaining testimony from potentially endangered or threatened witnesses.

Major Objectives:

To obtain that which can be used to prosecute persons accused of organized crime or other serious criminal activity.

To protect witnesses and their families when the testimony of the witnesses may jeopardize their personal security.

To compensate witnesses for subsistence costs such as housing, food, relocation, and incidental expenses as provided by the Witnesses Security Reform Act of 1984.

To provide orientation, documentation and family-oriented services, etc., to new entrants into the Witness Security program.

Base Program Description: The procedure for designating a person as a protected witness is set forth in Department of Justice OBD Order 2110.2 "Witness Protection and Maintenance Policy and Procedures." This order places within the U.S. Marshals Service the responsibility for the security of these witnesses and their families. This program provides for their financial maintenance including the following: subsistence expenses; housing; medical and dental expenses; travel; documentation expenses for identity changes; one-time relocation; costs for obtaining employment; and other miscellaneous expenses. This activity also provides for construction and maintenance of strategically located safesite facilities to house protected witnesses before and during trial.

Accomplishments and Workload: All data reflecting the activities of this program are incorporated in the Witness Security program. However, a recent General Accounting Office report entitled "Witness Security Program: Prosecutive Results and Participants Arrest Data" (GAO/GGD-84-87) found that, upon reviewing 220 case summaries involving the testimony of protected witnesses, 78 percent of the defendants in these cases were found guilty. Eight-four percent of those found guilty were sent to prison for a median sentence of 4.4 years. These prosecutions resulted in significantly more severe sentences then those received for federal felony prosecutions in general.

This activity has also provided sufficient funding to ensure the protection of witnesses willing to testify for the government in all organized crime cases requiring such testimony.

Program Changes:	1991 Base	1991 Estimate	Increase/Decrease
Protection of Witnesses....................	$14,918	$18,228	$3,310

In 1990, the U.S. Marshals Service (USMS) will begin construction on at least two new major safesites. The Department will also renovate and remodel the first safesite ever built to enhance the state-of-the-art of the current security surveillance and communications systems. The requested program increase will allow USMS to maintain the new safesites and pay for increased housing and subsistence costs.

As the number of new and funded participants in the Witness Protection program increases, so too will the costs of services provided by the epartment. Primarily, housing (real estate) and medical expenses have risen nearly 25 percent in the last year alone. Further, Department of Justice Order 2110.43, "Guidelines for Maintenance Payments to Protected Witnesses" provides guidance on subsistence allowances for witnesses. A revised Order, which has not been updated since 1983, is currently pending review and approval to increase the housing and subsistence rate schedules to more accurately reflect today's costs. The Department anticipates that once the proposed revision is approved, relocation costs will increase by approximately 66 percent. Further, based on a near doubling of the number of child visitations from 1988 to 1989, USMS expects to complete 260 of these visits in 1991. Also, the number of witness productions for court appearances will increase by approximately 16 percent.

Taken together, the increases in housing, subsistence and relocation costs, child visitations and witness productions will generate a significant need for the requested program increase of $3,000,000. Following is a break-out of some of the various costs associated with the protection of witnesses costs for 1987, 1988 and 1989.

(In thousands of dollars)

	1987	1988	1989
Housing..........................	$2,009	$2,343	$3,070
Subsistence......................	3,051	3,436	4,299
Relocation.......................	2,117	2,643	2,246
Medical..........................	1,367	1,676	2,257
Total..........................	8,544	10,098	11,872

	1990 Enacted	1991 Base	1991 Estimate	Increase/Decrease
Victim Compensation Fund..........	$582	$582	$582	...

Long Range Goal. To pay restitution, or in the case of death, compensation for the death, to any victim of a crime that causes or threatens death or serious bodily injury that is committed by a protected witness.

Major Objective. To provide compensation to those individuals, or, in the case of death, to the individual's estate, who are victimized by a protected witness.

Base Program Description. This program provides resources to compensate individuals who are victimized by a protected witness. Section 1208 of the Comprehensive Crime Control Act of 1984 (Title II of P.L. 98-473), enacted October 12, 1984, authorized up to $1,000,000 to be appropriated annually for a Victim Compensation Fund. The Fund was first funded by the 1985 Supplemental Appropriations Act (P.L. 99-88).

Restitution will not exceed $50,000 for those victimized since the establishment of the Fund. Restitution not to exceed $25,000 shall be paid to the estate of victims killed as a result of crimes committed by persons who have been enrolled in the Witness Security Program if such crimes were committed prior to enactment of P.L. 98-473.

Accomplishments. The Department has provided adequate compensation to those victims who have been identified, submitted appropriate claim information, and were found eligible to receive benefits.

The Criminal Division has promulgated guidelines for identifying and notifying potential claimants, reviewing the claims, and making payments from the Fund.

	1990 Enacted	1991 Base	1991 Estimate	Increase/Decrease
Private Counsel....................	$1,974	$1,974	$2,374	$400

Long Range Goal. To continue to defend Federal employees personally sued for carrying out official duties.

Major Objective. To retain private counsel to represent Government officers and employees who are sued for actions taken while performing their official duties.

Base Program Description. This activity provides funding to allow the Department to retain outside private counsel to represent government officers and employees who are sued for actions taken while performing their official duties. As provided for under 28 C.F.R. 50.15 and 50.16, the Civil Division is delegated the authority to retain such counsel and further provided that payments for such services will be payable from the Department of Justice appropriations.

Accomplishments. Through 1989, the Department has provided a total of 13 attorneys for 10 individual cases. Following are synopses of three of the cases handled this year. In *Begay v. Hodel*, a civil action was brought concerning an Indian woman who alleged that Bureau of Indian Affairs employees did not properly consider her for placement in the school system. The action was brought under the Rehabilitation Act and the Education for all Handicapped Children Act. Also, a *Bivens* action was filed under the "Due Process Clause" of the Fifth Amendment. In *Willson, et. al. v. Cagle, et. al.*, a civil action for damages was filed against seven federal defendants alleging violation of constitutional rights, personal injuries and emotional distress arising out of the train accident at the Concord Naval Weapons Station on September 1, 1987. Plaintiffs were demonstrating against U.S. involvement in Central America at the time. Plaintiff Willson lost both legs when he was run over by a munitions train. Another civil suit was filed in *Moreno v. SBA*, wherein the plaintiff alleged he lost his job because he turned in a supervisor for alleged criminal actions. In response to "blowing the whistle", the plaintiff alleged that a conspiracy to fire him was joined.

Program Changes:	1991 Base	1991 Estimate	Increase/Decrease
Private Counsel............................	$1,974	$2,374	$400

The additional $400,000 is requested to allow the Department to continue hiring more outside counsel to handle a projected increase in the number of *Bivens* cases, wherein the private bar attempts to couch tort claims against Government employees in terms of constitutional issues. These types of cases generally involve more defendants, and therefore, require the retention of more than one attorney per case. Finally, *Bivens* cases tend to involve complex constitutional issues and consequently result in numerous appeals which also serve to increase private counsel expenses.

OPENING REMARKS

Mr. **MOLLOHAN**. The Committee is pleased to welcome again Assistant Attorney General for Administration, Harry H. Flickinger. Mr. Flickinger, we welcome you to the Committee, and hope you didn't have trouble getting through the police line.

Mr. **FLICKINGER**. Just a bit. It was exciting out there.

Mr. **MOLLOHAN**. We are glad you made it. Welcome to the committee. We invite you to summarize your statement and submit your written statement for the record, if you will.

SUMMARY STATEMENT

Mr. **FLICKINGER**. Thank you, Mr. Chairman. I will be happy to do that, if I could summarize the main points in our request, in the interest of time.

First, as you have indicated, the General Administration appropriation request includes a total of $101,061,000, for 1,098 positions and 1,158 directly funded workyears in support of the Attorney General, other senior policy level officials, the principal management and administrative functions of the Department, and the Executive Office for Immigration Review, EOIR. This budget represents a net increase of $4,611,000 and a decrease of four positions from the 1990 enacted appropriation.

The request for GA contains mandatory increases of $7.3 million, including increases for SES and general schedule pay raises. Two million dollars of this amount represents annualization of increases provided by Congress in 1990.

The General Administration request also includes base level decreases of $631,000 that include nonrecurring costs and reductions for savings associated with implementation of telecommunications enhancements that are expected to be completed in the current year, 1990.

The General Administration appropriation is also proposing a decrease of $3.5 million. This will occur basically in the Justice Management Division and in the Executive Office for Immigration Review. Both of those organizations will absorb about 83 percent of that reduction.

The Justice Management Division will absorb its $1.6 million decrease in the debt collection program. The Private Counsel Project will be fully implemented in all 10 pilot districts by the end of fiscal year 1990. As a result, resource requirements for project implementation, such as equipment purchases, software development, travel and training for the private counsel offices, will be reduced.

In the Executive Office for Immigration Review, the $1.3 million reduction will primarily impact resources for scheduled enhancements to EOIR's automated case tracking system. This decrease will not adversely impact EOIR's programs.

SUPPLEMENTAL LANGUAGE

Before I address our requested program increases, I would like to mention a proposed supplemental language change regarding extension of the debt collection private counsel pilot. The Federal Debt Recovery Act of 1986 authorized the pilot project only through August 31, 1990, after which the program is due to terminate.

This supplemental language change would extend the pilot project through September 30, 1992. The extension is necessary due to unforeseen problems that arose in the process of letting the contracts to run the pilot project. As a result of these delays, the Department was unable to get the project operational in the first five pilot districts until September 1989. Extending the program until September 30, 1992 would provide the necessary time to judge the program's effectiveness.

PROGRAM INCREASES

The General Administration's program increases are requested in two program activities.

The Justice Management Division is requesting total program increases of five positions and $580,000 to provide resources for ethics, program fraud civil remedies, and equal employment opportunities oversight.

We are seeking an increase of two positions and $91,000 to handle the increased ethics workload. One of the major responsibilities of the Justice Management Division is to manage the ethics program for the Department. The recent enactment of the Ethics Reform Act of 1989 and promulgation of Executive Order 12674 on standards of conduct have greatly increased the burden of managing the program.

First, while over 700 Department officials are now required to file financial disclosure reports, this number will soon increase. Second, the new Executive Order requires that certain officials receive mandatory annual ethics briefings. Third, the Ethics Reform Act of 1989 effected sweeping changes in almost all of the ethics laws and regulations in existence. It will be incumbent upon JMD to analyze, explain, and implement all of these new rules within the Department. JMD will have to educate its own ethics staff, the deputy ethics officials throughout the Department, and the bulk of Department employees.

With regard to program fraud's civil remedies, we are asking for one position and $48,000 to handle the anticipated increased workload generated by new program fraud responsibilities.

With regard to EEO complaints processing, as the focal point for Departmental responsibilities for equal employment opportunity oversight the Justice Management Division is requesting two positions and $291,000 to increase the effectiveness and timeliness of investigations and to ensure that these improvements are sustained in the coming years. The additional resources we are requesting will enable JMD to maintain proper oversight of the offices, boards and divisions complaints inventory, and to provide necessary assistance to meet the Department's goals to eliminate the investigations backlog.

Productivity improvements initiative: The Department is actively proceeding to implement total quality management, TQM, in compliance with Executive Order and OMB Circular A-132. Specifically, we are requesting $150,000 to implement this initiative.

FACILITIES PROGRAM 2000

Facilities Program 2000: The Department of Justice is requesting $970,000 to begin a major facilities construction and renovation project that will span 10 years and partially consolidate components currently located in over 50 locations in the Washington metropolitan area.

The project consists of two parts. The first is occupancy of three new buildings, which also entails construction. The new buildings will provide an opportunity to dramatically reduce the Department's physical fragmentation and to release between 17 and 20 of its current locations. Components from most of these locations will partially or fully consolidate in these new buildings. Savings directly accrued by the Department will result from reduced lease costs through more efficient design and improved utilization of space, improved working conditions, lower operational and administrative costs, and increased productivity due to the physical proximity of staffs.

The second part of this project is the critically-needed renovation of the Main Justice and the Home Owners Loan Corporation Buildings for improvement in environmental conditions, upgrading of electrical and cooling systems, and removal of asbestos hazards.

The total estimated cost for all elements of this program, including base building construction and the building renovations, is $330 million to $375 million. This is the total estimated cost to the government. The Department of Justice's share of these costs, over a 10-year period, could be as high as $70 million.

The $970,000 requested for 1991 would be used to develop the Department's "Requirements Program" that identifies offices to be relocated, their personnel and equipment needs, and any special functional requirements. Additionally, the funding would provide the contract architectural and engineering support needed to begin the process for preparation of the construction drawings.

[The statement of Mr. Flickinger regarding the General Administration and Fees and Expenses of Witnesses appropriations follows:]

DEPARTMENT OF JUSTICE
GENERAL ADMINISTRATION APPROPRIATION

STATEMENT OF THE
ASSISTANT ATTORNEY GENERAL FOR ADMINISTRATION,
HARRY H. FLICKINGER,
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE, THE JUDICIARY AND RELATED AGENCIES

MR. CHAIRMAN AND MEMBERS OF THE SUBCOMMITTEE:

I APPRECIATE THE OPPORTUNITY TO APPEAR BEFORE YOU TO DISCUSS THE 1991 GENERAL ADMINISTRATION (GA) APPROPRIATION REQUEST. THE REQUEST INCLUDES A TOTAL OF $101,061,000 FOR 1,098 POSITIONS AND 1,158 DIRECTLY FUNDED WORKYEARS IN SUPPORT OF THE ATTORNEY GENERAL, OTHER SENIOR POLICY LEVEL OFFICIALS, THE PRINCIPAL MANAGEMENT AND ADMINISTRATIVE FUNCTIONS OF THE DEPARTMENT, AND THE EXECUTIVE OFFICE FOR IMMIGRATION REVIEW (EOIR). THIS BUDGET REPRESENTS A NET INCREASE OF $4,611,000 AND A DECREASE OF FOUR POSITIONS FROM THE 1990 ENACTED APPROPRIATION.

THE REQUEST FOR GA CONTAINS MANDATORY INCREASES OF $7.3 MILLION, INCLUDING INCREASES FOR SES AND GENERAL SCHEDULE PAY RAISES. TWO MILLION DOLLARS OF THIS AMOUNT REPRESENTS ANNUALIZATION OF INCREASES PROVIDED BY CONGRESS IN 1990. THESE INCREASES INCLUDE 50 POSITIONS FOR EOIR AS PART OF THE PRESIDENT'S VIOLENT CRIME INITIATIVE; 8 POSITIONS FOR EOIR ASSOCIATED WITH THE CHIEF ADMINISTRATIVE HEARING OFFICER FUNCTION; AND 9 POSITIONS FOR THE JUSTICE MANAGEMENT DIVISION (JMD) FOR THE PRIVATE COUNSEL FOR DEBT COLLECTION PILOT PROGRAM.

SAVINGS

THE GENERAL ADMINISTRATION REQUEST ALSO INCLUDES BASE LEVEL DECREASES OF $631,000 THAT INCLUDE REDUCTIONS FOR SAVINGS ASSOCIATED WITH IMPLEMENTATION OF TELECOMMUNICATIONS ENHANCEMENTS THAT ARE EXPECTED TO BE COMPLETED IN 1990.

IN COMPLIANCE WITH ADMINISTRATION POLICY GUIDANCE TO REDUCE FEDERAL SPENDING, THE GENERAL ADMINISTRATION APPROPRIATION IS ALSO PROPOSING A PROGRAM DECREASE OF $3.5 MILLION THAT WILL BE APPLIED ON A PRO RATA BASIS TO EACH PROGRAM ACTIVITY. THIS REDUCTION SHOULD NOT HAVE A DETRIMENTAL IMPACT ON THE PROGRAMS WITHIN THIS APPROPRIATION. THE JUSTICE MANAGEMENT DIVISION AND THE EXECUTIVE OFFICE FOR IMMIGRATION REVIEW WILL ABSORB ABOUT 83 PERCENT OF THIS REDUCTION.

THE JUSTICE MANAGEMENT DIVISION WILL ABSORB ITS $1.6 MILLION DECREASE IN THE DEBT COLLECTION PROGRAM. THE PRIVATE COUNSEL PROJECT WILL BE FULLY IMPLEMENTED IN ALL 10 PILOT DISTRICTS BY THE END OF FISCAL YEAR 1990. AS A RESULT, RESOURCE REQUIREMENTS FOR PROJECT IMPLEMENTATION, SUCH AS EQUIPMENT PURCHASES, SOFTWARE DEVELOPMENT, TRAVEL AND TRAINING FOR THE PRIVATE COUNSEL OFFICES, WILL BE REDUCED. THEREFORE, THE FUNDING PROPOSED FOR 1991 SHOULD BE SUFFICIENT TO MANAGE THE PROJECT AND PROVIDE DATA TO EVALUATE THE PRIVATE COUNSEL CONCEPT AND DETERMINE ITS FEASIBILITY AS A METHOD FOR COLLECTING FEDERAL PUBLIC DEBT.

IN THE EXECUTIVE OFFICE FOR IMMIGRATION REVIEW, THE $1.3 MILLION REDUCTION WILL PRIMARILY IMPACT RESOURCES FOR SCHEDULED

ENHANCEMENTS TO EOIR'S AUTOMATED CASE TRACKING SYSTEM. THIS DECREASE WILL NOT ADVERSELY IMPACT EOIR'S PROGRAMS.

THE JUSTICE MANAGEMENT DIVISION IS ALSO REFLECTING AN A-76 REDUCTION OF 4 POSITIONS, 4 WORKYEARS, AND $127,000.

PROPOSED LANGUAGE SUPPLEMENTAL

BEFORE I ADDRESS OUR REQUESTED PROGRAM INCREASES, I WOULD LIKE TO MENTION A PROPOSED SUPPLEMENTAL LANGUAGE CHANGE REGARDING EXTENSION OF THE DEBT COLLECTION PRIVATE COUNSEL PILOT. THE FEDERAL DEBT RECOVERY ACT OF 1986 AUTHORIZES THE PILOT PROJECT ONLY THROUGH AUGUST 31, 1990, AFTER WHICH THE PROGRAM IS DUE TO TERMINATE. THIS SUPPLEMENTAL LANGUAGE CHANGE WOULD EXTEND THE PILOT PROJECT THROUGH SEPTEMBER 30, 1992. THE EXTENTION IS NECESSARY DUE TO UNFORESEEN PROBLEMS THAT AROSE IN THE PROCESS OF LETTING THE CONTRACTS TO RUN THE PILOT PROJECT. AS A RESULT OF THESE DELAYS, THE DEPARTMENT WAS UNABLE TO GET THE PROJECT OPERATIONAL IN THE FIRST FIVE PILOT DISTRICTS UNTIL SEPTEMBER 1989. EXTENDING THE PROGRAM UNTIL SEPTEMBER 30, 1992, WOULD PROVIDE THE NECESSARY TIME TO JUDGE THE PROGRAM'S EFFECTIVENESS.

PROGRAM INCREASES

THE GENERAL ADMINISTRATION'S PROGRAM INCREASES ARE REQUESTED IN TWO PROGRAM ACTIVITIES.

JUSTICE MANAGEMENT DIVISION

THE JUSTICE MANAGEMENT DIVISION IS REQUESTING TOTAL PROGRAM INCREASES OF FIVE POSITIONS AND $580,000 TO PROVIDE RESOURCES FOR ETHICS, PROGRAM FRAUD CIVIL REMEDIES, AND EQUAL EMPLOYMENT OPPORTUNITIES OVERSIGHT.

ETHICS PROGRAM

WE ARE SEEKING AN INCREASE OF TWO POSITIONS AND $91,000 TO HANDLE THE INCREASED ETHICS WORKLOAD.

ONE OF THE MAJOR RESPONSIBILITIES OF THE JUSTICE MANAGEMENT DIVISION IS TO MANAGE THE ETHICS PROGRAM FOR THE DEPARTMENT. THE RECENT ENACTMENT OF THE ETHICS REFORM ACT OF 1989 AND PROMULGATION OF EXECUTIVE ORDER 12674 ON STANDARDS OF CONDUCT HAVE GREATLY INCREASED THE BURDEN OF MANAGING THIS PROGAM.

FIRST, WHILE OVER 700 DEPARTMENT OFFICIALS ARE NOW REQUIRED TO FILE FINANCIAL DISCLOSURE REPORTS, THIS NUMBER WILL SOON INCREASE. THESE REPORTS MUST BE COLLECTED, REVIEWED, AND RETAINED FOR PUBLIC INSPECTION. ONLY OFFICIALS ABOVE THE LEVEL OF GS-16 ARE PRESENTLY REQUIRED TO FILE. HOWEVER, THE OFFICE OF GOVERNMENT ETHICS WILL SOON ISSUE REGULATIONS THAT WILL REQUIRE MANY EMPLOYEES AT THE GS-13 TO 15 LEVEL TO FILE FINANCIAL DISCLOSURE REPORTS, A REQUIREMENT THAT WILL ADD GREATLY TO JMD'S WORKLOAD. JMD WILL HAVE TO SET UP A SYSTEM TO DETERMINE WHO SHOULD FILE, PROVIDE FOR THE COLLECTION OF REPORTS, AND PROVIDE INSTRUCTIONS ON THE REVIEW OF THESE REPORTS.

SECOND, THE NEW EXECUTIVE ORDER REQUIRES THAT CERTAIN OFFICIALS RECEIVE MANDATORY ANNUAL ETHICS BRIEFINGS. LAST YEAR, DESPITE THE EFFORTS OF SEVERAL ETHICS OFFICIALS BOTH WITHIN AND OUTSIDE JMD, ONLY SIX PERCENT OF DEPARTMENT PERSONNEL RECEIVED ETHICS TRAINING. WE WILL NEED TO GREATLY INCREASE THIS PERCENTAGE IN THE COMING YEARS.

THIRD, THE ETHICS REFORM ACT OF 1989 EFFECTED SWEEPING CHANGES IN ALMOST ALL OF THE ETHICS LAWS AND REGULATIONS IN EXISTENCE. IT WILL BE INCUMBENT UPON JMD TO ANALYZE, EXPLAIN, AND IMPLEMENT ALL OF THESE NEW RULES WITHIN THE DEPARTMENT. JMD WILL HAVE TO EDUCATE ITS OWN ETHICS STAFF, THE DEPUTY ETHICS OFFICIALS THROUGHOUT THE DEPARTMENT, AND THE BULK OF DEPARTMENT EMPLOYEES.

PROGRAM FRAUDS CIVIL REMEDIES

WE ARE ASKING FOR ONE POSITION AND $48,000 TO HANDLE THE ANTICIPATED INCREASED WORKLOAD GENERATED BY NEW PROGRAM FRAUD RESPONSIBILITIES.

THE JUSTICE MANAGEMENT DIVISION HAS BEEN GIVEN RESPONSIBILITY FOR PROSECUTING CLAIMS UNDER THE PROGRAM FRAUDS CIVIL REMEDIES ACT. THIS ACT PROVIDES THAT FALSE CLAIMS AND STATEMENTS MAY BE PROSECUTED ADMINISTRATIVELY AND CIVIL FINES MAY BE RECOVERED, IN CASES WHERE THE DEPARTMENT OF JUSTICE CHOOSES NOT TO FILE A CRIMINAL ACTION OR CIVIL SUIT IN THE UNITED STATES DISTRICT COURT.

EEO COMPLAINTS PROCESSING

AS THE FOCAL POINT FOR DEPARTMENTAL RESPONSIBILITIES FOR EQUAL EMPLOYMENT OPPORTUNITY OVERSIGHT, THE JUSTICE MANAGEMENT DIVISION IS REQUESTING TWO POSITIONS AND $291,000 TO INCREASE THE EFFECTIVENESS AND TIMELINESS OF INVESTIGATIONS, AND TO ENSURE THAT THESE IMPROVEMENTS ARE SUSTAINED IN THE COMING YEARS.

IN THE PAST, THE DEPARTMENT OF JUSTICE HAS BEEN CITED BY BOTH THE CONGRESS AND THE EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

FOR ITS DEFICIENCIES IN THE TIMELY PROCESSING OF DISCRIMINATION COMPLAINTS. AS A RESULT, THE DEPARTMENT HAS DESIGNATED THIS AS ONE OF ITS PRIORITIES AND HAS VOWED TO SEEK NECESSARY RESOURCES TO RESOLVE THE PROBLEM. SEVERAL DEPARTMENT COMPONENTS HAVE BEEN DIRECTED TO IMPLEMENT ACTIONS TO ELIMINATE THE BACKLOG OF CASES, AS WELL AS TO REDUCE THE AVERAGE PROCESSING TIME. THIS HAS BEEN DONE BY INCREASING THE NUMBER OF FULL-TIME EEO INVESTIGATORS, AND BY CONTRACTING INVESTIGATIONS AND PROPOSED DISPOSITIONS TO PRIVATE COMPANIES. THIS HAS REDUCED THE USE OF COLLATERAL DUTY PERSONNEL WHO FORMERLY PERFORMED THESE TASKS ON A PART-TIME, VOLUNTEER BASIS.

THE ADDITIONAL RESOURCES WE ARE REQUESTING WILL ENABLE JMD TO MAINTAIN PROPER OVERSIGHT OF THE OFFICES, BOARDS, AND DIVISIONS COMPLAINTS INVENTORY, AND TO PROVIDE NECESSARY ASSISTANCE TO MEET THE DEPARTMENT'S GOALS TO ELIMINATE THE INVESTIGATIONS BACKLOG.

PRODUCTIVITY IMPROVEMENTS INITIATIVE

THE DEPARTMENT IS ACTIVELY PROCEEDING TO IMPLEMENT TOTAL QUALITY MANAGEMENT (TQM) IN COMPLIANCE WITH EXECUTIVE ORDER AND OMB CIRCULAR A-132. MEETING THE AMBITIOUS AIMS OF THIS INITIATIVE WILL REQUIRE SIGNIFICANT CHANGES IN THE WAY WE THINK AND ACT IN MANAGING THE DEPARTMENT'S PROGRAMS AND OPERATIONS.

TO ASSIST IN LAYING THE IMPORTANT GROUNDWORK FOR THIS PROCESS--AND IN PLANNING AND ORGANIZING FOR CHANGES OF THIS MAGNITUDE--WE WILL ENLIST THE ASSISTANCE OF PROFESSIONAL CONSULTANTS WHO ARE EXPERIENCED IN PROVIDING TRAINING AND

TECHNICAL ASSISTANCE IN TOTAL QUALITY MANAGEMENT. THE JUSTICE MANAGEMENT DIVISION WILL SERVE AS PRINCIPAL MANAGER AND POINT OF CONTACT FOR ALL CONSULTANT SERVICES.

SPECIFICALLY, WE ARE REQUESTING $150,000 TO IMPLEMENT THIS INITIATIVE.

FACILITIES PROGRAM 2000

THE DEPARTMENT OF JUSTICE IS REQUESTING $970,000 TO BEGIN A MAJOR FACILITIES CONSTRUCTION AND RENOVATION PROJECT THAT WILL SPAN 10 YEARS AND PARTIALLY CONSOLIDATE COMPONENTS CURRENTLY LOCATED IN OVER 50 LOCATIONS IN THE WASHINGTON METROPOLITAN AREA.

THE PROJECT CONSISTS OF TWO PARTS. THE FIRST IS OCCUPANCY OF THREE NEW BUILDINGS, WHICH ALSO ENTAILS CONSTRUCTION. THE NEW BUILDINGS WILL PROVIDE AN OPPORTUNITY TO DRAMATICALLY REDUCE THE DEPARTMENT'S PHYSICAL FRAGMENTATION AND TO RELEASE BETWEEN 17 AND 20 OF ITS CURRENT LOCATIONS. COMPONENTS FROM MOST OF THESE LOCATIONS WILL PARTIALLY OR FULLY CONSOLIDATE IN THESE NEW BUILDINGS. SAVINGS DIRECTLY ACCRUED BY THE DEPARTMENT WILL RESULT FROM REDUCED LEASE COSTS THROUGH MORE EFFICIENT DESIGN AND IMPROVED UTILIZATION OF SPACE, IMPROVED WORKING CONDITIONS, LOWER OPERATIONAL AND ADMINISTRATIVE COSTS, AND INCREASED PRODUCTIVITY DUE TO THE PHYSICAL PROXIMITY OF STAFFS.

THE SECOND PART OF THIS PROJECT IS THE CRITICALLY NEEDED RENOVATION OF THE MAIN JUSTICE AND THE HOME OWNERS LOAN CORPORATION BUILDINGS FOR IMPROVEMENT IN ENVIRONMENTAL CONDITIONS, UPGRADING OF ELECTRICAL AND COOLING SYSTEMS, AND REMOVAL OF ASBESTOS HAZARDS.

THE TOTAL ESTIMATED COST FOR ALL ELEMENTS OF THIS PROGRAM, INCLUDING BASE BUILDING CONSTRUCTION AND THE BUILDING RENOVATIONS, IS $330 MILLION TO $375 MILLION. THIS IS THE TOTAL ESTIMATED COST TO THE GOVERNMENT. THE DEPARTMENT OF JUSTICE'S SHARE OF THESE COSTS, OVER A 10 YEAR PERIOD, COULD BE AS HIGH AS $70 MILLION, BUT THIS AMOUNT IS SUBJECT TO NEGOTIATIONS WITH THE GENERAL SERVICES ADMINISTRATION.

THE $970,000 REQUESTED FOR 1991 WOULD BE USED TO DEVELOP THE DEPARTMENT'S "REQUIREMENTS PROGRAM" THAT IDENTIFIES OFFICES TO BE RELOCATED, THEIR PERSONNEL AND EQUIPMENT NEEDS, AND ANY SPECIAL FUNCTIONAL REQUIREMENTS. ADDITIONALLY, THE FUNDING WOULD PROVIDE THE CONTRACT ARCHITECTURAL AND ENGINEERING SUPPORT NEEDED TO BEGIN THE PROCESS FOR PREPARATION OF THE CONSTRUCTION DRAWINGS. PRELIMINARY ENGINEERING FOR THE SPECIALIZED SECURITY SYSTEMS WILL ALSO BE ACCOMPLISHED. THESE ENGINEERING ACTIVITIES ARE CRUCIAL TO THE DESIGN/CONSTRUCTION PROCESS.

MR. CHAIRMAN, THIS IS A SUMMARY OF OUR REQUEST FOR THE GENERAL ADMINISTRATION APPROPRIATION. I WILL BE HAPPY TO ANSWER ANY QUESTIONS YOU OR OTHER MEMBERS OF THE SUBCOMMITTEE MAY HAVE REGARDING THIS REQUEST.

DEPARTMENT OF JUSTICE
FEES AND EXPENSES OF WITNESSES
STATEMENT OF THE ASSISTANT ATTORNEY GENERAL FOR ADMINISTRATION,
HARRY H. FLICKINGER
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE, THE JUDICIARY AND RELATED AGENCIES

MR. CHAIRMAN AND MEMBERS OF THE SUBCOMMITTEE:

I AM ALSO PLEASED TO APPEAR BEFORE YOU IN SUPPORT OF THE 1991 BUDGET REQUEST FOR THE FEES AND EXPENSES OF WITNESSES APPROPRIATION. THE REQUEST IS FOR $70,628,000, WHICH REPRESENTS AN INCREASE OF $14,601,000 OVER THE 1990 APPROPRIATION OF $56,027,000. THE 1991 REQUEST INCLUDES PROGRAM INCREASES OF $10,891,000 FOR THE FEES AND EXPENSES OF WITNESSES ACTIVITY, $3,310,000 FOR THE PROTECTION OF WITNESSES ACTIVITY AND $400,000 FOR PRIVATE COUNSEL.

THIS APPROPRIATION IS USED BY ALL OF THE DEPARTMENT'S LITIGATING ORGANIZATIONS FOR THE PAYMENT OF FEES AND EXPENSES OF FACT AND EXPERT WITNESSES WHO PRESENT TESTIMONY ON BEHALF OF THE U.S. GOVERNMENT AND FOR THE PAYMENT OF EXPENSES ASSOCIATED WITH COURT ORDERED MENTAL COMPETENCY EXAMINATIONS. THE APPROPRIATION IS ALSO USED BY THE U.S. MARSHALS SERVICE TO PAY THE EXPENSES ASSOCIATED WITH THE PROTECTION OF WITNESSES AND THEIR DEPENDENTS. FURTHER, APPROPRIATION RESOURCES ARE USED TO PAY RESTITUTION TO ANY VICTIM OF A CRIME THAT CAUSES OR THREATENS DEATH OR SERIOUS BODILY INJURY AND THAT IS COMMITTED BY AN INDIVIDUAL ENROLLED IN THE WITNESS SECURITY PROGRAM. IN CASE OF DEATH, COMPENSATION IS PAID TO THE VICTIM'S ESTATE. THE APPROPRIATION IS ALSO USED TO PAY THOSE EXPENSES ASSOCIATED WITH THE PROVISION OF OUTSIDE LEGAL

Legal Activities

Fees and Expenses of Witnesses

Summary of Requirements by Object Class

(In thousands of dollars)

Object Class	1989 Actual	1990 Appropriation Enacted	1991 Request	Increase/Decrease

REPRESENTATION OF GOVERNMENT EMPLOYEES WHO ARE SUED FOR ACTIONS COMMITTED WHILE PERFORMING THEIR OFFICIAL DUTIES.

THE REQUESTED PROGRAM INCREASE OF $10,891,000 FOR THE FEES AND EXPENSES OF WITNESSES ACTIVITY WILL BE USED ENTIRELY FOR EXPERT WITNESSES. APPROXIMATELY $1.5 MILLION OF THE REQUESTED INCREASE WILL BE USED EXCLUSIVELY TO PAY EXXON-VALDEZ WITNESSES. ADDITIONAL FUNDING FOR THIS ACTIVITY IS NEEDED TO ALLOW OUR FRONT-LINE ATTORNEYS TO CONTINUE TO EMPLOY THE VALUABLE SERVICES PROVIDED BY EXPERTS WHO PREPARE AND PRESENT TESTIMONY ON BEHALF OF THE GOVERNMENT. IN AN ATTEMPT TO HOLD DOWN WITNESS EXPENSES, WE HAVE DECENTRALIZED THE EXPERT WITNESS FUND AND ALLOCATED THOSE RESOURCES TO THE LEGAL DIVISIONS AND THE U.S. ATTORNEYS. THE NEW PROCEDURE PROVIDES SPECIFIC FINANCIAL ACCOUNTABILITY AT THE USER LEVEL WHICH SHOULD RESULT IN MORE PRUDENT MANAGEMENT OF AVAILABLE RESOURCES. FURTHER, IN PAST YEARS WE HAVE HAD TO REPROGRAM FUNDING FROM OTHER ACTIVITIES WITHIN THE APPROPRIATION TO PROVIDE ADEQUATE EXPERT WITNESS RESOURCES. IN SOME EXTREME CASES WE HAVE EVEN IMPOSED MORATORIUMS ON EXPERT WITNESS SPENDING WHEREBY ONLY EMERGENCY REQUIREMENTS WERE ADDRESSED. IN SPITE OF THESE EFFORTS, THE COST OF OBTAINING THE VARIOUS TYPES OF EXPERT WITNESS SERVICES USED MOST BY OUR ATTORNEYS CONTINUES TO RISE. FOR EXAMPLE, FREQUENTLY USED EXPERTS IN HIGHLY SPECIALIZED AND/OR TECHNICAL FIELDS SUCH AS AVIONICS, BIOSTATISTICS AND HYDRODYNAMICS GENERALLY ARE IN SHORT SUPPLY, AND THEREFORE, TEND TO DEMAND HIGHER RATES OF COMPENSATION FOR THEIR WORK. MOREOVER, THE TIME NEEDED FOR OUR EXPERTS TO PREPARE THEIR TESTIMONY IS GENERALLY TIED TO THE LEVEL OF EXPERTISE ANTICIPATED IN OPPOSING

ARGUMENTS. THUS, THE INCREASING SOPHISTICATION OF THE PRIVATE BAR RESULTS IN THE NEED FOR MORE PREPARATION TIME AND SUBSEQUENTLY HIGHER EXPENSES FOR OUR WITNESSES.

OTHER FACTORS THAT CONTRIBUTE TO THE RISE IN TOTAL EXPERT WITNESS COSTS ARE THE RECENT INCREASES IN THE DEPARTMENT'S LITIGATIVE RESOURCES. SPECIFICALLY, AS ADDITIONAL RESOURCES ARE PROVIDED TO ENHANCE THE DEPARTMENT'S VARIOUS LITIGATIVE ACTIVITIES, SUCH AS THE ONGOING INVESTIGATIONS OF MANUEL NORIEGA AND THE FINANCIAL INSTITUTION INDUSTRY, THERE WILL BE A CONCOMITANT INCREASE IN THE NUMBER OF REQUESTS FOR EXPERT WITNESSES. FURTHER, ADDITIONAL EXPERTS WILL BE NEEDED TO PREPARE TESTIMONY REGARDING NATURAL RESOURCE DAMAGE CLAIMS IN THE NUMEROUS EXXON-VALDEZ CIVIL CASES THAT ARE LIKELY TO EVOLVE FROM THE ELEVEN MILLION GALLON OIL SPILL.

THE ADDITIONAL FUNDING REQUESTED FOR THE PROTECTION OF WITNESSES ACTIVITY IS NEEDED TO ADDRESS AN ANTICIPATED INCREASE IN THE NUMBER OF WITNESSES ENROLLED IN THE WITNESS SECURITY PROGRAM. SUCH AN INCREASE WILL ALSO GENERATE INCREASES IN WITNESS RELOCATIONS, CHILD VISITATIONS AND WITNESS PRODUCTIONS. FURTHER THE DEPARTMENT HAS RECENTLY IMPLEMENTED A STATUTORY AUTHORITY THAT DELEGATES THE ATTORNEY GENERAL'S AUTHORITY TO ISSUE REGULATIONS GOVERNING ADMINISTRATION OF THE PROGRAM TO THE DIRECTOR OF THE MARSHALS SERVICE. IN NOVEMBER, THE DIRECTOR EXERCISED HIS NEWLY DELEGATED AUTHORITY BY UPDATING THE PREVIOUS SEVEN-YEAR OLD DEPARTMENT ORDER THAT PROVIDES GUIDELINES ON MAINTENANCE PAYMENTS TO PROTECTED WITNESSES. IMPLEMENTATION OF THE REVISED ORDER, WHICH WILL OCCUR IN APRIL 1990, WILL INCREASE

HOUSING AND SUBSISTENCE RATES BY 17 PERCENT OVER THE CURRENT RATES. THIS ESTIMATE IS BASED ON 1989 DATA FOR THE AVERAGE SIZE FAMILY .

THE NEED FOR ADDITIONAL RESOURCES FOR THE PRIVATE COUNSEL ACTIVITY IS PRIMARILY BASED ON THE INCREASING COSTS OF RETAINING HIGHLY QUALIFIED ATTORNEYS TO REPRESENT GOVERNMENT OFFICIALS. ALTHOUGH THE FEDERAL EMPLOYEES LIABILITY REFORM AND TORT COMPENSATION ACT OF 1988 (P.L. 100-694) RESTORED TO GOVERNMENT EMPLOYEES CERTAIN PROTECTIONS FROM COMMON LAW TORTS, IT EXPRESSLY OMITTED SIMILAR PROTECTION FROM CONSTITUTIONAL TORTS. THUS, THE DEPARTMENT BELIEVES THERE WILL BE AN INCREASE IN THE NUMBER OF CONSTITUTIONAL TORT CASES BROUGHT AGAINST GOVERNMENT EMPLOYEES.

MR. CHAIRMAN, THAT CONCLUDES MY PREPARED STATEMENT. I HAVE WITH ME, JAMES RICHMOND, THE U.S. ATTORNEY FOR THE NORTHERN DISTRICT OF INDIANA AND CHAIRMAN OF THE ATTORNEY GENERAL'S ADVISORY COMMITTEE; MYLES FLINT, DEPUTY ASSISTANT ATTORNEY GENERAL FOR THE LAND AND NATURAL RESOURCES DIVISION; AND JEFFREY AXELRAD, CHIEF OF THE CIVIL DIVISION'S TORTS LITIGATION BRANCH TO ANSWER ANY QUESTIONS YOU OR THE OTHER MEMBERS OF THE SUBCOMMITTEE MAY HAVE.

FEES AND EXPENSES OF WITNESSES

Mr. FLICKINGER. If you would like, I will proceed to the fees and expenses of witnesses.

Mr. MOLLOHAN. Please proceed.

SUMMARY STATEMENT

Mr. FLICKINGER. The budget request for Fees is for $70,628,000, which represents an increase of $14,601,000 over the 1990 appropriation of $56,027,000. The 1991 request includes program increases of $10,891,000 for the fees and expenses of witnesses activity, $3,310,000 for the protection of witnesses activity, and $400,000 for private counsel.

This appropriation is used by all of the Department's litigating organizations for the payment of fees and expenses of fact and expert witnesses who present testimony on behalf of the U.S. Government. The appropriation is also used by the U.S. Marshals Service to pay the expenses associated with the protection of witnesses and their dependents. The appropriation is also used to pay those expenses associated with the provision of outside legal representation of government employees who are sued for actions committed while performing their official duties.

The requested program increase of $10,891,000 for the fees and expenses of witnesses activity will be used entirely for expert witnesses. Approximately $1.5 million of the requested increase will be used exclusively to pay Exxon Valdez witnesses. Additional funding for this activity is needed to allow our front-line attorneys to continue to employ the valuable services provided by experts who prepare and present testimony on behalf of the government.

Unfortunately, the cost of obtaining the various types of expert witness services used most by our attorneys continues to rise. For example, frequently-used experts in highly specialized and/or technical fields such as avionics, biostatistics and hydrodynamics generally are in short supply and, therefore, tend to demand higher rates of compensation for their work.

Other factors that contribute to the rise in total expert witness costs are the recent increases in the Department's litigative resources. Specifically, as additional resources are provided to enhance the Department's various litigative activities, such as the ongoing investigations of Manuel Noriega and the financial institution industry, there will be a concomitant increase in the number of requests for expert witnesses.

PROTECTION OF WITNESSES

The additional funding requested for the protection of witnesses activity is needed to address an anticipated increase in the number of witnesses enrolled in the witness security program. Such an increase will generate increases in witness relocations, child visitations and witness productions.

In November, the Director exercised his newly-delegated authority by updating the previous seven-year-old Department order that provides guidelines on maintenance payments to protected witnesses. Implementation of the revised order, which will occur in April 1990, will increase housing and subsistence rates by 17 percent over the current rates. This estimate is based on 1989 data for the average size family.

The need for additional resources for the private counsel activity is based primarily on the increasing costs of retaining highly-qualified attorneys to represent government officials. The Department believes there will be an increase in the number of constitutional tort cases brought against government employees.

I have with me, James Richmond, the U.S. Attorney for the Northern District of Indiana and Chairman of the Attorney General's Advisory Committee; Myles Flint, Deputy Assistant Attorney General for the Land and Natural Resources Division; and Jeffrey Axelrad, Chief of the Civil Division's Torts Litigation Branch to answer any specific questions you may have with regard to the Fees and Expenses of Witnesses request.

Also joining me is the gentleman from the U.S. Marshals Service, Howard Safir, Associate Director for Operations; and Mr. Eugene Coon, Chief of the Witness Security Division. They can answer any questions with regard to the Protection of Witnesses program.

With regard to the General Administration appropriation, I also ask, that Mr. Dave Milhollan, the Director of the Executive Office for Immigration Review, be here.

IMPACT OF REDUCTIONS

Mr. **MOLLOHAN**. In your statement, you mention program decreases of $3.5 million to reduce Federal spending. What expenses will you reduce in order to achieve these savings and still, as you state, have no detrimental impact on the programs?

Mr. **FLICKINGER**. The reductions impact in basically two areas. Most will be absorbed within the Justice Management Division (JMD), and within the Executive Office for Immigration Review.

Within JMD, the impact is primarily on the debt collection program, the program involving the use of private counsel. As you know, we have the five pilot districts in operation now. By the end of this current year, we will have 10 pilot districts in operation, demonstrating how private counsel can be utilized in collecting debts. What is happening is that our requirements for equipment, certain software enhancements and other related activities are not going to be as great in 1991 as might have been anticipated. In addition, we are looking at a slight reconfiguration in that program. We feel that it is probably wise to concentrate our efforts on the 10 pilot projects as opposed to considering expansion into any other areas to and try to get the best evaluation from those 10 offices that we possibly can.

The net effect of all of that is that we will have a better ability to absorb the reduction within available funds.

On the Executive Office for Immigration Review side, basically there——

Mr. **MOLLOHAN**. You will not have any decrease in the effectiveness of your collection activities?

Mr. **FLICKINGER**. It will not impact the effectiveness.

Mr. **MOLLOHAN**. How do you know that?

Mr. **Flickinger**. We are not deviating from the basic game plan. The Department, in order to evaluate the debt collection program, was to identify 10 offices. We are sticking with that game plan. We had also considered making some modifications in other U.S. Attorney offices as an additional feature to the demonstration. By not doing that, we are not jeopardizing the collection activities that are ongoing in those U.S. Attorney's Offices now. It just limits our examination, if I can put it that way, to 10 offices.

Mr. **Mollohan**. Okay.

EXECUTIVE OFFICE OF IMMIGRATION REVIEW REDUCTIONS

Mr. **Flickinger**. Now, on the EOIR side, the reduction impacts essentially on the automated case tracking system, which for all practical purposes is a completed system. There were certain enhancements, though, and I will defer to Mr. Milhollan as to what the specifics were. But there were enhancements that they will forego, again without jeopardizing the basic utility of the automated tracking system.

So, we think we can make these absorptions without any direct impact on the activity.

Mr. **Mollohan**. You are not canceling this automatic system, you are delaying it, the expansion?

Mr. **Flickinger**. Basically delaying the system, that is correct.

Mr. **Mollohan**. And do you have a planned completion date?

Mr. **Flickinger**. As I indicated, the basic system is fully operational. The expansion, I don't know if we attached a time frame to that? David?

Mr. **Milhollan**. Our system is implemented nationwide, with the exception of the Office of the Chief Administrative Hearing Officer. That is a relatively new office. It is also a small office. It is the only office that we have left to implement. But other than that, our system is implemented and extensively utilized in our 21 field offices and the Board of Immigration Appeals at Falls Church.

So, what we are talking about absorbing is simply upgrades to that system. Obviously, the hardware itself wears out. Rather than run into a situation where we have a large expenditure at one time, we had hoped to gradually replace some of the things that we have to replace eventually.

Now, in addition, there is one other facet, we will be annualizing 58 positions, which would require 26 additional workyears. We will probably not be able to furnish those positions with terminals. But we think we can also absorb that without any detriment whatsoever to the actual program.

PRODUCTIVITY IMPROVEMENT

Mr. **Mollohan**. Thank you.

You request $150,000 for a productivity improvement initiative. Could you describe that initiative a little more, how you are going to implement it, why it is necessary and to what extent consultants are going to play a role?

Mr. **Flickinger**. Yes, sir, I'll be happy to. Basically, the notion of the total quality management initiative is hard to get your hands on. The notion is that the government, particularly in providing services to the agency, has to look at not only how fast and how many widgets we can produce in any given period of time, that is, not only on the productivity aspect, but you need to look at the more qualitative aspect as well. What is the quality of that service being provided? Are you doing it faster or better? Generally, that is the concept we are dealing with.

Now, if I can give you a specific example, the Department had been criticized for some time, as had other Departments, for the processing of retirement applications. The people would retire, would not get their initial annuity check until some period of time had elapsed. This was not a satisfactory way to operate. From the retired employee's point of view, it was a bad situation.

This is an important management technique. We are able to condense that time lapse. Those are the kinds of opportunities we want to look at. Why do we use consultants to do that? Basically because, while we have some expertise within the Department that can work in this area, we do not have enough. The types of specialties that are available in academia or in the consulting field generally do an effective job.

We think by bringing in people, we can apply their skills better in the training of the people within the Department at the same time.

Mr. MOLLOHAN. Are you undertaking this as part of the initiative? If that had never come down, would you be hiring consultants to tell you how to be more efficient?

Mr. FLICKINGER. We probably should have been. We are talking about improving the way we do our business. Every Department and agency has some obligation to constantly scrutinize what it does, to see where it can do things better.

So, in general terms, whether we call it productivity improvement or whatever, it is the kind of thing that should be ongoing anywhere, not just in government organizations. So we probably would be interested in these kinds of issues.

Mr. MOLLOHAN. Thank you very much for your testimony. We have a few questions for you to answer for the record.

[The following questions were submitted for the record:]

QUESTION SUBMITTED BY CONGRESSMAN MOLLOHAN

General Administration

Program Increases

QUESTION: You request $970,000 for the Facilities Program 2000 to develop office requirements and to begin the process for preparation of construction drawings. What is the timetable for the requirements phase of this program? Don't you believe it is a little premature to request funds for architectural and engineer support when you have not even begun to determine requirements?

ANSWER: In July 1989, the Attorney General and Acting Administrator of General Services agreed upon the allocation to the Department of 350,000 square feet of space in the International Cultural and Trade Center/Federal Office Building (ICTC/FOB), 280,000 square feet of space in the Ariel Rios Federal Building, and approximately 400,000 square feet of space in a new facility. In addition, GSA plans to renovate the Main Justice Building and the Government-owned Homeowners Loan Corporation Building. Facilities Program 2000 represents the Department's strategy to consolidate a portion of its headquarters personnel, currently housed in 20 leased buildings in the Washington metropolitan area, into these five facilities. This initiative will require approximately ten years to implement fully.

The $970,000 requested for 1991 would be used for contract architectural/engineering (A/E) support to continue the development of the Department's requirements for approximately 11 of its components to be housed in either ICTC/FOB or the new 400,000-square-foot facility. The requirements phase for ICTC/FOB began in March 1990. The requirements phase for the new facility is expected to begin in July 1990. Both efforts must continue through 1991 into the design and engineering stage necessary to complete the final design.

The requirements phase as we have used it, includes space program development, blocking and preliminary engineering for specialized systems. These efforts are all necessary before an A/E contract can be awarded for preparation of construction drawings. The requirements phase will identify offices to be relocated, their personnel and equipment needs, and any special functional requirements, such as libraries, computer rooms, and conference areas. The office space required will be defined to the level of developing standard workstations, and the functional adjacencies of organizations to be housed in the space, i.e., what offices need to be next to each other, will be determined. Preliminary engineering for specialized security systems, automated data processing and telecommunications systems will also be provided.

FTS 2000

QUESTION: The Department, after many attempts, has finalized its telecommunications plans by agreeing to use FTS 2000 as its single source of long distance data communications. Will the Department be maintaining a single source for telecommunications or will it be maintaining separate networks for the Federal Bureau of Investigation, the Drug Enforcement Agency, the Bureau of Prisons, and the Immigration and Naturalization Service?

ANSWER: It is the intent of the Department to maintain a single source of telecommunications service. The Department has recently signed an order to that effect. Under the auspices of the Justice Management Division (JMD), all Departmental long distance data communications service will be centralized within the guidelines of the FTS 2000 program. The only exception permits the Federal Bureau of Investigation (FBI) to manage its own telecommunications requirements with the understanding that all actions are reported to the JMD FTS 2000 Program Management Office. The Department will, in accordance with an approved transition plan, maintain its telecommunications service under the FTS 2000 network provided by U.S. Sprint.

QUESTION: What is the justification for not consolidating all separate networks into one network?

ANSWER: As previously stated the Department intends to consolidate all of the current networks under FTS 2000 service provided by U.S. Sprint.

Case Management System

QUESTION: Justice has been trying to establish a Departmental Case Management System since 1977. Yet, each of six litigating divisions and the United States Attorneys operate unique systems which are incompatible, and the Department also operates its own case management system. Why has the Department failed for 13 years to develop a workable, Department-level case management system?

ANSWER: The Department has a Departmental Case Management System (DCMS) which extracts data from the litigating components' systems and aggregates that data on a central database. The problem with DCMS is the inability to accurately identify the cases entered into the system more than once, which is referred to as "double counting". If the dual case numbering system in the Department were changed to be a single numbering system, the double counting problem would be effectively eliminated. This is the focus of our current efforts.

It should also be noted that the extract approach used in the DCMS is the only possible approach given the diverse and independent systems operating in the litigating organizations.

QUESTION: Has the Department ever conducted a functional analysis and a requirements study to determine what kind of case management system would be needed to satisfy both component and Departmental tracking and reporting requirements? Why not?

ANSWER: A requirements analysis was conducted prior to the development of DCMS. This analysis focused solely on the information needs of Departmental management. The litigating components were adamant that their own systems satisfied their requirements.

QUESTION: When do you expect that the Department will establish a comprehensive, compatible case management system?

ANSWER: While we have concluded that a single, integrated Departmental system is not feasible, we view our current DCMS, when double counting is eliminated, as a comprehensive case management system since it will maintain information on the Department's complete litigative caseload. We hope to solve the double counting problem in the coming fiscal year.

Computer Security

QUESTION: In compliance with the Computer Security Act of 1987, the Department has identified 83 automated data processing systems containing sensitive information and developed security plans for these systems. Has the Department conducted any follow-up reviews to determine if the security plans are adequate and implemented?

ANSWER: Computer security was identified as an objective in the Department's Automated Information Systems (AIS) Strategic Plan for 1989, as well as a distinct project in the Justice Management Division's 1989 AIS Tactical Plan. One milestone in the Tactical Plan was to establish an ad hoc Computer Security Management Committee (CSMC) to review each of the 83 computer security plans. This temporary committee was established in December 1988. The ad hoc committee currently consists of five members. Individual members of the committee have prior experience with ADP mainframe, minicomputer, or microcomputer operations and/or security initiatives. Since this is an ad hoc committee, the personnel worked part-time and only reviewed each of the 83 plans for completeness prior to forwarding the plans to NIST/NSA for review in January 1988.

QUESTION: Has the Department reviewed the risk analyses and contingency plans for these systems to determine if vulnerabilities identified have been corrected?

ANSWER: The Justice Management Division and the Office of the Inspector General are currently developing the criteria for the review program that will be used. This review program will not only cover risk analyses and contingency plans, but also review the development controls, installation controls, security awareness and training, technical controls, and security measures for support systems and application systems.

QUESTION: When does the Department expect to complete its review of risk analyses, contingency and security plans?

ANSWER: It is currently planned that a representative sample of existing security plans will be reviewed during 1990. In addition, the Department is preparing to implement Office of Management and Budget (OMB) guidance, which was recently issued in draft form (OMB Bulletin No. 90-XX). If the Department had the qualified personnel and they were dedicated full time, all 83 plans could probably be reviewed in one year. However, due to the limited number of qualified and experienced personnel on board, as well as competing programmatic priorities for their skills, it could take up to three years to thoroughly review each of the 83 plans. In the meantime, new systems and security plans would be added to the list and these plans, like the initial 83 plans, will be reviewed on a priority basis.

QUESTION: What resources is the Department planning to use to accomplish these reviews?

ANSWER: Currently, the JMD plans to use the five personnel on the CSMC in a part-time capacity to review the computer security plans.

Office Automation

QUESTION: One of the most serious and often expressed automated data processing concerns is the lack of automation support for the field offices and operations. Has the Department identified the automation requirements for its field offices? If not, why?

ANSWER: The Department gives general guidance to the offices, boards, divisions, and bureaus. Field offices and operations come under the specific component governing that particular endeavor, and as such, requests for automation support would be generated from that level. The Department, however, is in the process of implementing an integrated office automation capability within the Department to achieve uniformity in the long term and interoperability in the short term. A comprehensive policy and strategy for design and acquisition of a uniform office automated system was established for the six litigating divisions of the Department, the offices of the United States Attorneys, and senior Departmental management. This policy led to a Project EAGLE contract award that provides for an integrated office automation system for use by all Departmental components, nationwide.

QUESTION: Has the Department established and published a

systems architecture that reflects the needs of the field office? If not, why?

ANSWER: Yes, the Department's Strategic Plan for Automated Information Systems, supplemented by the Department's components Tactical Plans, outlines a Department-wide structure to meet the needs of all levels. The architecture is defined as Departmental data and telecommunications facilities operating in conjunction with distributed systems at the component level, e.g., EAGLE, AMICUS, and the FBI's FOIMS System. The Project EAGLE's systems architecture provides for the needs of both headquarters and field office elements. The architecture, consisting of intelligent workstations and other peripherals linked to file servers, provides for a great deal of flexibility to meet the differing needs of the Departmental components, as well as the headquarters and field office environments.

QUESTION: Has the Department established micro-computer standards for field offices? If not, why?

ANSWER: The Department develops and periodically updates micro-computer standards for the Department as a whole, while components initiate their program-particular standards based on varying needs and missions. The Project EAGLE system represents the Department's office automation standards.

QUESTION: Has the Department established a requirements contract to provide micro-computers and software for field offices? If not, why?

ANSWER: Yes, the scope of the Project EAGLE contract allows any Departmental component the ability to acquire full-featured office automation capabilities. The contract provides the Department with the ability to both upgrade the office automation environment and increase compatibility and interoperability while moving towards uniformity. All office automation functional requirements are covered by this contract, including word processing, data base management, telecommunications (including access to dial-up services and mainframe applications), and electronic mail.

Department ADP Policy

QUESTION: The Systems Policy Staff of the Justice Management Division has been assigned the primary responsibility for policy development, coordination, and oversight for Information Resources Management functions. Where is this staff function located in the organizational structure?

ANSWER: The Systems Policy Staff is a staff directly under the Assistant Attorney General for Administration (AAG/A), who is also the Designated Senior Official (DSO).

QUESTION: Does the Systems Policy Staff have access to the Attorney General?

ANSWER: Yes, through various channels including through the AAG/A-DSO, as well as through the Attorney General's staff.

QUESTION: Does the Systems Policy Staff conduct technology reviews and assessments, including field reviews of component agencies? If no, why not?

ANSWER: While fully supporting the concept, the Systems Policy Staff does not have a formal schedule for technology reviews and assessments including field reviews of component agencies. Such reviews and assessments are undertaken on an ad hoc basis dependent upon program priorities, staff resources, and time constraints, as well as other temporal factors that would have to be considered to do so. Component's strategic and tactical plans, as well as acquisition lists, are carefully reviewed by the Systems Policy Staff, in coordination with the Computer Technology and Telecommunications Staff and the Legal and Information Systems Staff. Technology issues which surface as a result of those reviews are addressed with the components.

QUESTION: A General Accounting Office report in 1986 noted that the Department's organizational structure failed to give the official responsible for Information Resources Management (IRM), the authority or control necessary to plan for these information resources. What measures have been taken to give sufficient authority to the senior IRM for him to do his job?

ANSWER: The Assistant Attorney General for Administration, as the DSO, sets the policy and gives guidance to the various offices, boards, divisions, and bureaus (OBDB) of the Department regarding information resources management and planning. Each OBDB has a designated IRM contact(s) who works with the Systems Policy Staff to plan and implement information resources management.

QUESTION: The Paperwork Reduction Act requires the senior Information Resources Management (IRM) official to report directly to the agency head. Does the senior IRM official for Justice report directly to the Attorney General? If not, why not?

ANSWER: Yes, the Assistant Attorney General for Administration reports directly to the Attorney General.

QUESTION: Under Departmental regulations, all components are required to obtain pre-acquisition approval from the Assistant Attorney General for Administration for all Automated Data Processing (ADP) acquisitions in excess of a given cost threshold. In 1987, the Assistant Attorney General approved a $2 billion, 8-year program which is so general that it is difficult to determine if some ADP

acquisitions were originally intended for inclusion under the approval. Why did the Assistant Attorney General approve such a broad scoped and general list of projects rather than requiring annual approval of proposed ADP acquisitions?

ANSWER: The FBI has in place a highly-structured, centralized automated information system (AIS) management and planning program. In an attempt to plan efficiently and effectively for the acquisition of the necessary AIS resources needed to support the FBI's distributed data processing environment, the FBI prepared a Comprehensive Advanced Systems Expansion (Case) Project. This Project, totaling $2 billion, identified projected acquisition expenditures needed to support the FBI's existing Headquarters Computer Center (HQCC) and the FBI's two existing Regional Computer Support Centers (RCSC's). In addition, Project Case addresses future AIS resources needed to support three additional proposed RCSC's.

The Department reviewed the documentation relative to Project Case and partially approved the FBI's request only for those planned acquisitions needed to support the FBI's existing HQCC and two RCSC's. The Department's approval was consistent with the Delegation of Procurement Authority (DPA) obtained by the General Services Administration (GSA). The approval was for a total of $194,604,350 versus the requested $2 billion. In addition, a detailed list of those items approved was delineated in the DPA and AIS approvals. The list specifically identified the acquisitions approved under Project Case. Approval was granted only for those items identified in the DPA/AIS approvals. Any additional requirements outside the scope of Project Case and/or above the FBI's AIS threshold must be submitted to the Department for approval. To ensure that the FBI is monitoring and controlling Project Case, the Department has requested that the FBI provide a detailed list of those acquisitions acquired to date under the approval of Project Case.

Overall, the Department and the FBI have worked closely together to ensure that the terms and conditions of Project Case are followed accordingly.

QUESTION: What mechanism does he have in place to ensure that all planned ADP acquisitions by the FBI are reviewed and approved prior to being procured?

ANSWER: The FBI has a $250,000 threshold with conditions that each acquisition supports their long-range automation strategy. Every six months, the FBI must provide to the Systems Policy Staff (under the auspices of the AAG/A) a list of acquisitions below the threshold. Acquisitions above the threshold are submitted through the AIS program in the preprocurement phase. The threshold is intended to address unanticipated AIS requirements which could not be planned for, but are nevertheless necessary to meet critical operational needs, as well as to ensure that the FBI has the flexibility and discretion to acquire the necessary support to maintain a major AIS program. The approval is not meant as an alternative to good planning and management. To ensure that AIS acquisitions support the Department of Justice Strategic Plan for Automated Information Systems as well as the FBI's Strategic and Tactical Plans, all of the FBI's AIS acquisitions must be coordinated by the FBI's Senior Official for Information Resources Management.

Department Data Centers

QUESTION: The Department just completed a costly move and upgrade of its Washington and Dallas data centers. We understand that the Federal Bureau of Investigation is now planning to build a data center at Vint Hills, VA. Has the Department examined the technical and economic benefits of consolidating the Washington and Vint Hills data processing operations? If not, why not?

ANSWER: In 1986, the Department reviewed the feasibility of co-locating the Washington data center with the FBI's proposed facility at Vint Hill Farms Substation in Fauquier County, VA. At that time, the need to relocate the Washington data center due to the severe space constraints and environmental problems was so demanding that it was determined that the Washington data center move could not wait for the completion of the Vint Hill Farms facility. The technical and economic benefits were reviewed during 1986 and it was decided to proceed with the relocation of the Washington data center due to the long lead time for completion of the Vint Hill Farms facility. The Washington data center relocated to a General Services Administration leased facility in Rockville, MD, during September 1989. The lease will extend through 2005.

QUESTION: What are the actual or planned costs for the three separate data centers?

ANSWER: The Dallas and Washington (Rockville) data centers are operated on a cost reimbursable basis. The Washington (Rockville) data center, with central site support, is operated with 112 workyears and has an annual operating plan of $41 million. The Dallas data center is operated with 24 workyears and has an annual operating plan of $10 million. The Justice Management Division (JMD) is currently working with the Drug Enforcement Administration to provide computer processing support for its EPIC center in El Paso, TX, in order to reduce the overhead of yet another data center in this Department's inventory. The FBI, in an August 1989 expansion study, estimated construction costs associated with a combined Headquarters Computer Center and Mid-Atlantic Regional Computer Support Center at Vint Hill Farms Station, VA. This study is currently under review by the Office of Management and Budget.

QUESTION: Are there any technical reasons to justify the operations of three different data centers?

ANSWER: The FBI and JMD requirements for security differ. The FBI's requirement is to process classified information while the JMD centers currently process only at the agency sensitive level. The regulations concerning the security of computer systems dictate that the facility and computer system security level is determined by the highest level of any computer system application which is processed by the systems in the facility. In the area of contingency, the separation of information across multiple data centers reduces the vulnerability of a single incident rendering the total Department without any mainframe data processing capability. The single incident could be from a natural or human caused disaster. Further, the FBI's Field Office Information Management System (FOIMS) itself will require multiple computer support centers. This requirement is based on the need for continuity of operations should one or more center fail or become inoperable and to provide sufficient computing capacity required to support the FOIMS operating environment.

QUESTION: Have any cost benefit analyses been completed that compare the cost of the present mainframe operations to benefits of a shared facility? If not, why not?

ANSWER: No thorough cost benefit analysis has been completed that concerns the FBI and JMD sharing a joint facility. While it appears on the surface to represent potential cost savings, the FBI's requirement for a secure environment (to protect sensitive computer systems and telecommunications) precludes the establishment of a joint FBI/JMD facility unless significant logistical obstacles are overcome.

Reorganizations

QUESTION: The Department of Justice is required to submit an advance notification to the Appropriations Committees whenever funds are to be obligated for the relocation or reorganization of offices. In addition, Section 105 of the 1989 Supplemental Appropriations Act states that no funds in that or any prior act shall be available for obligation to relocate, reorganize, or consolidate any office under the jurisdiction of Justice.

The Immigration and Naturalization Service (INS) is consolidating offices in the Dallas area from three to one leased building. In 1989, the move cost $432,000 including alterations. The newly leased building in the Dallas area provides more space than in the three buildings where INS was housed. The increase is 30,719 square feet, and the annual rent increase is about $280,000.

The General Counsel for Justice concluded that the Dallas move was an "ordinary" move within one locality that did not require notification to the committees. However, in an earlier move involving the consolidation of the United States Marshals and the Drug Enforcement Administration in the Washington, D.C., area to a Pentagon City building, notification was sent to the Committees.

What is the rationale for reporting the Washington, D.C., area move and not the Dallas INS move? The $432,000 of 1989 expenditures was charged to the INS Administrative Services Program and the base for this program was exceeded by more than $250,000. Therefore, why did Justice not send a reprogramming notice to the Appropriations Committees?

ANSWER: In accordance with Section 606 of the Appropriations Act, the Department notifies the Appropriations Committees of both Houses of Congress of reprogrammings which meet the reporting threshold. In September 1989, the Department learned that the Southern Region of INS had started the first phase of a move affecting the Southern Regional Headquarters and that the cost of the move was estimated to be between $700,000 and $900,000. Because the estimated cost of the move exceeded the notification threshold, the Department stopped the move in progress and enjoined the INS from continuing it until proper notification of the Congress of a reprogramming could take place.

With respect to the assertion that "the General Counsel for Justice concluded that the Dallas move was an 'ordinary' move within one locality that did not require notification to the committees," see the answer to the following question.

QUESTION: Would the General Counsel have ruled differently if he had been aware that the $432,000 expended in 1989 funds caused the INS Administrative Services Program to be exceeded by more than the $250,000 threshold for reprogramming?

ANSWER: The Office of General Counsel (OGC), Justice Management Division, sent a memorandum to the Assistant Attorney General for Administration, in response to his request for OGC's opinion on the meaning of the restriction contained in section 105 of the 1989 Supplemental Appropriations Act. The OGC did not rule on the Dallas INS move.

QUESTION: What is the justification for acquiring an additional 30,719 square feet of space for INS in the Dallas area?

ANSWER: Although INS requested an additional 30,719 square feet of space as part of the relocation action, this additional space was denied, and space usage of 94,000 square feet was approved. It was directed that the additional 30,719 square feet be outleased. Approximately

20,000 square feet has already been outleased to the Dallas Bank Fraud Task Force. INS is in the process of reviewing their space needs for the Regional Office in Dallas, Texas. When the reassessment is complete, the Department will forward the relocation notification to the Congress. After approval of the relocation action has been received, INS will be allowed to finish the relocation of the Southern Regional Office in Dallas, Texas.

QUESTION: Was the lease award for the new building coordinated with the lease expiration dates for the three buildings that were vacated by INS? As a result of the move, how much rent was paid for vacant space in the new building or in the three vacated buildings?

ANSWER: The General Services Administration made the effort to coordinate the lease expiration dates for the three buildings with the new lease. The lease for the new Southern Regional Office was awarded during a period when cancellation privileges on the existing leases could be exercised. Redesign of the space in the Southern Regional Headquarters building is continuing, and INS has organized the move to minimize any rent paid on vacant space.

No-Year Funds

QUESTION: The Federal Bureau of Investigation (FBI), Drug Enforcement Administration (DEA), and Immigration and Naturalization Service (INS) each obtain funding from annual Salaries and Expenses appropriations that also includes some no-year and 2-year funds. The records show that these three organizations carried forward unobligated no-year funds each year for 1984 through 1988. The FBI generally included carryover in its estimates for the budget year. However, DEA and INS did not include any carryover in the budget estimates. The exclusion of estimated carryover of unobligated funds from the budget year in effect overstates needed budget authority.

Two other Department of Justice no-year appropriations also did not show carryover in the budget year, those for the Office of Justice Programs and Support of United States Prisoners. For these, the total carryover of unobligated funds for 1984 through 1988, averaged approximately $64 million each year.

Why does Justice show the estimated carryover of unobligated prior year funds in the budget year for the FBI and not for DEA, INS, Office of Justice Programs, and Support of United States Prisoners?

ANSWER: DEA--At the beginning of each fiscal year, DEA performs an intensive analysis of financial needs and develops an internal financial plan that addresses these needs and utilizes all available resources to satisfy them. While DEA holds nothing in abeyance and plans to fully utilize all available resources in each fiscal year, there are frequent systemic or processing problems that preclude the completion of major equipment or contractual acquisitions during the budget year. This situation then requires the carryover of unobligated funds from the budget year into the next fiscal year.

INS--INS has not included the estimated carryover of unobligated prior year funds since these funds have been predominantly related to construction projects funded with "no-year" appropriated resources. Construction projects generally progress at different rates which are related to size and/or complexity, resulting in considerable variation in the timing of obligations.

For this basic reason carryover has not been estimated for use in budget year estimates since project-related variation would make the estimate unreliable.

OJP--The OJP appropriation is largely made up of State and local grant programs, as opposed to salaries and expenses. For that reason, OJP is unable to predict almost a year in advance either how much money will be unobligated at the end of the year, or in which programs the unused balances will exist.

SUSP--The estimated carryover of unobligated prior year funds has not been shown in budget estimates for the Support of United States Prisoners (SUSP) appropriation because of the difficulty in accurately predicting the amount that will be carried forward in any given year.

Prior to 1988, all unobligated balances brought forward in the SUSP appropriation were Cooperative Agreement Program (CAP) funds. The carryover of CAP funds is due mainly to the unpredictability of when State and local entities will actually sign cooperative agreements with the United States Marshals Service, thereby accepting renovation or construction funds in exchange for guaranteed bedspaces for Federal prisoners. The timing of the State or local signature often depends on action by the State or local legislative body and/or on completion of the State or local entity's own portion of the financing for the construction project, both of which are difficult to predict. If a CAP agreement is not signed by the State or local entity by the end of the fiscal year, the funding for it is carried over into the next fiscal year.

The carryover of CAP funds is also caused to a lesser extent by recoveries of prior year obligations, which occur when signed CAP agreements fall through and the funds cannot be reobligated prior to the end of the fiscal year.

In 1988 and 1989, the unobligated balances brought forward included both CAP funds and funds for the Care of United States Prisoners (CARE). The carryover of CARE funds is, again, the result of unpredictability. Obligations for CARE are dependent on many variables, such as the number of pre-trial detainees, the jail day rates charged by

State and local facilities, and the length of prisoners' stay in these facilities. At the time budget estimates are prepared, information on CARE expenses in the current year has not been sufficient to accurately predict carryover into the budget year.

QUESTION: It is realistic to assume that all no-year funds will be obligated in the budget year and none carried forward when the history of these accounts show otherwise?

ANSWER: DEA--DEA enters every fiscal year assuming full obligation of all available resources. No carryover is planned and only occurs when major purchases cannot be accomplished within the fiscal year. Therefore, it is reasonable to assume that DEA will make every effort to fully obligate all available resources and only carryover those funds which are absolutely necessary to complete work begun during the budget year.

INS--Given the nature of the construction projects funded with "no-year" resources, an estimate of carryover for construction projects could be viewed as unrealistic in view of the factors which can influence the timing of obligations in the various phases of construction.

The solution may be in the establishment of a formula for estimating carryover which recognizes certain timing factors by size and type of construction project.

OJP--At the start of a fiscal year, it is realistic to assume all available funds will be obligated. Factors that affect the obligation of funds do not arise until the year progresses. For instance, it is generally not known until late in the fiscal year that a particular State will not participate in the Juvenile Justice formula grant program. More importantly, circumstances may delay a State's application for formula grant funds until the following year. The State and local grant programs were established in a no-year account specifically to accommodate this type of problem. While it is true that there are typically unobligated balances carried over from the current year to the budget year, any estimate would have to be identified by specific program. These carryover balances vary for an individual program from year to year. Lacking sound information, it would be irresponsible to estimate a significant unused carryover balance that may not materialize, particularly when such an action could wrongly influence Congressional budget deliberations and result in an offsetting reduction for that program.

SUSP--Although the assumption of no carryover funds into the budget year is not completely realistic, given the fluctuation in the amount of carryover funds from year to year and the SUSP appropriation's frequent supplemental requirements, the Department feels it is more appropriate to assume no carryover funds rather than to assume an arbitrary amount.

QUESTION: To what extent did the carryover of each agency in 1986, 1987, 1988, and 1989 represent actual unmet requirements also carried over from the prior year and "free" funding no longer tied to prior year needs?

ANSWER: DEA--Since DEA's only carryover is for equipment and contractual requirements that could not be acquired during the budget year, all carryover is for specific prior year needs that still exist in the following fiscal year.

INS--In all instances carryover was related to actual requirements. Carryover in 1988 was part of the two-year supplemental appropriation for the implementation of the Immigration Reform and Control Act of 1986. In other years it was "no-year" funding specifically tied to construction activity. A small amount of carryover also occurs in the Research and Development program. This remains tied to this activity by specific appropriation language.

OJP--Carryover balances brought forward from one year to the next are generally from two sources: 1) unobligated funds from the current year appropriation and 2) recoveries from obligations incurred in prior years. During the years addressed, one exception to these types of balances was the Emergency Assistance Program, for which funds from the 1986 availability were carried over each year from 1986 through 1989, due simply to the receipt of few eligible applications for assistance. The bulk of OJP's end-of-year unobligated balances are from the current year appropriation. These resources are simply not obligated before the fiscal year expires, for a variety of reasons. For instance, the States may not have submitted their grant applications before the year-end or in sufficient time to allow the completion of administrative and/or financial reviews. This was the case for the Anti-Drug Abuse formula grant program in 1987, which was the first year of funding for the program. In that year, over $30 million for 12 States was included in the carryover balance, representing 65 percent of the balance. Those funds were then awarded at the start of 1988. In 1989, the end-of-year carryover balance included $7.6 million for Juvenile Justice formula grants, which represented 1988 and 1989 allocations for 16 States and Territories. These grants which will have been awarded this fiscal year, were for the most part, delayed due to new jail removal compliance regulations and the necessity to await the receipt of information from the States in order to determine compliance with the regulations and thereby confirm the State's eligibility to receive funds. In accordance with the Juvenile Justice and Delinquency Prevention Act, formula grant State allocations that are available because of non-participation in the program are made available directly to localities as discretionary funds. This process is typically lengthy and would result in a grant award at least one year following appropriation. Agency-wide, most discretionary funds must go through a process leading up to grant awards or contracts. Program priorities are established and program plans are developed. During this process, other Justice Department bureaus and other Federal agencies are frequently consulted to ensure appropriate coordination. The programs are then publicly announced and some programs are statutorily required to allow for a period of review, comment, and recommendation from State and local governments, public and private agencies before the plan becomes final. Applications are then solicited, in most instances, competitively. Upon receipt, the discretionary grant applications must undergo numerous programmatic and financial reviews by the program offices. The applications must also pass through peer reviews, administrative reviews, civil rights and equal employment opportunity program reviews, and financial reviews that address the applicant's financial capability, fiscal integrity audit resolutions, and the project's budget and indirect costs. Throughout this process, negotiations with applicants are frequently required. Contracts must also go through the process of request for proposals, review of proposals, and negotiation prior to awarding the contract. The foregoing information provides insight into some of the extensive, involved procedures that are necessarily followed and some of the problems that are encountered in administering OJP's grant programs. Although unobligated funds exist at year-end, most of the resources are committed and are merely pending award.

SUSP--The majority of carryover funding into 1986, 1987, and 1988, being CAP funding, was associated with agreements initiated in the prior years and was, therefore, not free for use to meet other current year needs. The majority of carryover funding into 1989 was CARE funding and was available to meet increased expenses for the care of prisoners in 1989.

Reprogrammings

QUESTION: The Department of Justice issues annual detailed budget execution instructions for its organizations to follow in managing resources and for notifying its administrative office of reprogrammings which meet Congressional criteria. Reprogramming requests are reviewed by the Office of the Assistant Attorney General for Administration and the Office of Management and Budget (OMB) before transmittal to the appropriate Congressional Committees.

Justice's budget execution instructions state that July 1 is the deadline for submitting reprogramming notices to the administrative office and September 1 is the deadline for notifying the Appropriations Committees. In effect, individual organizations have to submit proposed reprogramming requests to the administrative office 90 days before the end of the fiscal year. In order to meet

the July 1 deadline, some organizations start working on reprogramming as early as March.

The Committees and OMB have separately criticized Justice for filing reprogramming notifications late in the fiscal year after the reprogrammings have occurred. Despite the criticism, Justice sent six reprogramming notices to be Committees in September 1989.

Has Justice revised its procedures so as to comply with the law and submit reprogramming notices to the Committees no later than September each year?

ANSWER: The Department issued guidance in the 1990 BUDGET AND PROGRAM EXECUTION CALL that stipulates notification is required at least 90 days prior to the end of the operating year. To ensure that the Department meets this 90-day deadline, if upon review of expenditures it is determined that a reprogramming is necessary, the Assistant Attorney General for Administration may request that a reprogramming be submitted to the Department within 30 days.

QUESTION: Why do reprogramming notices have to be prepared 90 days before the end of the fiscal year? Can Justice reduce this 90-day lead time?

ANSWER: Reprogramming notifications must be submitted to the Congressional Committees by September 1. In order to meet this deadline, reprogrammings need to be prepared 90 days prior to the end of the fiscal year in order to give sufficient time to all organizations reviewing them. Following is the time sequence for that review process:

1. To the Congressional Committees by September 1;
2. If effective on September 1, to the Congressional Committees 15 days prior;
3. To the Office of Management and Budget (OMB) 15 days prior;
4. To the Department 15 days prior;
5. 15 days slippage.

The Department is also mindful of the fact that Congress is normally in recess for the most of the month of August and the Executive Branch review is often delayed because of examiner/analyst leave. In reality, in order for the 15-day clock to run while the Congress is in session, the Department needs to get the reprogrammings to the Committees before August 1, if possible. This makes a 90-day lead time insufficient in many cases.

QUESTION: Given the 90-day lead time established by Justice's instructions, are reprogrammings identified in the last 3 months of the fiscal year ever reported to the Committees?

ANSWER: Yes, the Committee received six major reprogrammings for 1989 from the Department in the month of September 1989. All six of the reprogrammings included actions that became known in the last three months of the fiscal year. There is however, a significant problem in reprogrammings that are not planned but simply develop as a result of operations. For example, if the Drug Enforcement Administration begins what appears to be a domestic investigation that later turns out to have significant foreign ramifications, this investigation may be reclassified as a special enforcement operation. Should this case be significant, it will breach the reprogramming thresholds and, if it occurs late in the fiscal year, will not be able to be reported to Congress by September 1. Since these kinds of changes occur frequently and unnecessary reprogramming notifications are to be avoided, the need for notification is often not identified until late in the fiscal year.

QUESTION: What procedure or instruction has Justice established for processing reprogrammings that are identified late in the fiscal year?

ANSWER: The Department has revised the budget execution process in order to surface reprogramming needs earlier in the fiscal year. In addition, four weeks prior to the July 1 deadline, the Director, Budget Staff, will notify by memorandum all appropriate organizations of the need for a reprogramming; two weeks prior to the July 1 deadline the Deputy Assistant Attorney General, Controller, will notify by memorandum all appropriate organizations of the need for a reprogramming submission; and on July 1 the Assistant Attorney General for Administration will notify by memorandum the appropriate organizations that they have missed the July 1 deadline, and request immediate submission of the reprogramming request. Except in urgent or emergency circumstances, the AAG/A will not consider revisions requiring Congressional notification within 90 days of the end of the operating year.

QUESTIONS SUBMITTED BY MR. MOLLOHAN

Fees and Expenses of Witnesses

QUESTION: Why does the cost of experts continue to escalate?

ANSWER: Expert witness costs are escalating most dramatically in many new, non-traditional disciplines associated with environmental protection, bank fraud and medical malpractice. Rate increases, and subsequently higher overall costs, are an unfortunate by-product of the prevailing market condition of under-supply for growing demand. In many cases, we find that we are competing directly with opposing counsel to hire qualified experts from a pool of a mere dozen potential experts nationwide. The issues in these cases are at the forward edge of both science and technology. In some of these new disciplines, which include groundwater migration modeling, geomorphology, economic modeling and genetic engineering, the number of sufficiently qualified experts is so small and the demand so great that most witnesses are in a position to demand unusually high fees. Subsequently, the deep-pocket corporations and high-profile law firms who are able to pay such fees, force the Department into bidding wars for top-notch experts. A primary example of this kind of situation occurred in our search for witnesses for the Exxon-Valdez case. When we began contacting potential witnesses, we found that Exxon Corp. had already retained two Nobel-prize laureates in economics, and the State of Alaska had contacted yet another.

Further, the number of hours worked per expert is increasing, especially in the most technical and highly sophisticated areas of litigation. This is due to the continuing increase in complexity of the factual issues presented in our cases and to the increased sophistication of opposing counsel, whose carefully crafted arguments must be rebutted with equal care.

QUESTION: Have you examined any alternatives for holding these rates down?

ANSWER: As in previous years, we continue to stress to our field attorneys the need for prudence in their negotiations with potential witnesses. In some cases involving less complicated issues, this may mean accepting a witness who is less qualified than their first choice.

One major new initiative we have undertaken just this year is the allocation of expert witness funding to the individual user organizations. Previously, these resources were vested in a central fund and withdrawn on a first come, first served basis. However, the new structure allows for better management of available funding by establishing financial accountability at the point of witness contact.

QUESTION: What would be the effect if Congress imposed ceilings on the rates that could be paid to experts? Would they refuse to be experts for the Government? Would they accept the lower level?

ANSWER: Unless Congressionally-imposed ceilings applied equally to the private bar, such ceilings would be very detrimental to the Department's litigative efforts. Specifically, if only the government was required to operate within statutorily established ceilings, we would not be able to compete with the private bar for the best qualified experts. In time, because the more highly qualified witness would not lower their fees to work for the Government, the Government's pool of acceptable witnesses would shrink, leaving us to choose from a less qualified population of candidates. Accordingly, the effectiveness of our litigation would diminish since judges and juries tend to give greater credence to the testimony of lettered experts who can explain complex matters in simple terms. To attract and hire such experts, the private bar would merely need to spend a few dollars more than the mandated ceiling. Expert witness rate ceilings could potentially generate some short-term savings for the Fees and Expenses of Witnesses appropriation, but they would be more than offset by long-term losses to the Judgement Fund.

QUESTION: Can you provide specific examples where cases were impacted due to funds not being available for expert witnesses?

ANSWER: In the midst of trial preparation for Daewoo, a multi- million dollar customs fraud case, a moratorium was imposed on new expenditures for expert witnesses. To successfully prosecute this case, Civil Division attorneys required the services of a reputable accounting firm that was capable of quickly mastering volumes of complicated financial data, and that was also experienced in trial presentations. Threatened with the possibility that sufficient funds would not be available to acquire these services, the lead trial attorney prepared to accept a less than favorable settlement offer. Fortunately, at that particular time, we were able to defer certain lower priority expenditures to ensure that sufficient funds would be available for Daewoo. Subsequently, the Department was able to hire its witness and proceed in the litigation with a much stronger case. As a result, the Government was awarded $34 million in a pre-trial settlement. Without sufficient funding for the required expert witness in this case, the Government would have forfeited millions of dollars in Treasury collections.

OPENING REMARKS

Mr. MOLLOHAN [presiding]. The Committee will come to order.

We will now hear testimony concerning the United States Trustee System, which requests new budgetary authority of $65,673,000 for fiscal year 1991, to be derived from the fees collected into the fund. We will insert into the record at this point the fiscal year 1991 budget justifications for this request.

United States Trustee System Fund

Summary Statement

Fiscal Year 1991

In 1991, the United States Trustee program is requesting a net program increase of $970,000. With this increase, the program will reach a resource level of $65,673,000, 929 positions and 913 workyears. Our program enhancement addresses a critical oversight aspect of the program, and because of the revenue generation features of the U.S. Trustee System Fund, the implementation of this initiative can be funded at no cost to the public fisc.

The initiative contained in this request is for additional funding to expand the U.S. Trustees program of audits of the Chapter 7 panel trustees. Consistent with the Attorney General's policy goals and management objectives, the highest priority of the UST program is the upholding of standards of integrity and accountability throughout the bankruptcy system.

ADMINISTRATION OF CASES

The Administration of Cases program involves the oversight of bankruptcy cases administered in federal judicial districts under Public Law 99-554. Through this decision unit, 88 of the nation's 94 federal judicial districts are served by 21 U.S. Trustees operating through 88 offices. The remaining six judicial districts will by existing statute be brought into the program no later than October 1, 1992.

The U.S. Trustee program will continue to emphasize its Congressional mandate to prevent fraud, dishonesty and overreaching in the bankruptcy arena. In addition to the aggressive monitoring of fees charged by bankruptcy practitioners and vigilant oversight of case trustees, procedures for referring criminal cases and matters to the U.S. Attorneys, Federal Bureau of Investigation (FBI) and state and local law enforcement bodies will be strengthened.

MANAGEMENT AND ADMINISTRATION

The U.S. Trustee program requires centralized policy guidance, coordination and administrative support. These functions are provided through the Management and Administration decision unit. Program-wide legal and administrative policies are established and monitored by the Director and Counsel, who provides guidance and support through the General Counsel's staff, Policy and Planning staff, Oversight and Compliance staff, Office of the Controller, and administrative, personnel, automation and other support services through the Executive Officer's staff.

Audits of Trustees. One of the most critical responsibilities of the UST program is the ongoing audits of private trustees. Additional funding of $1,000,000 is requested for this function in 1991. These audits are necessary to verify that the assets of bankruptcy estates are maintained in compliance with applicable laws and regulations. The objectives of the audits are to determine: (1) the adequacy of the trustee's internal controls over bankruptcy estate cash; (2) the accuracy of cash records; (3) compliance with applicable laws and regulations; and (4) adequacy of the trustee's bond level.

The greater the frequency of these audits, the greater the integrity of the system and,therefore, the lower the opportunities for misappropriation and criminal activities. Moreover, because the program is relatively new, there are numerous trustees who have never been audited and may not be for several years. At the current base level for the audit function, it will take another four years to audit each of the 1,600 chapter 7 panel trustees. With the funding requested, the program will be able to contract for these audits every three years.

Through the efforts of our program significant instances of improprieties have been discovered. In Santa Rosa, California, a former chapter 11 and chapter 7 trustee embezzled estate funds of $1,900,000 from cases under his administration. In Cedar Rapids, Iowa, a chapter 7 panel trustee embezzled estate funds of $741,000 from 52 cases under his administration. Furthermore, the reconstruction of case files and financial documentation resulted in criminal referrals for misappropriation of bankruptcy assets of 18 additional trustees.

Legal Activities
United States Trustee System Fund
Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in the appropriation language for the U.S. Trustee System Fund listed and explained below. New language is underscored, and deleted matter is enclosed in brackets.

United States Trustee System Fund

For the necessary expenses of the United States Trustee Program, [$60,729,000] to remain available until expended and to be derived from the Fund, for activities authorized by section 115 of the Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act of 1986 (Public Law 99-554): Provided, That deposits to the Fund are available in such amounts as may be necessary to pay refunds due depositors. $65,673,000

(12 U.S.C. 1904b; Department of Justice Appropriations Act, 1990; additional authorizing legislation to be proposed).

Explanation of Change
No substantive changes proposed.

Long-Range Goal: To assure effective administration of bankruptcy cases, with the maximum confidence of creditors, debtors, and the courts, and the public. Also, to permit judges to focus on legal matters in the cases before them, by performing case administration.

Major Objectives: In creating the U.S. Trustee system, the Congress cited the necessity for separating administrative and adjudicative functions "to afford bankruptcy litigants the fair and impartial justice to which all other litigants in the federal courts are entitled" (H.R. Rep. No. 595, 95th Cong., 1st Sess. 91 (1977)). Within this broad responsibility the objectives of the U.S. Trustees are:

To ensure a consistent nationwide approach toward the application of bankruptcy laws.

To supervise the performance of chapter 11 debtors-in-possession (or trustees) to preserve the going-concern value of the business, prevent administrative insolvencies and guard against tax losses to the Treasury.

To maximize assets of estates and distributions to creditors.

To monitor the costs of professional and other services in the administration of bankruptcy estates.

To recruit, select, train, and maintain panels of qualified individuals to serve as private trustees in Chapter 7 cases.

To supervise the administration of chapter 12 and 13 cases by standing trustees, and ensure that costs are held to a reasonable level.

To encourage creditor participation in bankruptcy cases.

To ensure that all parties in bankruptcy cases act in conformance with the law, and that fraud, dishonesty, and overreaching in the bankruptcy arena are prevented.

To assign cases to panel members on a fair and impartial basis and supervise their performance.

Base Program Description. The objectives that the U.S. Trustee System were created to accomplish have not changed since the inception of the program. The Trustee program has expanded to include 96% of the total bankruptcy filings in the United States. Fiscal year 1991 will be the third year that the U.S. Trustee program is totally self funded by monies deposited (filing fees and Chapter 11 Quarterly fees) in the United States Trustee System Fund.

Under the Administration of Cases program, the U.S. Trustees oversee the administration bankruptcy cases filed in federal judicial districts under the Bankruptcy Judges, United States Trustees and Family Farmer Bankruptcy Act of 1986. Currently, 88 of the nation's 94 federal judicial are served by 21 U.S. Trustees operating through 88 offices. The remaining six judicial districts will be brought by existing statute into the program no later than October 1, 1992.

Through this decision unit, the U.S. Trustee program realizes its Congressional mandate to prevent fraud, dishonesty and overreaching in the bankruptcy arena. In addition to the aggressive monitoring of fees charged by bankruptcy practitioners, procedures for referring criminal cases and matters to the U.S. Attorneys and state and local law enforcement bodies will be strengthened.

Accomplishments and Workload: The table on the next page summarizes the cases under Chapters 7, 11, 12, and 13 of the Bankruptcy Code.

	1988	1989	1990	1991
Cases Administered under Chapter 7:				
a. Active, start-of-year	370,881	351,966	344,966	332,966
b. Filed	437,000	454,000	525,000	575,000
c. Inactivated	455,915	461,000	537,000	589,000
d. Active, end-of-year	351,966	344,966	332,966	318,966
Cases Administered under Chapter 11:				
a. Active, start-of-year	77,096	74,012	70,181	64,068
b. Filed	18,071	17,200	14,800	14,800
c. Inactivated	21,155	21,031	20,913	20,913
d. Active, end-of-year	74,012	70,181	64,068	57,955
Cases Administered under Chapter 12	2,941	1,800	1,200	1,200
Cases Administered under Chapter 13	153,000	167,000	199,000	219,000
Total Filings, All Chapters	611,012	640,000	740,000	810,000

Explanation. **Estimates provided above are for the entire United States. The six districts that will not be part of** the United States Trustee Program until 1992 represented only 4% of the filings in 1987 and 1988.

Long Range Goal. To furnish U.S. Trustees with effective and efficient program management, policy direction, legal advice, administrative support and coordination.

Major Objectives.

To develop policies which foster efficient implementation of the program created by the "Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act of 1986," (Pub. L. 99-554), including assuring that actions taken in bankruptcy cases are consistent with the law.

To develop program priorities and exercise program management.

To implement the nationwide expansion and provide continuing support for the U.S. Trustee program.

To review the management operations of field offices and recommend systems and procedures for improving the efficiency and effectiveness of these offices.

To provide a full range of administrative support services to the field offices, including personnel, procurement, and space management.

To provide legal and paralegal research and support services to field offices.

To determine ADP and word processing requirements of field offices and provide for the necessary procurement, installation and maintenance of suitable systems.

To supervise audits of private trustee performance.

To develop and maintain administrative, substantive and law enforcement operating manuals for guidance of U.S. Trustees.

To allocate field office staff and other resources, and to control the expenditure of funds in a manner which permits program accomplishments within appropriated levels and consistent with OMB Circular A-123.

To provide liaison with other Department of Justice organizations concerning administrative and legal matters.

To provide liaison with Congress and with central administrative bodies, such as the Office of Management and Budget, the Office of Personnel Management, the General Services Administration and the Administrative Office of U.S. Courts.

To manage the U.S. Trustee System Fund.

Base Program Description. The U.S. Trustee system requires centralized policy guidance, coordination and administrative support. The Director and Counsel and the Deputy Director of the Executive Office for United States Trustees provide policy and management direction to the U.S. Trustees and their staffs in the field. Program-wide legal and administrative policies can only be established and monitored effectively from one central location.

The General Counsel's staff is responsible for giving legal advice and opinions to the U.S. Trustees and for providing assistance in maintaining the quality of legal work performed in the field offices. The Policy and Planning staff is responsible for management assessments, internal control compliance, and overall policy planning. The Office of the Controller is responsible for budget development and execution, resource allocation, direction of collection activity and management of the U.S. Trustee System fund. The Oversight and Compliance Staff provides monitoring guidelines.in case administration for the standing and panel trustee, including the independent audit process; financial reporting requirements for chapters 7, 12 and 13; as well as technical assistance to the United States Trustees for all financial aspects of bankruptcy case administration.

The Administrative staff is responsible for program wide procurement and contracts, personnel management, property, security, space, accounting, and automated management information systems. Numerous federal regulations, laws and executive orders that govern administrative matters require the services of the Executive Office. For example, the General Services Administration regulations governing the acquisition and use of space require centralized handling of these responsibilities. The complexity of federal personnel regulations likewise precludes the delegation of this function to field office personnel. Procurement can be handled more cost effectively at the headquarters level.

U.S. Trustee System Fund Revenue

The revenue projections below are derived from the existing fee structure. Revenue estimates are made on a modified cash receipt basis. The filing fee revenues are based on actual and historical court filings.

United States Trustee System Fund Financial Activity
(in thousands of dollars)

	1989	1990	1991
Unappropriated balance, start of year	51,916	63,994	65,598
Collections on Deposit:			
a. Case filing fees	23,427	24,984	27,150
b. Chapter 11 Quarterly Fees	31,187	32,015	30,464
c. Interest Income	3,667	4,279	3,766
d. 28 U.S.C. 586(e) funds	1,167	365	275
Total, Collections on deposit	59,448	61,643	61,655
Total available for appropriation	111,364	125,637	127,253
Appropriation	(47,370)	(60,039)	(65,673)
Unappropriated balance, end of year	63,994	65,598	61,580

The Revenue Analysis staff receives monthly data from the Administrative Office of the U.S. Courts (AOUSC) on the amounts credited to the Fund for filing fees collected by judicial district offices of the bankruptcy and district courts. These reports are monitored against projected revenues to determine the status of filing fees deposited to date.

The U.S. Trustee program collects chapter 11 fee revenue through a lock box facility under a U.S. Treasury Department contract with a bank. Chapter 11 fees are deposited to the credit of the UST account, advice of the deposit is made to Treasury, and detailed payment information to EOUST is transmitted each day.

Revenue in the Fund that is not needed for current expenses is invested in Treasury securities, and the income so earned accrues to the fund. This investment income increases the U.S. Trustee System Fund revenue which minimizes the financial burden on users of the system.

Program Changes

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Management and Administration..	54	52	$5,804	54	52	$6,804	...	...	$1,000

Audits of Trustees. This program will require a program increase of $1,000,000 to contract for audits of private trustees in 1991. These audits are necessary to verify that the assets of bankruptcy estates are maintained in compliance with applicable laws and regulations. The objectives of the audits are to determine: (1) the adequacy of the trustee's internal controls over bankruptcy estate cash; (2) the accuracy of cash records; (3) compliance applicable laws and regulations; and (4) adequacy of the trustee's bond level.

Since the inception of the U.S. Trustee program, audits of private trustees have uncovered significant instances of fraud and abuse. The certainty of an audit recently caused a trustee in Iowa to admit to the embezzlement of over $741,000 in estate funds during the past 20 years. The greater the frequency of the audit, the lower the opportunity for undetected improprieties and significant losses. Moreover, because the program is relatively new, numerous trustees have never been audited and may not be for several years. At the current base level for the audit function, it will take another four years to audit each of the 1,600 panel trustees. With the funding requested, the program will be able to contract for these audits every three years.

The Oversight and Compliance staff in the Executive Office for U.S. Trustees, with the United States Trustees, oversee private trustees under the program's general supervision. The staff utilizes private auditors and accounting firms when needed and also works in cooperation with the Inspector General's Office of the Department of Justice. Its mission is to safeguard the funds in bankruptcy estates, and keep a close watch on accountability and reporting of the more than 1,600 chapter 7 panel trustees who oversee liquidation of assets as well as the 250 chapter 13 and chapter 12 standing trustees who administer re-payment plans for debtors in individual and family farm bankruptcies respectively. The audit staff scrutinizes budgets, audit reports, and financial activity of these private trustees, and will respond immediately when there is an allegation or referral of fund shortages. The staff also initiates the reconstruction of records and accounts to determine the amount of the misappropriation or embezzlement of estate funds. Since 1985, 20 trustee misappropriations have been found by the program. Their audits often provide substantial documentation to assist the FBI investigation and the United States Attorney's prosecution. There is, of course, also the benefit we realize by deterring and discouraging wrong doing by trustees who know they would be quickly discovered by the reporting and auditing functions established by the Executive Office for United States Trustees. Furthermore, the recovery of funds to bankruptcy estates increases the dollars available to affected unsecured creditors and builds confidence in the integrity of the bankruptcy system.

[1] The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

Legal Activities
United States Trustee System Fund
Justification of Adjustments to base
(Dollars in thousands)

Mandatory Increases:	Perm. Pos.	Work-years	Amount
1. Additional Compensable day The annual salary rate for Federal employees is based on 260 paid days. During 1991 there is one more compensable day (261) than 1990 (260). Appropriate personnel benefits are included in this figure.	...	...	$152
2. 1990 Full-year pay increase impact on 1991 This request provides for the full-year pay increase of 3.6 percent as contained in the general provisions of the U.S. Treasury, Postal Services and General Government Appropriations Bill, 1990, for civilian and military personnel to be effective in January of 1990. The Department will be required to absorb the total pay raise in 1990. The requested increase of $1,460,000 is the amount required for full year funding in 1991. NOTE: The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.	...	...	1,460
3. 1991 pay increase For the first time, the Administration is proposing to include the costs of the pay increase effective in the budget year with the initial budget request. This request provides for 50 percent of the proposed 4.0 percent pay increase effective January of 1991. The Department will be required to absorb half of the costs of this pay raise. The amount requested, $431,000, is the cost of the pay increase for approximately three-quarters of the of the year assuming a 50-percent absorption.	...	...	431
4. Senior Executive Service increase This request represents the 1991 costs of the pay increase for	...	...	200

for executive level and senior executive service employees. This pay increase is to be effective in January of 1990, but will be absorbed completely for the first year. In 1991, an increase of $200,000 is necessary for this requirement.

	Perm. Pos.	Work-years	Amount
5. Special Salary Rates.. This request provides increases as authorized by law in U.S.C. 5303. The Office of Personnel Management has approved these rates for positions where retention and recruitment of qualified applicants is a problem. The Department's request represents coverage of 33 authorized special rates.	...	...	32
6. Within-grade increases (WGI)............................... This request provides for the expected increase in the cost of within-grade increases. This increase represents WGI costs based on a dynamic model of the Department's employee population.	...	...	145
7. Health Benefits.. The Federal Employees Health Benefits Act (P.L.93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1989, the actual contribution to health insurance increased 27 percent. The requested increase of $206,000 provides funds for actual increased costs from pay period 1 to pay period 2, projected for a full year.	...	...	206
8. Federal Employees Retirement System (FERS)................ This request provides for the additional costs in 1991 necessary to continue the implementation of the Federal	...	...	418

	Perm. Pos.	Work-years	Amount
Employees Retirement System Act of 1986, P.L. 99-335. The Act established a retirement program for Federal civilian employees hired after December 31, 1983, who are covered by social security and for employees under the Civil Service Retirement System who chose to transfer to the new system. The increased requirement for 1991 is based on actual agency payments for the basic FERS annuity, Social Security and thrift savings.			
9. GSA Rent... GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $382,000, or a five-percent increase over the base, is required to meet our commitment to GSA.	...	...	382
10. GSA recurring reimbursable services........................ Reimbursable payments are made to GSA for heating, ventilation and air conditioning provided in excess of normal working hours and for guard services. An estimated 1.1-percent increase of $1,000 for these services in 1991 over the 1990 charges of $90,000 is required.	...	...	1
11. Building Maintenance Shortfall............................ The General Services Administration (GSA) delegated responsibility for maintaining the Main Justice (MJB) and Home Owners Loan Corporation (HOLC) buildings to the Department in FY 1983 and FY 1986, respectively. Citing funding constraints, GSA has declined to provide funding beyond what it would spend to manage the buildings based on GSA-estimated formulas, irrespective of the age and	...	...	34

	Perm. Pos.	Work-years	Amount
condition of the buildings. Requested resources will ensure that the HOLC and MJB buildings are adequately maintained. An increase of $2.5 million will be required in FY 1991.			
12. Employee data and payroll services......................... Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems, maintenance and payroll accounting, are based on the number of employee records maintained. The rate of 188.23 per record in 1989 will be raised to $199.52 per record for 1991. The change is based on anticipated uncontrollable cost increases of 6 percent for the operation of the Justice Employee Data Service. An increase of $6,000 will be required in 1991.	...	...	6
13. Security Reinvestigations................................. The security reinvestigation program has been receiving widespread attention due to the increase in espionage cases, and the many situations where employees, who had been working in their jobs for a number of years, were discovered to be involved in various activities that were detrimental to the nation's security. The OPM Federal Personnel Manual, Chapter 736 requires incumbents of certain positions to be reinvestigated, at a minimum, every five years. By 1991, the Department will require 7,592 employees to be reinvestigated in each of the next five years to address the existing backlog. Requested resources will provide for an additional 2,300 cases per year of the 7,092 cases that remain unfunded. An increase of $10,000 will be required in 1991.	...	...	10
14. General pricing level adjustments.........................	...	...	394

	Perm. Pos.	Work-years	Amount
This request applies OMB pricing guidance as of December 6, 1989, to selected expense categories. The increased costs identified result from applying a factor of 4.2 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts, with the private sector, transportation costs and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1991 estimates.			
15. Administrative Salary Increase............................ This request provides for an expected annual pay increase in the cost of administratively determined salaries for the Assistant U.S. Trustees and for those U.S. Attorneys occupying ungraded positions.	...	...	145
16. Annualization of program expansion........................ This request provides for adjustment in staffing level to support the mandated functional requirements of the nationwide U.S. Trustee Program. Program expansion was authorized by the Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act of 1986 (Public Law 99-554) and was completed on October 20, 1989 when the last group of pre-November 1986 came under the jurisdiction of the U.S. Trustee Program.	36	23	706
Total mandatory increases..............................	...	...	$4,722
Non-recurring Decreases			
1. Federal Telecommunication System (FTS)....................	...	...	(58)

	Perm. Pos.	Work-years	Amount
In 1991, the General Services Administration (GSA) is to have the FTS 2000 system fully implemented, At present GSA projections indicate costs for current FTS minute charges will decrease from 34 cents per minute to 18 cents per minute. The requested reduction of $58,000 from a base of $64,000, reflects this decrease.			
Total non-recurring decreases............................	...	...	(58)

Consulting and Related Services

	1989 Actual	1990 Estimate	1991 Estimate
Consulting Services	25	25	25
Management and Professional Services	2,866	1,579	1,550
Special Studies and Analysis	...	...	...
Total	2,891	1,604	1,575

Consulting and related services are required to provide those services beyond the scope of skills available within the U.S. Trustee program. The Management and Professional Services estimates exclude estimated program reimbursements for intra-government services (i.e., audit, personnel, procurement).

In the first category of estimates above, consulting services involve assistance to the Director of the Executive for U.S. Trustees in areas beyond the expertise of the permanent staff. Areas of expertise include the organization of the program, and the development of program policies.

Estimates in the second category, management and professional services, are for instances when it is more cost effective to contract for services than to hire permanent staff. These specialists have assisted the program with computer programming, specialized accounting services, procurement, personnel, technical development, system analysis and financial services.

Finally, special studies and analysis are required for ongoing evaluations of the automated systems. Through these evaluation, productivity and performance can be improved to hold expenses over the life of the case management systems.

Mr. **Mollohan**. The committee is pleased to welcome the Acting Director of the Trustee System Fund, Mr. John E. Logan.

Since this is your first appearance before the Committee, we will insert a copy of your biographical sketch into the record.

[The biographies of Mr. Logan and Mr. McCracken follow:]

John E. Logan

John E. Logan was born in Somerville, New Jersey. He attended public school in New Jersey. He received his undergraduate degree in Economics from the University of Pennsylvania. He received his law degree from Rutgers University. He joined the Department in 1980. As General Counsel of the United States Trustee program, he oversees the litigation of the program in the bankruptcy and district courts as well as advising the agency on legal issues in general. While General Counsel, he has served as Acting United States Trustee for the judicial districts of Colorado, Wyoming and Utah. On November 3, 1989, Mr. Logan was appointed Acting Director of the United States Trustee program.

David M. McCracken

David M. McCracken was born in Waltham, Massachusetts. He attended public school in Alabama and Maryland. He received his undergraduate degree in Business Administration from Towson State University. He joined the Department in 1980. As Acting Budget Officer of the United States Trustee program, he oversees the financial activities relating to the formulation and execution of the program's budget.

Mr. **Mollohan**. Mr. Logan, you may proceed with your oral statement. Your written statement, if you have one, will be made a part of the record.

Mr. **Logan**. Thank you, Mr. Chairman.

It is an honor to be here this afternoon at your request to discuss our proposal for fiscal year 1991. I make a request that the whole text of the statement be placed in the record.

Mr. **Mollohan**. Fine. Your whole statement will be made a part of the record.

SUMMARY STATEMENT

Mr. **Logan**. Thank you, Mr. Chairman.

As you correctly identified, our request for fiscal year 1991 is for 929 positions, 913 full-time equivalent workyears and $65,673,000. It is important to note that the U.S. Trustee Program is funded out of the U.S. Trustee System Fund, which is self-sufficient. It depends solely upon fees assessed upon debtors.

Specifically, we receive part of the filing fee each debtor pays when he seeks the protection of the Bankruptcy Code. We receive quarterly fees which are assessed on a graduated scale on those entities in the reorganization cases of chapter 11. The fund also receives interest payments.

Finally, there are miscellaneous assessments against debtors that also go into the fund. The program's purpose and responsibility is to oversee the administration of bankruptcy cases. In that regard, we appoint trustees, people who actually administer the cases. We monitor their performance and oversee the movement of the cases through the system. Our appropriation for fiscal year 1990 is $60,039,000. The request pending before the committee will simply keep us at the present resource level, with one progam increase.

Specifically, we are requesting an additional $1 million to fund our audit activities. The audit initiative provides the resources to regulate the trustees we appoint. That is, they are entrusted with substantial amounts of funds. We monitor their performance.

We ensure that they close their cases. One of the ways we do this, through a reimbursable agreement with the Office of the Inspector General of the Department, is to conduct audits of their operations. That is, are they truly using funds for purposes of the estate and are they gathering the assets and moving them toward both liquidation and distribution to the creditors in an expeditious yet fair manner?

We make the increased request for the audit function to enhance the public confidence in the system that is now moving a great number of cases. Secondly, we think that with the greater audit capabilities and the more efficient they are, the greater return the creditors are likely to see.

Most of these funds will go to auditing the chapter 7 cases, that is, the liquidation cases. Last year, I think there were some 450,000 chapter 7 cases. The Administrative Office of the U.S. Courts anticipates 525,000 chapter 7 case filings in 1990.

Obviously, we are trying to keep up to speed in our audit capabilities. I would note also that this increase will come out of the Fund, and that there will be no need to increase the fees presently assessed against debtors.

The program will also carry out its responsibilities in terms of chapter 11 cases. Chapter 11 gives the debtor an opportunity to receive protection from creditors. A creditor can't enforce any interests against the debtor once a debtor files under the bankruptcy laws. But, at the same time, the debtor is obligated to do fundamental things like pay taxes to State and Federal Governments, provide financial information to both creditors and public agencies, and make a sincere effort to reorganize its affairs.

All too often, we have found that debtors come in and seek protection, but nothing more. One of the items the program does through its attorneys and financial analysts is review the cases and bring to the court's attention those cases which should be converted to a liquidation or simply dismissed, so they don't continue to bog down the whole system.

ATTORNEYS FEES AND PROFESSIONAL FEES

Similarly, the program devotes a substantial effort to commenting upon the reasonableness of attorneys' fees and professional fees in bankruptcy cases. We are truly the only party that shows up in a case that will do this. As you can imagine, various attorneys and professionals in the case are reluctant to challenge each other's fees. As you can also imagine, it is not a popular responsibility we have undertaken.

In addition to our monitoring and overseeing the administration of the cases, the funding request allows us to continue our information systems, which we call the automated case management system. This is an automated system which we use instead of large stacks of files where pertinent case information is placed into a computer data base that we are able to draw up on our computer screen instead of going to the files. It also provides a word processing system and some means to do financial analysis.

In this regard, we are working with the Administrative Office of the United States Courts to streamline the system so that we are not both inputting the same information to our various systems. In this way, we pay the court system to have the expertise and the ability to do that.

In another sense, we are working with the court system to delineate and set forth the various responsibilities that come forth in the administration of a case between our offices and the clerk's functions.

Finally, Mr. Chairman, the program, having just completed its expansion in October of 1989, assumed the authority over all cases under the 1986 Act. We are seeking to improve the integrity of the system and to maintain our high standards. One way we are seeking to do this is by raising our own standards. That will be our effort this year which will obviously continue into 1991.

With those thoughts, Mr. Chairman, I, of course, will try to answer any questions you or any member of the committee may have.

[The prepared statement of Mr. Logan follows:]

DEPARTMENT OF JUSTICE
EXECUTIVE OFFICE FOR UNITED STATES TRUSTEES

STATEMENT OF THE
ACTING DIRECTOR AND COUNSEL
JOHN E. LOGAN
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to have the opportunity to appear before you today to discuss the 1991 appropriation request for the United States Trustees. We are requesting a total of 929 positions, 913 full-time equivalent work years and $65,673,000. I would emphasize that this request is for an appropriation of monies that were deposited in the United States Trustee System Fund as a result of fees collected from bankruptcy cases, and therefore, it does not result in a cost to the taxpayers.

The program's basic responsibility is to oversee the administration of bankruptcy cases. In this regard, our duties include appointing trustees, supervising their performance and monitoring bankruptcy estates in general.

The program has met the challenge of fiscal self-sufficiency through the fee structure established within the Bankruptcy Judges, United States Trustee and Family Farmer Act of 1986 and requires no support from the general revenues of the Federal Government. As you are aware, the revenues to the United States Trustee System Fund are derived from a specified portion of the filing fee, chapter 11 quarterly fees, payment of excess percentage fees collected by chapter 12 or 13 standing trustees, and interest on invested funds. Fiscal year 1990 is the second year that the program has been totally self funded and 1991 should follow suit.

In October 1989, the program assumed authority over all cases as provided by the 1986 Act. This implementation of the 1986 legislation in expanding the program nationwide, carries out the important reform of the Bankruptcy Reform Act of 1978, the separation of administrative and adjudicative functions in bankruptcy cases. Fostering the fair, efficient and effective administration of bankruptcy cases remains the program's main responsibility. Specifically, the final six regions of the program assumed authority over cases filed prior to the 1986 Act on October 20, 1989. The United States Trustee program is in place in 88 of the Nation's 94 Federal judicial districts. As you know, the Act excluded the three judicial districts for the State of Alabama and the three judicial districts for the State of North Carolina from the program until 1992, unless the judges of those districts choose to become part of the program at an earlier date.

In 1990 Congress provided $60,039,000 from the United States Trustee System Fund for the program. In addition, carryover balances, as provided by law, of $477,000 are available to fund anticipated expenses in fiscal year 1990. We do not anticipate significant carryover funding available at the end of fiscal year 1990 for 1991 purposes.

The 1991 budget maintains the resources to operate the 88 field offices across the country. Our one program increase request of $1,000,000 is for additional funding to expand our efforts of auditing trustees. These audits are conducted by the Department's Office of Inspector General through a reimbursable agreement. These efforts are critical to verify that the assets of bankruptcy estates are maintained in compliance with applicable laws and regulations. A system that entrusts large sums of money to private individuals must ensure that the required fiduciary standards are adhered to. Upholding this level of integrity provides not only public confidence in the process, but a real opportunity for creditors to receive a share of an estate's assets. A extensive and sound audit system is a major factor in this regard. This resource request is critical for the United States Trustees to continue to determine the adequacy of the private trustee's internal controls over bankruptcy estate cash, and the adequacy of cash records and trustee's bond limit.

In this regard, the program continues to oversee and work closely with the private trustees. The private trustees are the individuals who actually administer the cases under chapter 7 (liquidation), chapter 12 (family farmers) and chapter 13 (wages earners) and are the foundation of the system. With over 623,000 cases filed under these chapters in 1989, the trustees not only seek to ensure that the provisions of the bankruptcy laws are complied with in each case, but are also the individuals who seek to protect the system from those who attempt to abuse the bankruptcy laws. Overall, the private trustees are responsible for maintaining and distributing hundreds of millions of dollars per year. We will continue to devote significant efforts in not only selecting high quality individuals for these positions, but also providing oversight and direction to obtain the goal of maximizing the amounts available for distribution to creditors.

In the chapter 11 reorganization cases we will continue our effort in fostering creditor participation in a case. Where there is no creditor interest we will carry forward our responsibility of ensuring that those who seek the protection of the bankruptcy laws also meet their concurrent obligations. The payments of payroll taxes to Federal and State governments, providing adequate disclosure of information required under the Bankruptcy Code and making a real effort to reorganize an entity's financial affairs are all fundamental responsibilities of a chapter 11 debtor. Too often, instead of using the protections of law to reorganize, debtors simply use it as a shield from all responsibilities. In this area, the program's attorneys and financial analysts devote significant efforts in reviewing a debtor's financial status and bringing to the court's attention, through motions to dismiss the case, to convert to chapter 7 liquidation, or for a trustee to manage the estate's operations of those debtors who do not adhere to the law's requirements. Such efforts seek to ensure that the process is not only fair, but that cases move toward resolution in an expeditious manner.

Another significant, but unpopular, area for which the 1991 request will continue to provide funding is in the area of review of fee applications of professionals, such as attorneys and accountants, in a case. The United States Trustee is effectively the only party in a case who will come forward to comment on the reasonableness of the fees such individuals seek to collect from an estate. The law requires the Court to award such fees, but only the United States Trustee normally provides any overview to the Court. Again, the goal is maximizing the amounts available for distribution to creditors.

The 1991 request includes resources to operate our existing Automated Case Management System (ACMS). This is the automated bankruptcy case management system, and it is now installed in all of our 21 regions. It enables our offices to carry out their functions and responsibilities in the administration of bankruptcy cases, of which 640,000 were filed during 1989. ACMS has the capability to track bankruptcy cases and trustees. It assists in the monitoring of debtor and panel trustee performance and attorney fees. The system also performs word processing functions and financial analyses, generates pleadings, monitors the history of cases, helps identify potential problem areas within a case, and maintains caseload and fee statistics.

The 1991 request will also allow the program to continue our cooperative efforts with the Administrative Office of the United States Courts. The areas include the exchanging of automated information regarding cases so as to reduce duplicative efforts in inputting information in both systems. Additionally, we will continue to work with the Administrative Office in refining means for an efficient and expeditious administration of cases and estates.

For the future of the program, our most important goal is to continue to strengthen the integrity of the nation's bankruptcy system. In this regard we will seek to strengthen the quality of our own efforts. We will continue to undertake actions so as to enhance the fair and impartial enforcement and adjudication of the bankruptcy laws.

This concludes my prepared statement, Mr. Chairman. I will be pleased to answer any questions you or any member of the Subcommittee may have.

Mr. MOLLOHAN. Thank you, Mr. Logan.

I understood you to say that you are asking for $60,039,000.

Mr. LOGAN. It is $65 million, I apologize. That was the fiscal year 1990 appropriation. For fiscal year 1991, we are asking for $65,673,000. I appreciate the chance for correction.

Mr. MOLLOHAN. BANKRUPTCY CASES Do you believe you are succeeding in your bankruptcy cases?

Mr. LOGAN. I think at a very initial stage, what the program represents is the articulation to Congress of separating the adjudicative aspects of a case, what a judge is supposed to do, from the administrative end. In that regard, we no longer have a system in which the court is appointing people to administer cases and at the same time awarding fees and, more importantly, ruling on litigation involving the parties.

The program represents the fundamental decision that Congress made. In that regard, I think we have made significant strides in both choosing good people to administer cases and also monitoring how well they do that. I think we are proud of that, but at the same time, we realize there are many other problems just to fulfill the role that Congress envisioned.

Mr. MOLLOHAN. It is a process that you are trying to nurture in a successful sort of way. What stage in the process are you?

Mr. LOGAN. What comes through severely is the logistics of expanding from an agency in November 1986 of 168 people to this request of 929, going from 14 offices to 88, bringing those people on board, training them, and institutionalizing processes. I think this is a greater challenge than perhaps some imagine. That is the life, I think, of a new program. That is why I say we have much work to do in raising those levels of standards.

PERFORMANCE MEASURES

Mr. MOLLOHAN. To what extent have you been successful and where do you think you need to work harder?

Mr. LOGAN. I think, as I have said before, we have created a presence in the bankruptcy court that there is now a party there to come forth to the court and say, these series of cases or this case should not be in chapter 11. Abuse is present in the reorganization cases, and someone is finally coming forward and objecting to it.

Mr. MOLLOHAN. You look at cases and make determinations as to whether they should remain in chapter 11 or whether the bankrupt individual is abusing the system just to protect himself and not meeting the criteria?

Mr. LOGAN. We make that initial determination and then are obligated to come to the court and say we request that it be dismissed or converted to chapter 7 We are nothing more than a normal litigant other than the fact that we are there every day.

BANKRUPTCY CASES IN WEST VIRGINIA

Mr. MOLLOHAN. So, you are informing the court. May I take an example? How are you performing in West Virginia?

Mr. LOGAN. West Virginia is an area which represents, for the most part, a good sample of bankruptcy cases nationwide. Every case isn't Drexel or Eastern Air Lines.

Mr. MOLLOHAN. Not in West Virginia.

Mr. LOGAN. Or most of the country. And what you have here is, for the most part, entities chapter 11 trying to get a break and get that time span to reorganize.

Mr. MOLLOHAN. Are you operating in West Virginia?

Mr. LOGAN. We have an office in Charleston, and we have facilities in Wheeling, where we hold meetings of creditors. One of the problems we have throughout the program is the logistics of spreading the staff fairly throughout rural America.

Mr. MOLLOHAN. Are you fully staffed in West Virginia? I am using it as an example.

Mr. LOGAN. Right. The staff is a very credible staff. I think part of it is our ability to recruit good people there. We also have the problems, as I am sure you hear time and time again, of recruiting in major metropolitan areas.

Mr. MOLLOHAN. Do you hire a lawyer on a full-time basis to do that?

Mr. LOGAN. We have an Assistant United States Trustee who heads the office and at least two full-time financial analysts. They cover the judicial districts in West Virginia, with probably a complement of 10 to 15 people covering the State.

THE TRUSTEE FUNCTION

Mr. MOLLOHAN. Do you hire trustees to manage individual cases?

Mr. LOGAN. The way the system works is in a chapter 7 liquidation, which is where the debtor is coming and saying, "I would like to be discharged of my debts and here are my assets," we appoint, from a rotating panel, individuals, usually lawyers in the community, to take that case and liquidate it and distribute the assets to the creditors.

In a chapter 11 case, you usually don't have a trustee, the business is allowed to continue unless there is mismanagement, et cetera. The appointment process is largely in the 7s, the liquidations, and in the chapter 13 cases, which are largely the wage-earners who come forward with their own reorganization plans.

Mr. MOLLOHAN. Do most bankruptcies start out in chapter 11?

Mr. LOGAN. No, most start in chapter 7.

Mr. MOLLOHAN. How about businesses?

Mr. LOGAN. Most businesses start in chapter 7, too. They come forward to get out. The chapter 11 cases have dropped slightly.

Mr. MOLLOHAN. What percentage of them are chapter 11s?

Mr. LOGAN. I can give you the numbers. Out of the—what is it, 640,000 cases, the chapter 11s are only 17,200 across the country—approximately 3% of the total filings. Those are just filings, that is not the number of cases pending over the years.

Mr. MOLLOHAN. What percentage of those are successfully reorganized?

Mr. LOGAN. A very small percentage.

Mr. MOLLOHAN. So, most of them are going to liquidation?

Mr. LOGAN. Yes. Either going into chapter 7 or chapter 11. It is possible that the debtor's plan is to liquidate on an orderly basis.

OVERSIGHT RESPONSIBILITY OF TRUSTEES

Mr. Mollohan. Who has oversight responsibility over the trustees to determine effectiveness?

Mr. Logan. Well, of course, we are accountable to the Deputy Attorney General in terms of what we do and the conduct of our activities.

Mr. Mollohan. How is your effectiveness and successfulness measured?

Mr. Logan. I think in a couple of ways. One is simply the audits the Inspector General does over the panel of trustees. The Inspector General goes out and finds deficiencies—really, it is reflective on us, how well we are doing. While the audit report itself doesn't address the Department of Justice personnel, it is an indication of what the trustee hasn't done.

In terms of measuring——

Mr. Mollohan. I am sorry. Do you audit all of the cases?

Mr. Logan. No. It is random sampling.

Mr. Mollohan. What percentage gets audited?

Mr. Logan. Actually, what is audited is the trustee himself. I think what you focus on is the difference between our system and what previously was done. We attempt to come in and look at an operation of the trustee, see where they are keeping the money, and see if they have safeguards. It depends on the district.

In a smaller district, a larger percentage are audited. We try to look at each trustee over a three-year period.

Mr. Mollohan. So, each trustee can expect to be audited once every three years?

Mr. Logan. Yes. In the chapter 13s, which are much larger operations, where you have one trustee taking all the debtors in that district and distributing cash, we try to check once a year. Millions of dollars are going through the system. So, if you don't get there once every three years, it could be a problem.

Mr. Mollohan. Do you find many irregularities among the trustees?

Mr. Logan. I would say no. The problem is, of course, once you find one, it is on your watch. Someone has been using those funds for their purposes, and the question is, what have we been doing?

Mr. Mollohan. So, you are suggesting you actually oversee yourself in that sense?

Mr. Logan. Yes, we worry about that exposure. It is a built-in worry factor, I suppose.

FINAL DISCLOSURE DELAY

Mr. Mollohan. Are you aware of concerns that there is a lengthy delay in many districts between the time that a bankruptcy case is finalized and when the trustee actually discloses the files in that case?

Mr. Logan. Yes. I think what you are focusing on here are concerns that we have as a result of expansion. What we are talking about is a rather defined piece of the world, closing out a bankruptcy case.

You don't easily get these types of individuals, except in the court, and you also don't easily train them.

Mr. MOLLOHAN. What do you mean? What individuals?

Mr. LOGAN. The individuals largely at the paralegal and clerical levels.

Mr. MOLLOHAN. Who do the closing out?

Mr. LOGAN. Who actually look at the trustee's report, add up what cash—making sure everything adds up.

Mr. MOLLOHAN. What about getting the report?

Mr. LOGAN. That is another part of it, making sure they come forth in a timely fashion.

Mr. MOLLOHAN. Is that a problem?

Mr. LOGAN. It is a problem in the sense of a general oversight, which is probably easier at this stage in the program than the actual closing process.

Mr. MOLLOHAN. What are you doing about that problem?

Mr. LOGAN. What we are doing is addressing it program-wide, breaking down the process, raising the expertise level of those who do it by training, making them go through——

Mr. MOLLOHAN. You are doing that?

Mr. LOGAN. Yes. Making them go through the actual processes. It is not going as fast as we want it to.

Mr. MOLLOHAN. Why not?

Mr. LOGAN. I think it's a result of the logistics of expansion. These people have only been on board in some regions for less than a year. Also, all districts are supposed to have uniform bankruptcy laws, but each district has its nuances. This isn't anything to be offended by, but you can't just implement a nationwide training program. You have to break it down into each judicial district, and sometimes the separate courts themselves.

So that is truly the challenge which we face, raising the level of abilities.

Mr. MOLLOHAN. Do you feel you are facing that challenge as quickly and as effectively as you can?

Mr. LOGAN. Yes. I think we have now got the ability and plans to go out, not only simply to give the training, but to revisit and make sure that the people are accountable, and learning something from the training.

Mr. MOLLOHAN. But you are doing that in a systematic way, system-wide?

Mr. LOGAN. Having the logistics of expansion behind us now, that is really what we have to do and are doing.

Mr. MOLLOHAN. That is one of your primary focuses, would it be fair to say?

Mr. LOGAN. Yes.

Mr. MOLLOHAN. But you would say, give us to next year at this time and we will make dramatic progress?

Mr. LOGAN. Yes. To report that this is what we are doing, and there are problems, specifically these are the problems. Part of the problem is the tremendous growth of caseload in the chapter 7 area.

ATTORNEYS FEES

Mr. MOLLOHAN. You mentioned in your comments about the reasonableness of attorneys' fees. Are you addressing any concerns you might have in that regard?

Mr. LOGAN. This doesn't fully respond to your question——

Mr. MOLLOHAN. I don't know that I fully asked the question.

Mr. LOGAN. God has no wrath like an attorney whose fees have been challenged. You just wonder why one is so insulted when one questions the size of fees.

It is really an attempt to create standards in an area which previously had none. Again, part of the problem I think we face is particularly in the large cases where the business, the entity, has always been paying these large fees. Is it totally unfair that the accountants and attorneys not receive the same fees? I am not sure.

But what you have got to—what we try to do is uphold a standard of disclosure so that everyone knows where the money is really going—it is simply not going to the administration of a case. What is the expression? We practiced great medicine, but the patient died.

Mr. MOLLOHAN. Also, do you think these are excessive in some instances, and to what extent, and what are you doing about it?

Mr. LOGAN. I can't say they are excessive. What I can say is what we are trying to do and trying to articulate is that these are standards which have to be adhered to. If you want to go outside the standards, explain to the court why.

Mr. MOLLOHAN. What kind of standards, the amount of time dedicated to a case?

Mr. LOGAN. Cases or matters almost as trivial as how much you get reimbursed for going across the street from your office to the courthouse. Generally, that is an overhead which you shouldn't be reimbursed for, but suddenly, particularly in a big case, you see people being reimbursed for such things, because the money is there.

You border on the trivial, too, on how much is a Xeroxed copy worth? Is the law firm running a little business out of their Xerox room and saying, really, this 25 cents should be 10 cents, because that is what it costs the court to reproduce it?

Again, you are accused of being trivial.

Mr. MOLLOHAN. It adds up to big money or they wouldn't be doing it.

Mr. LOGAN. As I said again, it all comes out of the estate.

Mr. MOLLOHAN. Okay.

Mr. Logan, thank you very much for your testimony. We have a couple other questions we will submit for the record. Thank you.

[The following questions was submitted for the record:]

QUESTION SUBMITTED BY MR. MOLLOHAN

United States Trustee System Fund

QUESTION: What is the amount expected to be unobligated at the end of 1990? What are the obligations to date for 1990? What are the obligations to date for 1989 for the same time period?

ANSWER: We do not expect any significant unobligated balance at the end of 1990 to carry forward to 1991. In 1988, we had a substantial unobligated balance due to the first quarter lapse of the expansion caused by the Continuing Resolution of that year. We were able to carry forward only $477,000 from last fiscal year to 1990.

At the end of February 1990 our total obligations for 1990 were approximately $24 million. For the same time period in 1989, our total obligations were $22.4 million.

Due to the uncertain impact of the 1990 Gramm-Rudman sequestration, many essential obligations for the current fiscal year were delayed and have not been incurred through February 1990. These obligations, however, will be incurred in the current fiscal year. The obligations that were temporarily deferred include essential ADP equipment purchases (including upgrades to the central processing units of the Automated Case Management System) and various training seminars which are to be conducted in the current fiscal year.

THURSDAY, MARCH 15, 1990.

COMMUNITY RELATIONS SERVICE

WITNESSES

GRACE FLORES HUGHES, DIRECTOR

ALFREDA D. HAYES, BUDGET OFFICER

JEFFREY L. WEISS, ASSOCIATE DIRECTOR, OFFICE OF IMMIGRATION AND REFUGEE AFFAIRS

GAIL B. PADGETT, ASSOCIATE DIRECTOR, OFFICE OF TECHNICAL ASSISTANCE AND SUPPORT

ARTHUR E. COLLINS, JR., PROGRAM SPECIALIST, OFFICE OF PLANNING, BUDGET, AND EVALUATION

HARRY H. FLICKINGER, ASSISTANT ATTORNEY GENERAL FOR ADMINISTRATION

MICHAEL J. ROPER, DEPUTY ASSISTANT ATTORNEY GENERAL, CONTROLLER

ADRIAN A. CURTIS, DIRECTOR, BUDGET STAFF

Mr. MOLLOHAN. The hearing will resume.

We will now hear testimony from the Community Relations Service, which requests $28,172,000 for fiscal year 1991, a decrease of $1,127,000. We will insert into the record at this point the 1991 budget justifications.

Salaries and expenses, Community Relations Service

Summary Statement

Fiscal Year 1991

The Community Relations Service (CRS) is requesting, for 1991, a total of $28,172,000, 118 permanent positions, and 120 workyears. This request represents a decrease of $758,000 below the 1990 appropriation enacted. The two major programs within this appropriation are summarized below.

Of the resources requested, $8,392,000, and 88 permanent positions is requested for the Prevention and Conciliation of Community Disputes, and $19,780,000 and 30 permanent positions is requested for the Reception, Processing and Care of Cubans and Haitians.

Prevention and Conciliation of Community Disputes

This activity provides assistance to communities in preventing and resolving conflicts involving racial and ethnic minorities. By bringing disputes to the negotiating table before they are acted out in violence or litigation, CRS forestalls the eventuality of more costly Federal intervention such as litigation, investigation, prosecution, or the use of marshals or the military to preserve or restore the peace.

CRS projects its annual backlog of alerts, assessments, and conciliation/mediation cases in 1991 will increase by approximately 729 over 1989's record high of 951. CRS will conciliate or mediate approximately 1,290 cases in FY 1991, compared to 1,250 cases in FY 1989. This caseload represents full utilization of CRS' capacity to provide service under the FY 1991 funding level.

Categories of racial/ethnic community conflict which will require increased attention in 1991 include:

> Cases involving newly legalized or arriving immigrants, which are becoming more visible and more complex. Not only is the number of legalized immigrants increasing, due to the Immigration Reform and Control Act (IRCA), but their growing familiarity and comfort with American institutions have made them, as well as their community associations, more assertive in demanding redress of grievances and in competing for equity in employment, housing, business, and social benefits.
>
> Racially motivated acts of hate violence and intimidation are increasing. CRS, which alerted 392 such acts in 1988 and 426 in 1989, anticipates this trend to continue in the 1990's. Anti-minority incidents on college campuses, barely evident three years ago, reached 94 in 1989. Several campuses have seen the formation of white student unions which have been involved in backlash activities against minority students.

Use of force by and against police, as a result of intensifying violence accompanying the drug war.

Reception, Processing and Care of Cubans and Haitians

This activity is responsible for the reception, processing and care of Cuban and Haitian nationals as authorized by Title V, Section 50 (c) of P.L. 96-422, (The Refugee Education Assistance Act of 1980), and by Executive Order 12341 of January 21, 1982, transferring these functions to the Department of Justice. Through this activity, CRS provides outplacement, resettlement, medical and mental health care services to Cuban and Haitian nationals paroled by the Immigration and Naturalization Service (INS) from INS and Bureau of Prisons (BOP) detention facilities and St. Elizabeth's Hospital. These services are provided through grants and cooperative agreements with voluntary and private agencies and through an interagency agreement with the Public Health Service (PHS).

CRS halfway house and family sponsorship programs ensure that Mariel Cubans who are approved for release by the INS are rovided appropriate supervision and services upon their release in order to: protect the public safety; enable the individuals to achieve economic self-sufficiency without reliance on public assistance; and reduce the number of Mariel Cubans re-entering federal custody because of criminal conduct. CRS works closely with the INS, BOP, and PHS in outplacing Mariel Cubans approved for release by the INS. The INS and BOP look to CRS to relieve overcrowding problems, security concerns, and high detention costs.

CRS provides primary resettlement services to those Cuban and Haitian nationals who are paroled from INS Service Processing Centers for humanitarian reasons, under exclusionary bonds, and as unaccompanied minors. It also provides for secondary resettlement of Cuban and Haitian entrants whose initial resettlements, primarily in South Florida, proved unsuccessful. In addition, CRS provides resettlement and community follow-up services to Cuban and Haitian nationals discharged from community based residential psychiatric treatment programs administered by the PHS.

The program decrease in 1991 of $1,127,000 will result in a reduction in CRS' Mariel Cuban and Haitian resettlement capabilities. CRS' Cuban and Haitian Entrant Program will reduce the number of Mariel Cubans and Haitians resettled and serviced by a total of 315, including a reduction of 181 Mariel Cubans provided medical and mental health care.

With the requested level of funding, CRS will be able to outplace 440 detained Mariel Cubans through the halfway house program, 269 through the family/sponsorship program and 57 through its aftercare programs. In addition, 503 Cubans and Haitians will be provided primary resettlement assistance and 300 will be provided secondary resettlement assistance. PHS will be able to furnish 100 beds at St. Elizabeths Hospital for long-term care patients, perform 600 mental health evaluations, and perform comprehensive medical screenings on 2,583 Cubans and Haitians at the Krome Special Processing Center.

Community Relations Service

Salaries and expenses

Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses, Community Relations Service

For necessary expenses of the Community Relations Service, established
by title X of the Civil Rights Act of 1964, [$29,334,000], of which $28,172,000
not to exceed [$21,500,000] shall remain available until expended to make $20,214,000
payments in advance for grants, contracts and reimbursable agreements and
other expenses necessary under Section 501(c) of the Refugee Education
Assistance Act of 1980 (Public Law 96-422; 94 Stat. 1809) for the processing,
care, maintenance, security, transportation and reception and placement in the
United States of Cuban and Haitian entrants: Provided, That notwithstanding
section 501(e)(2)(B) of the Refugee Education Assistance Act of 1980 (Public
Law 96-422; 94 Stat. 1810), funds may be expended for assistance with respect
to Cuban and Haitian entrants as authorized under section 501(c) of such Act.

(Reorganization Plan No. 1 of 1966; Department of Justice Appropriation Act, 1990; additional authorizing legislation to be proposed.)

Explanation of changes:

No substantive changes proposed.

2. Reception, Processing and Care of Cubans and Haitians..........	30	30	21,606	...	...	-$275	...	-1	-296	...	...	...	30	29	21,035
Total............................	118	120	29,609	...	...	-275	...	-1	-404	...	...	...	118	119	28,930

Congressional Appropriation Actions. The Congressional allowance for 1990 reflects a reduction of $275,000. The Administration has decided to apply the full reduction to the Reception, Processing and Care of Cubans and Haitians because the program's unobligated balance available at the end of 1989 can be applied to the 1990 program decrease.

1990 Sequestration. The reduced funding of $404,000 allows for a sequestration of 1.4 percent in 1990.

This budget activity includes resources for one of the two primary missions of the Community Relations Service. Funds requested for this activity are used to provide assistance in the form of service to communities in resolving disputes, disagreements, and difficulties arising from discriminatory practices based on race, color or national origin which impair the rights of citizens and threaten to disrupt peaceful relations.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Technical Assistance................	6	6	$454	6	6	$482	6	6	$482	...	...	...

Long-Range Goal: To enhance the delivery of expert conflict resolution services by conciliation specialists to disputes involving state and local officials and minority community groups.

Major Objectives:

To provide the field conciliation staff with technical resources and expertise to improve the effective achievement of dispute resolution.

To assist administration of justice agencies and their field operations to overcome problems that cause conflict and confrontation and to provide technical assistance on policies, procedures, and programs that reduce friction with the local community.

To assist school systems to reduce racial conflicts arising out of issues involving youth gangs, disproportionate discipline rates for minorities and lower performance levels for minorities.

To maintain a headquarters resource center of technical periodicals, articles and materials and model approaches pertaining to issues affecting the work of the Community Relations Service.

To coordinate and monitor casework to ensure quality, facilitate exchange of conciliation and mediation techniques, and track casework trends in order to best determine technical assistance needs.

Base Program Description: The Community Relations Service's conciliators and mediators in the regional offices are trained and experienced in the skills of dispute resolution and community conflict management. Often their role is that of a catalyst in highly sensitive and emotional situations, enabling resources within the community to combine in a new pattern in order to resolve a specific problem. Conciliators and mediators often require technical assistance in the specific matter of the dispute. Such assistance is provided by and through the Office of Technical Assistance and Support (OTAS). This program's function is therefore an integral part of the conciliation and mediation process. It improves program performance by providing field staff with essential background and technical information to more efficiently and effectively resolve disputes and by providing oversight to ensure a standard level of casework quality.

Various categories of cases are supported by OTAS through the work of staff program specialists whose role is to: 1) provide expert assistance on-site; 2) identify and arrange for the services of other experts as needed; 3) update the background and skills of field staff through training and the provision of materials; 4) coordinate the inter-regional transfer of experience and technology; 5) identify and distribute models of programs used successfully in other communities; 6) conduct special research to meet the needs of specific cases; and, 7) develop new program tools to respond to new types of problems.

Accomplishments and Workload: Accomplishments of the Technical Assistance program are presented in the following table:

Item	1988	1989	Estimates 1990	 1991
Case consultations	550	1,536	1,600	1,600
Items of technical information provided	2,560	3,240	3,300	3,300
Technical publications produced	2	0	2	4
Training models distributed	36	36	36	36
Status reports on case activity	4	25	52	52
Weekly case reports reviewed for quality assurance	...	4,800	10,400	10,400

Explanation

Case Consultation figures changed considerably due to three changes in the Technical Assistance program: the number of professional staff providing consultation doubled from 2 to 4; the staff is providing more mail and phone consultations as opposed to more costly on-site technical assistance; and, the newly established function of field coordinator reviews all Weekly Update Reports to alert specialists to need for consultations.

Figures for the Weekly Case Reports Reviewed reflect the hiring of a field coordinator in March of 1989. The field coordinator reviews approximately 200 case reports per week.

In 1989, 3,240 technical materials or service packages were provided to CRS staff in education, the administration of justice, and other program areas. It also conducted 1,536 consultations with regional staff on various cases. Major areas of CRS involvement continue to be conflicts arising from allegations of police use of deadly or excessive force, hate violence, and racial conflict on college campuses. OTAS has been active in coordinating national resources that address these issues. The office has focused on disseminating information about innovative and cooperative efforts between police agencies, college administrations, local government officials, and coalitions of minority groups.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Program Operations................	63	65	$5,782	63	65	$6,147	63	65	$6,147	...	...	...

Long Range Goal: Prevention and reduction of community conflict and violence related to racial or ethnic prejudice, discrimination, and denial of Constitutional rights.

Major Objectives:

To help resolve approximately 1,290 racial/ethnic disputes and conflicts.

To help local communities and state agencies to establish and improve their own procedures and mechanisms for preventing and resolving racial/ethnic disputes and conflicts.

Base Program Description: While disputes based on race, color or national origin occur throughout the United States, their nature and frequency vary from place to place, reflecting demographic, economic and social variables. Sweeping population movements into and within the country make many communities more vulnerable to critical conflict. Areas, which a short while ago were totally white, are becoming increasingly mixed; city after city which had been governed by white majorities are accommodating to the growing political power of racial and ethnic minorities; school systems are facing significant changes in racial balance. These changes give rise to anxiety and stress as people and institutions seek to adjust to changing customs, different languages, and competition for jobs and housing. Through careful assessment of more than 2,000 conflict situations to which the agency is alerted each year, only the most critical are accepted as cases. Through the techniques of conciliation and mediation, CRS enables the contesting parties to work out their differences through communication and give-and-take negotiation rather than on the streets or on a take-it-or-leave it basis that perpetuates grievances for future conflict. The negotiated resolution of conflicts, before they escalate, obviates the later need for more costly methods of settlement, including investigation, prosecution, and litigation.

Conflict areas which will require increased attention from CRS in 1991 include:

> The increasing violence accompanying the war on drugs is threatening to reverse a decade of progress in the reduction of fatal confrontations between police and minority communities. Pressure for relaxation of restraints on excessive use of force by police is beginning to endanger carefully cultivated patterns of community cooperation so essential in fighting drugs. CRS will be working increasingly with police agencies and community groups to strengthen community-police collaboration against drugs and crime and to resolve disputes between police agencies and minority communities over law enforcement response to crimes relating to drug trafficking.
>
> Anti-minority incidents on college campuses, barely evident as recently as four years ago, are brought to CRS' attention in increasing numbers. Heightened awareness by college administrators of underlying problems, and the CRS record for successful resolution of campus conflicts, increases the demand for CRS services each year.
>
> Racially motivated acts of hate violence and intimidation are increasing. CRS, which alerted 392 incidents in 1988 and 426 in 1989, anticipates this trend to continue in the 1990's.
>
> Cases involving newly legalized or arriving immigrants are becoming more visible and more complex. Not only is the number of legalized immigrants increasing, due to the Immigration Reform and Control Act, but immigrants' growing familiarity and comfort with American institutions have made them as well as their community associations more assertive in demanding redress of grievances and in competing for equity in employment, housing, business and social benefits.

Accomplishments and Workload: Accomplishments and workload of the Program Operations program are presented in the following table:

Item	1988	1989	Estimates 1990	 1991
Alerts received	1,905	2,031	2,200	2,200
Backlog (alerts, assessments and conciliation cases not completed)	650	951	1,360	1,680

Item	1988	1989	Estimates 1990	Estimates 1991
Assessments processed............................	1,654	1,420	1,450	1,450
Conciliation cases conducted......................	1,314	1,163	1,200	1,200
Conciliation cases closed.........................	988	715	730	730
Mediation cases conducted.........................	102	87	90	90
Mediation cases closed............................	71	52	55	55
Community tension appraisals conducted............	105	100	100	100

Explanation:

In the past year, CRS opened new avenues of communication and patterns of cooperation between police agencies and growing populations of newly legalized immigrants.

This trend, which will continue in the budget year and beyond, reflects both the changing nature of racial/ethnic controversy and a revised casework emphasis by CRS. With increasing frequency, minority groups are defining issues in terms of deep-rooted problems of equity which require long-range contractual solutions rather than temporary accommodation. Responding to that change, CRS is devoting more of its energies to helping the parties to recognize the need for and the possibilities of achieving fundamental and durable solutions to basic problems.

Backlog figures represent activities at the alert, assessment, and conciliation/mediation stages that have not been closed and transcend the fiscal year. Cases not completed within the average time span are usually not concluded due to the lack of travel money required to hold the requisite number of on-site conciliation sessions to have parties reach agreement. Many cases held over for the following fiscal year increase requirements for travel monies.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Executive Direction and Control...	13	13	$1,286	13	13	$1,367	13	13	$1,367	...	...	...

Long-Range Goal: To implement those principal areas of activity by which the Director establishes and plans policies and programs; and directs, monitors, controls, and evaluates their execution.

Major Objectives:

To develop and implement agency policy and provide management and supervision that assures maximum agency service delivery.

To conduct and coordinate pertinent communications with the public, other Departments, Federal agencies, and the Congress.

To provide legal review and analysis to headquarters and field personnel.

To collect and analyze information on the nature, level, and geographic distribution of community tensions.

To coordinate program planning, related to all levels, for operational analysis and evaluation.

To evaluate and assure the quality of CRS services.

To monitor casework activity and maintain casework records.

To manage and implement the agency's Automated Data Processing and Office Automation program.

Base Program Description: This program is responsible for establishing policy for planning and budgeting programs, and for directing, monitoring, controlling, and evaluating program execution. The functions of executive direction and control are performed directly within the Office of the Director and the Office of Planning, Budget, and Evaluation.

Efficient utilization of agency personnel and funds is made possible through the Operational Planning System, a cyclical process involving the planning of programs in response to guidance provided; the reporting, monitoring and evaluation of program implementation; the study of program and policy issues; and the provision of quality assurance and review.

Accomplishments and Workload: Accomplishments of the Executive Direction and Control program are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Office plans reviewed and approved	14	17	16	16
Reports on statistical evaluation and analysis of operations	4	4	4	4
Operational Data Reports/Queries	40	45	50	50
Responses to public/Congressional inquiries	50	331	340	340
Responses to FOIA/PA inquiries	55	15	20	20
Responses to requests for legal assistance from regional offices	720	735	740	740
Studies on Proposed Legislation	5	2	2	2
Judicial and Legislative items for review	750	790	790	790
Directives revised/published	4	9	10	10

Explanation:

A full-time Media Affairs Officer was appointed during the last quarter of FY 1988. Prior to that time, CRS' public media and press relations were handled by the Public Information Office at the Departmental level.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Administrative Services...........	6	6	$373	6	6	$396	6	6	$396	...	...	...

Long-Range Goal: To improve operational efficiency and internal controls in the delivery of personnel, procurement, financial management, and other administrative support services.

Major Objectives:

To provide timely advisory services to all management levels on technical matters related to administrative services.

To provide timely fiscal control and effective management over resources flowing to and from the Service.

To provide timely processing of all administrative related requests for space, security, procurement, travel and financial reimbursement.

Base Program Description: A wide range of administrative support, personnel, financial, and procurement services are provided by the Administrative Office to CRS' headquarters and 10 regional offices. The program provides direct input of vouchers, personnel requests, requests for goods and services, obligating documents, inventory control, etc., to the Justice Management Division's accountability systems.

Accomplishments and Workload: Accomplishments of the Administrative Services program are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Personnel and payroll actions processed..........	228	535	600	600

	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Activity: Reception, Processing and Care of Cubans and Haitians..	30	29	$21,035	30	30	$20,907	30	30	$19,780	...	...	-$1,127

Long-Range Goal: To administer the orderly placement and resettlement of Cuban and Haitian entrants in such a manner as to avoid community conflict and minimize the impact on public resources and safety, and to provide shelter care and family reunification services to alien unaccompanied minors in the legal custody of the Immigration and Naturalization Service (INS).

Major Objectives:

To relieve the burden on federal detention facilities caused by the return of Mariel Cubans to INS custody from federal, state and local criminal justice systems. To accomplish this, CRS intends to resettle approximately 709 of the projected 783 Mariel Cubans expected to be approved for release by the INS through CRS halfway house and family sponsorship programs.

To provide appropriate resettlement services to approximately 628 Cuban and Haitian nationals, including unaccompanied minors, who are paroled for humanitarian reasons by the INS from its Krome Service Processing Center. CRS will accomplish this through grants and cooperative agreements with voluntary agencies for provision of shelter care, child welfare, and resettlement services.

To provide secondary resettlement services, through grants and cooperative agreements with voluntary agencies, to approximately 300 Cuban and Haitian nationals living in South Florida whose initial resettlements did not lead to their achievement of economic self-sufficiency. This assistance will reduce the impact of this population upon state and local resources.

To provide cost-effective health and mental health care services to the Cuban and Haitian nationals in federal custody at the Krome Service Processing Center and at St. Elizabeth's Hospital and to provide community-based mental health treatment programs for Mariel Cubans paroled from INS detention. CRS will accomplish this through an interagency agreement with the U.S. Public Health Service (PHS).

To reduce the impact on state and local health and mental health care services by providing resettlement and community follow-up services to about 57 Cuban nationals who have been discharged from PHS psychiatric treatment programs and who are ready to make the transition to independent living.

Base Program Description: This activity is responsible for the reception, processing, and care of Cuban and Haitian nationals as authorized by Title V, Section 501 (c) of P.L. 96-422 (The Refugee Education Assistance Act of 1980), and by Executive Order 12341 of January 21, 1982, transferring these functions to the Department of Justice. Through this activity, CRS provides outplacement, resettlement, medical and mental health care services to Cuban and Haitian nationals paroled by INS from INS and the Bureau of Prisons (BOP) detention facilities and from St. Elizabeth's Hospital, and medical and mental health care services to Cuban and Haitian nationals in Federal detention at the Krome Service Processing Center and at St. Elizabeth's Hospital. Services are provided to eligible individuals through the award of grants to, and entry into cooperative agreements with, voluntary and private agencies, and through the operation of an interagency agreement with the Public Health Service (PHS).

The primary populations served include certain Cubans who arrived in the United States during the Mariel Boatlift of 1980, and those Haitians who arrived in 1980 and each year thereafter and who have been detained subsequently by INS for undocumented entry into the United States.

CRS' outplacement and resettlement services for Cuban and Haitian nationals include the following activities.

Outplacement of Mariel Cubans from Detention: CRS provides outplacement services to Mariel Cubans reparoled by INS from INS and BOP detention facilities. Such outplacement services are rendered through operation of halfway house and family sponsorship programs. Outplacement through CRS halfway houses provides highly structured residential and community based service components for Mariel Cubans whose histories and needs dictate substantial support and supervision in order to become self sufficient. Outplacement through family sponsorship provides transitional assistance to individuals whose criminal histories and circumstances do not require intensive residential or community supervision.

Outplacement of Cuban and Haitian nationals from the INS Krome Service Processing Center: CRS provides primary resettlement services to Cuban and Haitian nationals, including unaccompanied minors, who are paroled from INS detention under exclusionary bonds, or for humanitarian reasons. Services provided include child welfare, resettlement and outplacement services.

Secondary Resettlement Services: CRS provides secondary resettlement assistance to Cuban and Haitian entrants whose initial resettlement did not lead to economic self sufficiency. Such activities generally provide for resettlement of clients from areas impacted by heavy influxes of aliens to communities that present greater economic and employment opportunities. Emphasis is placed upon employment development, placement and retention.

Aftercare for Mentally Ill Cubans: CRS provides resettlement services and community based follow-up services to Cuban entrants discharged from PHS community-based psychiatric treatment programs into more normalized systems of living, which will fully prepare them for self sufficiency.

Health Services: Through an interagency agreement with PHS, CRS provides medical and mental health services to Cuban and Haitian nationals detained at the INS/Krome Special Processing Center; mental health care at St. Elizabeth's Hospital and community-based psychiatric treatment programs; and mental health evaluation of Mariel Cubans considered for reparole by INS

Accomplishments and Workload: Accomplishments of the Reception, Processing and Care activity are presented in the following tables:

	1988	1989	Estimates 1990	Estimates 1991
Entrant Population				
Mariel Cubans Revoked to Federal Custody	1,080	1,080	2,594	2,594

- Through CRS Halfway House Program	456	480	470	440
- Through CRS Family Sponsorship Program	177	85	280	269
Cubans and Haitians Resettled from the INS/Krome SPC:				
- Adults & Accompanied Minors	118	548	548	503
- Unaccompanied Minors/Shelter Care	326	125	125	125
Secondary Resettlement Assistance in South Florida	321	330	330	300
Aftercare for Mariel Cubans Completing PHS Programs	19	61	75	57

Explanation:

- Workload presented for primary and secondary resettlement of Cubans and Haitians in 1990 and 1991 reflect current best estimates of CRS based upon 1989 workload. Projections for 1990 are higher than those presented in previous submissions. This reflects the elevated level of Haitian migration to the United States, particularly South Florida, and the potential for increase in that rate resulting from political turbulence in Haiti.

- As Haitian entrants have adjusted their status through the Immigration Reform and Control Act, many have sought CRS assistance in building a permanent and better life in the United States. The number of entrants in South Florida seeking CRS secondary resettlement services has increased significantly. There is no sign that the need is abating; housing and employment opportunities in South Florida remain extremely limited, and the concentration of entrants in the area intensifies.

Adjusted workload presented for outplacement of Mariel Cubans in 1990, and 1991 reflect current best estimates of CRS and INS. Outplacements for 1989 were lower than projected because of the delay in start-up of the Departmental Review Panel process in 1989, lower than anticipated monthly review rates for both the Departmental Panels and the Cuban Review Panels, and lower than expected rates of approval for release for both the Departmental Panels and the Cuban Review Panels.

There are currently about 2,594 Mariel Cubans in federal custody, and another 3,000 in state and local detention facilities awaiting return to federal custody. The loss of the 2,400 detention spaces at the Atlanta and Oakdale detention facilities as a result of the November 1987 riots has caused serious problems of overcrowding and safety in the INS and BOP detention facilities housing Mariel Cubans. In the first half of 1989, the number of Mariel Cubans approved for release was drastically reduced due to the above mentioned factors. Because of the decrease in Cubans approved for release in FY 1989, CRS reduced its FY 1989 outplacement capacity to 565. In an effort to outplace the Mariel Cubans expected to be approved for release in 1990, CRS will increase its outplacement capacity in FY 1990. It is estimated that during 1990, approximately 783 will be approved for release from among those Mariel Cubans still in detention, as well as those returned to INS custody from federal, state and local criminal justice systems. It is estimated 783 Mariel Cubans will be approved for release in 1991. The release of these individuals depends on the availability of appropriate halfway house programs or family sponsors. CRS projects outplacement of approximately 750 Mariel detainees in FY 1990 and 709 in FY 1991.

			Estimates	
	1988	1989	1990	1991
PHS Services				
Health and mental health care:				
- Long-term care residents at:				
Federal facilities (PHS)................................	110	110	110	100
Non-Federal facilities (PHS)............................	187	187	153	153
- Individuals in need of long-term care....................	300	300	322	322
- Short-term Care:				
Clinic visits..	8,500	8,350	8,350	8,204
Hospital days*...	510	260	260	260
Mental Health evaluations:**				
PHS/INS Facility (SEH)................................	1,000	624	624	600
AFP, FADC and other facilities.......................	550	700	700	900

* Includes medical hospitalization at St. Elizabeth's Hospital (SEH).

** The Public Health Service (PHS) has limited evaluations to: brief screenings of all returnees; further evaluations as indicated by screening or requested by INS; and, repatriation summaries. Beginning in 1987, only mental health screening on returned entrants and evaluations required by INS or CRS were completed. SEH's full capacity was utilized and every admission called for mental health evaluation and further work-up as indicated (an estimated 3 evaluations per admission through 1986 and 5 per admission in 1987-1990).

Item	1988	1989	Estimates 1990	 1991
Grant Activities:

- PHS	16	10	10	8

Program Changes:	1991 Base Perm. Pos.	 WY	 Amount	1991 Estimate Perm. Pos.	 WY	 Amount	Increase/Decrease Perm. Pos.	 WY	 Amount
Reception, Processing and Care of Cubans and Haitians	30	30	$20,907	30	30	$19,780	...	...	-$1,127

The program decrease in 1991 of $1,127,000 will result in a reduction in CRS' Mariel Cuban and Haitian resettlement capabilities. CRS' Cuban and Haitian Entrant Program would be forced to reduce the number of Mariel Cubans and Haitians resettled and serviced by a total of 315, including a reduction of 181 Mariel Cubans provided medical and mental health care.

With the requested level of funding, CRS will be able to outplace 440 detained Mariel Cubans through the halfway house program, 269 through the family/sponsorship program and 57 through its aftercare programs. In addition, 503 Cubans and Haitians will be provided primary resettlement assistance and 300 will be provided secondary resettlement assistance. PHS will be able to furnish 100 beds at St. Elizabeths Hospital for long-term care patients, perform 600 mental health evaluations, and perform comprehensive medical screenings on 2,583 Cubans and Haitians at the Krome Special Processing Center.

[1] The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

Legal Activities

Salaries and expenses, Community Relations Service

Justification of Adjustments to Base
(Dollars in thousands)

Adjustments to base:

Mandatory increases:

		Work-Years	Amount
1.	Adjustment to workyears With the absorption of the pay raise a workyear could not be funded in 1990. This restores that workyear; funding is provided below.	1	...
2.	Additional compensable day The annual salary rate for Federal employees is based on 260 paid days. During 1991 there is one more compensable day (261) than 1990 (260). Appropriate personnel benefits are included in this figure.	...	$29
3.	1990 full-year pay increase impact on 1991 This request provides for the full-year pay increase of 3.6 percent as contained in the general provisions of the U.S. Treasury, Postal Services and General Government Appropriations Bill, 1990, for civilian and military personnel to be effective in January of 1990. The Department will be required to absorb the total pay raise in 1990. The requested increase of $274,000 is the amount required for full-year funding in 1991. NOTE: The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.	...	274
	1991 pay increase For the first time, the Administration is proposing to include the costs of the pay increase effective in the budget year with the initial budget request. This request provides for 50 percent of the proposed 4.0 percent pay increase effective in January of 1991. The Department will be required to absorb half of the costs of this pay raise. The amount requested, $101,000, is the cost of the pay increase for approximately three-quarters of the year assuming a 50-percent absorption.	...	101

OPENING STATEMENT

Mr. MOLLOHAN. The committee is pleased to welcome back the Director of the Community Relations Service, Grace Flores Hughes. Ms. Flores Hughes, the committee would like to welcome you, and we will, if you have a written statement, we will be pleased to make that a part of the record. You may proceed with your oral presentation.

Ms. FLORES HUGHES. Thank you. Accompanying me, I also would like to introduce my Budget Officer, Ms. Alfreda Hayes.

CRS is responsible for two major programs. One program, the Prevention and Conciliation of Community Disputes, addresses racial and ethnic tension, and carries out CRS' earliest legislative mandate.

The second program, the Reception, Processing, and Care of Cubans and Haitians, provides humanitarian, placement and resettlement assistance, and fulfills responsibilities transferred to the Department by Executive Order 12341 in 1982. Both of these programs help ensure domestic racial and ethnic tranquility.

For 1991, CRS requests $28,172,000; 118 permanent positions; and 120 workyears. This request represents a net decrease of $758,000 from the 1990 appropriation. It includes inflationary adjustments of $369,000 for the agency, offset by a program decrease of $1,127,000, which is applied to the Reception, Processing, and Care of Cubans and Haitians Program.

In 1989, America marked passage of a quarter of a century since the enactment of the Civil Rights Act of 1964, and the establishment of the CRS.

I reaffirm what President Bush said in his 1990 State of the Union Address: "Every one of us must confront and condemn racism, anti-Semitism, bigotry and hate. Not next week, not tomorrow, but right now. Every single one of us."

CRS' principal responsibilities involve working directly with public officials and leaders in local communities. This is not easy work. It requires the seasoned judgment of conciliation specialists who must be sensitive and discreet. Often, the conflicts are marked by violence.

Also, racial and ethnic disputes are becoming more complex, requiring greater sophistication and specialization by our staff. The relatively small investment to support the work of this staff of conflict resolution specialists is well-spent.

When we look around the world today, we see that nations without institutions and agencies for peaceful resolution of ethnic and racial tensions continue to be torn apart by conflict and violence.

As we enter into the last decade of the 20th century, it is apparent that much has been accomplished in civil rights in America since 1964. Yet, it is equally clear that much remains to be done. The dynamic nature of American society presents ever-changing opportunities and challenges for its institutions.

Demographic change brings with it the possibility for racial and ethnic tension and confrontation. During the last several years, many communities throughout the Nation have experienced conflict as racial and ethnic minorities arrive in search of better lives. The accompanying transitions present new and different issues that must be addressed by neighbors and by local governments, law enforcement agencies, employers, landlords and school officials.

COMMUNITY DISPUTE ACCOMPLISHMENTS

According to CRS' records, disputes arising out of racially-motivated acts of hate, violence and intimidation have increased in recent years. It is noteworthy that CRS identified more racial and ethnic conflicts in 1989 than in any other year.

The number of CRS responses to racial unrest and hate violence increased last year. This trend was acutely apparent on college and university campuses. Perhaps this trend is understandable if we remember that universities, as microcosms of American society, are bringing people together into close quarters who may have fears and misconceptions about those different from themselves.

CRS anticipates that the resolution of racial and ethnic conflicts impacting recent immigrants to the United States will command increasing attention during 1990 and 1991. Two principal factors will contribute to this need: The number of newly-legalized aliens is increasing as a result of the Immigration Act. Further, as they become more comfortable with and confident about American institutions, newly-legalized aliens are becoming more assertive in their desire for equality in employment, housing, business, and social benefits.

The problem of drug abuse in America has particularly profound implications for racial and ethnic tension for the foreseeable future. Street gangs and drug crime are prevalent within public housing projects in communities heavily populated by racial and ethnic minorities. The violence accompanying the war on drugs has increased police-community friction and created concern over allegations of excessive use of force by police.

CRS is helping reduce racial and ethnic tensions arising out of street gang activity and law enforcement response to drug crimes. CRS is extending application of a model approach to combating drug crime in public housing.

In partnership with the Drug Enforcement Administration, Federal Bureau of Investigation, U.S. Marshals Service, U.S. Attorneys, and local law enforcement agencies, CRS is delivering a number of important services to public housing tenants. Under this approach, CRS conciliates agreements between law enforcement entities, public housing management, and tenant associations regarding how public housing will be patrolled and secured by police; how community watch groups will relate to police; how youth and recreational programs can be developed as alternatives to drugs, and how police will respond to calls from tenants.

CRS routinely works with community-based projects addressing the war against crime. For example, in the Southwest Region, CRS pursued the war against crime and drugs by enlisting the support of the corporate sector to adopt a community and implement programs to reduce drug abuse and crime.

CRS' Rocky Mountain Region supported a grass-roots effort in Denver that addressed street gangs and drug crimes. CRS provided a task force model, technical assistance and liaison services to the Denver Police and concerned residents. CRS also assisted this task force to put in place a community school pilot project and junior achievement and summer employment programs.

To combat serious racial violence and address hate group activity, CRS has been instrumental in the formation of several multi-State coalitions against malicious harassment. CRS also convened a forum for college presidents to map out strategies to improve the campus racial and ethnic climate.

We foresee no reduction in demand for services under CRS' Prevention and Conciliation of Community Disputes Program. Instead, we expect that CRS will record 2,200 incidents of racial and ethnic conflict, annually, this year and next, up from the 1989 level of 2,031. We also anticipate that CRS will handle 1,290 cases annually in the same period, as opposed to 1,250 in 1989.

RECEPTION, PROCESSING, AND CARE PROGRAM

With respect to the Reception, Processing, and Care of Cubans and Haitians program, CRS provides outplacement, resettlement, medical and mental health care services to Cubans and Haitians paroled from Immigration and Naturalization Service detention.

We anticipate that the demand for outplacement of Mariel Cubans will continue as these individuals continue to be returned to Federal custody at the rate of 80 to 100 per month. The Department's Repatriation and Re-Parole Review Panels are fully operational and adding to the pool of Mariels awaiting outplacement.

The requested level of funding will enable CRS to outplace 440 detained Mariel Cubans through its halfway house program, 269 through its family sponsorship program, and 57 through its aftercare program.

CRS will also provide primary and secondary resettlement services to 803 Cubans and Haitians. Further, through an interagency agreement with the Public Health Service, CRS will provide 100 long-term care hospital beds, conduct 600 mental health evaluations, and perform comprehensive medical screenings on 2,583 Cubans and Haitians in 1991. The Cuban and Haitian Program allows the U.S. Government to both respond to complex legal and humanitarian issues and protect the public safety.

This concludes my statement, Mr. Chairman. I welcome the opportunity to respond to questions.

[The prepared statement of Ms. Flores Hughes follows:]

	Work-Years	Amount
5. Senior Executive Service pay increase This request represents the 1991 costs of the pay increase for senior executive service employees. This pay raise is to be effective in January of 1990, but will be absorbed completely for the first year. In 1991, an increase of $21,000 is necessary for this requirement. Funding for the executive level employees pay raise is completely absorbed in both years.	...	$21
6. Special salary rates This request provides increases as authorized by law in 5 U.S.C. 5303. This Office of Personnel Managment (OPM) has approved these rates for positions where retention and recruitment of qualified applicants is a problem. The Department's request represents coverage of 33 authorized special rates.	...	3
7. Health benefits The Federal Employees Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1990, the actual contribution to health insurance increased 25 percent. The requested increase of $29,000 provides funds for actual increased costs from pay period 1 to pay period 2, projected for a full year.	...	29
8. GSA rent GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. A mandatory increase of $5,000 is required to meet our commitment to GSA.	...	5
9. Government Printing Office (GPO) The GPO is currently projecting a seven-percent increase over the 1990 printing costs of $3[illegible]00. An additional $2,000 will be required in 1991.	...	2

	Work-Years	Amount
10. Employee data and payroll services Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems, maintenance and payroll accounting, are based on the number of employee records maintained. The rate of $188.23 per record in 1990 will be raised to $199.52 per record for 1991. The change is based on anticipated uncontrollable cost increases of 6 percent for the operation of the Justice Employee Data Service. An increase of $1,000 will be required in 1991.	...	$1
Total mandatory increases	1	465
Decreases (Automatic non-policy):		
1. Federal Telecommunications System (FTS) In 1991, the General Services Administration (GSA) is to have the FTS 2000 system fully implemented. At present GSA projections indicate costs for current FTS minute usage charges will decrease from 34 cents per minute to 18 cents per minute. The requested reduction of $96,000 reflects this decrease.	...	-96

Consulting and Related Services
(Dollars in thousands)

	1989 Actual	1990 Estimate	1991 Estimate
Consulting Services..	$9	$16	$16
Special Studies and Analysis..	25	3	...
Total..	34	19	16

Consultants' services are used by the Community Relations Service only for those assignments which cannot be performed in-house.

The Community Relations Service uses consultants in various specialized areas of education and the administration of justice to assist field staff in helping to resolve disputes and working with community groups and major institutional leaders. Examples are police departments, school superintendents and school staff as well as community organizations which generally are led by business persons, as well as, civil rights organizations. Consultant services were reduced in 1989 because of budget constraints.

In addition, in 1989, CRS contracted with an ADP Consultant firm to examine the activities, programs, organization, and existing automation systems with a view to recommending an Automated Information Systems architecture, organizational support and training strategies to implement the recommendations. An additional $3,000 is needed for follow-up activities in 1990.

DEPARTMENT OF JUSTICE
COMMUNITY RELATIONS SERVICE

STATEMENT OF THE DIRECTOR
GRACE FLORES HUGHES

BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF STATE, JUSTICE, AND COMMERCE, THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to have the opportunity to testify in support of the Community Relations Service's (CRS') budget request for FY 1991.

CRS is responsible for two major programs. One program, the Prevention and Conciliation of Community Disputes, addresses racial and ethnic tension, and carries out CRS' earliest legislative mandate. The second program, the Reception, Processing, and Care of Cubans and Haitians, provides humanitarian, placement, and resettlement assistance, and fulfills responsibilities transferred to the Department by Executive Order 12341 in 1982. Both of these programs help ensure domestic racial and ethnic tranquility.

For 1991, CRS requests $28,172,000; 118 permanent positions; and 120 workyears. This request represents a net decrease of $758,000 from the 1990 appropriation. It includes inflationary adjustments of $369,000 for the agency, offset by a program decrease of $1,127,000, which is applied to the Reception, Processing and Care of Cubans and Haitians Program.

In 1989, America marked passage of a quarter of a century since the enactment of the Civil Rights Act of 1964, and the establishment of CRS.

Title X of the Civil Rights Act of 1964 mandated that CRS "...Provide assistance to communities and persons therein in resolving disputes, disagreements, or difficulties relating to discriminatory practices based on race, color, or national origin which impair the rights of persons...under the Constitution or laws of the United States...." By helping communities cope with racial and ethnic conflicts, CRS helps these communities secure justice and equality of opportunity for all.

I reaffirm what President Bush said in his 1990 State of the Union Address: "Everyone of us must confront and condemn racism, anti-semitism, bigotry and hate. Not next week, not tomorrow, but right now. Every single one of us."

CRS' principal responsibilities involve working directly with public officials and leaders in local communities. This is not easy work. It requires the seasoned judgement of conciliation specialists who must be sensitive and discreet. Often the conflicts are marked by violence. Also racial and ethnic disputes are becoming more complex, requiring greater sophistication and specialization by our staff. The relatively small investment to support the work of this staff of conflict resolution specialists is well spent. When we look around the world today, we see that nations without institutions and agencies for peaceful resolution of ethnic and racial tensions continue to be torn apart by conflict and violence.

As we enter into the last decade of the twentieth century, it is apparent that much has been accomplished in civil rights in America since 1964. Yet, it is equally clear that much remains to be done. The dynamic nature of American society presents ever-changing opportunities and challenges for its institutions.

Demographic change brings with it the possibility of racial and ethnic tension and confrontation. During the last several years, many communities throughout the nation have experienced conflict as racial and ethnic minorities arrive in search of better lives. The accompanying transitions present new and different issues that must be addressed by neighbors and by local governments, law enforcement agencies, employers, landlords, and school officials.

According to CRS' records, disputes arising out of racially motivated acts of hate violence and intimidation have increased in recent years. It is noteworthy that CRS identified more racial and ethnic conflicts in 1989 than in any other year. The number of CRS responses to racial unrest and hate violence increased last year. This trend was acutely apparent on college and university campuses. Perhaps this trend is understandable if we remember that universities, as microcosms of American society, are bringing people together into close quarters who may have fears and misconceptions about those different from themselves.

CRS anticipates that the resolution of ethnic and racial conflicts impacting recent immigrants to the United States will command increasing attention during 1990 and 1991. Two principal factors will contribute to this need. The number of newly legalized aliens is increasing as a result of the Immigration Reform and Control Act. Further, as they become more comfortable with and confident about American institutions, newly legalized aliens are becoming more assertive in their desire for equality in employment, housing, business, and social benefits.

The problem of drug abuse in America has particularly profound implications for racial and ethnic tension for the foreseeable future. Street gangs and drug crime are prevalent within public housing projects in communities heavily populated by ethnic and racial minorities. The violence accompanying the war on drugs has increased police-community friction and created concern over allegations of excessive use of force by police.

CRS is helping reduce racial and ethnic tensions arising out of street gang activity and law enforcement response to drug crimes. CRS is extending application of a model approach to combating drug crime in public housing. In partnership with the Drug Enforcement Administration, Federal Bureau of Investigation, U.S. Marshals Service, U.S. Attorneys, and local law enforcement agencies, CRS is delivering a number of important services to public housing tenants. Under this approach, CRS conciliates agreements between law enforcement entities, public housing management, and tenant associations regarding how public housing will be patrolled and secured by police; how community watch groups will relate to police; how youth and recreational programs can be developed as alternatives to drugs, and how police will respond to calls from tenants.

CRS routinely works with community-based projects addressing the war against crime. For example, in the Southwest Region, CRS pursued the war against crime and drugs by enlisting the support of the corporate sector to adopt a community and implement programs to reduce drug abuse and crime. CRS' Rocky Mountain Region supported a grass-roots effort in Denver that addressed street gangs and drug crimes. CRS provided a task force model, technical assistance and liaison services to the Denver police and concerned residents. CRS also assisted this task force to put in place a community school pilot project and junior achievement and summer employment programs.

To combat serious racial violence and address hate group activity, CRS has been instrumental in the formation of several multi-state coalitions against malicious harassment. CRS also convened a forum for college presidents to map out strategies to improve the campus racial and ethnic climate.

We foresee no reduction in demand for services under CRS' Prevention and Conciliation of Community Disputes Program. Instead, we expect that CRS will record 2,200 incidents of racial and ethnic conflict, annually, this year and next, up from the 1989 level of 2031. We also anticipate that CRS will handle 1,290 cases annually, in the same period, as opposed to 1250 in 1989.

With respect to the Reception, Processing and Care of Cubans and Haitians Program, CRS provides outplacement, resettlement, medical and mental health care services to Cubans and Haitians paroled from Immigration and Naturalization Service detention.

We anticipate that the demand for outplacement of Mariel Cubans will continue as these individuals continue to be returned to Federal custody at the rate of 80-100 per month. The Department of Justice's Repatriation and Reparole Review Panels are fully operational and adding to the pool of Mariels awaiting outplacement.

The requested level of funding will enable CRS to outplace

440 detained Mariel Cubans through its halfway house program, 269 through its family sponsorship program, and 57 through its aftercare program. CRS will also provide primary and secondary resettlement services to 803 Cubans and Haitians. Further, through an interagency agreement with the Public Health Service, CRS will provide 100 long-term care hospital beds, conduct 600 mental health evaluations, and perform comprehensive medical screenings on 2,583 Cubans and Haitians in 1991. The Cuban and Haitian Program allows the U.S. Government to both respond to complex legal and humanitarian issues, and protect the public safety.

This concludes my statement, Mr. Chairman. I welcome the opportunity to respond to questions.

IMPACT OF PROGRAM REDUCTION

Mr. **Mollohan**. Thank you, Mrs. Flores Hughes.

You recommend a decrease of $1,127,000 in the Reception, Processing, and Care of Cubans and Haitians Program. Does this decrease reflect a reduction in the workload due to a lower number of eligible Cubans and Haitians, or are you reducing services?

Ms. **Flores Hughes**. The services we are providing will not change. The number of Cubans and Haitians that we will be able to service will decrease by an estimated 315 individuals.

MARIEL CUBAN POPULATION

Mr. **Mollohan**. How do those populations break down? Part of that population have criminal records and part of them——

Ms. **Flores Hughes**. Of the Mariel Cubans, we processed approximately 951 last year. All of them have criminal records, as you know. Those that have very severe criminal records are kept in either INS or BOP detention. We resettle the ones with the less serious criminal records that have been approved by INS to send out to the community with extensive follow-up from our agency.

Mr. **Mollohan**. How do you process and relocate them into communities?

Ms. **Flores Hughes**. We bring them into five of the halfway houses we have throughout the country. We service them for approximately 12 months. For the first three to four months they are with us they get extensive training in English and in basic learning skills about the environment, such as, how to write a check. We also provide training in interview skills so that they may acquire jobs. We also provide employment placement services.

And then we follow up on their progress. We also have a savings for them so when they go off they have money to rent an apartment and hopefully live in decent housing. We monitor them for the remainder of the 12-month period to ensure that they are working and are not involved in criminal activity of any kind.

PROGRAM SUCCESS

Mr. **Mollohan**. How successful has that program been?

Ms. **Flores Hughes**. We have had some of the folks back into detention. The recidivism rate is a very low one. I would say that any of the individuals that have gone through our halfway houses, maybe 10 percent come back to Federal custody for criminal or conditional parole violations and another 10 percent are AWOL cases.

Mr. **Mollohan**. You said you monitored that?

Ms. **Flores Hughes**. We monitor them when they are out in the community. If we find any of them, and our numbers have been very small, that we need to pull back into our halfway house or back into the detention, we will do so. But our numbers are very, very low.

MENTAL HEALTH PROGRAM

Mr. **Mollohan**. Are there any parties of either of these populations that are not—don't fall within the criminal group, but also aren't candidates for mainstreaming, if you will; that you have to provide custodial care for on a long-term basis?

Ms. FLORES HUGHES. The ones that have their criminal problems——

CUSTODIAL CASE RESPONSIBILITY

Mr. MOLLOHAN. I am eliminating that part of the population, and I am eliminating the part that you are mainstreaming. Is there any part of that population that doesn't fall into those two groups, and that you have to provide custodial care for, for example?

Ms. FLORES HUGHES. None that I am aware of.

Mr. MOLLOHAN. What I am getting at is, that there was part of that group that were incompetents or mentally incompetent. Is there such a group?

Ms. FLORES HUGHES. Yes. I am sorry. I was focusing on the criminal element of the population we serve. We do have our mental patients. They are being cared for in St. Elizabeth's here in Washington, D.C.

Mr. MOLLOHAN. How big is that population?

Ms. FLORES HUGHES. I was there a couple of months ago to review this program. I thought there was, at the time, 100 to 200 beds approximately. It is 110 beds, so I was close.

Mr. MOLLOHAN. Do you know the history of that group? Has it increased, decreased?

Ms. FLORES HUGHES. Since I have been with the Service for about a year and a half, the numbers have pretty much stayed the same in that 100 to 200 area. There are approximately 55 severely ill patients that may have to be at St. Elizabeth's for as long as they are in the United States. The number of very severe cases is increasing.

Mr. MOLLOHAN. Is St. Elizabeths the only facility that is caring for any of these people that may fall between the criminal element and the mainstream element? Are there any others that are being treated at St. Elizabeth's?

Ms. FLORES HUGHES. We have a contract with the Public Health Service, to provide after-care programs for them. I don't know whether Jeff Weiss may want to add something more to that. He is the Associate Director of my Immigration and Refugee Affairs office.

Mr. WEISS. These are for Marielitos with mental problems. We have a program that requires non-residential care; located in California, the Midwest, and the East Coast. This care takes place after they have been released from public health institutional care, and they are competent to live in the community but they need monitoring, treatment and counseling. It is a lot less expensive than institutional care.

Mr. MOLLOHAN. How large is that population?

Mr. WEISS. About 187.

Mr. MOLLOHAN. Where would they live? Where would they eat? Would they work?

Mr. WEISS. Some of them work, others are on local subsistence programs. We try to place those that can work. We have job counseling programs for these clients.

Mr. Mollohan. Those that can, are they living independently?

Mr. Weiss. Yes, they have supervised, independent living. Again, they come in for treatment. It operates pretty close to what you would find in a regular American after-care program here in Washington or Maryland.

Mr. Mollohan. Thank you very much, Mrs. Flores Hughes. We appreciate your testimony. We have some questions that we would ask you to answer for the record. Thank you for your testimony.

[The following questions were submitted to be answered for the record:]

QUESTIONS SUBMITTED BY CONGRESSMAN MOLLOHAN

Community Relations Service

Prevention and Conciliation of Community Disputes

QUESTION: You request no program growth for 1991 for Prevention and Conciliation of Community Disputes. Are these amounts sufficient to handle all of your requirements?

ANSWER: I recognize the importance of living within budetary constraints. Therefore, we will do the best we possibly can with the resources made available to Community Relations Service (CRS).

The amount that we requested will allow us to carry out the workload set forth in the budget. This is, we will complete approximately 1,450 assessments, and conduct approximately 1,290 conciliation and mediation cases. However, I recognize that unless we change the way we do business, the backlog will grow as the demand for CRS' services increase.

I am reviewing the way our Prevention Program operates and seeking short and long-term efficiencies. In the short term, we are going to work with the regions to reprioritize case involvement, so that we devote our efforts to the resolution of disputes that will have the greatest positive community impact.

Uncompleted alerts account for 24.7 percent of the total Prevention program backlog and is a major factor in the accumulation. Therefore, I am proposing a streamlined assessment process, to be used in some circumstances, that will allow regions to handle alerts much more expeditiously and to reduce backlog.

QUESTION: Is it true that in 1990, a year in which you were also held to no program growth, that your backlog of cases was a record high of 951?

ANSWER: I have hired consultants to help CRS in redesigning its Automated Data Processing System, and in developing a database that more accurately addresses backlog figures. Therefore, at this time, I cannot say that the current backlog is at a historical high for CRS.

In part, the current backlog reflects my initiative to have regions alert all incidents of racial conflict that come to their attention. Before my arrival, many incidents that were known to the regions and that should have been captured in our database, were not reported. Generally, regional offices did not report such incidents because they felt that resources would not be available to address these disputes. I initiated comprehensive alerting because the existing incomplete method of reporting did not allow me to have an accurate picture of the nationwide need for our services.

QUESTION: What impact will your requested level of funding in 1991 have on your backlog?

ANSWER: Based on current trends in demand for CRS' service, with resources available in 1990 and 1991, the backlog would increase as indicated in the budget. However, the backlog figures contained in the budget do not reflect the initiatives that I am now putting in place to reduce the backlog. Through these efforts, I anticipate that we can reduce the backlog at the end of 1991 by approximately 50 percent.

QUESTION: What funding levels would you require to bring your backlog back down to 1989 levels?

ANSWER: Through management initiatives that I am putting in place, we can reduce our backlog by approximately 25 percent this year, and by the same amount next year. Therefore, I believe that we will not require additional funding to bring the backlog back down to 1989 levels.

THURSDAY, MARCH 15, 1990.

FOREIGN CLAIMS SETTLEMENT COMMISSION

WITNESSES

STANLEY J. GLOD, CHAIRMAN

HARRY H. FLICKINGER, ASSISTANT ATTORNEY GENERAL FOR ADMINISTRATION

MICHAEL J. ROPER, DEPUTY ASSISTANT ATTORNEY GENERAL, CONTROLLER

ADRIAN A. CURTIS, DIRECTOR, BUDGET STAFF

Mr. MOLLOHAN. Continuing in our review of the Department of Justice, we will now hear testimony from the Foreign Claims Settlement Commission. They are requesting $490,000 in fiscal year 1991. We will insert into the record at this point the Commission's fiscal year 1991 budget justifications.

[The justifications follow:]

Summary Statement
Fiscal Year 1991

The Foreign Claims Settlement Commission is requesting a total of $490,000, seven permanent positions and seven workyears for 1991. This request represents a net increase of $50,000 from the 1990 appropriation of $440,000.

The Commission consists of a Chairman and two part-time Commissioners, who are appointed by the President with the advice and consent of the Senate. The part-time Commissioners receive compensation at the Executive Level V rate of pay for performance of official business of the Commission at the direction of the Chairman.

The principal mission of the Commission is to adjudicate claims of American citizens arising out of the nationalization, expropriation or other taking of their properties and interests by foreign governments, under jurisdiction conferred by the International Claims Settlement Act of 1949, as amended. To date, the Commission has compiled and evaluated such claims against 14 countries: Yugoslavia, Panama, Bulgaria, Hungary, Romania, Italy, the Soviet Union, Czechoslovakia, Poland, Cuba, China, the German Democratic Republic (East Germany), Vietnam, and Ethiopia. In addition, the Commission is currently engaged in the issuance of supplemental awards on claims of U.S. citizens against Egypt which were settled by the Department of State in 1976.

In 1991, the Commission will continue its advisory function to the Congress and the Departments of State and Treasury concerning claims before the United States-Iran Claims Tribunal at The Hague. In accordance with Public law 99-93, the Commission will also initiate a program for adjudication of the group of claims against Iran which are currently pending before the Tribunal under the sponsorship of the Department of State, as soon as a lump-sum settlement agreement concerning such claims is concluded with the Government of Iran.

The Commission will continue to provide technical assistance to the Department of State in conducting claims settlement negotiations with the German Democratic Republic and the Soviet Union, and will also provide assistance in settlement negotiations with other countries, as requested by the Department.

The Commission will continue to assist the Department of the Treasury in paying awards which have been certified for payment from existing claims funds, such as the Czechoslovakian claims fund, the Ethiopian claims fund, and the Egyptian claims fund.

Under the War Claims Act of 1948, as amended, the Commission will continue to have authority to award compensation to American military prisoners of war held in Southeast Asia during the Vietnam conflict, or their survivors, for inadequate rations and inhumane treatment while in captivity.

The Commission will continue to furnish information contained in the records pertaining to the 40 completed international and war-related claims programs it has conducted, as requested by claimants and their heirs, attorneys, researchers, and other members of the public. Upon request, it will also provide advice on policy determinations, preliminary planning, evaluation of pending claims legislation, and liaison with Congressional committees considering legislation intended to provide for adjudication of additional types or classes of claims.

Foreign Claims Settlement Commission

Salaries and expenses

Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses, Foreign Claims Settlement Commission

For expenses necessary to carry out the activities of the Foreign Claims Settlement Commission, including services as authorized by 5 U.S.C. 3109, [$440,000: Provided, That for fiscal year 1990 and hereafter, funds appropriated under this heading shall be available for: allowances and benefits similar to those allowed under the Foreign Service Act of 1980 as determined by the Commission; expenses of packing, shipping, and storing personal effects of personnel assigned abroad; rental or lease, for such periods as may be necessary, of office space and living quarters of personnel assigned abroad; maintenance, improvement, and repair of properties rented or leased abroad, and furnishing fuel, water, and utilities for such properties; insurance on official motor vehicles abroad; advances of funds abroad; advances or reimbursements to other Government agencies for use of their facilities and services in carrying out the functions of the Commission; hire of motor vehicles for field use only; and employment of aliens] ^ . ________ $490,000

22 U.S.C. 1621-1645; 50 U.S.C. App. 2001-2017; Department of Justice Appropriations Act 1990.

Explanation of changes:

The change deletes language which is included in the Department of Justice Appropriations Act for 1990.

The citations shown in the fiscal year 1991 galleys are incorrect. The above citations apply to the Foreign Claims Settlement Commission.

Activity: Adjudication of International Claims	7	7	$440	7	7	$490	7	7	$490	...	...	...

Long-Range Goal: To make effective determinations of unsettled claims of American nationals against foreign governments within the framework of the International Claims Settlement Act of 1949 and other pertinent statutes, and to provide assistance to claimants in past international and war claims programs.

Major Objectives:

- To provide assistance to the Department of State in the presentation of United States claims before the United States-Iran Claims Tribunal at The Hague.
- To provide general information concerning past programs and to respond to requests about specific decisions the Commission has made on past claims.
- To advise other agencies and the Congress concerning potential future programs and to comment on pending legislation.
- To assist the Department of State in negotiations for the settlement of adjudicated claims against foreign governments, including those of East Germany, Vietnam, Cuba, and the Soviet Union.
- To assist the Department of the Treasury in making distributions on past awards certified by the Commission.
- To provide executive departments and private attorneys with legal precedents issued by the Commission.
- To conduct preliminary planning of pending new programs.
- To respond to requests for advice on policy determinations relating to the settlement of international claims.

1991 BUDGET REQUEST

Mr. MOLLOHAN. The committee welcomes Stanley Glod, Chairman of the Foreign Claims Settlement Commission. Mr. Glod?

Mr. GLOD. Good afternoon. With your permission, I will ask the record to include the statement that I prepared and made available for the reporter.

Mr. MOLLOHAN. We will make it a part of the record.

Mr. GLOD. Thank you.

OPENING REMARKS

I am pleased to have the opportunity to appear before you in support of the Foreign Claims Settlement Commission's 1991 budget request. As you have stated, the Commission is requesting $490,000 for fiscal year 1991 for seven permanent employee positions and seven workyears. This represents an increase of $50,000 over the agency's approved appropriation for 1990, and is being sought to cover mandatory increases in the cost of administrative services and operating expenses. The $490,000 requested includes an amount of $344,000 for personnel costs and benefits, and $146,000 for support costs.

FOREIGN CLAIMS SETTLEMENT COMMISSION RESPONSIBILITIES

The Commission's three principal functions are to adjudicate claims of United States nationals against foreign governments under jurisdiction conferred by Title I of the International Claims Settlement Act of 1949, as amended; claims against Iran under Public Law 99-93, enacted in August 1985; and claims under Public Law 91-289, enacted in 1970 as an amendment to the War Claims Act of 1948.

The Commission will stand ready to initiate new claims adjudication programs to deal with claims against foreign countries with which claims agreements may be negotiated by the Department of State.

NEW CLAIMS IN 1991

During fiscal year 1991, such new programs may likely be required for the determination of additional claims of United States citizens against East Germany and the Soviet Union, as prospects exist for success in concluding settlement agreements with one or both of those countries. Negotiations aimed at reaching agreements were begun with East Germany in 1982 and with the Soviet Union in 1988.

As these negotiations progress, the Commission will be required to provide continuing technical assistance to the Department of State on legal and factual issues relevant to the claims in question, based on the findings and determinations rendered in the claims programs it conducted under Titles III and VI of the International Claims Settlement Act of 1949.

IRANIAN CLAIMS

Secondly, during fiscal year 1991, the Commission will continue to stand ready to take over the adjudication of the United States citizens' claims against Iran, valued at or near $250,000 per claim, in accordance with Public Law 99-93, passed in 1985, should a lump-sum settlement be reached with the Iranian Government.

Since the signing of the Algiers Accord in 1981, the Department of State has been engaged in presenting these claims before the Iran-United States Claims Tribunal at The Hague on the claimants' behalf. Some 2,800 such claims have been filed, based on property losses resulting from the revolutionary takeover of Iran in 1979.

Pending conclusion of a settlement agreement with Iran, the Commission will also be required to provide technical assistance to the State Department on the international law principles and precedents relevant to the validity of these claims.

U.S. CLAIMS DURING THE VIETNAMESE WAR

As its third principal activity, the Commission will also continue during fiscal year 1991 to carry out its statutory responsibility of adjudicating any further claims of United States Armed Forces personnel and civilians, or their survivors, that may be filed for compensation based on inadequate food rations and inhumane treatment received while held as prisoners-of-war or internees during the Vietnam conflict, as mandated by Public Law 91-289. While it might seem unlikely that a basis for any further claims could yet remain, our Government's renewed efforts to account for the MIAs in Southeast Asia will undoubtedly bring additional filings.

In addition, the Commission will continue to provide information from its records on World War II, Korean War and Vietnam War era claims to veterans and their families seeking to qualify for benefits under various State and Federal programs, including medical benefits provided by the Department of Veterans' Affairs.

Finally, during 1991, the Commission will continue to respond to requests from Congressional offices, Federal agencies, and the public for information and advice on completed claims programs, proposals for claims legislation, and issues involving the law of international claims.

EXPENSES OF THE COMMISSION

As has been noted in the past, I would also like to mention that the operating expenses of the Commission, in fact, are ultimately borne only partially, if at all, by the taxpayer. Virtually all of the claims legislation under which the Commission has proceeded over the years has provided for a percentage of the compensation obtained from foreign governments to be set aside for the Department of the Treasury as miscellaneous receipts to defray the administrative expenses of the claims programs.

Since 1950, for example, the budget obligations of the Commission and its predecessors have amounted to less than $29 million, while the deductions have amounted to over $32 million.

Mr. Chairman, this concludes my statement in support of the Commission's 1991 fiscal year request. I will be happy to answer any questions that you may have.

[The prepared statement of Mr. Glod follows:]

Base Program Description:

The Commission provides continuing informational services to claimants (and, where applicable, their legal successors) with regard to the 40 completed international and war claims programs it has conducted. It also provides advice on policy determinations, preliminary planning, and evaluation of proposed legislation intended to authorize adjudication of claims of new categories of claimants, and liaison with Congressional committees considering such legislation.

Accomplishments and Workload:

Under the authority conferred upon it by Public Law 99-93, the Commission will adjudicate claims of United States nationals against Iran for property losses amounting to less than $250,000, as soon as an *en bloc* settlement of those claims is concluded with the Iranian government. In addition, the Commission will continue to provide technical assistance to the Department of State in its efforts to conclude claims settlement agreements with foreign governments, including, in particular, an agreement with the government of East Germany, to settle claims adjudicated under Public Law 94-542, and a similar agreement with the Soviet Union.

Utilizing its basic authority under Title I of the International Claims Settlement Act of 1949, as amended, the Commission will conduct claims adjudication programs following the Department of State's successful conclusion of claims settlements with foreign governments. In addition to East Germany, countries with which agreements remain to be negotiated include Albania and the Soviet Union. Under section 620(e) of the Foreign Assistance Act of 1961, as amended (22 U.S.C. 2370(e)), the Commission also has ongoing authority, upon request of the President, to evaluate property of United States nationals expropriated or otherwise subjected to action by foreign governments in violation of international law.

Under the War Claims Act of 1948, as amended, the Commission is empowered to authorize payments of compensation to American prisoners of war and civilians captured or interned by hostile forces in Southeast Asia during the Vietnam conflict, or to their survivors, for inadequate rations and inhumane treatment while in captured status. The Commission to date has granted awards to 736 prisoners of war or their survivors in the amount of $5,347,773; awards to 41 civilian internees in the amount of $229,337; and awards to members of the crew of the USS Pueblo in the amount of $68,675, for a total of $5,645,785. The status of a small number of military servicemen listed as Missing-in-Action who may have been held as prisoners of war remains to be determined by the Department of Defense. Upon receipt of these final determinations, this program will be completed.

The Commission will have completed issuance of supplemental awards on claims of U.S. citizens against Egypt originally determined by the Department of State under the 1976 U.S.-Egyptian Claims Settlement Agreement.

Salaries and expenses
Justification of Adjustments to Base
(Dollars in thousands)

	Pos.	WY	Amount
Mandatory increases:			
1. Additional compensable day The annual salary rate for Federal employees is based on 260 paid days. 1991 has one more compensable day (261) than 1990 (260). Appropriate personnel benefits are included in this figure.	...	...	$ 1
2. 1990 full-year pay increase impact on 1991 This request provides for the full-year pay increase of 3.6 percent as contained in the general provisions of the U.S. Treasury, Postal Services, and General Government Appropriations Bill, 1990, for civilian and military personnel to be effective in January of 1990. The Commission will be required to absorb the total pay raise in 1990. The requested increase of $9,000 is the amount required for full-year funding in 1991. NOTE: The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Commission, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. This requested increase is reflected as a mandatory increase and built into the 1991 base.	...	...	9
3. 1991 pay increase For the first time, the Administration is proposing to include the costs of the pay increase effective in the budget year with the initial budget request. This request provides for 50 percent of the proposed 4.0 percent pay increase effective in January of 1991. The Department will be required to absorb half of the costs of this pay raise. The amount requested, $3,000, is the cost of the pay increase for approximately three-quarters of the year assuming a 50-percent absorption.	...	...	3
4. Executive Level pay increase This request represents the President's proposed pay increase for executive level and senior executive service employees. This pay increase is to be effective in January of 1990, but will be absorbed completely for the first year. In 1991, an increase of $24,000 is necessary for this requirement.	...	...	24
5. Within-grade increases (WGI) This request provides for the expected increase in the cost of within-grade increases This increase represents WGI costs based on the Commission's employee population.	...	...	3

	Pos.	WY	Amount
6. Health Benefits The Federal Employees Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1990, the actual contribution to health insurance increased 25 percent. The requested increase of $2,000 provides funds for actual increased costs from pay period 1 to pay period 2, projected for a full year.	...	...	$2
7. GSA Rent GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. A mandatory increase of $5,000, or a five-percent increase over the base, is required to meet our commitment to GSA.	...	...	5
8. Government Printing Office (GPO) The Government Printing Office (GPO) is currently projecting a seven-percent increase over the 1990 printing costs. An additional $1,000 will be required in 1991.	...	...	1
9. Security reinvestigations The security reinvestigation program has been receiving widespread attention due to the increase in espionage cases, and the many situations where employees, who had been working in their jobs for a number of years, were discovered to be involved in various activities that were detrimental to the nation's security. The Office of Personnel Management, Federal Personnel Manual, Chapter 736 requires incumbents of certain positions to be reinvestigated, at a minimum, every five years, By 1991, the Department will require 7,592 employees to be reinvestigated in each of the next five years to address the existing backlog. Requested resources will provide for an additional 2,300 cases per year of the 7,092 cases that remain unfunded. An increase of $1,000 will be required in 1991.	...	...	1
10. General pricing level adjustment This request applies OMB pricing guidance as of December 6, 1989, to selected expense categories. The increased costs identified result from applying a factor of 4.2 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, transportation costs and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1991 estimates.	...	...	1
Total mandatory increases	...	...	$ 50

STATEMENT OF STANLEY J. GLOD
CHAIRMAN, FOREIGN CLAIMS SETTLEMENT COMMISSION
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE, THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to have this opportunity to appear before you in support of the Foreign Claims Settlement Commission's Fiscal Year 1991 Budget Request.

The Commission is requesting $490,000 in Fiscal Year 1991 for seven permanent employee positions and seven work years. This represents an increase of $50,000 compared to the agency's Fiscal Year 1990 appropriation. The $490,000 requested includes an amount of $344,000 for personnel costs and benefits and $146,000 for support costs.

The Commission's three principal functions are to adjudicate claims of United States nationals against foreign governments under jurisdiction conferred by Title I of the International Claims Settlement Act of 1949, as amended; claims against Iran under Public Law 99-93, enacted in August 1985; and claims under Public Law 91-289, enacted in 1970 as an amendment to the War Claims Act of 1948. These respectively authorize the Commission to render decisions on (1) property expropriation claims of United States nationals against any foreign countries (other than those that were at war with the United States in World War II) which have concluded _en bloc_ claims settlement agreements with the United States; (2) property expropriation claims of United States nationals against Iran valued at under $250,000, contingent upon an en bloc settlement agreement with the United States; and (3) claims of United States military personnel and civilians held as prisoners-of-war or interned in Southeast Asia during the Vietnam conflict, or their survivors, for inadequate rations and inhumane treatment, including forced labor, while in captured status.

Over the last several years, the Commission has sought to maintain only the minimum level of staffing and physical resources needed to discharge its current statutory responsibilities. As one of these responsibilities, the Commission is currently adjudicating claims against Egypt, completing a program begun by the Department of State pursuant to the 1976 en bloc claims settlement agreement between the United States and Egyptian governments.

At the same time, however, the Commission must maintain the capability to initiate new claims adjudication programs, in the event that international or other developments should require it to do so. During Fiscal Year 1991, such new programs may likely be required for the determination of additional claims of United States citizens against East Germany and the Soviet Union, as prospects exist for success in concluding settlement agreements with one or both of those countries. Negotiations aimed at reaching agreements were begun with East Germany in 1982 and with the Soviet Union in 1988.

Furthermore, as these negotiations progress, the Commission will be required to provide continuing technical assistance to the Department of State on legal and factual issues relevant to the claims in question, based on the findings and determinations rendered in the claims programs it conducted under Titles III and VI of the International Claims Settlement Act of 1949.

Similarly, circumstances may develop during Fiscal Year 1991 which will make effective the Commission's jurisdiction over the claims of United States citizens against Iran valued at or under $250,000 per claim. Since the signing of the Algiers Accords in 1981, the Department of State has been engaged in presenting these claims before the Iran-United States Claims Tribunal at The Hague on the claimants' behalf. Some 2,800 such claims have been filed, based on property losses resulting from the revolutionary takeover of Iran in 1979. (Claims for losses greater than $250,000 are presented by the claimants directly.) Under the terms of Public Law 99-93, the Department will transfer to the Commission, en masse, those claims that have not been disposed of by the Tribunal, as soon as a settlement is reached.

Pending conclusion of a settlement agreement with Iran, the Commission will also be required to provide technical assistance to the State Department on the international law principles and precedents relevant to the validity of these claims. At present, it is our understanding that approximately 2,300 of the claims remain pending before the Tribunal.

As its third principal activity, the Commission will also continue during Fiscal Year 1991 to carry out its statutory responsibility of adjudicating any further claims of United

States Armed Forces personnel and civilians, or their survivors, that may be filed for compensation based on inadequate food rations and inhumane treatment received while held as prisoners-of-war or internees during the Vietnam conflict, as mandated by Public Law 91-289. While it might seem unlikely that a basis for any further claims could yet remain, our Government's renewed efforts to account for the MIA's in Southeast Asia will undoubtedly bring additional filings.

In addition, as part of its responsibility with respect to prisoner-of-war claims, the Commission will continue to provide information from its records on World War II, Korean War and Vietnam War era claims to veterans and their families seeking to qualify for benefits under various state and Federal programs, including medical benefits administered by the Department of Veterans' Affairs.

Finally, during Fiscal Year 1991 the Commission will continue to respond to requests from Congressional offices, Federal agencies, and the public for information and advice on completed claims programs, proposals for claims legislation, and issues involving the law of international claims. Experience has demonstrated that an ongoing need exists for such services, and the Commission stands ready to continue to provide them in a cost-effective manner. Indeed, as my predecessors have pointed out in testimony before the Subcommittee in previous years, the operating expenses of the Commission ultimately are borne only partially, if at all, by the taxpayer. In virtually all instances, the legislation authorizing the adjudication of claims has directed that a percentage of the funds obtained from foreign governments for payment of the Commission's awards be set aside for deposit in the Treasury as miscellaneous receipts to defray the administrative expenses of conducting the claims programs. Since 1950 the budget obligations of the Commission and its predecessors have amounted to less than $29 million, while during that period the deductions taken have amounted to over $32 million.

Mr. Chairman, this concludes my statement in support of the Commission's Fiscal Year 1991 Budget Request. I will be happy to answer any questions which you or the other Members of the Subcommittee may have.

POTENTIAL FUNDING IMPACTS

Mr. MOLLOHAN. The Commission's 1990 appropriation was $20,000 less than in fiscal year 1989. Did this have any impact on discharging your responsibilities?

Mr. GLOD. In the Commission's 1990 budget, a total of $17,000 was requested for mandatory increases. However, we had a decrease of $49,000 which resulted in an overall decrease to our 1990 request of $32,000. Taking those two figures into account the $49,000 decrease was a result of nonrecurring costs for benefits and travel for a former employee. That was really in the form of severance pay.

We will obviously not experience such a decrease in 1991. In 1991, we will be required to absorb part of the 1991 pay increases, as well as pay the increase for Executive Level and Senior Executive Service employees included in the 1990 Act.

Additionally, our mandatory increases consist of 1990 pay increases and its impact on 1991, the normal GSA rent, health benefits and communications costs.

OVERSEAS EMPLOYEES

Mr. MOLLOHAN. Does the Commission, Mr. Glod, still have permanent employees stationed overseas?

Mr. GLOD. No, we do not. The provision for having a potential officer over there is really based on precedent in the past. There were several programs that required our presence overseas. There is no such requirement at the present time.

That, however, does not preclude the possibility of having such a situation arise where there may have to be a presence over there.

Mr. MOLLOHAN. If you have none, why do you require appropriation language providing you with authority similar to those accorded to Foreign Service employees?

Mr. GLOD. My answer to that, in short as I indicated already at least partially in my reply, is that a situation could occur following a settlement with East Germany, and the commencement of a second claims program, to investigate the facts that may be relevant, and could be achieved only by having people overseas. The rationale for this is, it is better to have the language, not saying that you are actually going to have offices or personnel in place, but to have the language there to enable you to act quickly, should that circumstance arise.

Mr. MOLLOHAN. Mr. Glod, thank you very much for your testimony.

Mr. GLOD. We welcome those.

Mr. MOLLOHAN. Thank you.

The committee will adjourn until Tuesday next.

MONDAY, MARCH 19, 1990.

1991 REQUEST

Mr. EARLY [presiding]. The committee will come to order.

Continuing with our review of the Department of Justice, we will now hear testimony from the Federal Prison System. For fiscal year 1991, the Prison System requests $1,371,882,000 for salaries and expenses, $374,358,000 for buildings and facilities, and $10,007,000 for the National Institute of Corrections. We will insert in the record at this point the Prison System fiscal year 1991 budget justification.

Summary Statement

Fiscal Year 1991

The Federal Prison System is requesting a total of $1,371,882,000, 22,269 permanent positions, and 19,215 [1] workyears for "Salaries and expenses" in 1991. This request represents an increase of $233,177,000, 4,798 positions and 3,323 workyears over the 1990 appropriation enacted.

This appropriation will provide for the custody and care of an average of 62,450 offenders and for the maintenance and operation of 66 penal institutions, 5 regional offices, 3 staff training centers, a central office, and the contract confinement of 7,130 Federal offenders with approximately 365 State and local correctional institutions, 45 juvenile facilities and 325 community residential facilities in 1991. At the recommendation of the Congress, the Bureau of Prisons is considering the establishment of a sixth region to include the mid-Atlantic states. On page 5 is a geographical display of the Federal Prison System.

For 1991, program increases totalling 4,883 positions, 2,375 workyears and $167,997,000 are requested to provide for a projected increase in the inmate population; to activate two (2) new Federal Correctional Institutions and twelve (12) housing expansions at existing institutions; to improve staffing systemwide; and to expand electronic monitoring. Following is a brief summary of each initiative:

Population Increase

The Administration's law enforcement initiatives, especially those directed at major drug trafficking and organized crime, have resulted in a 127 percent increase in the Federal prison population - from 23,783 in 1981 to more than 54,000 inmates today. More recently, the Federal inmate population growth rate has accelerated, increasing by 8,300 or 18 percent since January 1989. Based on short-term analysis of this growth level, Federal court cases pending, and the impact of tougher crime legislation the Federal Prison System projects that the average daily institution based population will increase by 6,050 inmates (11%) during FY 1991, from 56,400 to 62,450.

For 1991, a total of $25,462,000 is requested for subsistence and related support costs of the projected population increase. These additional resources will enable the Federal Prison System to continue to provide for food, medical care, clothing, inmate transportation, security, unit management, education, recreation, psychology, records, and maintenance costs associated with the projected population increase.

Activation of New Facilities

The current population of more than 54,000 inmates is housed in prison facilities that by contemporary correctional standards should confine 32,496 inmates. Today, Federal prisons are currently overcrowded by a systemwide average of 67 percent with several individual institutions overcrowded by more than 100 percent. Prison overcrowding coupled with the continuing rapid growth of the inmate population has the potential for creating a "gridlock" in the Federal criminal justice system. This crisis threatens the safety of staff, inmates, and the general public while at the same time seriously impairing the Department's ability to achieve its high priority law enforcement objectives.

For 1991, the Federal Prison System is requesting 883 positions, 375 workyears and $49,578,000 for the activation of the new facilities listed below which will be completed and ready for activation and operation in FY 1991. These facilities will add 3,315 critically needed beds.

---

[1] Excludes 127 reimbursable workyears

New Facilities:

	Beds	Activation Date	Pos.	FTE	Amount (in 000's)
Minersville, PA FCI	700	6/91	254	85	$12,104

Total	3,315		883	375	49,578

Improve Staffing Systemwide

Operating the Federal Prison System at 67 percent over its designed capacity without commensurate staffing increases has placed too severe demands on too few staff. Prison overcrowding is commonly related to an increased potential for inmate idleness, inmate violence and inmate litigation. Failure to continue to improve staffing systemwide can seriously compromise the security of our Federal prisons, endangering life and property. The Office of Management and Budget established a staff to inmate ratio goal of 1:3. The 1991 budget includes 4,000 positions, 2,000 workyears and $91,569,000 to achieve that goal. This increase will enable the Federal Prison System to improve staffing in critically understaffed programs listed below for which workload has increased in direct proportion to increases in inmate population. Special emphasis has been given to medical services, inmate literacy, drug abuse treatment and staff development. Following is a recap of this increase by program:

Programs:

	Pos.	FTE	Amount (in 000's)
Food Service	156	77	$3,633
Medical Service	614	307	17,939
Other Inmate Services	38	19	600
Institution Security	1,466	732	23,670
Unit Management:			
General Units	206	103	6,376
Drug Abuse Treatment	200	100	6,204
Education Programs (Inmate Literacy)	132	65	2,534
Leisure Programs	54	27	932
Religious Services	24	12	578
Psychology Services	46	23	1,206
Inmate Systems Management	160	80	4,394
Financial Management	220	110	6,042

	Pos.	FTE	Amount (in 000's)
Staff Development:			
Personnel Management	88	45	2,472
Staff Training	184	92	4,695
Institution Maintenance	266	133	6,171
Community Corrections Management	36	19	1,051
Executive Direction	50	25	1,371
Administrative Services	60	31	1,701
. Subtotal, Programs	4,000	2,000	91,569

Expend Contract Confinement

The Federal Prison System contracts with state, local and private community corrections centers for community residential bedspace for offenders who are eligible and need a pre-release transition program at the end of their sentences before returning to the community; who the Federal courts determine need more than probation and less than full institution confinement and services; who are under probation or parole supervision but need more intensive services and/or programs that can be provided under the "street" supervision of the U.S. Parole Officer; and who are committed directly from court generally serving short sentences. For 1991, the request includes $1,000,000 for "electronic monitoring" (250 inmates). An added benefit of this request is a reduction to FPS institution based population and thus a reduction to overcrowding.

Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses

For expenses necessary for the administration, operation, and maintenance
of Federal penal and correctional institutions, including purchase (not
to exceed [159, of which 55] are for replacement only) and hire of law 330 of which 90
enforcement and passenger motor vehicles; [$1,097,631,000]; Provided, That $1,371,882,000
there may be transferred to the Health Resources and Services Administration
such amounts as may be necessary, in the discretion of the Attorney General,
for direct expenditures by that Administration for medical relief for
inmates of Federal penal and correctional institutions: Provided further,
That uniforms may be purchased without regard to the general purchase price
limitation for the current fiscal year [:Provided further, That not to
exceed $3,000 shall be available for official reception and representation
expenses].

(18 U.S.C. 3050, 3059, 3651, 4001, 4002, 4007, 4008, 4011, 4041, 4042, 4081 4082, 4253, 4281, 5015; Department of Justice Appropriations Act 1990; additional authorizing legislation to be proposed.)

[For carrying out efforts at National Drug Control and the President's initiative to combat violent crime, $54,923,000, for additional staff to activate new prisons, to improve staffing at existing institutions, and to fund additional support costs associated with the projected increases in Federal prison populations.]

(Department of Transportation and Related Agencies Appropriations, Act 1990)

Explanation of Changes

No substantive changes.

1990 Sequestration. The sequester reflects the permanent reduction of amounts appropriated for FY 1990 pursuant to the provisions of Public Law 99-177 which requires a percentage reduction to each program specified in the budget justification submitted to the Committee on Appropriations in support of the fiscal year 1990 budget estimates. While the Bureau of Prisons has applied the percentage reductions as specified, a reprogramming of resources between programs will be necessary later this year to avoid furloughing staff. Staff reductions from the levels included in Conference Report 101-299 considering the current level of overcrowding and the expected increases in the Federal inmate population would compromise security and jeopardize the lives of inmates and staff and the safety of the community.

Reprogrammings. The reprogramming reflects the permanent effect of the August 16, 1988 reprogramming notification.

1990 Pay Increase. The cost of the 1990 pay increase will be fully absorbed and will also require reprogramming later this year.

This budget activity includes the cost of food; medical care; clothing; linens; security; welfare services; release clothing, transportation and gratuities; housing unit furnishings; academic; social and occupational education courses; leisure time programs; and religious and psychology services. Also included are the salaries and other expenses of Public Health Service commissioned officers stationed in Federal Prison System facilities.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount

Long-Range Goal: To provide offenders incarcerated in the Federal Prison System with a nutritional diet; comprehensive, accessible high quality health care services; clean clothing, footwear, linens, toiletries and stationery; and to properly manage the Inmate Trust Fund.

Major Objectives:

Provide three nutritional meals daily including provisions for medical and religious diets.

Continue cost-effective farm operations to supplement food purchased from local sources.

Professionally analyze food service programs for nutritional adequacy.

Continue to provide current level health care services in all institutions, which include promotion of good health practices, prevention of diseases and disability, inpatient and outpatient treatment, medical rehabilitation services, health education, and to promote dental hygiene and prevention of dental disease.

Meet and/or maintain medical accreditation requirements in all institutions.

Acquire and provide an adequate supply of clothing, footwear, linens, toiletries and stationery items for distribution to the inmate population.

Maintain laundry and clothing issue/return operations and the Inmate Trust Fund.

Base Program Description: The Federal Prison System (FPS) continues to provide three nutritional meals daily. These meals are certified for nutritional adequacy by registered dieticians and are well within the Recommended Dietary Allowances of the Department of Agriculture's National Research Council. Meal preparation is accomplished primarily by inmate workers (about 10 percent of the population) under the supervision of staff. The United States Penitentiary at Lompoc, CA and the Federal Correctional Institution at El Reno, OK utilize available land resources in the limited production of beef and milk. Farm products are consumed at the producing institutions and are also shipped to nearby institutions to offset their need to purchase some products on the open market.

Medical services are provided by a variety of professional and para-professional health care personnel including physicians, dentists, nurses, pharmacists and physician assistants. Within 14 days of admission, all inmates receive a complete physical, mental health, and dental examination. Sick call, which includes examination of patient complaints, ordering and assessment of diagnostic tests and a medical treatment plan is conducted five days a week. Medical emergencies during other than normal working hours or on weekends and holidays are handled on an on-call basis. If an inmate has a health condition which is beyond the professional capability of the institution's medical staff, the inmate is referred to a contract physician or hospital in the community or one of the bureau's medical referral centers.

The Medical Center for Federal Prisoners (MCFP) at Springfield, MO is the major medical referral center for the Federal Prison System. There are five additional regional medical centers within the FPS health care delivery system. The Federal Medical Center (FMC), Rochester, MN accepts referrals of both male and female specialty medical and psychiatric cases made nationwide as a result of its affiliation with the Mayo Clinic. The Federal Correctional Institution (FCI), Butner, NC provides for male psychiatric cases mainly from the Northeast and Southeast Regions. FCI, Lexington, KY handles female medical, surgical, and psychiatric cases nationwide. Also, selected chronic (disabled, handicapped, geriatric) cases are referred to Lexington on a nationwide basis. FCI, Terminal Island, CA accepts referrals of both male and female medical and surgical and male psychiatric cases primarily from the Western Region. Finally, FCI, Fort Worth, TX accepts referrals for male geriatric cases.

The U.S. Public Health Service continues to provide personnel in support of the Federal Prison System medical program. Medical, surgical, and rehabilitative services not available in FPS medical facilities, are provided to inmates through contract arrangements with community hospitals and/or governmental health facilities.

The Federal Prison System maintains an inventory of clothing, footwear, toiletries, linens and writing supplies for issue to all inmates during incarceration. Clean clothing and linens are issued weekly in exchange for clothing and linens to be laundered. A laundry operation is maintained to clean all clothing and linens. All services are performed with inmate labor under staff supervision.

In addition, FPS maintains an Inmate Trust Fund account for all monies on deposit for each inmate. Monthly inmate earnings received for work with Federal Prison Industries, performance pay, and money from family, friends or other sources during visits or via the mail are deposited directly to each inmate's account. Inmates can withdraw funds when needed to make purchases from the commissary, send money to family members, pay for legal services or pay for supplies to participate in programs such as college courses or leisure activities.

Accomplishments and Workload: Actual and estimated accomplishments of the Inmate Care Program are presented in the following tables:

			Estimate	
	1988	1989	1990	1991
Food and Farm Services:				
Meals provided (Daily)........	131,505	151,134	169,200	187,350
Average cost per inmate per day (excluding salaries and benefits)........	$3.44	$4.21	$4.65	$5.05
Percent of Recommended Dietary Allowance........	100%	100%	100%	100%

			Estimate	
	1988	1989	1990	1991
Number of farms operated	2	2	2	2
Value of farm products in thousands	$1,000	$1,900	$2,030	$2,060
Medical Services:				
Total Outpatient Visits (yearly)	3,041,813	3,549,506	4,116,840	4,333,405
Average Number of Outpatient Visits (daily)	11,699	13,652	15,834	16,666
Average Daily Patient Load	1,172	1,367	1,586	1,669
Average Length of Stay	36	37	36	36
Hospital Days per Inmate per Year	9.1	9.3	9.1	9.2
Human Immunodeficiency Virus (HIV) Tests	31,456	26,486	32,523	44,572
Other Inmate Services:				
Supply of clothing/footwear	236,900	256,700	287,500	318,263
Supply of linens	348,750	377,900	423,200	468,482
Laundry manhours	18,000	19,500	21,500	23,800
Inmate Trust Fund collections ($ in 000's)	$81,037	$86,849	$103,727	$114,826
Inmate Trust Fund disbursements ($ in 000's)	$75,572	$82,240	$96,732	$107,082

The FPS has 24-hour or 16-hour medical coverage, as appropriate, at all of its institutions. The MCFP, Springfield, Missouri, the FMC, Rochester and the FCI's Lexington, KY, Butner, NC, Fort Worth, TX and Terminal Island, CA have maintained accreditation by the Joint Commission on Accreditation of Healthcare Organizations.

The Presidential Commission on the HIV epidemic acknowledged the Bureau's HIV program as a model in corrections through continued emphasis on education, follow-up and monitoring of the prevalence of HIV infection within the inmate population. A random sample shows a relatively stable 2.5% of incoming inmates as HIV positive and no seroconversions beyond six months. However, with the population growth during 1989, the FPS has provided care and treatment to an increasing number of AIDS patients. This trend is expected to accelerate as a result of changes in sentencing guidelines and mandatory sentencing.

During 1989, the FPS established a National Wellness Program for staff. The program will provide information, education, and assistance. Proper nutrition, weight management and smoking cessation will be a few of the areas emphasized by the Wellness Program.

	1991 Base			1991 Estimate			Increase/Decrease		
Program Changes:	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Inmate Care	2,506	2,296	$256,617	3,439	2,756	$305,767	933	460	$49,150

The request includes $12,796,000 to provide for a projected increase in the average daily population of 6,050 from 56,400 in 1990 to 62,450 in 1991. Within this amount, $5,963,000 is for food supplies, $5,412,000 is for medical services and supplies and $1,421,000 is for clothing, footwear, bedding, toiletries, etc. In addition, 137 positions, 69 workyears and $14,246,000 are included in this level to provide resources to activate new facilities in 1991 as follows:

Facility:	Estimated Activation Date	Food and Farm Service			Medical Services			Other Inmate Services		
		Pos.	WY	Amount	Pos.	WY	Amount	Pos.	WY	Amount
Minersville, FCI, SL-4, 700 beds	6/91	13	4	$1,243	16	5	$1,586	2	2	$365

Total		62	27	5,691	59	26	6,966	16	16	1,589

This budget also provides 808 positions, 403 workyears and $22,172,000 to improve staffing in the inmate care program as a result of workload increasing in direct proportion to the inmate population.

Within the request to improve staffing is 156 positions, 77 workyears and $3,633,000 for the food service program. Since 1981, the number of meals prepared on a daily basis have increased by 100 percent from 71,349 to 151,134. This workload increase has created a severe strain on the food service programs capability to supervise the preparation, service and clean-up of three daily meals. Most institutions have had to extend hours of operations and, in some cases, add an extra shift. It should be emphasized that the quality of the food service program has a dramatic impact on inmate morale.

Also staff increases include 614 positions, 307 workyears and $17,939,000 to maintain the delivery of medical services at existing institutions. With the increased inmate population there is a commensurate increase in the number of patients and patient visits for the wide variety of medical services that the Federal Prison System is required to provide. Modest increases in staffing are required to continue to provide comprehensive, accessible health care services.

Finally, 38 positions, 19 workyears and $600,000 will enable the laundry, clothing issue/return, and inmate trust fund operations to continue uninterrupted. Like food service, hours of operation have been extended and extra shifts added.

These increases are partially offset by A-76 savings of 12 positions, 12 workyears and $64,000.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Institution Security	7,347	6,644	$265,193	7,347	7,066	$284,010	9,102	7,894	$315,423	1,755	828	$31,413

Long Range Goal: Provide institution security, inmate control, and inmate supervision to assure maximum protection for the community, staff, and inmates consistent with program requirements in all FPS facilities.

Major Objectives:

Reduce or minimize the situations and opportunities which can lead to prohibited acts such as escapes, homicides, assaults, suicides, and drug transactions.

Maintain an effective transportation system for prisoners in conjunction with the U.S. Marshals Service.

Base Program Description: All institutions are assigned a security classification based in part on the physical design of each facility. There are six security level classifications, one being the least restrictive and six the most restrictive. Offenders are assigned a custody status which relates to the degree of supervision needed, and from a security and custody standpoint, are assigned to an institution. The result is a grouping of offenders with similar custodial needs in an institution. This significantly reduces the mixing of predatory and non-predatory offenders.

Within each institution, correctional officers are assigned to security posts which are primarily established on the basis of structural\ visual considerations. The two basic categories of security are perimeter security and internal security. Perimeter security consists of walled or fenced perimeter supplemented by manned gunned towers, razor wire strung between a double fence, high mast lighting to illuminate the perimeter, perimeter patrols and highly technical equipment such as alarm systems and video surveillance. Entrances through the perimeter are controlled by a series of gates, both electrical and manual, supplemented by metal detection systems and search procedures for weapon and contraband control. For all practical purposes, all other security measures, processes and activities can be called internal security, commencing when an inmate is committed and terminating upon his\her release. Supervision of inmates is provided in living units, visiting areas, dining halls, recreation areas, and any other area where inmates may be located or have access to.

Regularly scheduled counts are conducted several times a day in all institutions in order to monitor inmates whereabouts. Work supervisors and program personnel are held strictly accountable for all inmates under their supervision.

Violations of institution regulations are dealt with through the Inmate Disciplinary Process. Correctional staff investigate the incident, prepare a report and submit it to the Unit Discipline Committee, which usually consists of a unit manager, case manager and a correctional counselor. Depending on the seriousness of the charge, the Unit Committee may hear and decide the case or refer it to the Institution Discipline Committee for hearing and decision. An administrative remedy process provides for appeals to decisions of the Committee.

The Administrative Detention program provides for the separation of offenders from the general population who require special protection and for those who pose a serious escape risk or threat to the security and orderly operation of the institution. The Disciplinary Segregation Program provides for segregation of offenders who have committed serious prohibited acts within the institutional setting. Inmates are held in segregation only after a due process hearing where the inmate is given the opportunity to rebut the charges.

In coordination with the United States Marshals Service, the Federal Prison System maintains a prisoner transportation system including the transportation of Witness Security inmates.

Accomplishments and Workload: Actual and estimated accomplishments of the Institution Security program are presented in the following table:

			Estimates	
	1988	1989	1990	1991
Successful confinement rate	98.5%	98.5%	98.5%	98.5%
Incapacitation rate	99.5%	99.5%	99.5%	99.5%
Security staff coverage rate	85%	87%	90%	96%
Staff to inmate ratio:				
Morning watch (midnight to 8:00 AM)	1:68	1:72	1:68	1:64
Day watch (7:30 AM to 4:00 PM)	1:24	1:26	1:24	1:21
Evening watch (4:00 PM to midnight)	1:38	1:40	1:35	1:29

The successful confinement rate is the percent of those inmates who will not be involved in assaults, homicides and suicides. The incapacitation rate is the percent of inmates confined who will not escape. As illustrated in the above table, FPS continues to minimize the situations and opportunities which lead to prohibited acts. In 1989, only one percent of the FPS average daily population were involved in assaults, homicides, suicides and escapes.

FPS establishes institution staffing guidelines through ongoing full-field reviews which consider the institution's security level, posts such as front entrance, control room, housing units, segregation/detention, visiting rooms, perimeter security activities areas, etc., and rated capacity and overcrowding level. The security staff coverage rate is the percent of institution posts that can be covered with available staff (workyears). Covering all posts improves security and is a factor in reducing the incidents of negative inmate behavior.

It should be emphasized that the Institution Security Program is on a twenty-four hours per day/seven days per week basis. Staff as measured in workyears must be distributed between three work shifts as referred to in the above workload table as the morning, day, and evening watch. Thus, a presentation of an overall security staff to inmate ratio of 1:8 in 1991 would be totally misleading. As indicated in the above table, an FPS facility on the average could expect a security staff to inmate ratio of 1:64 on the morning watch, 1:21 on the day watch and 1:29 on the evening watch. In reality, even these ratios are misleading because the staff on duty are assigned to different posts, e.g., control room, housing units, perimeter security, etc. An officer assigned a housing unit post can expect a 1:150/200 staff to inmate ratio.

The U.S. Penitentiary at Marion, Illinois continues to house the 350 most dangerous offenders in the Federal Prison System. Approximately 25 percent of the Marion population is now housed in units whose operation approximates those of other Federal penitentiaries. Assault rates have dramatically decreased at Marion. In addition, we believe that Marion serves as a disincentive to assaultive behavior by inmates in other institutions.

During 1989, the prisoner transportation system handled 107,127 moves, an increase of 15,000 over 1988. In addition, over 123 Witness Security cases were relocated without incident.

	1991 Base			1991 Estimate			Increase/Decrease		
Program Changes:	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Institution Security..................................	7,347	7,066	$284,010	9,102	7,894	$315,423	1,755	828	$31,413

The request includes $1,223,000 to provide for security supplies associated with a projected Federal inmate population increase of 6,050 from 56,400 in 1990 to 62,450 in 1991.

In addition, the request includes 326 positions, 133 workyears and $6,719,000 to provide resources to activate new facilities in 1991 as follows:

	Estimated Activation Date	Institution Security		
Facility:		Pos.	WY	Amount
Minersville, FCI, SL-4, 700 beds..................	6/91	106	35	$1,754
Manchester, FCI, SL-4, 700 beds..................	6/91	106	35	1,660
Fairton Satellite Camp, 200 beds..................	10/90	9	9	399
Butner Satellite Camp, 150 beds..................	10/90	9	9	379
Big Spring Housing Unit, SL-1, 240 beds..................	6/91	14	5	277
Otisville Satellite Camp, 150 beds..................	6/91	9	3	209
Tallahassee Satellite Camp, 150 beds..................	6/91	9	3	191
Tyndall Housing Unit, SL-1, 225 beds..................	6/91	14	5	290
Loretto Housing Unit, SL-1, 100 beds..................	6/91	5	2	129
Danbury Satellite Camp, 150 beds..................	6/91	9	3	209
Tallahassee Detention Unit, SL-A, 150 beds..................	10/90	9	9	405

Facility:	Estimated Activation Date	Institution Security Pos.	WY	Amount
Fort Worth Detention Unit, SL-A, 150 beds	10/90	9	9	385
Milan Detention Unit, SL-A, 150 beds	6/91	9	3	218
Atlanta Detention Unit, SL-A, 150 beds	6/91	9	3	214
Total		326	133	6,719

Finally, this budget includes 1,466 positions, 732 workyears and $23,670,000 to improve security staffing at existing institutions. Operating the Federal Prison System at 66 percent over its designed capacity without commensurate staffing increases has placed too severe demands on too few staff.

Failure to improve staffing systemwide in light of the level of overcrowding can seriously compromise institution security, endangering life and property.

These increases are partially offset by A-76 savings of 37 positions, 37 workyears and $199,000.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Unit Management	2,317	2,122	$99,877	2,317	2,246	$107,602	2,829	2,490	$127,452	512	244	$19,850

Long Range Goal: To establish a safe, humane environment which minimizes to the extent possible, the detrimental effects of confinement; and to provide a variety of counseling programs which are most likely to aid inmates in a successful adjustment to the institution and, upon release, a successful return to the community.

Major Objectives:

Subdivide the inmate population into small well-defined and manageable groups whose members develop a common identity from close association with each other and their unit staff.

Increase the frequency of contacts and improve relations between staff and inmates.

Ensure that decisions regarding inmates are made by staff most closely associated with those inmates, increasing the quality and swiftness of the decisions.

Provide opportunities for individual and group counseling in each unit.

Provide drug abuse programs for inmates who have the need and motivation to participate.

Base Program Description: The purpose of the Unit Management program is to improve inmate control and establish healthy relationships between staff and inmates by dividing the large institution population into smaller, more manageable groups. A team of multi-disciplinary staff who have administrative and supervisory authority in most institutional aspects of programming and living are permanently assigned and located in the unit to work with the inmates. This places services closer to the users and permits decision-making by those who are most knowledgeable of the inmates and their programs. The increased interaction between inmates and staff enhances communication and understanding of inmate needs to a level not possible in a centralized correctional environment. The program is carried out through the proper classification of inmates and development of inmate programs on the basis of need and motivation.

__Accomplishments and Workload__: Actual and estimated accomplishments of the Unit Management program are presented in the following table:

	1988	1989	Estimates 1990	Estimates 1991
Average daily population	43,835	50,378	56,400	62,450
Number of Units	234	323	283	314
Counseling Hours	463,500	545,193	667,440	740,858
Initial Classification Studies	20,401	43,249	24,676	27,390
Study & Observation Reports	755	133	913	1,013
Transfer Reports	13,033	14,962	15,765	17,499
CCC Referral Reports	8,174	1,355	9,887	10,974
Furloughs Processed	18,783	16,138	19,161	19,356
Releases	26,739	30,730	34,404	38,188

The Federal Prison System has virtually met its goal of establishing functional unit management in most of its facilities. However, because of the rapid growth in population, it has become necessary in some instances to return to a centralized management system or to administratively combine two units into one larger unit under the supervision of one unit manager.

__Program Changes__:	1991 Base Perm. Pos.	1991 Base WY	1991 Base Amount	1991 Estimate Perm. Pos.	1991 Estimate WY	1991 Estimate Amount	Increase/Decrease Perm. Pos.	Increase/Decrease WY	Increase/Decrease Amount
Unit Management	2,317	2,246	$107,602	2,829	2,490	$127,452	512	244	$19,850

The request provides an additional $1,284,000 for contract services and supplies associated with the projected population increase of 6,050 from 56,400 in 1989 to 62,450 in 1991. In addition, this level includes 85 positions, 51 workyears and $6,050,000 to activate or expand this program at the following facilities scheduled for completion during 1991.

__Facility__:	Estimated Activation Date	Unit Management Pos.	Unit Management WY	Unit Management Amount
Minersville, FCI, SL-4, 700 beds	6/91	28	9	$1,400

Milan Detention Unit, SL-A, 150 beds	6/91	5	2	265
Atlanta Detention Unit, SL-A, 150 beds	6/91	5	2	256
Total		118	53	6,050

The request includes 406 positions, 203 workyears and $12,500,000 to continue to improve drug abuse treatment case management and counseling services. Of this amount, 100 positions, 75 workyears and $6,757,000 is requested to establish eight to ten "intensive drug treatment programs" with the ability to accommodate approximately 1,000 inmates. In addition, "low intensity" drug abuse educational programs will be further developed to address the needs of approximately 2,000 more inmates. Finally, an extensive network of pre-release drug abuse treatment will be implemented as an integral part of the overall program.

In the past two years, nearly 40 percent of all new Bureau of Prisons commitments screened by institutional psychologists have been identified as having moderate to severe drug abuse histories. This percentage is anticipated to grow substantially due to the emphasis in this area of Federal Law enforcement efforts and the impact of the Anti-Drug Abuse Act of 1986 (which increases the period of time served for conviction of drug distribution).

A number of research findings provide an argument for attempting to reduce the level of drug usage among prisoners. These include findings that 75 percent of all robberies reported by a national sample of youth and 50 percent of the felony assaults were committed by a small, but highly criminal group, who were cocaine, heroin, or pill users (Johnson et al., 1983); that the criminal activity of drug abusers increase when they are using drugs and decrease when they are abstinent (Ball et al., 1983); (McGlothlin et al., 1978). These later studies clearly confirm one of the major assumptions of drug treatment - that reducing the level of drug usage can reduce the level of criminal activity, even among relatively hard-core drug users.

Recent research findings from programs such as Phoenix-House, Cornerstone, and "Staying-Out", have shown that these type of intensive residential programs can be very successful in treating offender populations. Based on what has been found by researchers to be effective in treating offenders with drug histories, the Bureau is currently starting two "pilot demonstration programs" in an effort to further determine specifically what treatment components are effective. Unfortunately, the total number of inmates participating in these pilot programs will be less than 200.

The remaining staff increase, 306 positions, 128 workyears and $5,437,000, is requested to keep pace with case management and counseling workload. Because of the projected increase the case manager's time will be primarily devoted to preparing mandatory reports such as initial classification studies, parole hearing reports, study and observation reports, transfer reports, and CCC referral reports. The timeliness of these reports will suffer and other duties such as Central Inmate Monitoring, technical assistance and inmate counseling will not receive adequate attention without additional staff. This request will enable existing institutions to adhere to the established staffing guidelines of not less than one case manager per 100 inmates, not less than one counselor per 100 inmates and not less than one unit secretary for every 150 inmates.

These increases are partially offset by A-76 savings of 12 positions, 12 workyears and $64,000.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Inmate Programs....................	1,163	1,018	$65,443	1,163	1,084	$70,544	1,503	1,238	$80,604	340	154	$10,060

Long Range Goal: Provide general and occupational education opportunities to all inmates desiring or required to participate; Provide Federal offenders with a full range of recreation and leisure activities to improve their physical and mental health and promote the development of personal, interpersonal and social skills to better enable them to cope with the psychological and physical impact of their incarceration;

Provide all prisoners with reasonable and equitable opportunities to pursue individual religious beliefs and practices within the constraints of confinement and;

Provide immediate and long-term psychological care for Federal inmates with mental health problems and assist in the decision making of the courts, prison administrators and parole officials.

Major Objectives:

Provide education programs designed to meet inmate needs for functional literacy, high school equivalency, continuing education, and personal growth and to enhance their employability upon release.

Maintain education program certification or accreditation by regional Associations of Colleges and Schools or other appropriate accrediting agencies.

Provide a variety of indoor and outdoor physical, cultural, and related leisure activities with opportunities to belong to social and other groups.

Make available the appropriate worship services of the various religious disciplines represented within the inmate population and provide a variety of non-worship religious program options.

Provide psychological screening for every inmate admitted to the FPS.

Provide psychological care to inmates admitted to inpatient mental health program.

Provide psychotherapy and crisis intervention counseling.

Provide employee assistance programs.

Provide psychological evaluations requested by the courts, parole officials, and prison administrators.

Continue drug abuse and alcohol abuse special treatment programs.

Provide staff training in mental health areas.

Base Program Description: Inmate programs include general and occupational education programs, leisure time activities and religious and psychology services.

General education programs are designed to meet specific inmate needs for functional literacy, high school equivalency, continuing education, and personal growth. There are six major components of the general education program: Adult Basic Education, General Education Development, Adult Continuing Education, English as a Second Language, Postsecondary Education and Social Education.

The Adult Basic Education is designed for the 25 percent of the inmate population having less than an eighth grade education. The General Education Development component is for the nearly 50 percent of Federal offenders who lack a high school diploma and consists of high school equivalency courses and general equivalency examinations. Adult Continuing Education courses are designed for inmates who have a desire to "brush up" in a special area or enroll in a special interest program, e.g., speed reading, English, mathematics, contemporary issues, history and foreign language. English as a Second Language (ESL) is offered in those institutions where English is not the primary language for a significant number of inmates. Postsecondary Education courses are for inmates who have successfully completed high school and want to further their education, e.g., drafting, computer technology, data processing, and dental technology. The Social Education component helps inmates develop a positive self-image and adequate social skills.

Occupational education programs serve to enhance the employability of offenders upon release, particularly those who either lack solid employment history or a saleable skill. The majority of Federal offenders are unskilled at the time of commitment to prison. Federal offenders can choose a vocation, through instruction, work experiences, and career orientation; acquire or improve productive work skills and habits; and gain practical knowledge essential to working and functioning in a complex industrial-technical world of work.

A wide variety of leisure time activities are offered at each Federal prison including indoor and outdoor individual athletic and sports activities, arts and crafts, music and drama activities, movies and frequently, guest performances.

Chaplaincy personnel conduct the religious services of their particular faith group and arrange for the delivery of religious services of other faith groups. Approximately 250 contracts are issued annually for the delivery of services of the smaller faith groups and other related religious services. Chaplains also recruit, train, supervise, and sustain approximately 2,500 volunteers from the community who regularly visit the institution to participate in the religious programming. Over 13,000 religious worship services are conducted each year representing the various religious disciplines within the prisoner population. In addition to worship services, chaplaincy personnel offer a wide variety of non-worship religious program options.

Psychology staff are an integral part of correctional treatment administering programs of group and individual psychotherapy, crisis intervention, personal development classes, and staff consultation/training. Policy requires that every inmate admitted to a FPS facility be given an initial psychological screening which consists of psychological testing, psychological interviews, social history reviews, and behavioral observation. The purposes of the screening are to identify special treatment and/or referral needs; provide information useful in future crisis-counseling situations; identify strengths as well as potential adjustment problems to imprisonment; and discuss possible program needs with the inmates and provide information about them.

Both individual and group psychotherapy is available to inmates who express a desire and evidence need for it. Training and orientation programs are also offered for developing "life competency skills" including communication, assertiveness, self-image, interpersonal relationships, conflict resolution, problem solution and work skills. Short-term crisis counseling has been acknowledged by mental health professionals as a powerful, viable skill. FPS psychologists have expertise in this area and have provided training and consultation to staff in all institutions. FPS psychologists have traditionally provided the courts, parole officials and prison administrators with quality psychological evaluations.

Accomplishments and Workload: Actual and estimated accomplishments of this program are presented in the following table:

			Estimates	
	1988	1989	1990	1991
Education:				
Enrollments:				
Adult basic education	17,614	17,716	19,664	21,828

Staff training sessions	5,657	6,118	6,852	7,587
Unit team meetings	12,652	13,090	15,353	17,000

All inmates except those specifically exempt, e.g., detained aliens, who function below the eighth grade level, are now enrolled in a mandatory Adult Basic Education program. Promotions to industry and institution jobs above the entry level depend on meeting the eighth grade level standard. Inmates who wish to be promoted to top pay positions must show prior attainment of a high school diploma or equivalency certificate. Approximately 4,000 General Education Development tests are administered annually. Post Secondary Education programs continue to have one of the highest retention rates of all education programs. Completion rates in college courses are in excess of 50 percent. Over 150 Federal prisoners earn college degrees annually, most of them AA degrees.

Education services at the Federal Correctional Institutions (FCI's) Alderson, WV; Danbury, CN; Milan, MI; Morgantown, WV; Oxford, WI; Safford, AZ and Tallahassee, FL; Pleasanton, CA; Sandstone, MN; Terminal Island, CA; Otisville, NY; Englewood, CO; Ray Brook, NY; the Federal Prison Camp Boron, CA; United States Penitentiaries (USP's) Lewisburg, PA; Lompoc, CA; Terre Haute, IN; and Leavenworth, KS; and the Medical Center for Federal Prisoners at Springfield, MO are now accredited by the regional commissions of colleges and schools. In addition, accreditation procedures are in progress at several other institutions.

Apprenticeship programs have been expanded to over 300 training units in approximately 80 different trade classifications at 32 institutions. Approximately 500 inmates enroll in apprenticeship programs annually. Uniform curriculum performance standards have been established for adult basic education, machine shop and welding vocational courses. Computer assisted instruction (CAI) is available in most institutions. Twenty-six institutions use an integrated CAI system to supplement literacy, high school and related classroom instruction. This system can provide up to 2,000 hours of individualized instruction.

FPS continues to provide 100 percent of the psychological screening for every new admission, the psychological evaluations requested by the courts, and the crisis intervention counseling.

In 1991, FPS projects an average daily population of 62,450, an increase of 6,050 over the 1990 estimate of 56,400. Included in the request level is $1,672,000 to provide supplies and contract services for the increased population as follows: Education, $924,000; Leisure Activities, $471,000; Religious Programs, $170,000; and Psychology Services, $107,000.

In addition, 89 positions, 32 workyears and $3,159,000 are requested to permit the activation of new facilities scheduled in 1991 as follows:

Facility:	Estimated Activation Date	Education Pos.	Education WY	Education Amt.	Leisure Pos.	Leisure WY	Leisure Amt.	Religious Pos.	Religious WY	Religious Amt.	Psychology Pos.	Psychology WY	Psychology Amt.

Total		44	16	1,350	22	8	970	6	2	253	17	6	586

The request also includes 256 positions, 127 workyears and $5,250,000 to improve staffing of inmate programs at existing institutions as follows:

	Pos.	WY	Amount
Education Programs	132	65	$2,534
Leisure Programs	54	27	932
Religious Services	24	12	578
Psychology Services	46	23	1,206
	256	127	5,250

Additional teachers are required for the mandatory adult basic literacy program and increased high school equivalency requirements associated with actual and projected increases in the Federal inmate population. In addition, fifty-four additional recreation specialists are required to properly supervise activities and thus minimize the opportunities which can lead to prohibited acts. The dramatic increase in the Federal inmate population has also intensified the demand for religious services, not only for worship services but also non-worship program options including counseling services for family crisis, marriages, deaths, illnesses and marital problems; prayer meetings; moral growth seminars; revivals; etc. Finally, the population explosion has also increased the demand for psychology services including psychological screening/evaluations, suicide prevention, group and individual therapy and crisis intervention. In addition, the Federal Prison System needs to expand drug/alcohol abuse counseling programs commensurate with the inmate population's actual and projected growth.

These increases are partially offset by A-76 savings of 5 positions, 5 workyears and $21,000.

This budget activity covers all costs associated with the general administration, operation and maintenance of facilities. Included are functions of the warden's office, legal counsel, personnel, financial management, records office, safety, staff training, mechanical services, motor pool operations, power house operations and other administrative functions.

	1989 Appropriation Enacted			1990 Base			1990 Estimate			Increase/Decrease

Long Range Goal: To continue to provide effective and innovative administration at all institutions and continually seek ways to improve existing administrative practices and procedures.

Major Objectives:

Provide executive direction and control at each institution.

Manage each institution's financial resources.

Assemble and maintain an effective workforce and administer personnel policies.

Provide for Equal Employment Opportunity.

Provide for a Drug Free Workplace.

Maintain effective procedures for the processing and disposition of Federal offenders.

Process all official and inmate mail.

Maintain inmate records.

Maintain standards for safe and healthy working/living conditions.

Base Program Description: The Institution Administration Program consists of an institution's executive staff, financial management office, personnel office, administrative systems office and safety office.

The executive staff at each institution including wardens, associate wardens, and executive assistants, provide overall direction and implement policies.

The financial management office is charged with the management and control of all allotted funds with responsibility for procurement, property management, warehousing, issuing supplies, equipment, contracting for services, disbursement and collection of monies and collection, and input of all data for the automated accounting system and employee payroll.

The personnel office in assembling and maintaining an effective workforce, advertises all vacancies, collects applications, establishes promotion boards and prepares a list of eligible. The personnel office ensures that all position descriptions are current and accurate. It serves as the management representative to the union, develops manpower plans for institutions and plays a major role in recruiting minorities to meet Equal Employment Opportunity goals.

The inmate systems management office is responsible for the processing of detainers and the admission, transfer, sentence computation for and discharge of all Federal prisoners. The admission process entails the identification of inmates, review of court documents, fingerprinting, photographing, and disposition of personal property. Following admission, the inmate systems office performs sentence computation, which involves adjustments due to U.S. Parole Commission action, Institution Disciplinary Committee actions and good time. This office also maintains relationships with Federal, state and local law enforcement agencies, including the courts and parole boards regarding the criminal status of incarcerated and released inmates. Inmate systems staff work with the U.S. Marshals Service and Federal Prison System bus and airlift personnel to coordinate prisoner transfers and consolidate all inmates' records.

In addition, the inmate systems management office provides paralegal services such as answers to show cause orders; determinations in sentence computation problems; interpretations of court orders; representation of the institution in court matters pertaining to inmate records; and providing expert testimony regarding sentence computation. The office is also responsible for the processing of all institution mail.

The safety program involves the inspection of institutions for sanitation, rodents, unsafe working conditions and presence of hazardous chemicals. The safety officer is responsible for processing accident reports and compensation forms for employees.

Accomplishments and Workload: Actual and estimated accomplishments for the Institution Administration program are presented in the following table:

			Estimates	
	1988	1989	1990	1991
Purchase Orders	150,659	173,554	155,178	159,833

Total		153	68	11,169

An increase of 468 positions, 235 workyears and $12,908,000 is requested to continue to improve staffing in three critically understaffed areas: Inmate Systems Management, Financial Management, and Personnel Management. Special emphasis is given to Human Resource Development. With the Federal inmate population and the number of prison facilities projected to nearly double by the end of 1995, the recruiting, staffing, staff training and development requirements for the Bureau are truly staggering. The Bureau must begin now to acquire the staff resources to plan and implement the recruiting, training and staff development systems that will insure the existence of an ample pool of experienced and competent personnel to meet the substantial managerial and staffing demands resulting from this rapid growth.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Staff Training	173	145	$15,349	173	166	$16,203	357	256	$21,437	184	90	$5,234

Long Range Goals: To communicate current policies and procedures to all staff and to teach them the skills and techniques necessary to maintain a safe, secure and productive correctional environment.

To prepare and develop staff to meet and manage the future growth challenges of the Bureau of Prisons.

MAJOR OBJECTIVES:

Provide introductory and correctional training for all new staff and advanced correctional classes for experienced employees.

Provide job specialty training.

Restructure training programs to meet developmental needs of supervisors and managers.

Provide instructor skills training for all facilities.

Provide institution-based operations training for all staff.

Implement an active career development program which meets Bureau's staffing needs for the future.

Explore, examine, and where appropriate, utilize new technology in communication for delivery of training.

Identify and implement alternative training delivery methods to supplement correctional, specialty and management training currently conducted at our training centers.

Implement an effective on-going training needs assessment system for the Bureau of Prisons.

Develop and begin implementation of the concept of training institutions.

Explore desirability of a correctional cadet program.

Expand liaisons and investigate a wide variety of new approaches to staff development, to enrich and update BOP efforts.

Develop a cultural diversity training program which assists the Bureau of Prisons in utilizing the multi-cultural workforce projected for the future.

Base Program Description: Staff training is being provided on site at each of the institutions; at five residential training centers; through external training provided by the Office of Personnel Management, National Academy of Corrections, and other Federal agencies; by colleges and universities; and by private agencies.

The Bureau of Prisons operates a training academy at the Federal Law Enforcement Training Center, Glynco, Georgia, which provides introductory correctional training for all new employees. The training academy provides facilities for the housing of students, training in firearms, self-defense, disturbance control, bus operations, locksmith, and armed escort training. Course materials are organized and written, and provide instruction on abnormal behavior, community programs, counseling systems, the dynamics of prejudice, equal employment opportunity, employee conduct and responsibility, employee stress management, escapes, fire prevention, first aid, correctional practices, inmate discipline, interpersonal communications, and legal issues. The training center offers courses for required instructor certification in such areas as, firearms, self-defense, disturbance control, and instructors skills.

Most of the BOP's meetings, workshops, and conferences are held at the Management and Specialty Training Center in Denver, Colorado. Through arrangements with local housing establishments, there is an unlimited number of rooms available for students. This center can provide training/classroom space for over 100 students at any one time. A wide range of courses are available for supervisors and program managers and for trainers who conduct the institution's training programs. These include courses for equal employment opportunity counselors, unit managers, case managers, correctional counselors, correctional supervisors, medical records technicians, hospital administrative officers, and industrial mid-managers. The training center offers courses for required instructor certification in firearms, self-defense, disturbance control, and interpersonal communications.

The BOP also operates Food Service and Trust Fund Training Centers at the Federal Correctional Institution (FCI), Fort Worth, Texas, and a Paralegal Training Center in Dallas, Texas.

Approximately 80% of the Bureau's training is conducted on site at the institutions. Each institution has an Employee Development Manager who plans, manages, and organizes the institution's training programs. Certain institution conducted courses are required by national policy. For example, each new employee must be given one week of orientation training immediately upon entry on duty. Each experienced employee must be given correctional refresher training each year in such subjects as self-defense, disturbance control, firearms, fire protection, and inmate supervision. Each new case manager and unit manger must complete a self-study course in case management operations within sixty days of appointment.

The Career Development Office gathers, maintains and provides information to top management concerning Bureau of Prisons managers; develops and coordinates national programs to assist managers in the development of their careers; and conducts special research projects concerning our workforce.

Accomplishments and Workload: Actual and estimated accomplishments for the Staff Training program are presented in the following table (figures represent the number of students trained):

	1988	1989	Estimates 1990	1991
External Training Provided	3,430	4,802	6,722	7,461
STC Training Provided	2,538	3,725	4,974	5,521
MSTC Training Provided	1,070	2,742	2,097	2,328
Internal Training Provided	57,436	69,255	112,574	124,957

The Federal Prison System implemented a paralegal training program in April 1989 to help meet an increasing demand for legal services. The Training Center is in Dallas, Texas, and provides a twelve month paralegal training program, specifically geared to correctional litigation. Academic training is provided in a variety of legal subjects, coupled with actual work experience in processing administrative claims. The students also receive training in writing litigation reports and answering inmate grievances filed under the administrative remedy process.

During 1989, the Bureau of Prisons more than doubled the size of the Management and Specialty Training center in Denver, CO in response to the need for increased training brought about by the rapid expansion of the Federal Prison System. Further in line with this need, the Bureau developed and implemented the concept of a leadership forum - an intensive five day management development course for current and potential managers to meet the Bureau's needs during this period of rapid growth.

Atlanta Detention Unit, SL-A, 150 beds	6/91	...	...	21
Total		2	...	552

The request also includes 184 positions, 92 workyears and $4,695,000 to expand training capabilities at our training academy at Glynco, Georgia and the management and specialty training center in Denver, Colorado commensurate with staff increases.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Institution Maintenance..........	1,370	1,226	$154,765	1,370	1,302	$162,624	1,688	1,449	$184,310	318	147	$21,686

Long-Range Goal: Continue preventive maintenance program, provide continuous service of all utilities in the most energy efficient manner, and provide transportation services in support of institutional operations.

Major Objectives:

Purchase utilities or maintain and operate utility systems and central power plants.

Maintain and operate telecommunication and transportation services.

Maintain the interior of all buildings such as plumbing, electronics, masonry, mechanics, carpentry and painting.

Maintain the exterior of all buildings including landscaping, gardening fence repair and painting.

Implement motor vehicle management program.

Base Program Description: The Institution Maintenance Program covers the requirements for adequately maintaining and operating the physical plants of the Federal Prison System. Facilities vary in age from 100 years to buildings recently constructed. Over fifty (50) percent of the facilities are more than 30 years old which is the expected life of buildings without major repair. The facilities are situated on approximately 31,000 acres and the buildings contain approximately 16 million square feet of floor area, all of which must be maintained and furnished utility services. Complex heating and air conditioning systems, high pressure steam power plants, sophisticated hospital equipment, emergency electrical power systems and fire protection and life safety systems all require regular maintenance. Each institution maintains communication systems including complete private automatic branch exchange telephone systems, radio systems including base station and mobile units and several electronic detection and control systems. Additionally, this program provides for the maintenance and operation of approximately 900 vehicles.

Requirements are identified through regular inspections conducted in the on-going preventive maintenance program; formal semi-annual inspections; and through requests for specific needs identified by institution staff members. This program finances maintenance projects estimated to cost $4,000 or less. Maintenance requirements in excess of $4,000 are included in the "Modernization and Repair" program of the "Buildings and Facilities" appropriation.

The work within this program is accomplished almost entirely by inmate crews under staff supervision. Each work crew consists of a staff foreman and between five and fifteen inmates. Each institution must have highly skilled staff with experience and training in every phase of construction and maintenance work including steamfitters, air conditioning mechanics and electronics repairment. A few specific jobs are contracted out because special skills or equipment items are required, or because the work may be extremely dangerous. Examples of these jobs are elevator inspection and repair, radio frequency aligment, and water tower painting.

Accomplishments and Workload: Actual and estimated accomplishments of the Institution Maintenance program are presented in the following table:

			Estimates	
	1988	1989	1990	1991
Major maintenance projects completed ($200-$4,000)....................	952	970	1,080	1,177
Minor maintenance projects completed ($200 or less)..................	137,927	144,721	151,000	158,500
Power Plants operated..	31	36	37	39

	1988	1989	Estimates 1990	 1991

Program Changes:	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Institution Maintenance	1,370	1,302	$162,624	1,688	1,449	$184,310	318	147	$21,686

The request includes an increase of $7,865,000 for utilities, trash removal, and maintenance supplies commensurate with a projected population increase from 56,400 in 1990 to 62,450 in 1991. In addition, this level includes 58 positions, 20 workyears and $7,683,000 to activate or expand this program at the following facilities scheduled for completion during 1991:

Facility:	Estimated Activation Date	Institution Maintenance Pos.	 WY	 Amount
Minersville, FCI, SL-4, 700 beds	6/91	22	7	$1,877
Manchester, FCI, SL-4, 700 beds	6/91	22	7	$1,634

Tallahassee Detention Unit, SL-A, 150 beds	10/90	1	1	449
Fort Worth Detention Unit, SL-A, 150 beds	10/90	1	1	391
Milan Detention Unit, SL-A, 150 beds	6/91	1	...	315
Atlanta Detention Unit, SL-A, 150 beds	6/91	1	...	304
Total		58	20	7,683

This request also includes 266 positions, 133 workyears and $6,171,000 to complete ongoing maintenance requirements identified through facilities inspections conducted as part of the preventive maintenance program. Over fifty (50) percent of the facilities are more than 30 years old which is the expected life of buildings without major repairs. In addition, operating the facilities at 67 percent over their designed capacity the past few years has further intensified maintenance workload demands. Failure to adequately maintain facilities erodes capital investment and multiplies the costs in future years for accomplishing the required repairs.

The increases in this budget are partially offset by A-76 savings of 17 positions, 17 workyears and $96,000.

Program Changes:	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Contract Confinement..............	177	151	$87,735	177	177	$90,778	211	194	$92,816	34	17	$2,038

Long Range Goal: To provide, through contract, high quality and diversified state, local and private facilities to house all offenders requiring confinement outside the Federal Prison System (including Community Corrections Centers formerly called Community Treatment Centers).

Major Objectives:

Place all youthful offenders committed under the provisions of the Juvenile Justice and Delinquency Prevention Act of 1974 and the Sentencing Reform Act of 1984 in appropriate non-federal juvenile facilities.

Place juveniles near their homes and in community-based facilities whenever possible.

House those offenders who are in danger in Federal institutions, in state correctional institutions or other facilities.

House offenders with sentences of up to 180 days or less in local detention facilities.

Provide community residential resources to all FPS releasees deemed eligible and appropriate for release to a Community Corrections Center (CCC) for an average length of stay of 120 days.

Provide 100 percent of the community residential program bed space requested by the Federal courts, the U.S. Probation Service and the U.S. Parole Commission.

Monitor contract facilities and provide training for all contractors annually.

Provide accurate and timely information to the Central Inmate Monitoring and Witness Protection tracking system.

Keep the Federal law enforcement agencies aware of changes in FPS policy, sentencing alternatives and other areas of concern.

Maintain close relationships with state and local correctional agencies to exchange information and manage resources.

Provide individual case management services and perform administrative systems functions for inmates confined in contract facilities.

Base Program Description: Certain categories of federal offenders are designated for confinement in state, local and private facilities. These include persons committed under the Federal Juvenile Statues, who must be separated from adult offenders and placed in community-based facilities near their residence whenever possible; adult offenders, whose lives might be endangered in Federal facilities (protection cases); and offenders with short sentences (generally 180 days or less) who are placed in local detention facilities (jails) for service of sentence.

In addition, FPS contracts with State, local and private community corrections centers for community residential bedspace for offenders who are eligible and need a pre-release transition program at the end of their sentences before returning to the community; who the Federal courts determine need more than probation and less than full institution confinement and services; who are under probation or parole supervision but need more intensive services and/or programs than can be provided under the "street" supervision of the U.S. Probation Officer; and who are committed directly from court generally serving short sentences. Contract CCCs provide services to inmates attempting to establish themselves as fully functioning citizens while still under supervision. Available services include individual and group counseling, supervised living quarters, employment and placement assistance.

Community Corrections Managers (CCM's) develop contractor resources and negotiate and monitor contracts for the boarding of Federal offenders in State and local institutions and in private residential community treatment centers. CCM's also make recommendations for designation of newly sentenced offenders and are responsible for the placement of direct commitments to non-Federal facilities. They provide case management services to all Federal inmates placed in non-Federal institutions and serve as technical consultants to contractors on FPS policy. In addition, CCM's serve as the FPS liaison with members of the U.S. Marshals Service, U.S. Probation Service, U.S. Parole Commission, Federal courts, other Federal agencies, state and local government agencies and local community agencies. There are presently 30 CCM's stationed in 30 major cities throughout the United States.

Accomplishments and Workload: Actual and estimated accomplishments for this program are presented in the following table:

			Estimates	
	1988	1989	1990	1991
Number of contracts with juvenile facilities	36	35	40	45
Number of contracts with adult facilities	40	37	40	45
Number of contracts with jails	335	290	300	320
Number of contracts with community corrections centers	325	283	300	325
Contract monitoring:				
Major use facility	75%	82%	90%	95%
Minor use facility	90%	86%	90%	95%
Designations	35,500	36,170	39,000	41,000
Average daily population:				
Juveniles	110	124	125	130
Adult Offenders	679	1,518	1,400	1,700
Short Termers	1,716	1,136	1,200	1,400
Contract Community Corrections Centers	3,690	3,445	3,700	3,900
Average Length of Stay in CCC's (days)	88	105	110	120

Since 1977, with only minor exceptions, the FPS has been able to place all juveniles in non-Federal juvenile facilities. During 1989, FPS contracted for the confinement of an average daily population of 124 juveniles. Roughly 24 percent of the juveniles are placed in community-based facilities and 27 percent are confined in their state of residence which enhances the opportunity to use available community resources and increases opportunities for visits from relatives and friends. In addition, FPS used adult state correctional institutions to house an average daily population of 1,518 adult Federal prisoners who needed protection and those who had special needs. We believe this action has prevented some deaths and assaults and has allowed these inmates to live in the general population and participate in programs. This program also allows approximately 5,409 short term offenders (or an average daily population of 1,136) to remain in their home community, near families and friends. It also saves the government transportation expenses to and from a Federal institution.

Since January 1982, the FPS has increased the number of inmates confined in contract CCC's from 948 to approximately 3,475 today. Currently the FPS is providing community residential programs at 82% of all FPS releasees deemed eligible and appropriate for release to a CCC for an average length of stay of 90 days. Community Programs Managers continue to closely monitor CCC placements to insure maximum utilization of CCC bed space within funds available.

An added benefit of contracting for the confinement of Federal prisoners in non-Federal facilities is that contract based population results in a reduction to FPS institution based population and thus reduces overcrowding.

Inmate contributions to the cost of residence in a Community Corrections Center, known as subsistence collections, have increased significantly over the past several years. The amount collected for FY 1989 was $5.5 million, a substantial increase from 1987, when collections amounted to less than $1 million. In 1988, the Bureau's philosophy of encouraging inmate financial responsibility was extended to Community Corrections and much greater emphasis was placed on subsistence collections. Since June 1988, inmates in CCC's have been required to pay the contractor 25 percent of their gross income, not to exceed the contract per diem rate. The contractors reduce their bills to the Bureau by the amount collected from inmates.

In 1989, 957 inmates, serving sentences in a CCC, had their parole advanced up to 60 days and were released with a special supervision of home curfew. Also, the FPS continued the pilot project called the Community Control Program in two districts, Southern Florida and Central California. Inmates who are CCC eligible will have their parole date advanced up to 180 days and will go directly into the community from the institution, where they will be monitored electronically by the U.S. Probation Office.

	1991 Base			1991 Estimate			Increase/Decrease		
Program Changes:	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Contract Confinement....................................	177	177	$90,778	211	194	$92,816	34	17	$2,038

In 1991, the request includes $1,000,000 to expand the electronic monitoring program by 250 inmates.

In addition, 36 positions, 19 workyears and $1,051,000 is requested to manage the significantly increased contract confinement program. Since 1982 the average daily population confined in contract facilities has increased by over 500 percent. All functions of the program have experienced dramatic workload increases. Combined with continued future emphasis on alternatives to incarceration, this increase is more than justified.

These increases are partially offset by A-76 savings of 2 positions, 2 workyears and $13,000.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Executive Direction and Control...	409	397	$19,627	409	412	$21,364	459	437	$22,735	50	25	$1,371
Administrative Services...........	327	320	42,894	327	336	44,535	387	367	46,624	60	31	2,089
Total...........................	736	717	65,521	736	748	65,899	846	804	69,359	110	56	3,460

This budget activity covers the costs of regional and central office executive direction and management support functions such as the executive staff, regional and central office program managers, research and evaluation, program analysis, budget development, policy development and implementation, system support, financial management, personnel, ADP, space management, and legal services.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Executive Direction and Control...	409	397	$19,627	409	412	$21,364	459	437	$22,735	50	25	$1,371

Long Range Goal: To continue providing effective, comprehensive direction and leadership to the Federal Prison System (FPS) by coordinating, initiating and evaluating planning and operational activities through the various central office branch chiefs, regional office program managers and the executive staff.

Major Objectives:

Establish and enunciate policy.

Provide legal counsel on correctional issues.

Plan, develop, coordinate, and evaluate FPS programs and activities.

Increase efficiency and program effectiveness.

Investigate alleged employee misconduct.

Maintain capabilities to respond effectively to public and congressional inquiries.

When necessary and appropriate, assist state correctional systems, the District of Columbia Department of Corrections, the U.S. Marshals Service, the Immigration and Naturalization Service and other jurisdictions experiencing difficulty by housing their offenders.

Have all Federal institutions as well as Central and Regional Offices accredited by the American Correctional Association.

Base Program Description: The Bureau of Prisons is managed from a central office in Washington, D.C., where the Director, Assistant Directors and General Counsel manage the agency's headquarters functions and five regional offices headed by a Regional Director. The Bureau of Prisons' Executive Staff which includes the Director, all Assistant Directors, and all Regional Directors reviews all major issues and determines major policy for the FPS.

The Executive Office of the Director is composed of the Director, a Chief of Staff, Public Affairs, Research, Strategic Planning and Internal Affairs sections, and the Office of General Counsel. These functions serve to assist the Director in managing overall agency functions through the Assistant and Regional Directors. The Chief of Staff serves a liaison with the other members of the Bureau's Executive Staff, and manages the immediate functions of the Director's Office.

The Office of Public Affairs is responsible for the public information, congressional liaison and communications functions within the Director's Office. Under the Office of Public Affairs are the Bureau's Public Information Officer, Congressional Liaison and Chief of Communications.

The Bureau's Office of Research and Evaluation provides information relevant to current and future questions in the field of corrections through social science research. Primary functions include conducting studies, developing and maintaining information systems, maintaining the Central Office Library, producing and distributing reports, responding to information requests, providing technical assistance, and processing research proposals.

The Office of Strategic Planning is responsible for supporting and monitoring the Bureau's strategic planning efforts. Staff of the Office provide training and support to the Central Office, Regional Offices, and field locations, assisting staff in adapting the principles of strategic management to their particular needs. This Office also coordinates the activities of all Wardens' Advisory Groups (WAGs), monitors the progress of Task Forces appointed by the Bureau's Executive Staff, and prepares summaries of issues presented before the Executive Staff.

The Bureau sets and enforces high standards of personal and professional conduct in its workforce. The Office of Internal Affairs (OIA), under the Director, provides liaison and investigative assistance to the recently established Department of Justice Office of the Inspector General regarding allegations of waste, fraud, mismanagement, and improper activities on the part of agency employees. Investigations that may lead to criminal sanctions are also coordinated by either the Office of the Inspector General (OIG) or the Federal Bureau of Investigation.

The Office of General Counsel provides legal advice and assistance to officials of the Bureau, with regard to management, policy development, decision-making and contract matters.

The Administration Division provides the resources and support necessary for the Bureau to perform in an effective and efficient manner. This includes the development and maintenance of the Bureau's physical facilities, the development of budget requests and stewardship of financial resources, the provision of modern, automated data and information systems, and other administrative support services as required by the organization.

The Correctional Programs Division is responsible for managing correctional services (security) operations in Bureau institutions, community corrections, case management and unit management as well as religious and psychology services.

The Health Services Division's mission is to provide high quality medical, dental, and psychiatric care, nutritious and appetizing meals for inmates, and safe living and working environments for all individuals committed to the custody of and working in the Bureau.

The Human Resource Management Division was created in June 1988. Establishing a separate Human Resource Management Division is consistent with the approach now taken by many public and private sector organizations, providing increased emphasis and priority on national recruitment, selection, training and retention programs and improving integration of Human Resources policy issues with other Bureau-wide policy developments. Its functions also include pay and position management, career development and labor-management relations. With the Bureau's tremendous manpower development needs in the coming decade, this division is particularly critical.

The Program Review Division is responsible for assessing and evaluating all Bureau operations and review activities. These activities include conducting reviews of Bureau programs and operations at agency headquarters, regional offices and field facilities as well as monitoring reviews of the same entities conducted by Bureau personnel outside the Program Review Division. This Division collects and integrates information and data generated during program reviews into an information system.

The Associate Commissioner for Federal Prison Industries, Inc. (FPI) reports directly to the Director and to the Federal Prison Industries Board of Directors. The Associate Commissioner is responsible for FPI Industrial Operations and Corporate Management and educational and leisure programs.

Accomplishments and Workload: Actual and estimated accomplishments for this program are presented in the following table:

			Estimates	
	1988	1989	1990	1991
Policy Statements Issued	32	29	62	64
Change Notices	30	42	78	81

Public Affairs Reports and Requests	5,150	5,251	5,408	5,624
Congressional Inquiries	5,350	5,421	5,720	5,949
Tort Claims	2,400	2,415	2,496	2,596
FOIA/Privacy Act Cases	6,100	6,700	6,968	7,247
Administrative Remedy Cases	20,000	20,000	20,000	20,000
EEO Cases	95	95	95	95
Investigations of Alleged Violation of Standards of Professional Conduct	412	517	450	470

During 1989, the Office of Research enhanced the Key Indicators Strategic Support System, an integrated information system that is currently available to managers on micro-computers at 26 locations. The system assists managers in identifying significant trends regarding inmates, staff, financial management, and institutional operations. This system is intended to form the backbone of the Bureau's internal management and oversight structures in coming years, and will be integrally related to virtually every function in the agency. Featuring a uniquely blended system of stand-alone microcomputers using mainframe computer data, Key Indicators provides Bureau managers at all levels with critical comparative data on not only their own operations, but also emerging trends across all organizational levels. Having this information in hand at the earliest possible moment enable prompt, effective management intervention when necessary, including the redirection of resources to areas where imbalances are developing.

More than 40 research reports were written and distributed. The reports included projections of the Bureau's inmate population, HIV infection among inmates, sex offenders in Federal institutions, inmates, costly health care needs, private sector management of prisons, shock incarceration, serious prison infractions, substance abuse programs, food strikes in Federal facilities, sentenced non-citizens, uses of Key Indicators, a re-examination of crowding research, and social climate in Bureau institutions, among other topics.

Research staff also responded to more than 60 major requests for information or technical assistance from Bureau staff and outside agencies, each request requiring from eight to 160 hours of staff time to complete. Data generated on such topics as population projections, furloughs, non-citizens, UNICOR, and legal residence of inmates were considered by managers in formulating Bureau policy and/or programs.

The first meeting of the Research Issues Forum was held, at which experts from academia, corrections and business reviewed the Office's research agenda and discussed correctional issues.

The Prison Social Climate Survey (PSCS) was administered to a representative sample of staff across the Bureau to provide management with information about employee perceptions of their jobs, their places of work, and the Bureau as an organization.

Separate legal branches in the areas of commercial, correctional policy, and human resources were established, to meet the increased demand for legal guidance in these areas.

The Bureau of Prisons prevailed in various court decisions. For example, the Court of Appeals for the District of Columbia Circuit upheld the Bureau's designation process, enabling the Bureau to continue considering past affiliations with groups that participated in violent criminal activities. In a second case, the Supreme Court upheld the Bureau's regulation authorizing prison officials to reject incoming regulations found detrimental to prison security as reasonably related to legitimate penological grounds.

The FPS continues to lend assistance to many state correctional systems experiencing difficulty by housing their offenders. There are approximately 1,000 state offenders in FPS facilities. In addition to state prisoners, there are approximately 2,000 from the District of Columbia and approximately 180 territorial prisoners serving sentences in Federal Prisons. To assist the U.S. Marshals Service in housing unsentenced Federal prisoners due to their inability to renew or negotiate contracts with state and local jails because of overcrowding, the FPS has established or expanded jail units for pre-trial detainees at several institutions including the Memphis, Milan, Talladega, Englewood, Otisville, Phoenix and Pleasanton Federal Correctional Institutions and the Metropolitan Correctional Centers at Chicago, Miami, New York, San Diego, Tucson and Los Angeles. There are approximately 6,300 pre-sentenced detainees in FPS facilities. In addition, at the request of the Immigration and Naturalization Service, the FPS also is housing approximately 1,500 Cuban refugees.

To date, 35 institutions have been accredited by the American Correctional Association for three year terms. The re-accreditation process, resumed in 1987.

During 1989, the Bureau of Prisons developed the concept of Federal Correctional Centers (FCC). FCC's will be multifunctional facilities, operated by Bureau staff with possible contractor assistance. They will provide the following services:

Residential programs for pre-release inmates transferred from institutions.

A residential Community Corrections Component for short-term commitment and community confinement cases.

A base of operations for home confinement programs; Detention space for pretrial prisoners, short-term confinement, and community program failures.

A location for Correctional Management Center staff to perform functions now performed in Community Corrections offices.

A training resource for contract programs in the service area.

A component for intensive substance abuse treatment.

The Bureau will still use contract programs in smaller areas. FCC's will place the Bureau back in the operational mainstream of community corrections.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Executive Direction and Control..........................	409	412	$21,364	459	437	$22,735	50	25	$1,371

The request includes 50 positions, 25 workyears and $1,295,000 to expand this program. The more than 100 percent growth in the Federal inmate population since 1981, has required the FPS to expand virtually all programs and activities. The planning, development, coordination and evaluation of the expansion requires a modest increase in staff.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Administrative Services...........	327	320	$42,894	327	336	$44,535	387	367	$46,624	60	31	$2,089

Long Range Goal: Provide for effective personnel administration including equal employment opportunity; an efficient and responsive financial management system including procurement and property management; and systems support administration and oversight.

Major Objectives:

Increase the rate of hiring minorities and women to ensure their representation in the workforce.

Increase the number of minorities and women promoted to management and supervisory positions.

Review local labor contracts as they are negotiated assuring compliance with master agreement prior to approval.

Complete analysis of all Merit System Protection Board and arbitration decisions of the past 12 months to determine patterns and identify potential problems.

Provide current and accurate financial management information.

Place more emphasis on program manager involvement in the management of funds.

Conduct financial management reviews at all institutions.

Continue to enhance SENTRY applications.

Base Program Description: The central and five regional offices are responsible for the functions of personnel management; maintenance of equal employment opportunity; medical services; financial management, including procurement and property management; and ADP services, records management, mail, printing, reproduction, and space management.

Personnel administration is largely regulated by the government-wide merit system and requires considerable planning and coordination with both the Department of Justice and the Office of Personnel Management. Coordination is necessary with colleges, high schools, civic groups, public and private groups and organizations in order to recruit an efficient work force. Increased hiring of minorities and women is accomplished through recruitment campaigns, visits to colleges and universities and other similar programs. EEO specialists have been placed in each region in order to help carry out this program.

Training is provided to appropriate personnel in labor/management relations and arbitration. Provisions of newly negotiated Master Agreements and local supplemental agreements are communicated widely to increase employee involvement, particularly field employees, in the process. Merit System Protection Board and arbitration cases are reviewed and analyzed to provide more thorough insight into labor/management policy problems.

Financial Management provides for the design, development, and implementation of financial systems and the maintenance and continuous analysis, evaluation and modification of existing systems to ensure compliance with statutory and regulatory requirements and to meet the administrative needs of the FPS. Financial Management established property accounting, cost-based budgeting practices and suitable internal control procedures; and develops and provides financial reports on the fiscal status, financial results of operations, and the cost of the FPS's operations. Financial Management is also responsible for the development of the FPS's financial operating plans and the administration of funds appropriated to the FPS. Financial audits are conducted to ensure field compliance with policies and regulations. These audits are scheduled to accomplish a financial review of each field location every 18 months.

The Property Management and Procurement functions are also the responsibility of Financial Management. This includes procurement responsibility for all services and supplies; the administration of regulations for all procurement and personal property and administrative legal claims matters; and the review and interpretation of statutes and regulations of other government agencies relating to all phases of property management and procurement.

In addition, Financial Management is responsible for special inmate services (including commissary, inmate trust fund, and laundry). Commissary operations provide opportunities for inmates to purchase items above the necessities of life. Inmate trust fund operations account for all monies on deposit for each inmate. Laundry operations provide all inmates clean clothing, footwear and linens. Other inmate services include provisions for toiletries and writing supplies.

The FPS's batch inmate information system provides a variety of demographic information on the inmate population, but is of limited use because the information is not timely. For the past few years the FPS has been involved in the implementation of the SENTRY system, an on-line system which performs up-to-the minute locator status information on all individuals under the custody of the Attorney General. It provides population counts and refined inmate demographic statistics; interagency and intra-institution population movement, schedules, notices, and statistics; and it will automatically compute and update sentence computations. It will also provide base program data for other information modules under development or to be developed.

Accomplishments and Workload: Actual and estimated accomplishments for the Administrative Services program are presented in the following table:

			Estimates	
	1988	1989	1990	1991
Personnel Surveys	30	32	34	36
EEO Recruitment Activities	130	141	150	160
Representation of Women in the FPS Workforce year end	23%	26%	29%	31%
Representation of Minorities in the FPS Workforce year end	42%	44%	45%	46%
New Hires - Women	32%	35%	40%	42%
New Hires - Minorities	33%	35%	38%	40%
Promotion - Women	29%	31%	33%	35%
Promotion - Minorities	30%	33%	35%	37%
Arbitration Cases	80	80	80	80
Financial Management Reviews	32	36	40	48
SENTRY Average Daily Transactions (in thousands)	300	356	473	525

The Bureau activated six institutions, adding 2,100 beds to capacity.

The Inmate Financial Responsibility program is a systematic collection program for court-imposed fines, fees, and costs, which heretofore has remained unpaid in many instances. It resulted from close coordination between the Bureau, the Administrative Office of the U.S. Courts and the Department of Justice. In April 1988, the Bureau implemented this program systemwide. Under it, the Bureau encourages each sentenced inmate to satisfy his or her legitimate financial obligations and each inmate is provided the opportunity to develop a financial plan to satisfy those obligations. An inmate's participation in the program is reviewed each time unit staff assess an inmate's demonstrated level of responsible behavior (custody classification, furloughs, halfway house placement, etc.).

Currently 12,000 inmates are actively participating in the program; 23,247 have completed their financial obligations. An estimated $620 million is owed by inmates to the Government through court orders; to date, as a result of participation in this program, inmates have paid approximately $30 million toward satisfaction of those financial obligations.

In 1988, Memorex Telex was awarded a contract to replace the SENTRY equipment in all BOP facilities nationwide. Installation of the new hardware was completed during 1989, showing a growth to more than 4,000 terminals.

In addition, several enhancements were made to the SENTRY system during 1989. These include the implementation of a report of Inmates to support the victim/witness program, as well as a tracking program for sensitive medical date. Other accomplishments include a new automated intake screening process, and continued implementation of Comprehensive Crime Control Act (CCCA) enhancements.

The Bureau of Prisons is currently developing an on-line Integrated Financial Management System. The system will replace the current batch system and will include accounting, procurement, and the Trust Fund operations. A major pilot test of the new on-line Financial Management System is underway in parallel with the existing batch system. The test is expected to last two years.

The Bureau also negotiated a new master contract between BOP and AFGE. The Correctional Officer Register continues to be operated by BOP on delegation of authority from the Office of Personnel Management. Training was conducted for all field personnel offices in the recently developed workforce utilization program which utilizes the management of both workyears and positions.

An inmate telephone system pilot program was implemented at FCI, Butner, and the system was approved for further implementation at other locations. This system provides automated control over the telephone numbers inmates are permitted to call. Without staff assistance, inmates can call only a specified list of numbers which have been previously approved by staff, and this system will help prevent inmates from making unauthorized contacts. In addition, the system makes inmates financially responsible for long-distance telephone calls they make rather than placing this burden on family members and friends.

A video arraignment program was implemented, in conjunction with the United States District court in Denver, linking the Denver federal Court House and the Federal Correctional Institution, Englewood, Colorado. The intent of the project is to reduce inmate transportation and supervision for: arraignments, initial hearings and similar proceedings where all parties involved have agreed to this as the procedure of choice. The project will be evaluated over the next 12 months.

To further advance the Bureau's construction program, architectural design programs were developed in draft form for Federal Correctional Institutions, U.S. Penitentiaries, Federal Prison Camps, Metropolitan Detention Centers and administrative facilities. These programs are being developed to maintain consistency not only in the design of new institutions but also in the renovation of existing institutions. In addition, several new construction techniques were initiated which are expected to shorten the construction time for new institutions. These techniques include the use of pre-case concrete modular cells, the use of Computer-Assisted Drafting for the design of new facilities and the design and construction of Federal Correctional Complexes. In the case of the correctional complexes, several correctional facilities of different security levels (e.g., U.S. Penitentiaries, Federal Correctional Institutions, Federal Prison Camps) would be constructed at one site.

The Bureau's National Recruitment Office continued high-profile recruitment activity, including extensive placement of advertisements in a large number and variety of newspapers and magazines, targeting various population segments including minorities, professionals, and technicians. National Recruitment and Health Services jointly completed a strategic planning session to coordinate their efforts in attracting top medical service staff for Bureau institutions.

The Bureau of Prisons achieved significant progress in the area of pay enhancements that are critical to staff recruitment and retention, particularly in specialty occupations and high cost areas. Six additional Correctional Officer special salary rates were obtained for Bureau locations where recruitment and retention previously were hampered by higher local pay rates in the community. Over 1,200 Correctional Officers are now on special pay rates nationwide. Additional special salary rates for a battery of other occupations were obtained from OPM for hard to fill locations. Over 950 non-correctional officer employees are now under special pay rates nationwide.

The Bureau continued to operate its own applicant processing and hiring program for select occupations, including Correctional Officer. The Bureau now operates the largest examining process in the Federal government outside of the Office of Personnel Management (OPM). More than 20,000 applicants were processed in FY 1989.

Optical scan technology was developed for use in a revised Management Preference Profile system for the Bureau, as well as an executive track data base for Preference Profiles. The Career Development office also created a Managerial Skills Profile for use by agency managers allowing them to receive feedback from their supervisor concerning skills in ten major job dimensions. In addition to its use in providing managers with personal feedback, the process helps to identify the training needs of broad groups of agency managers.

During 1989, the Bureau established a strategy to centralize the review process for all program areas, starting with Health Services, Correctional Services and Community Corrections. In addition, a new system of review was established -- the Institution Character Profile -- resulting from an on-site visit to each institution by Regional Staff to assess the quality of life in each institution, and is intended to compliment the Prison Social Climate Survey conducted by questionnaire.

	1991 Base			1991 Estimate			Increase/Decrease		
Program Changes:	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Administrative Services....................................	327	336	$44,535	387	367	$46,624	60	31	$2,089

Included are 60 positions, 31 workyears and $1,701,000 to keep pace with administrative services associated with the dramatic growth in inmate population and the expansion of the Federal Prison System over the past several years. In particular, support for Financial Management, National Recruitment efforts, Staff Development, Inmate Systems Management and ADP programs will help the FPS accomplish its objectives more efficiently and effectively.

1/ The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

Federal Prison System

Salaries and Expenses

Justification of Adjustments to Base
(Dollars in thousands)

	Work-years	Amount
Mandatory Increases:		
1. 1990 full-year pay increase impact on 1991	...	$22,975

This request provides for the full-year pay increase of 3.6 percent as contained in the general provisions of the U.S. Treasury, Postal Services and General Government Appropriations Bill, 1990, for civilian and military personnel to be effective in January of 1990. The Department will be required to absorb the total pay raise in 1990. The requested increase of $22,975 is the amount required for full-year funding in 1991. NOTE: The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

	Work-years	Amount
2. Annualization of 1990 Increases	1,033	45,581

This provides for the annualization of 2,231 positions approved in 1990 for the activation of new facilities and additional positions at existing facilities.

	1990 Increase	Annualization Required
Annual salary rate of the 2,231 positions	$50,988	
Less lapse	-19,807	$19,807
Net compensation	31,181	
Associated employee benefits	8,443	7,073
Other object classes	95,444	18,701
Total cost subject to annualization	135,068	45,581

	Work-years	Amount
3. Additional Compensable Day	...	2,431

The annual salary rate for Federal employees is based on 260 paid days. During 1991 there is one more compensable day (261) than 1990 (260). Appropriate personnel benefits are included in this figure.

	Work-years	Amount
4. 1991 Pay Increase	...	9,408

For the first time, the Administration is proposing to include the costs of the pay increase effective in the budget year with the initial budget request. This request provides for the 50 percent of the proposed 3.5 percent pay increase effective in January of 1991. The Department will be required to absorb half of the costs of this pay raise. The amount requested, $9,408, is the cost of the pay increase for approximately three-quarters of the year assuming a 50-percent absorption.

	Work-years	Amount
5. Senior Executive Service Pay Increase	...	250

This request represents the 1991 costs of the pay increase for senior executive service employees. This pay increase is to be effective in January of 1990, but will be absorbed completely for the first year. In 1991, an increase of $250,000 is necessary for this requirement. Funding for the executive level employees pay raise is completely absorbed in both years.

Justification of Adjustments to Base (Con't)

	Work-years	Amount
6. Special Salary Rates This request provides increases as authorized by law in 5 U.S.C. 5303. The Office of Personnel Management (OPM) has approved these rates for positions where retention and recruitment of qualified applicants is a problem. The Department's request represents coverage of 33 authorized special rates.	...	$3,998
7. Health benefits The Federal Employees Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1990, the actual contribution to health insurance increased 31 percent. The requested increase of $3,956,000 provides funds for actual increased costs from pay period 1 to pay period 2, projected for a full year.	...	3,956
8. Federal Employees Retirement System (FERS) This request provides for the additional costs in 1991 necessary to continue the implementation of the Federal Employees Retirement System Act of 1986, P.L. 99-335. The Act established a retirement program for Federal civilian employees and Postal workers hired after December 31, 1983, who are covered by social security and for employees under the Civil Service Retirement System who chose to transfer to the new system. The increased requirement for 1991 is based on actual agency payments for the basic FERS annuity, Social Security and thrift savings.	...	5,204
9. Federal Employees' Compensation Act (FECA) - Workers' Compensation This increase reflects the billing provided by the Department of Labor for the actual costs in 1989 of employees' accident compensation. The 1991 amount will be $8,802,000 or $928,000 over the 1989 base.	...	928
10. Government Printing Office (GPO) printing costs The GPO is currently projecting a seven percent increase over the 1990 printing costs of $501,000. An additional $22,000 will be required in 1991.	...	22
11. Employee data and payroll services Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems, maintenance and payroll accounting, are based on the number of employee records maintained. The rate of $188.23 per record in 1990 will be raised to $199.52 per record for 1991. The change is based on anticipated mandatory cost increases of 6 percent for the operation of the Justice Employee Data Service. An increase of $131,000 will be required in 1991.	...	131
Total mandatory increases	1,033	94,884

Justification of Adjustments to Base (Con't)

Decreases (Automatic non-policy):	Work-years	Amount
1. Non-recurring costs.......... This provides for a reduction of the one-time costs (Change of Duty Station, inventory and equipment) of activating the new facilities approved in 1990.	...	-$26,728
2. GSA Rent.......... GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. A decrease of $199,000 will still allow us to meet our commitment to GSA.	...	-199
3. Federal Telecommunications System (FTS).......... In 1991, the General Services Administration (GSA) is to have the FTS 2000 system fully implemented. At present, GSA projections indicate costs for current FTS minute usage charges will decrease from 34 cents per minute to 18 cents per minute. The requested reduction of $2,320 from a 1990 base of $7,356, reflects this decrease.	...	-2,320
Total decreases..........	...	-29,267
Total, adjustments to base..........	1,033	65,637

Federal Prison System

National Institute of Corrections

Summary Statement

Fiscal Year 1991

For 1991, the National Institute of Corrections (NIC) is requesting a total of 53 positions, 53 workyears and $10,007,000. This resource level represents an increase of four positions, four workyears and $34,000 over the 1990 appropriation enacted.

The mission of the NIC is to work with State and local governments to assist them in developing and training their corrections staff, to conduct and support research regarding ways to improve correctional programs and to serve as a clearinghouse for information on improvements in corrections. Given that the nation's prisons and jails are critically overcrowded, the functions which NIC perform become even more crucial.

Recognizing the problem with which the Federal criminal justice system is presently confronted, the Administration has set forth as a priority to increase prison space to house the growing number of Federal offenders. In direct support of this priority, NIC, through its training and technical assistance activities, lessens the likelihood that State and local prison populations will "spill over" into the Federal Prison System.

Without NIC's continuing assistance and leadership in providing relevant training and responsive intervention, the deficiencies that plague State and local correctional agencies (i.e., insufficient training of staff) will be exacerbated during a period when prisons and jails are experiencing unprecedented growth, crowding and diminishing resources with no relief in sight for the foreseeable future.

The services performed by NIC are extensive but have a comparatively low cost to the Federal Government. In fact, a large part of the resources made available to NIC are used for the delivery of services to the corrections community. This is possible because NIC has implemented several cost saving initiatives. For example, NIC contracts with a private vendor to operate its clearinghouse function and perform certain accounting activities; enters into agreements with State and local governments through the Intergovernmental Personnel Act (IPA); and uses consultants to deliver technical assistance and provide training. The use of the IPA and consultants provides NIC flexibility to expand or decrease its staff as program requirements dictate, without the attendant long-term fiscal commitment.

Federal Prison System

National Institute of Corrections

Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

National Institute of Corrections

For carrying out the provisions of sections 4351-4353 of title 18, United States Code, which established a National Institute of Corrections, [$10,112,000] ,to remain available until expended. $10,007,000

(18 U.S.C. 4351-4353; Department of Justice Appropriations Act, 1990; additional authorizing legislation to be proposed.)

Explanation of Changes

No substantive changes proposed.

	49	49	$10,112	53	53	$10,246	53	53	$10,007	...	..	-239

Long Range Goal: Provide leadership in moving corrections toward greater professionalism; develop national policies from the guidance and coordination of Federal agencies and initiatives affecting corrections; serve as a national center to which State and local correctional agencies can turn to receive many different types of assistance; and serve as a source of correctional programs, policies, planning standards, and practices.

Major Objectives:

To assist in the improvement of State and local jail operations nationwide so they may become more humane, fair, efficient, effective, and comply with legal requirements.

To strengthen correctional programs by effective and efficient utilization of staff and organizational resources.

To increase the effectiveness of correctional programs by expanding the use of alternatives to incarceration and promoting a safe, humane, and constitutional environment for those offenders who must be incarcerated.

To develop the capacity to respond quickly, accurately, and informatively to a wide variety of inquiries on correctional programs, policies, standards, and practices.

To provide training to the correctional community to upgrade skills of personnel.

Base Program Description: In an effort to increase coordination, reduce duplication, and upgrade State and local corrections, the National Institute of Corrections has initiated several activities, including developing memoranda of understanding between Federal agencies, placing representatives of several Federal agencies on the NIC Advisory Board, and conducting frequent meetings with representatives from the entire spectrum of correctional practices. An annual plan is approved by the Advisory Board, after which the NIC staff develops a program strategy utilizing training, technical assistance and clearinghouse, policy/program development and evaluation to accomplish the objectives in the plan.

Accomplishments and Workload: Accomplishments of the National Institute of Corrections program are presented in the following table:

Item	1988	1989	1990	1991 Base Level	1991 Change	1991 Request Level
Application papers processed....................	350	350	350	350	...	350

Information requests processed.................	10,000	14,931	15,000	15,000	...	15,000

During 1989, the National Institute of Corrections awarded 55 grants and contracts to State and local correctional agencies, organizations and individuals to carry out its mission. The Institute responded to 728 requests for technical assistance from State and local agencies in all 50 states, and the District of Columbia. Training was provided to 1,758 managers, administrators, and staff trainers working in corrections. The provision of training to 1,758 participants includes the participation of over 1,000 staff trainers from State and local agencies in NIC-sponsored programs at their agency site. These trainers subsequently provided similar training for nearly 22,500 correctional staff in their agencies. The NIC Information Center responded to over 14,000 information requests from Federal, State and local practitioners, due to more widespread marketing of the Information Center Services.

---

[1] The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as mandatory increase and built into the 1991 base.

Federal Prison System

National Institute of Corrections

Justification of Adjustments to Base
(Dollars in thousands)

	Perm. Pos.	Work-Years	Amount
Mandatory increases:			
1. Adjustment in permanent positions & workyears........................	4	4	...
This adjustment represents a realignment of resources to accomplish a more permanent staffing complement at the National Academy of Corrections in Boulder, Colorado. Within the past year, the Academy experienced tremendous turnover both in permanent staff and individuals hired under the Intergovernment Personnel Act (IPA). With this change, it was realized that there was an erosion of institutional knowledge. To preclude this from occurring again, it is NIC's desire to create better balance in its permanent staff and IPA hires. The funding to finance these workyears, we propose to transfer the resources from object classification 2500.			
2. Additional compensable day..	...	...	59
The annual salary rate for Federal employees is based on 260 paid days. 1991 has one more compensable day (261) than 1990 (260). Appropriate personnel benefits are included in this figure.			
3. 1990 Full-year pay increase impact on 1991..........................	...	...	81
This request provides for the full-year pay increase of 3.6 percent as contained in the general provisions of the U.S. Treasury, Postal Services and General Government Appropriations Bill, 1990, for civilian and military personnel to be effective in January of 1990. The Department will be required to absorb the total pay raise in 1990. The requested increase of $81,000 is the amount required for full year funding in 1991. Note: The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and is built into the 1991 base.			

		Perm. Pos.	Work-Years	Amount
4.	1991 Pay raise	...	...	$33
	For the first time, the Administration is proposing to include the costs of the pay increase effective in the budget year with the initial budget request. The request provides for 50 percent of the proposed 3.5 percent pay increase effective in January of 1991. The Department will be required to absorb half of the costs of this pay raise. The amount requested, $33,000 is the cost of the pay increase for approximately three quarters of the year assuming a 50 percent absorption.			
5.	Within-grade increases (WGI)	...	...	19
	This request provides for an expected increase in the cost of within-grade increases. This increase represents WGI costs based on a dynamic model of the Department's employee population.			
6.	Health Benefits	...	...	10
	The Federal Employees Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1990, the actual contribution to health insurance increased 29 percent. The requested increase of $10,000 provides funds for actual increased costs from pay period 1 to pay period 2, projected for a full year.			
7.	Federal Employees Retirement System	...	...	109
	This request provides for the additional costs in 1991 necessary to continue the implementation of the Federal Employees Retirement System Act of 1986, P.L. 99-335. The Act established a retirement program for Federal civilian employees and Postal workers hired after December 31, 1983, who are covered by social security and for employees under the Civil Service Retirement System who chose to transfer to the new system. The increased requirement for 1991 is based on actual agency payments for the basic FERS annuity, Social Security and thrift savings.			

	Perm. Pos.	Work-Years	Amount
8. GSA Rent	...	...	$20
GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontollable increase of $20,000 is required to meet our commitment to GSA.			
Total mandatory increases	4	4	281
Decreases:			
Federal Telecommunications System (FTS)	...	...	-8
A reduction of $8,000 is associated with savings expected to accrue once the new FTS 2000 telephone system is fully activated.			
Program decrease	...	...	-239
A decrease of $239,000 is required to meet the Administration's deficit reduction goal.			
Total decreases	...	...	-247

Federal Prison System

Buildings and Facilities

Summary Statement

The Federal Prison System (FPS) is requesting a total of $374,358,000, 378 positions and 365 workyears for Buildings and Facilities for 1991. This request represents a decrease of $1,131,595,000 and an increase of 2 positions and 69 workyears over the 1990 funds available.

The major objectives of the Buildings and Facilities Appropriation is to provide offenders with a safe and humane environment which affords an acceptable level of privacy and a complete range of programs and activities for improving offenders' capabilities to achieve crime-free lives and to protect capital investment in existing facilities.

Capacity Expansion. The principal theme of the 1991 request is the continuation of the Bureau of Prisons capacity expansion program. For 1991, the Federal Prison System is requesting $288,500,000, 38 positions and 27 workyears to further expand the capacity of the Federal Prison System by 6,175 beds. This includes $191,900,000 for new capacity for 4,925 sentenced Federal offenders and $96,600,000 to assist the U.S. Marshals Service by expanding bedspace for Federal detainees by 1,250. Of the total capacity expansion requested, $125,700,000, 13 positions and 7 workyears is included in the base level. The remaining $162,800,000, 25 positions and 20 workyears are requested as program increases.

Current prison overcrowding coupled with projected increases in the Federal inmate population continues to be the major challenge facing the Federal Prison System. Since January 1981, the FPS facilities have experienced a dramatic 127 percent growth from 23,783 inmates to over 54,000 inmates, an increase of over 30,200 inmates. This population growth is primarily the result of law enforcement and prosecution efforts against drug trafficking and organized crime.

Today, Federal prisons are overcrowded by a system-wide average of 67 percent with several individual institutions overcrowded by more than 100 percent. Prison overcrowding is commonly related to an increased potential for inmate idleness, inmate violence and inmate litigation. It has been judged as a major contributing factor in some of the worst state prison disturbances.

The FY 1990 budget projects that the Federal inmate population will increase to 83,500 by FY 1995. This projection was developed prior to the enactment of the Anti-Drug Abuse Act of 1988 and prior to our having access to substantial data regarding sentences imposed under the new sentencing guidelines. Analysis by our Office of Research of Federal court caseload estimates presented at the March 1989 Judicial Conference indicates that the Federal inmate population growth will accelerate and it is now projected to reach 95,100 by FY 1995. We believe this projection is still conservative for two reasons. First, it is based on the Judicial Conference's low growth scenario in future trends in court convictions and further, it does not anticipate the increase in the number of U.S. Marshals Service pre-trial inmates the Bureau will house.

During this period of rapid growth, the Bureau of Prisons has taken every possible action within available resources to reduce institutional overcrowding to manageable proportions to ensure that Federal inmates continue to serve their sentences in a safe and humane environment. These actions include increasing the utilization of contract facilities, expanding existing institutions, acquiring surplus properties and constructing new institutions.

It should be noted that the Federal Criminal Justice System has traditionally made extensive use of alternatives to confinement. In 1989, approximately 60 percent of the 133,000 Federal offenders were under supervision in the community. The principal alternative to incarceration continues to be probation. The Federal Prison System has also sought to expand alternatives to institutional confinement of prisoners. Since 1982, the community corrections center population was expanded by 2,527 offenders from 948 to 3,475 inmates. This increase has reduced significantly the potential institution based population. In addition, during 1989, 957 offenders were placed on curfew parole status and FPS implemented the limited use of electronic monitoring for those offenders who do not present a threat to society.

The Bureau of Prisons has increased capacity by approximately 8,800 beds since 1981. Funding currently available for the construction of new prisons, the acquisition of surplus facilities for conversion to minimum security camps, and the expansion of existing institutions will add about 33,000 beds when completed.

The Bureau of Prisons dedicated two new Federal Correctional Institutions in 1989, one in Sheridan, OR in August 1989 and the other in McKean County, PA (Bradford Township) in October 1989. The Bureau will complete Correctional Institutions in Fairton, NJ and Jesup, GA in the next several months. Construction is also underway for Correctional Institutions in Minersville, PA (Schuylkill County) and Three Rivers, TX. Site work is underway for a Federal Correctional Institution in Manchester, KY and a Federal Detention Center in Guaynabo, Puerto Rico. Three Federal Correctional Institutions, Estill, SC, Cumberland Md, and a Western FCI; and two Federal Correctional Complexes (Florence, CO and Allenwood, PA) are in design. The Bureau of Prison is considering sites for a Metropolitan Detention Center in the northeast.

Also, the Bureau of Prisons is identifying locations for the construction of five Correctional Complexes, four Federal correctional Institutions, and three Metropolitan Detention Centers and the lease of a Federal Correctional Institution. These additional facilities resulted from the Congress' approval of the President's request for $1.4 billion in 1990 to expand prison capacity. As a result, the capacity of the Federal Prison System will more than double during the President's first term.

The major objective established for the Federal Bureau of Prisons is to continue to expand the capacity of the Federal Prison System to keep pace with projected increases in the inmate population and to simultaneously reduce prison overcrowding to approximately 30 percent by FY 1995.

It should be noted, if the FY 1995 population projection of 95,100 is accurate and funding for capacity expansion is limited to what has currently been appropriated, prison overcrowding would still be at an unacceptable level of 45 percent in FY 1995. Complete support of the 1991 request and continued expansion during 1992 would add 9,655 beds and reduce overcrowding to 27 percent by 1995.

To increase capacity for sentenced Federal offenders, the 1991 request contains a Federal Correctional Complex (1,960 beds), a long-term nursing care unit (300 beds), the expansion of seven existing institutions (965 beds) and the acquisition of military facilities (1,700 beds). The 1991 budget request also includes seven detention units for unsentenced Federal offenders which will add 1,250 beds.

The U.S. Marshals Service has found it increasingly more difficult to house unsentenced Federal detainees in state and local jails because of overcrowding and unconstitutional conditions of confinement. As a result, the Federal Prison System has steadily increased its assistance to the U.S. Marshals. Currently, there are 6,300 unsentenced detainees in Federal Prison System facilities. The U.S. Marshals Service is requesting that the Federal Prison System expand its assistance in housing Federal detainees by constructing additional Federal Detention Centers and establishing or expanding jail units at existing Federal prisons. The 1989 budget provided funding for a new Metropolitan Detention Center in Brooklyn, NY and a Federal Detention Center in Puerto Rico. The 1990 budget funded Metropolitan Detention Centers in Miami, FL and three additional unnamed sites, expansion of two Detention Centers, four additional Detention Units, a holdover unit for the U.S. Marshals Service and a Detention Unit for the Immigration and Naturalization Service.

Major Renovations and Improvements The normal expected useful life of buildings without major repair and renovation is 30 years. Fifty percent of FPS facilities are over 30 years old. Moreover, prison facilities are subjected to heavier than normal use. The FPS has an ongoing program for the replacement and/or rehabilitation of obsolete structures and plant facilities. Each year several high priority projects are identified by field facilities. The 1991 request includes $31,900,000, 15 positions, and 15 workyears for 7 new projects to continue to preserve the infrastructure of prison facilities.

Utility Improvements Finally, this request includes $8,700,000 to improve water and sewage systems at three locations.

Federal Prison System

Buildings and Facilities

Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Buildings and Facilities

For planning, acquisition of sites and construction of new facilities; purchase, leasing and acquisition of facilities and remodeling and equipping such facilities for penal and correctional use, including all necessary expenses incident thereto, by contract or force account; and constructing, remodeling, and equipping necessary buildings and facilities at existing penal and correctional institutions, including all necessary expenses incident thereto, by contract or force account, [$401,332,000] to remain available until expended: Provided, That labor of United States prisoners may be used for work performed under this appropriation: Provided further, That not to exceed 10 per centum of the funds appropriated to "Buildings and Facilities" in this Act or any other Act may be transferred to "Salaries and Expenses", Federal Prison System upon notification by the Attorney General to the Committees on Appropriations of the House of Representatives and the Senate in compliance with provisions set forth in Section 606 of this Act.

$374,358,000

(18 U.S.C. 4003, 4009, 4010, 4042, 4125; Department of Justice Appropriations Act, 1990) additional authorizing legislation to be proposed.

[For carrying out efforts at National Drug Control and the President's initiative to combat violent crime, $1,000,000,000, to remain available until expended, for acquisition and construction of new Federal Prison facilities in order to handle the projected growth in prisoner populations resulting from the increased number of drug-related convictions.]

Department of Transportation and Related Agencies Appropriations Act 1990)

Explanation of Changes:

No substantive changes proposed.

Long Range Goals:

Provide safe, humane environments for both inmates and staff, which meet the basic human needs for privacy and dignity, which support voluntary programs of self-improvement that prepare inmates for their eventual release into the community, and which minimize the often corrosive effects of institutional confinement.

Expand the capacity of the Federal Prison System to keep pace with projected increases in the Federal inmate population and to simultaneously reduce prison overcrowding to 30 percent by FY 1995.

Major Objectives:

Review FPS capacity requirements.

Locate and acquire suitable, surplus facilities as an alternative to prison construction.

Locate and acquire suitable sites for new construction.

Prepare design programs and concepts for new facilities, including new housing units.

Construct new Federal prisons and detention centers and expand existing Federal prisons as required.

Undertake a leasing program for two (2) new Federal Correctional Institutions.

Base Program Description: The Federal Prison System (FPS) continuously reviews capacity requirements, considering the inmate population level, current law enforcement initiatives, geographic origin of the confined population, and the age and condition of present facilities. If the Federal inmate population levels are projected to exceed the capacity of the Federal Prison System, every possible action is taken to keep institutional overcrowding at manageable proportions to insure that Federal inmates continue to serve their sentences in a safe and humane environment.

It should be noted that the Federal Judiciary and the Federal criminal justice community have traditionally made extensive use of alternatives to confinement. In 1989, approximately 60 percent of the 133,000 Federal offenders were under supervision in the community. The principle alternative to incarceration continues to be probation.

The Federal Prison System has also sought alternatives to institutional confinement of prisoners. Since 1982, the community treatment center population was expanded from 948 to approximately 3,475 inmates. This increase has reduced significantly the potential institution based population. In addition, during 1989, 957 offenders were placed on curfew parole status and FPS continued the limited use of electronic monitoring for those offenders who do not present a threat to society.

Several other options to constructing new prisons to reduce overcrowding have been pursued by FPS. These include contracting with state, local and private facilities, expanding existing Federal prisons, and acquiring surplus facilities.

During 1989, the FPS contracted with state and local governments for the confinement of approximately 2,800 Federal inmates.

From a cost perspective, the expansion of existing institutions is the least expensive technique for increasing FPS capacity. The FPS is currently building additional housing units 20 at facilities where program space can absorb further population increases. However, where major program areas, such as food service and utilities, are already saturated, expansion may approach the cost of newly constructed facilities.

The FPS continually reviews Federal surplus and other property for possible acquisition and conversion to correctional use. The acquisition and conversion of existing property and structures is much less expensive than new construction and such facilities can be brought on-line in a much shorter period of time. While conversion of facilities to minimum security institutions is usually feasible, it generally is not cost-effective to convert most surplus properties to higher security level institutions because appropriate physical security must be designed into the facility. Converting existing non-correctional properties to medium and maximum security facilities is frequently more expensive than design and construction of new institutions.

If no suitable alternatives are available, FPS must construct new facilities to expand capacity. A suitable site must be located and acquired. The site acquisition process includes notification of the public and preparation of an Environmental Impact Statement. The new facility is designed by contract architects and the project is then bid for construction. Essentially, the FPS oversees construction projects that have been contracted out to private construction firms.

The FPS inmate population of over 54,000 is currently being housed in facilities with a total rated capacity of about 32,500, a system overcrowding rate of approximately 67 percent. Research studies on prison overcrowding indicate that the normal tensions of institutional living become magnified and can result in increased violence. In addition, changes in prosecution policies over the past several years have resulted in a more criminally sophisticated and violent Federal inmate population.

The Bureau of Prisons has increased capacity by approximately 8,800 beds since 1981. Funding currently available for the construction of new prisons, the acquisition of surplus facilities for conversion to minimum security camps, and the expansion of existing institutions will add about 33,000 beds when completed.

The Bureau of Prisons dedicated two new Federal Correctional Institutions in 1989, one in Sheriden, OR in August 1989 and the other in McKean County, PA (Bradford Township) in October 1989. The Bureau will complete Correctional Institutions in Fairton, NJ and Jesup, GA in the next several months. Construction is also underway for Correctional Institutions in Minersville, PA (Schuylkill County) and Three Rivers, TX. Site work is underway for a Federal Correctional Institution in Manchester, KY and a Federal Detention Center in Guaynabo, Puerto Rico. Three Federal Correctional Institutions, Estill, SC, Cumberland, MD and a Western FCI; and two Federal Correctional Complexes Florence, CO and Allenwood, PA) are in design. The Bureau of Prisons is considering sites for a Metropolitan Detention Center in the northeast.

Also, the Bureau of Prisons is identifying locations for the construction of five Correctional Complexes, four Federal Correctional Institutions, and three Metropolitan Detention Centers and the lease of a Federal Correctional Institution. These additional facilities resulted from the Congress' approval of the President's request for $1.4 billion in 1990 to expand prison capacity. As a result, the capacity of the Federal Prison System will more than double during the President's first term.

The major objective established for the Federal Bureau of Prisons is to continue to expand the capacity of the Federal Prison System to keep pace with projected increases in the inmate population and to simultaneously reduce prison overcrowding to approximately 30 percent by FY 1995.

It should be noted, if the FY 1995 population projection of 95,100 is accurate and funding for capacity expansion is limited to what has currently been appropriated, prison overcrowding would still be at an unacceptable level of 45 percent. Complete support of the 1991 request and continued expansion during 1992 would add 9,655 beds and reduce overcrowding to 27 percent by 1995.

The FY 1990 budget projected that the Federal inmate population will increase to 83,500 by 1995. This projection was developed prior to the enactment of the Anti-Drug Abuse Act of 1988 and prior to our having access to substantial data regarding sentences imposed under the new sentencing guidelines. Analysis by our Office of Research of Federal court caseload estimates presented at the March 1989 Judicial Conference indicates that the Federal inmate population growth will accelerate and it is now projected to reach 95,100 by 1995. We believe this projection is still conservative for two reasons. First, it is based on the Judicial Conference's low growth scenario in future trends in court convictions. Finally, it does not anticipate the increase in the number of U.S. Marshals Service pre-trial inmates the Bureau will house.

It should be emphasized that the prediction of future events is no less difficult in the prison setting than in other areas of social phenomena. Future policy and discretionary decisions throughout the Federal criminal justice system will significantly affect inmate population levels. It has been the experience of the FPS that highly accurate long-range population projection methodologies simply do not exist. While there are often factors that have statistically valid correlations with prison populations, such as Federal court activities, a basic difficulty arises when one attempts to forecast those variables in order to project prison populations, or when other non-court related variables like Immigration and Naturalization Service or the District of Columbia government policies come into play.

For 1991, the Federal Prison System's base program for new construction includes 13 positions, 7 workyears and $125,700,000 and will provide 2,110 additional beds as follows:

	Resources		
	Pos.	FTE	Amount (in 000's)
Northeast Correctional Complex, 1,960 beds (SL-5/6, 550 beds: SL-3/4, 910 beds; and SL-1, 500 beds).......	12	6	$119,700
Ray Brook - Construct Satellite Camp, 150 beds)..	1	1	6,000

Accomplishments and Workload: The following table compares projected population levels through 1995 to capacity changes (including increases in population and capacity for unsentenced prisoners).

1/ Federal Correctional Institution (FCI), Metropolitan Detention Center (MDC), Federal Detention Center (FDC), Federal Prison Camp (FPC), United States Penitentiary (USP)

2/ Reprogramming dated April 1, 1988

3/ Correctional Complex includes SL-5/6, 550 beds; SL-3/4, 910 beds; SL-1, 500 beds

Since January 1981, the Federal inmate population has increased from 23,783 to over 54,000. This dramatic 127 percent increase is the result of the law enforcement initiatives taken by this Administration, particularly the emphasis on drug trafficking and organized crime. Analysis by our Office of Research of Federal court caseload estimates presented at the March 1989 Judicial Conference indicates that the Federal inmate population growth will accelerate and it is now projected to reach 62,450 by 1991 and 95,100 by FY 1995. We believe this projection is still conservative for two reasons. First, it is based on the Judicial Conference's low growth scenario. Secondly, it excludes the potential impact, as yet unknown, of the President's recent proposals to enhance penalties for firearm violations and restrict plea bargaining.

With the support of this Administration and the Congress, the Bureau of Prisons has increased capacity by 8,800 beds since 1981. Funding currently available for the construction of new prisons, the acquisition of surplus facilities for conversion to minimum security camps, and the expansion of existing institutions will add about 33,000 beds when completed.

As the above table indicates, without continuation of the capacity expansion program during 1991 and in subsequent years, the Federal Prison System will be 45 percent overcrowded in 1995. The 1991 to 1995 planned changes to rated capacity will increase prison capacity by 9,655 by 1995. This capacity increase will reduce overcrowding to approximately 27 percent and enable the Federal Prison System to achieve its stated goal.

Program Changes: In 1991, FPS is requesting 25 positions, 20 workyears and $162,800,000 to expand prison capacity by an additional 4,065 beds as follows:

	Pos.	FTE	Amount (in 000's)
Fort Worth Long Term Care Unit (300 beds)	...	...	$10,500
Big Spring - Construct Satellite Camp (150 beds)	1	1	4,500
Bryan - Construct Facility, Ph III, (340 beds)	2	2	13,600
Tyndall - Expand Support Facilities and Camp (75 beds)	...	...	3,000
El Paso - Expand Facility (150 beds)	1	1	6,000
Terre Haute Segregation Unit (100 beds)	1	1	6,100
Military Facilities (1,700 beds)	6	6	22,500
El Reno Detention Unit (150 beds)	1	1	9,800
Seagoville Detention Unit (150 beds)	1	1	9,800
Memphis Detention Unit (150 beds)	1	1	9,700
Northeast Detention Unit, (350 beds)	8	3	37,500
Sheridan Detention Unit (150 beds)	1	1	10,800
Leavenworth Detention Unit, (150 beds)	1	1	10,300
Butner Detention Unit (150 beds)	1	1	8,700
Total, Program Changes (4,065 beds)	25	20	162,800

Combined with Base program funding of $125.7 million, the total 1991 capacity request will provide 6,175 beds.

	1990 Availability			1991 Base			1991 Estimate			Increase/Decrease		
Activity/Program	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Modernization and Repair of Existing Facilities	110	104	$96,705	110	104	$43,029	125	119	$83,629	15	15	$40,600

Long Range Goals: To protect capital investment in facilities. To provide safe, efficient, and adequately sized and equipped facilities for the operation of correctional programs within the Federal Prison System (FPS) institutions.

Major Objectives:

Repair and renovate facilities as required.

Make all facilities energy efficient in accordance with Department of Energy Life Cycle Costing method.

Identify and remove any hazardous waste that may exist on Federal Prison System property.

Comply with all requirements of the Joint Commission on Accreditation of Hospitals.

Comply with all requirements of the National Fire Protection Association (NFPA), 101 Life Safety Code pertaining to penal facilities.

Modernize antiquated Federal prisons.

Base Program Description: This program provides the resources to undertake essential rehabilitation, renovation or replacement projects at existing institutions to ensure that structures, utilities systems, and other plant facilities are kept in a good state of repair. Proper maintenance, modernization and repair of our existing institutions is essential, particularly since 50 percent of our facilities are over 30 years old. Failure to adequately maintain structures and utility systems erodes capital investment and multiplies the costs in future years for accomplishing the required maintenance and repair.

Work is identified by two specific categories of projects: Major line item requirements (projects valued over $500,000) for which funds are specifically requested by project; and repair and improvement (R&I) requirements (projects valued at $4,000 to $500,000). R&I projects address immediate needs resulting from routine repairs, emergencies, correctional program changes, etc., and are considered the base requirements for this program.

Accomplishments and Workload: Accomplishments of the program Modernization and Repair of Existing Facilities are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
New projects established	300	306	364	361
Projects completed and closed	200	300	300	300
Projects active	563	569	633	694

It should be emphasized that the normal useful life of buildings without major repair and renovation is 30 years. Fifty percent of FPS facilities are over 30 years old. Moreover, prison facilities are subjected to heavier than normal use especially during periods of high overcrowding.

Program Changes: In 1991, FPS is requesting 15 positions, 15 workyears, and $40,600,000 to accomplish major modernization and repair projects. Following is a brief description of the projects proposed:

	Pos.	WY	Amount (in 000's)
1. Replace Perimeter Fences at Lompoc, El Reno and Englewood A 12 foot high perimeter fence will be installed at all three institutions. In addition, high mast lighting will be installed at Englewood and El Reno and the perimeter fences and road will be extended.	5	5	$2,350
2. Rehab Support Buildings and Electrical Systems at Lewisburg Most buildings and utility systems at USP Lewisburg are nearly 60 years old. The existing electrical system will be upgraded. All the inmate housing units, hospital and other support facilities will be renovated.	1	1	10,000

	Pos.	WY	Amount (in 000's)
3. Construct Armory at Terminal Island Construct armory and lock shop area and complete installation of electric locks.	2	2	1,100
4. Rehab Roofs, Electrical Systems, Roads and Segregation Unit at Danbury Replace major portions of roofs, rehabilitate electrical systems, replace steam and condensate lines and renovate segregation.	2	2	10,000
5. Expand Support Services at Tucson Install helicopter deterrent, expand segregation unit and medical clinic and install six high mast lights.	2	2	1,690
6. Renovate Housing Units at Alderson Renovate five housing units and correct all life safety deficiencies.	1	1	4,000
7. Renovate Housing Units at Yankton Renovate all existing housing units and correct all life safety deficiencies.	2	2	2,760
8. Sewage Treatment Plant at Sandstone Construct sewage treatment plant for the facility to replace services discontinued.	...	...	2,000
9. Renovate Water and Sewage System at Boron Construct a new water line to the closest municipal supply and rehabilitate and enlarge the present sewer system.	...	...	5,500
10. Sewage Lagoon Improvements at El Reno Construct a total retention lagoon system.	...	...	1,200

1/ The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

2/ Includes $127.9 million to construct one correctional complex and one housing unit expansion project which will add 2,110 beds. The remaining $43.1 million is for the modernization and repair of existing institutions.

3/ Combined with the 2,110 beds included in the base, capacity expansion will total 6,175 beds in 1991.

Federal Prison System

Buildings and Facilities

Justification of Adjustments to Base

(Dollars in thousands)

	Perm. Pos.	Work-years	Amount
Mandatory Increases:			
1. 1990 full-year pay increase impact on 1991 This request provides for the full-year pay increase of 3.6 percent as contained in the general provisions of the U.S. Treasury, Postal Services and General Government Appropriations Bill, 1990, for civilian and military personnel to be effective in January of 1990. The Department will be required to absorb the total pay raise in 1990. The requested increase of $1,550 is the amount required for full-year funding in 1991. NOTE: The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.	...	...	$1,550
2. Annualization of 1990 increases and delayed projects	...	83	...
3. Additional Compensable Day The annual salary rate for Federal employees is based on 260 paid days. During 1991 there is one more compensable day (261) than 1990 (260). Appropriate personnel benefits are included in this figure.	...	...	42
4. 1991 Pay Increase For the first time, the Administration is proposing to include the costs of the pay increase effective in the budget year with the initial budget request. This request provides for the 50 percent of the proposed 3.5 percent pay increase effective in January 1991. The Department will be required to absorb half of the costs of this pay raise. the amount requested, $602, is the cost of the pay increase for approximately three-quarters of the year assuming a 50-percent absorption.	...	...	602
5. Health benefits The Federal Employees Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1989, the actual contribution to health insurance increased 31 percent. The requested increase of $35,000 provides funds for actual increased costs from pay period 1 to pay period 2, projected for a full year.	...	...	35
Total mandatory increases	...	83	2,229
Decreases (Automatic non-policy):			
1. Non-recurring costs - The base includes $125.7 million for capacity expansion. The remaining projects funded in 1990 were treated as non-recurring costs	...	...	-1,337,224
2. Positions and workyears associated with closed projects	-38	-49	...
Total decreases	-38	-49	-1,337,224
Total, adjustments to base	...	34	-1,334,995

Federal Prison System

Federal Prison Industries, Incorporated

Summary Statement

Fiscal Year 1991

The Federal Prison System is requesting for the Federal Prison Industries, Incorporated, for 1991, a total of 1,482 permanent positions and 1,467 workyears. This request represents an increase of 40 positions and 63 workyears from the planned 1990 level. In response to the unprecedented increase in the Federal inmate population of 59 percent from 1983 to 1989, the Federal Prison System has undertaken the largest capacity expansion program in its history. Until 1989, the Corporation was able to keep pace with this growth by expanding plants from retained earnings to permit a 77 percent increase in inmate employment.

Federal Prison Industries, Incorporated, was created by Congress in 1934 and is a wholly-owned Government corporation. The Corporation is authorized to operate industries in Federal penal and correctional institutions and disciplinary barracks (18 U.S.C. 4121-4128). Supervision is provided by the Director of the Federal Prison System who has jurisdiction over all Federal penal and correctional institutions.

Administrative expenses - A board of six directors, appointed by the President and serving without compensation, review and approve the policies of the Corporation. General management of the Corporation is presently performed by a staff of 32 employees located in Washington D.C. Expenses of this function are subject to Congressional limitation.

Industrial manufacturing program - An average of approximately 14,833 inmates will be employed during 1991 at 48 locations in the manufacture of such items as furniture, clothing, electronics, metal and canvas products, and in service industries such as furniture refinishing and data processing. In 1991, an increase of 40 positions is requested to provide work for as many of the employable inmate population as is possible, open new factories and expand existing factories.

Federal Prison System

Federal Prison Industries, Incorporated

Justification of Proposed Language Changes

The 1991 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Federal Prison Industries, Incorporated

The Federal Prison Industries, Incorporated, is hereby authorized to make such expenditures, within the limits of funds and borrowing authority available, and in accord with the law, and to make such contracts and commitments, without regard to fiscal year limitations as provided by section 104 of the overnment Corporation Control Act, as amended, as may be necessary in carrying out the program set forth in the budget for the current fiscal year for such corporation, including purchase of (not to exceed five for replacement only) and hire of passenger motor vehicles. (18 U.S.C. 4121-4128; Department of Justice Appropriations Act, 1990.)

Limitation on Administrative [and Vocational] Expenses
Federal Prison Industries, Incoporated

Not to exceed [$2,857,000] of the funds of the corporation shall be $3,167,000 available for its administrative expenses, for services as authorized by 5 U.S.C. 3109, to be computed on an accrual basis and to be determined in accordance with the corporation's prescribed accounting system in effect on July 1, 1946, and such amounts shall be exclusive of depreciation, payment of claims, expenditures which the said accounting system requires to be capitalized or charged to cost of commodities acquired or produced, including selling and shipping expenses, and expenses in connection with acquisition, construction, operation, maintenance, improvement, protection, or disposition of facilities and other property belonging to the corporation or in which it has an interest. (Department of Justice Appropriations Act, 1990.)

Explanation of Changes:

No substantive changes proposed.

Long Range Goal: Improve management of the Federal Prison System by employing and training inmates through the efficient and profitable operation of industries. By producing quality products and services for the Federal customer, inmates acquire practical skills on-the-job and achieve self-discipline and improvement in the workplace.

Major Objectives:

Operate all industrial factories and shops with inmate labor that is productive and efficient.

Expand factory capacity to provide employment for the optimum number of inmates available for work based on work measurement studies.

Provide on-the-job training to an average 14,833 inmates in all industrial factories in fiscal year 1991.

Sell products and services to other Federal agencies at market value consistent with the goal of remaining financially self-supporting.

Provide pre-industrial training projects to enhance factory operations and provide increased training opportunities.

Continue implementation of a fully automated management information system.

Continue to update staffing guidelines that will support efficient operation at all factories.

Base Program Description: Federal Prison Industries, Inc., has been self-sustaining since its inception when Congress transferred $3 million in capital assets to the Corporation for start-up costs. Since that time the Corporation has returned $82 million in profits to the United States Treasury. Due to the rapid expansion of the Bureau of Prisons, borrowing authority from the Treasury was requested in fiscal year 1989 in order to keep pace with the Bureau's expansion. The use of this authority will fund additional factory capacity, and therefore provide FPI the ability to employ more inmates. Revenues are primarily derived from the sale of products and services to other Federal agencies. Operating expenses are applied against these revenues, resulting in operating income or loss. As required by Congress, annual audits are completed by an independent big-eight accounting firm. A report is then submitted to Congress that affirms the financial integrity of the Corporation.

Federal Prison Industries addresses the problem of inmate idleness by providing a full-time work program for the Federal inmate population available for work. More than 50 percent of the inmates do not have marketable skills. FPI provides a program of constructive industrial work to develop job skills and acquire good work habits.

Institution factories and shops are managed by civilian supervisors who train and oversee the work of inmates. Orders for goods and services are obtained trough marketing and sales efforts by civilian staff. The largest customers are the Department of Defense, Postal Service and General Services Administration. Institution factories manufacture such items as furniture, clothing, electronics, metal and canvas products, and provide such services as data processing and furniture refinishing. Prices are usually established in negotiation with customer agencies at or near, but not exceeding current market prices. A portion of the profits realized by these operations is reinvested to improve facilities, purchase new equipment, maintain state-of-the art capability, and provide working capital.

To operate modern factories and shops and produce products that must meet Government specifications requires extensive inmate training because most of the inmates have had no previous training, experience or skills. Much of the needed training occurs on-the-job, with civilian supervisors and experienced inmates explaining and demonstrating the work to newly assigned inmates. Where skills require more formal training, classroom instruction is provided. Production Training Units, which combine classroom and on-the-job training, offer an effective method of skill development. Also in operation are registered programs of apprenticeship approved by the U.S. Department of Labor's Bureau of Apprenticeship and Training and local unions.

Accomplishments and Workload: Actual and estimated accomplishments for Federal Prison Industries are presented in the following table:

			Estimates	
Item	1988	1989	1990	1991
Average inmate employment......................	14,115	13,302	13,868	14,833
Sales...	$306,754,381	$373,900,000	$385,671,000	$410,000,000

Item	1988	1989	Estimates 1990	 1991
Use of Corporate earnings:				
Vocational training	$7,571,000	$4,677,000	*	...
MSA (performance awards, pay)	6,000,000	6,926,000	*	...
Accident compensation	300,000	272,000	300,000	300,000
Increase in retained earnings	11,500,000	14,653,000	26,213,000	20,500,000
Number of shops/factories	72	73	77	81

*Beginning in 1990, costs of vocational training & MSA (performance awards and pay) will be paid for by the salaries and expenses appropriation of the Federal Prison System.

During 1989, an average of 13,302 inmates were employed at 42 institutions in 73 factories. This represented 39.5 percent of the working inmate population. Sales increased to $373.9 million with net income of $6.2 million. While an increase in retained earnings is occurring each year, the net effect is negated by the need to keep pace with the growth of the Bureau of Prisons in constructing and expanding factories. Thus Federal Prison Industries sought and received borrowing authority for this expansion. A manufacturing management control system, which would allow closer coordination and monitoring of all planning, management, manufacturing and support functions within the Corporation, was prepared for 1990 implementation. Reconfiguration of divisional and institutional functions was accomplished to allow a greater efficiency and use of limited resources.

Staff training programs continued in all levels and functions of the Corporation as resources allowed.

Program Changes:	1991 Base Perm. Pos.	 WY	 Amount	1991 Estimate Perm. Pos.	 WY	 Amount	Increase/Decrease Perm. Pos.	 WY	 Amount
Industrial Manufacturing Program	1,442	1,442	$371,836	1,482	1,467	$389,500	40	25	$17,664

An increase of 40 positions and 25 workyears and $17,664,000 will enable Federal Prison Industries to employ an average of 14,833 inmates, an increase of 965. These resources will enable FPI to staff factories and business offices at the new Federal Correctional Institutions at Manchester, KY and Minersville, PA.

OPENING STATEMENT

Mr. EARLY. The Committee is pleased to welcome back the Director of the Federal Prison System, Mr. J. Michael Quinlan. Mr. Quinlan, you may proceed with your statement any way you would like.

Mr. QUINLAN. Thank you very much, Mr. Chairman.

First of all I would like to introduce to you again this year Wade Houk, who is the Assistant Director for Administration, on my right; and also introduce, Wayne Huggins sitting behind me, who was just recently appointed by the Attorney General as the Director of the National Institute of Corrections. Mr. Huggins, who previously served as sheriff of Fairfax County, Virginia, for over 10 years, comes to the position with a great deal of experience. I am sure the experience will be helpful in providing assistance to the State and local governments through the National Institute of Corrections' programs.

I appreciate the opportunity to appear before you, Mr. Chairman, and I would like to have the statement admitted into the record; and I would like to summarize, if I could, a couple of the key points of our budget for fiscal year 1991.

Mr. EARLY. We will include the entire statement in the record at this point.

[The prepared statement of Mr. Quinlan follows:]

DEPARTMENT OF JUSTICE

STATEMENT OF THE DIRECTOR, FEDERAL BUREAU OF PRISONS
J. MICHAEL QUINLAN
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON
THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE,
THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to appear before you today to discuss the Federal Bureau of Prisons' 1991 budget request. As you will note, our request totals $1,756,247,000 and 24,407 positions. The principal theme of the FY 1991 budget is the continued expansion of Federal prison capacity. It is essential that we expand capacity to keep pace with the projected growth in the inmate population and, at the same time, reduce the critical level of overcrowding in the Federal Prison System.

In addition to capacity expansion, this budget also includes important requests for additional resources to increase and improve inmate drug abuse treatment, literacy programs and medical services; to address critical staff development concerns resulting from the expansion program; and to provide for plant rehabilitation and renovation at existing facilities, many of which are over 30 years old and have been subjected to heavier than normal use because of prison overcrowding.

Inmate Population Growth/Projections

Mr. Chairman, the number of Federal inmates in the direct custody of the Bureau of Prisons is over 55,000. The Federal inmate population has increased by over 8,200 inmates or 18 percent during the past year, an unprecedented rate of growth. This growth reflects the success of Federal law enforcement efforts, particularly those directed at drug trafficking. The number of Federal inmates incarcerated for drug offenses has been steadily rising. In 1980, 25 percent of the total Federal inmate population were drug offenders compared with approximately 50 percent today. We project that drug offenders will represent over two-thirds of the total Federal inmate population by 1995.

While it is impossible to predict future inmate population levels with precision, I believe we all are in agreement that the number of Federal inmates will continue to increase. In last year's budget we projected that the Federal inmate population would increase to 83,500 by FY 1995. This projection was developed prior to the enactment of the Anti-Drug Abuse Act of 1988 and prior to having access to substantial data regarding sentences imposed under the new sentencing guidelines. Our analysis of Federal court caseload estimates presented at the March 1989 Judicial Conference indicates that the Federal inmate population growth will accelerate and it is now projected to reach 95,100 by FY 1995. We believe this projection is still conservative for three reasons. First, it is based on the Judicial Conference's low growth scenario of future trends in court convictions. Secondly, it excludes the potential impact of the President's proposals to enhance penalties for firearm violations and restrict plea bargaining. Third, it does not include increased assistance to the U.S. Marshals Service in housing Federal pre-trial detainees.

Progress in Reducing Prison Overcrowding

The current population of over 55,000 inmates is housed in prison facilities that by contemporary correctional standards should confine about 32,500 inmates. Today, Federal prisons are overcrowded by a system-wide average of 67 percent with several individual Federal institutions overcrowded by more than 100 percent.

The major objective established for the Federal Bureau of Prisons is to continue to expand the capacity of the Federal Prison System to keep pace with projected increases in the inmate population and to simultaneously reduce prison overcrowding to manageable levels.

As you know Mr. Chairman, we have already made significant progress, increasing Federal prison capacity by more than 8,800 beds since 1981. Funding currently approved by the Congress for the construction of new prisons, the acquisition of surplus facilities for conversion to minimum security camps, and the expansion of existing institutions will add 32,995 beds when completed.

In 1989, the Bureau of Prisons dedicated two new Federal Correctional Institutions, one in Sheridan, Oregon in August and one in McKean County, Pennsylvania in October. Under construction are the Federal Correctional Institutions in Fairton, New Jersey; Jesup, Georgia; Minersville, Pennsylvania (Schuylkill County); Three Rivers, Texas; and Manchester, Kentucky. Also, the Bureau of Prisons has in design a Federal Detention Center in Guaynabo, Puerto Rico; two Federal Correctional Institutions (Estill, South Carolina and Cumberland, Maryland); two Federal Correctional Complexes (Florence, Colorado and Allenwood, Pennsylvania); and is considering sites for Metropolitan Detention Centers in Brooklyn, New York and Miami, Florida.

Further, the Bureau of Prisons is identifying locations for the construction of five Correctional Complexes, four Federal Correctional Institutions, and three Metropolitan Detention Centers and the lease of a Federal Correctional Institution. These additional facilities resulted from the Congress' support of the President's request for $1.4 billion in 1990 to expand prison capacity.

The graph I have attached to this statement illustrates the President's plan to reduce prison overcrowding and keep pace with projected increases in the Federal inmate population. If the FY 1995 population projection increases to 95,100, as expected, current funding for capacity expansion will reduce prison overcrowding to 45 percent by 1995. Continued support of the President's plan during the period 1991-1993 would add 9,655 beds and reduce overcrowding to approximately 30 percent by 1995.

Plans for Capacity Expansion in 1991

Our 1991 budget requests $288.5 million to fund the construction of 6,175 new prison beds. This includes 4,925 beds for sentenced offenders through the construction of a Federal Correctional Complex; a long-term nursing unit; the expansion of six existing institutions; and the acquisition of surplus properties for conversion to minimum security facilities.

In addition to our plans to construct new prisons for sentenced Federal offenders, the Bureau of Prisons continues to assist the U.S. Marshals Service in housing pre-trial detainees. Close cooperation has been developed between both agencies through joint planning efforts. For FY 1991, this includes detention units at seven existing facilities.

The U.S. Marshals Service (USMS) first attempts to meet its detention responsibilities by contracting with local jails through the use of Intergovernmental Agreements and the Cooperative Agreement Program (CAP). The USMS has identified several geographic locations where they anticipate that local contracts will be insufficient to meet their pre-trial detention requirements. For these locations, the USMS has requested that the Bureau of Prisons provide detention facilities through the construction of new Metropolitan Detention Centers and expansion or establishment of detention units at existing Federal prisons.

The Bureau of Prisons has revised its facilities expansion plan to incorporate detention requirements identified by the USMS to date.

Cost Effective Approaches to Capacity Expansion

We recognize that the prison expansion program required to meet our objectives is an undertaking of substantial dimensions, in terms of both human and financial resources. It is equally clear that failure to achieve these objectives can result in greater prison overcrowding and could seriously jeopardize the lives and safety of Bureau of Prisons staff and inmates. This type of a crisis would invite court intervention and the establishment of prison population "caps", ultimately leading to a "gridlock" in the Federal criminal justice system. This scenario has already occurred in several State correctional systems.

I want to assure you and the members of this Committee that we will meet our mission in the most cost-effective manner possible. We continue to make maximum use of half-way houses, contract detention and other community options, and to expand capacity at existing institutions where possible. However, it is clear to me that public safety dictates that most of our expansion needs will require construction of new Federal prison facilities.

The Bureau of Prisons has taken several actions to insure that new prison construction is as cost effective as possible. These actions include the use of Federal surplus property, the correctional "complex" approach, introduced last year, and the use of already proven designs and new construction techniques. The design of Federal correctional facilities and use of new security technology are also responsible for prison staffing requirements that are less than occur in most correctional systems.

Another area of prison system expansion which has proven cost effective for us is the use of surplus military facilities. We are working closely with the military regarding potential base realignments and closures. In addition, the Department of Defense has recently shown increased receptivity to the concept of establishing Federal Prison Camps on active military bases. This is an important development since this approach is a very cost-effective method of obtaining space for minimum security Federal offenders. Recently, Federal Prison Camps were established at Tyndall and Homestead Air Force Bases (AFB) and the Pensacola Naval Air Station (NAS) in Florida, Seymour Johnson AFB in North Carolina, the Army's Fort Bliss in Texas, Nellis AFB in Nevada and the Memphis NAS in Tennessee.

Modernization and Repair

Mr. Chairman, fifty percent of our prison facilities are over 30 years old, which is the normal expected useful life of buildings without major repair and renovation. As you can imagine, prison facilities are subjected to heavier than normal use. Failure to adequately maintain structures and utility systems erodes capital investment and multiplies the costs in future years for accomplishing the required maintenance and repair. For 1991, $83,629,000 is requested for the modernization and repair of existing Federal prison facilities.

Salaries and Expenses

In addition to the new construction funds required to continue our expansion program, the FY 1991 request also includes important resources to activate new institutions. Specifically, $49.6 million and 883 positions are required to open two new medium security Federal Correctional Institutions and twelve expansion projects at existing prisons. In total, these projects will bring 3,315 prison beds "on-line" during FY 1991.

We are also requesting $25.5 million to support a projected increase of 6,050 in the inmate population in 1991, from 56,400 to 62,450.

Staffing Existing Institutions

Operating the Federal Prison System at more than 67 percent over its design capacity without commensurate personnel increases has placed severe demands on staff. Prison overcrowding is commonly related to an increased potential for inmate idleness, inmate violence and inmate litigation. Insufficient staffing can seriously compromise the security of our Federal prisons, endangering life and property. Recognizing this, the President requested and the Congress approved an additional 1,600 positions in 1989 and 1,500 positions in 1990 to continue to improve staffing in critically understaffed programs for which workload has increased in direct proportion to increases in inmate population. The FY 1991 budget includes 4,000 positions for this purpose. Within this staffing level, special emphasis will be given to health services, drug abuse treatment, inmate literacy and human resources.

Health Services

Current staffing levels are not sufficient to meet the increased demand for medical services brought about by the rapid inmate population growth. With projected continued growth in the population, medical services staffing will be increased systemwide to provide adequate levels of medical care. In addition, resources are requested to construct a long-term nursing facility to address specific care requirements of an aging population.

Drug Treatment

As I noted earlier, approximately 50 percent of the inmate population is incarcerated for drug offenses and the number of offenders with serious drug abuse histories is even greater. The recent anti-drug abuse statutes assure that these numbers will continue to grow and that offenders will be incarcerated for significantly longer periods of time. To enhance program capabilities for successful intervention, the Bureau will add specialized staff to implement a three-part treatment system consisting of eight to ten "intensive" treatment programs for approximately 1,000 inmates; a larger "low-intensity" educational program for approximately 2,000 inmates; and a network of pre-release aftercare treatment contracts.

Inmate Literacy

Approximately 15,000 inmates in the Federal Prison System do not have a GED, which is essentially the standard for literacy in the workplace. Most of these inmates are not enrolled in a GED program. Of 7,300 offenders withdrawing from the Adult Basic Education Program in 1988, most will probably be released without basic literacy skills. With the additional staff and resources requested to increase the mandatory literacy period from 90 to 120 days, we estimate an additional 5,000 literacy completions will be generated annually. If an ex-offender cannot compete effectively in the job market, he/she more than likely will return to a life of crime.

Human Resources

With the Federal inmate population and the number of prison facilities projected to double by the end of 1995, the recruiting, staffing, staff training and development requirements for the Bureau are truly staggering. The Bureau must begin now to acquire

the staff resources to plan and implement the recruiting, training and staff development systems that will insure the existence of an ample pool of experienced and competent personnel to meet the substantial managerial and staffing demands resulting from this rapid growth.

Community Corrections

The Bureau of Prisons continues to expand the use of Community Corrections. In 1989, 957 inmates, serving sentences in a Community Correctional Center, had their parole date advanced up to 60 days and were released with a special supervision of home curfew.

In addition, a pilot program called the Community Control Program was implemented in two districts, southern Florida and central California. Under this program, inmates who are eligible for a Community Corrections Center have their parole date advanced up to 180 days and go directly into the community upon release from prison, where they are monitored electronically by the U.S. Probation Office. The 1991 budget includes $1 million to expand electronic monitoring.

Federal Prison Industries

The next item I would like to discuss, Mr. Chairman, which merits emphasis is Federal Prison Industries, Inc. (FPI). As you know, FPI is not only a wholly-owned Government corporation, manufacturing and selling a variety of products to Federal agencies, it is also a correctional program vitally important to the effective management and operation of our prisons. The ability to keep increasing numbers of inmates employed and productive has been a critical factor in our ability to successfully manage prison overcrowding. In this context, it is essential that the Corporation retain its mandatory source status. Without its mandatory source status, FPI would be unable to maintain the required level of sales to support the ever increasing inmate employment requirements. Inmate idleness would increase, creating the potential for inmate unrest and violence, posing a threat to staff and the community. The Bureau of Prisons would have no choice but to request appropriated funds for alternative programs to occupy inmates' time.

National Institute of Corrections

Finally, Mr. Chairman, I want to note that the National Institute of Corrections continues its role as an important force for improvements in State and local correctional agencies through its training and technical assistance services. The Institute's

National Academy of Corrections has trained thousands of correctional officers and administrators from all over the nation. The Institute has retained its effectiveness partly because it has remained small and is able to respond directly and promptly to State and local needs. For 1991, we are requesting $10,007,000 and 53 positions for the Institute.

This concludes my prepared statement Mr. Chairman and I would be pleased to answer any questions you or your colleagues may have.

OPENING STATEMENT

Mr. QUINLAN. Thank you very much, Mr. Chairman.

The Bureau of Prisons' budget for fiscal year 1991 basically continues the theme of recent fiscal years, which is the expansion of the capacity of the Federal Prison System. We are trying to keep pace with the expected growth in the Federal inmate population over the next several years. Also, this budget requests additional resources for the implementation of programs in drug treatment, inmate literacy, medical services, and to address critical staff development issues, as well as rehabilitation and modernization of institutions.

PRISON POPULATION

The Bureau's population is now over 55,000 Federal prisoners, up over 8,200 during 1989, an 18 percent increase. This increase was due to a continuation of the initiatives of the law enforcement components of the Federal criminal justice system, implementation of the U.S. Sentencing Commission's sentencing guidelines, as well as new legislation, which has been enacted by the Congress over the past several years. The percentage of drug offenders has now reached almost 50 percent of the Federal inmate population, and that is up from 1980 when it was only 25 percent. So, the percentage of drug offenders has doubled.

In the fiscal year 1990 budget our population projection for 1995 was 83,500. Our FY 1991 budget reflects a 95,100 population projection for 1995. The major driving force for the increase is the implementation of the 1988 Anti-Drug Abuse Act. We think that 95,100 is somewhat conservative, since it is premised on information we received from the March 1989 judicial conference's, low growth scenario.

Also, it does not factor in any new initiatives that the Administration might be successful in having enacted in the area of firearm penalties enhancements or plea bargaining arrangements, and it does not factor in any of the added priorities that the Bureau of Prisons is going to be taking on as a result of efforts in the area of new detention initiatives, which further helped the U.S. Marshals Service with their problem of finding suitable bed space in local jails.

We have brought on line 8,800 beds since 1981, and we are funded for almost 33,000 additional beds, so that we hope to continue on our track of reducing our overcrowding by 1995 to 130 percent of capacity. It is currently 167 percent of capacity.

INSTITUTIONS UNDER CONSTRUCTION

We have five institutions under construction in Fairton, New Jersey; Minersville, Pennsylvania; Jesup, Georgia; Manchester, Kentucky; and Three Rivers, Texas. Plus we have institutions under design in Estill, South Carolina; Cumberland, Maryland; Guaynabo, Puerto Rico; Brooklyn, New York; and Miami, Florida. We also have two Federal prison complexes in development, one in Canyon City, Colorado and one in Allenwood, Pennsylvania.

CAPACITY EXPANSION

The 1991 budget requests $288.5 million for the addition of 6,175 beds to our capacity; 4,925 of those beds would be for sentenced offenders, including a complex, a long-term nursing unit, expansion of six existing institutions, and conversion of existing military bases or other surplus facilities into minimum security facilities.

The budget also requests funding for 1,250 detention beds at seven of our existing correctional institutions, for construction of additional housing units at those facilities.

We are also continuing to work closely with the Parole Commission and the U.S. Probation Service to expand the number of community sanctions so that we can meet the needs of the Federal criminal justice system in the most cost-effective way. We are also continuing to work with the military, with regard to the Base Closure Act, as well as with the Commission on Alternative Utilization of Military Facilities that was created as a result of the 1988 Drug Act.

Also in terms of cost efficiency, we are now building a number of new institutions as part of our prison complexes, taking advantage of economics of scale. Finally, we are continuing to look for surplus property whenever possible to build our institutions.

MODERNIZATION AND REPAIR

The 1991 budget also asks for resources, approximately $63 million, to modernize and repair existing institutions. Over 50 percent of our institutions are 30 years old or older, and they are getting more than normal use because of overcrowding. It is important that we keep them in good repair through these modernization efforts.

The 1991 activations also asks for $49.6 million to activate new institutions that were funded in previous fiscal year construction appropriations. We hope to open two new Federal Correctional Institutions, plus 12 housing units at existing institutions. The funded prison population level would be increased by 6,050 inmates, up to a total of 62,450 for fiscal year 1991.

STAFFING INCREASES

One of the key ingredients in the 1991 budget request, Mr. Chairman, and Members of the subcommittee, is the increase in staffing for the Bureau of Prisons. We have grown over the last ten years, but our staffing has not really kept pace with our growth in numbers of inmates. We would like to see some tremendous increases in that area, because of the importance of keeping down inmate idleness and also reducing the possibility of inmate violence and litigation.

The areas that we are particularly focusing on would be medical services, where we are seeing an aging of the Federal inmate population as well as an increase in the need for medical care because of AIDS and other issues.

We would also like to see an increase in our staffing in the area of drug treatment. We are now finding that over 40 percent of our prisoners, which is over 22,000 today, have serious to moderately serious drug addiction or substance abuse problems. These are problems that existed prior to their incarceration. They do not continue their drug abuse while in custody, because our drug testing program is very extensive. We did 62,000 drug tests last year and only 2.1 percent of those tests were positive.

Our drug treatment program would be focused in three areas. A low-intensity education program for 2,000 inmates, a very intensive program for 1,000 prisoners, and a network of aftercare drug treatment programs.

INMATE LITERACY

In the literacy area, we hope to be able to increase our ability to reduce the number of prisoners who leave our system without having the ability to read and write at the eighth grade level. We propose to improve inmate literacy by having prisoners complete 120 days of classes rather than the 90 mandatory days of classes that are now required.

CURFEW PAROLE

Also I wanted to mention that we are continuing the curfew parole program, in 1989. With the Parole Commission's cooperation, we were able to release 957 prisoners into the community up to 60 days early by advancing parole dates, if warranted. These releasees were placed in a home detention program.

ELECTRONIC MONITORING

We also have two pilot programs using electronic monitoring in central California and southern Florida that are working very well. We hope to expand electronic monitoring in 1991 to 10 additional districts.

FEDERAL PRISON INDUSTRIES

I would also like to mention, Mr. Chairman, that we continue to have a critical need for the Federal Prison Industries programs. In fact, we are very dependent on this vitally important program. Federal Prison Industries currently employs almost 14,000 of the 55,000 inmates. We desperately need the support of that program. As you probably remember, we faced a major challenge in the Senate last year over the mandatory source status for Federal Prison Industries. I want to report to the committee that we were successful in keeping the mandatory source status and that we must maintain that mandatory source status in the future if we are to continue to be effective and to continue to serve the needs of inmates in the Federal Prison System, especially in the future where we will be growing very quickly.

NATIONAL INSTITUTE OF CORRECTIONS

As I mentioned, Wayne Huggins is now responsible for the National Institute of Corrections. Funding for the Institute would be continued in this budget at a level of $10,007,000. These resources support State and local training and technical assistance needs, providing a very important and valuable service to the State and local governments.

That concludes the summary of my statement, Mr. Chairman. If there are any questions from you or the Committee, I would be delighted to try to respond to them.

Mr. EARLY. Thank you for your candid statement, Mr. Quinlan. I want to welcome you and Mr. Houk, and also Mr. Huggins, who is a new director in a very challenging position.

Mr. Quinlan, I have said it before and I want to say it again—in my view, the finest run Federal agency is the Bureau of Prisons.

Mr. QUINLAN. Thank you very much.

RAPID GROWTH

Mr. EARLY. However, your statement is very disconcerting. We look for growth all the time, but two things we don't want to grow are waistlines and prisons. The Bureau is building new prisons in New Jersey, Georgia, Pennsylvania, Texas, and Kentucky, right now. We have to find some alternatives. We can't continue on the route you are going, and there is no way you are going to maintain the quality management you have now, Mr. Quinlan, with the numbers you have given us. There are 55,000 inmates today, but the capacity is 32,500; that is 67 percent overcrowded. And you are projecting 95,000 inmates by 1995.

Fifty-two percent of the Bureau's buildings are over 30 years old. Also alarming to me is that in 1980, 25 percent of your prisoners were incarcerated for drug related offenses and today 50 percent are in this category. That is a change in the population; it is not going to be much different from local and state prisons. It is going to be difficult to maintain the quality of the work force, Mr. Quinlan.

Mr. QUINLAN. I know, Mr. Chairman. Our top goals are to maintain sufficient bed space for the prisoners as they come in to the system, and to maintain the quality of workforce that we have been successful in attracting in the Bureau of Prisons over the past 60 years. We are working very hard, and thus far I would like to report to you that we have been successful in a modest sort of way. I appreciate your kind comments very much. We have maintained our efficiencies and our quality of service because of the staff of the Bureau of Prisons, all 17,000 strong, who have made a commitment to perform their duties in an outstanding way. We couldn't do without them.

Mr. EARLY. I have also been pleased, Mr. Quinlan, with the cooperation among the Bureau of Prisons, the Parole Comission, probation and the Marshal's Office. I have said that they are interrelated and they need each other, because they certainly do. In the area of alternatives, you have requested a million dollars for electronic monitoring of up to 250 prisoners to help you reduce overcrowding in the prisons. Are these 250 prisoners the total number involved in the program?

Mr. QUINLAN. I would have to check on that, Mr. Chairman.

Mr. EARLY. Would you check and provide the answer for the record?

Mr. QUINLAN. Yes, absolutely.

[The information follows:]

ELECTRONIC MONITORING PROGRAM

The Bureau of Prisons currently has 69 prisoners participating in the electronic monitoring program. The requested $1 million in FY 1991 will allow an additional 250 inmates to participate in the program.

ELECTRONIC MONITORING PARTICIPANTS

Mr. **EARLY**. I have several other questions on that——

Mr. **QUINLAN**. Mr. Chairman, if I could just add one other point with regard to electronic monitoring. We are cautiously optimistic about the electronic monitoring program. We are being selective of who we put in there. Also we don't want to place people into the program who could be at home without any electronic device. We are taking some risks, but we are taking cautious risks.

I was recently informed that one of the other jurisdictions, not a Federal jurisdiction, has been using electronic monitoring in a much more progressive way, and they are finding that 13 percent of their prisoners are escaping. Our experience is to the contrary. No one in the Federal electronic monitoring program has escaped.

Now, there have been some technical violations, such as positive urinalysis tests, and things of that nature that result in removal from the program. These inmates are transferred back to a Federal prison. We are moving ahead cautiously. That is why only $1 million is requested in this year.

Mr. **EARLY**. Doesn't that tell you, Mr. Quinlan, that it is not the program but the administrators of the program. Let's look at some other alternatives. I have a number of specific questions but I will stay within my ten minutes and then yield to Mr. Rogers and Mr. Regula.

For alternatives, electronic monitoring just doesn't seem to be enough. I think you've got a tough sell, not only with prisons, but also with parole and probation. Over the 14 years that I have been on this committee, it has heard the Bureau of Prisons talk about making greater use of military facilities. It started with Fort Dix, you know. So I am looking for—the committee is looking for greater use of military installations such as where bases have been closed, and you mentioned that.

PRIVATIZATION

But have we looked at other options. I know that Alaska wanted to build a prison and lease it back to the Bureau, and I think Ohio considered it. Working with cities, towns and states, seems to be an alternative to the Bureau building them, Mr. Quinlan.

Mr. **QUINLAN**. I agree, Mr. Chairman. The fact is that we are encouraging the people in Horton, Kansas who are in the process now of building a speculative medium security institution. The staff in that facility will be hired by the municipality, and any profits will accrue to the municipality. I think that is an ideal situation for privatization. There, unfortunately, have not yet appeared on the horizon that many communities that want to enter into this as a speculative venture. But I agree with you.

USE OF MILITARY BASES FOR PRISONS

Mr. **Early**. I have a lot of reservations about consultants and the "rent-a-cop", "rent-a-prison", "rent-a-program", but we would look at Alaska. No one wants to look into Alaska, but that town wanted to build and lease back to the Bureau, and that is where you could put a maximum security facility if they wanted to build it.

Now, Mr. Quinlan, I think we have to supplant expenses on this. The military has all types of expenditures. We are telling the military to cut their spending, and we are going to cut it drastically. However we don't want to reduce the military force all at once. I have suggested having the military manage some of the prisons.

Let me ask the question in a different way. Are there Federal prisons—excuse me, Defense Federal prisons,—is there something that can be done here—Leavenworth and those type of prisons? I have had my staff inquire as to how many we have. Would it be possible to think of leasing space for the Bureau if there are military prisons that are not being used? The personnel are definitely well trained. Might the Bureau be able to lease space from the military to house 10,000 of the Bureau's prisoners, since the Bureau can't acquire all the closed bases? Could something like that be done?

Mr. **Quinlan**. Well, what we are doing, Mr. Chairman, is working with the military. In fact, I have a meeting in the next week or so with Assistant Secretary of the Army, Susan Livingstone, on possibly using underutilized military brigs for Federal prisoners. I think there probably will be surplus capacity in military brigs, particularly as the military force in this country becomes smaller. I think that there are some opportunities for us, and I assure you we will pursue it.

Mr. **Early**. We have been talking about that, Mr. Quinlan, for a long time, and you have been pursuing it, no question. My suggestion, though, is a little different today. We are in a dire emergency with prisons. Let's use Leavenworth as an example. Do you know how big a prison that is?

Mr. **Quinlan**. I think the capacity is 2,000 prisoners. The facility is housing above 1,700 prisoners.

Mr. **Early**. Even if it has 1,700, it is 300 under capacity, the Bureaus' facilities are 67 percent overcrowded. There must be other facilities like that. Why can't the Bureau rent those 300 spaces in Leavenworth and send 300 of its prisoners there?

Mr. **Quinlan**. I will pursue that with the military. My expectation, though, would be, Mr. Chairman, that they would be hesitant, because of posse comitatus, to take over any civilian law enforcement responsibilities. However, I think through our scheduled meetings with the military, there will be some merger of resources with some vacant space made available to the Bureau of Prisons. I am very optimistic that this can occur within the next six months.

Mr. **Early**. When I spoke to General Westmoreland 10, 15 years ago, he said, like a typical general, "Oh, we are in the business of national defense." This is a national emergency. Something has to be done.

Mr. **Quinlan**. Absolutely.

Mr. **Early**. So I wish you would pursue it and let the committee know what you do.

Mr. **Quinlan**. I assure you, we will. Absolutely.

Mr. **Early**. We should try to obtain from Defense its unused bed space. Although posse comitatus does pose a problem, this should be explored.

Mr. **Quinlan**. Yes. I think efforts have been made by the Department of Defense to try to find out how they can help the Federal drug initiative. I think their efforts in this regard most recently with Assistant Secretary Livingstone, are indicative of that progress. So I am optimistic.

Mr. **Early**. You are diplomatic. Defense doesn't want to give up anything. Now, because of the economics, it is being backed into it, and you might receive a different reception from them, I think the type of option where everyone would win. You say you have 22,000 drug addicted prisoners?

Mr. **Quinlan**. They come to us, Mr. Chairman, with substance abuse addiction. When they are on the street, they have access to alcohol and drugs, and they are addicted. In prison, they don't have the availability of those commodities, but they maintain psychological addictions. The psychologists and psychiatrists tell us that when they get back into the community where the drug is available, whether it is alcohol or drugs, they will resume use. They will go right back into using them. That is why we try to intercede while they are in our institution and try to break that addiction habit.

Mr. **Early**. I see a different problem with the individual that sells drugs for money than the person that sells drugs because he or she is addicted. We should have prison hospitals for the latter. Do we have enough of these facilities for this type of prisoner.

Mr. **Quinlan**. We are moving ahead rapidly, Mr. Chairman, on this problem.

MEDICAL COSTS

Mr. **Early**. I see no request for any money in here to buy any hospitals.

Mr. **Quinlan**. There is a request in this budget for some long-term nursing beds, 300 long-term nursing beds. We have sufficient hospital space for the next couple of fiscal years. However, if we see an opportunity on one of the base closures or if we can find a surplus military or underutilized Public Health Service hospital, we will attempt to acquire it, because in the long term we would probably need more medical beds.

DETENTION

Mr. **Early**. Mr. Quinlan, it is not totally your area but the Marshals testified last week. To bring a prisoner to federal court in the city of Boston, the marshal has to go down to Danbury, Connecticut where the prisoner is being held. That's four hours travel down, and four hours back. We don't have that luxury anymore. Why don't—and this will irritate people in my district and other districts—why don't we use Pease Air Force Base, which we are closing, Fort Devens, that is in my district, or Westover, for example, to hold these prisoners. We can't keep going with this type of cost for justice system, can we?

Mr. QUINLAN. I agree, Mr. Chairman, there is a very serious detention problem in the Northeast particularly. We have attempted to identify surplus or underutilized military space in the New England area. Up until now, the military has not been able to come up with any surplus space. But, I agree we have got to find a solution. There has just got to be a solution.

Mr. EARLY. You said the military has not been able to, perhaps they don't want to. The other day, the Marshals office told Mr. Rogers and me about a marshal in D.C. who has to transport ten prisoners at a time. Well, no one can take care of ten prisoners at a time, back and forth. They don't have the money to improve the situation. Probation, Parole, the Bureau of Prisons and the Marshals Office needs practical solutions.

We need alternatives you are projecting 95,000 prisoners in five years.

I am going to yield to Mr. Rogers.

Mr. QUINLAN. Thank you, Mr. Chairman.

Mr. ROGERS. Thank you, Mr. Chairman.

Director Quinlan, good to see you and your staff.

Mr. QUINLAN. Good to see you, sir.

POPULATION PROJECTIONS

Mr. ROGERS. Let me repeat Acting Chairman Early's comments about your operation being one of the best-run Federal agencies. I have to agree with that. Plus, you have some of the biggest headaches that our society has to deal with.

Now, last year when you came here, you were predicting that in 1995 that you would have 83,500 prisoners, and now you are saying this year that you will have 95,000. That is a 12,000 or so change in projections in just one year.

Mr. QUINLAN. Yes, sir.

Mr. ROGERS. What has happened, then?

Mr. QUINLAN. Well, the major thing that happened, Congressman Rogers, was the enactment of the 1988 Anti-Drug Abuse Bill. That legislation, along with the availability of new information from the U.S. Sentencing Commission on the impact of the recently implemented sentencing guidelines, was calculated into the new estimate of 95,100 number. But the bulk of the increase, I believe, is due to enactment of the law.

Mr. ROGERS. And so we are going to have 12,000 or so more prisoners in 1995 because of the sentencing guidelines, primarily?

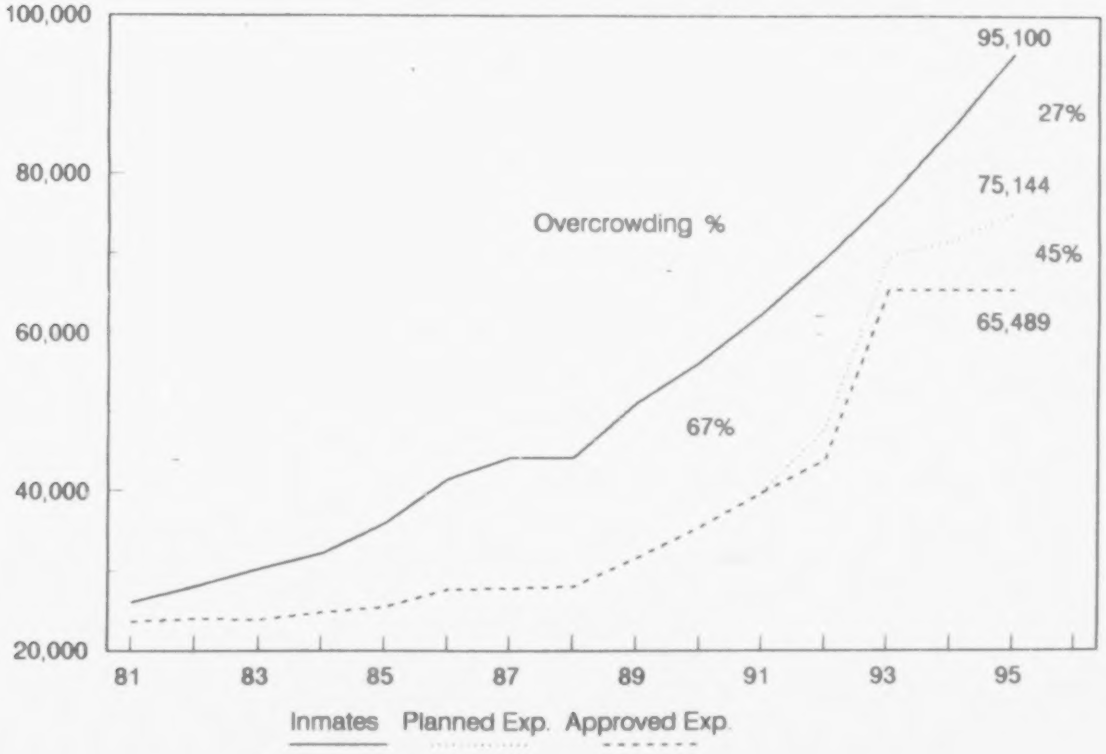
Mr. QUINLAN. Primarily, because of the 1988 Anti-Drug Abuse Act and the sentencing guidelines, yes, sir.

Mr. ROGERS. Well, now, since it takes three years to actually activate a prison, from the point when the environmental impact statement is done, and we have to prepare for another 12,000 prisoners in 1995, then how we fund prison construction in fiscal years 1991 and 1992 is absolutely critical to handling the population expected in 1995, isn't it?

Mr. QUINLAN. It is very critical, you are right.

Mr. ROGERS. So the time is upon us to fish or cut bait, is it not?

Comparison of Projected Inmate Population with Approved and Planned Capacity Expansion



Mr. **Quinlan**. We have been getting a lot of support from this Committee, the Congress and the Administration to expand the capacity of the Federal Bureau of Prisons. We have currently funded, but not yet operational, almost 33,000 additional beds. But when you look at the 95,100 projection, and our goal of trying to reduce the overcrowding level down to a more manageable level of 30 percent over design capacity, this year's request is also very critical.

Mr. **Rogers**. Well, is your request consistent with being no more than 30 percent overcrowded in 1995?

Mr. **Quinlan**. Yes, it is, Congressman.

BUILDINGS AND FACILITIES

Mr. **Rogers**. Well, I gather that the $374 million that you have asked for the Buildings and Facilities appropriation was certainly what you requested of OMB; is that correct?

Mr. **Quinlan**. That is correct.

Mr. **Rogers**. OMB gave you all that you requested?

Mr. **Quinlan**. They were very supportive. They have been very supportive.

Mr. **Rogers**. OMB gave you all that you wanted?

Mr. **Quinlan**. Basically they gave us everything we asked for, yes, sir.

PRISON POPULATION

Mr. **Rogers**. Now, can we expect even more increases in the prison population? Do you see any surprises laying out there future projections?

Mr. **Quinlan**. There are a couple of things, Congressman Rogers, that have yet to be fully factored in. If the Congress supports the Administration's request for tightening up of firearms and there are changes in the policy affecting plea bargaining arrangements, then that could potentially have an impact on our population. The other factor is that our projection is based on the Federal Judicial Conference's low growth scenario.

I want to assure you that as of today, this figure is still holding strong. I have no surprises to spring on you today or hopefully in the next several months.

Mr. **Rogers**. Do you see a scenario whereby we would not have the expected number of prisoners in 1995?

Mr. **Quinlan**. No, sir, I do not see that, unless prosecution policy dramatically changed with regard not only to drugs but also other Federal crimes.

PLEA BARGAINING POLICY

Mr. **Rogers**. You mentioned the change in policy on plea bargaining. What was that about?

Mr. **Quinlan**. I am not that familiar, Mr. Rogers, with that proposed change. I could get that for you and submit it for the record.

[The information follows:]

Restricting Plea Bargaining

An excerpt from page 3 of the President's outline of his Comprehensive Program to Combat Violent Crime, dated May 15, 1989 follows:

If our criminal justice system is to achieve its objective of ensuring that those who commit violent firearms offenses are held fully accountable for their actions, plea bargaining practices nationwide must be reformed. Too often, serious felons walk away from court after pleading guilty to minor offenses and misdemeanors because overburdened prosecutors have accepted plea agreements rather than going to trial. The lesser charges result in lesser sentences or probation and repeat offenders continue to beat the system. To speed an end to such plea bargaining:

1. The President directed the Attorney General to issue and fully implement guidelines for Federal prosecutors regarding plea bargaining under the Sentencing Reform Act to ensure that Federal charges always reflect both the seriousness of the defendant's conduct and the Department's commitment to statutory sentencing goals and procedures. This will ensure that Federal prosecutors seek minimum mandatory penalties for all violent firearms offenses.

2. The President urged State and local govenments to reform their plea bargaining and sentencing practices along similar lines and to devote increased resources to prosecutions.

Mr. ROGERS. Is there some change proposed in the plea bargaining area?

Mr. QUINLAN. I believe there is a proposed change that would lessen the availability of plea bargains on certain drug and violent crimes.

IMPACT OF LEGISLATION ON PRISON POPULATION

Mr. ROGERS. Well, your Bureau feels the impact of changes in the justice system. When Congress provides more judges and more prosecutors and more FBI, more DEA, more this, more that, and we convict the crooks, lock them up, many times the population forgets that we don't have space for them.

We have been beefing up the other links in the chain pretty heavily. I mean, there are hundreds of new Assistant U.S. Attorneys coming on this year; there are new proposed new Federal judgeships, and we are beefing up the FBI again and the DEA and the law whole enforcement community. You have taken all those factors into account in trying to predict population in 1995, have you not?

Mr. QUINLAN. Yes, we have.

Mr. ROGERS. How do you predict what the Congress is going to do?

Mr. QUINLAN. It is very difficult.

Mr. ROGERS. Maybe we should talk to you more.

Mr. QUINLAN. I think that is very important, when issues come up with regard to new criminal legislation, that we consider what impact it would have on the prison population, and that the resources be made available in the forthcoming fiscal year to deal with those increases.

Mr. ROGERS. Well, in trying to find that space, let me talk to you a minute or two about privatization. You contract with about 700 state and local and private providers to house certain subpopulations. And I gather those are pre-release inmates and maybe some inmates with shorter sentences, some juveniles, immigration detainees and that type of person. Could you tell us how that type of privatization is working out?

Number one, what percentage of your prisoners are in privatized or state or local agencies?

Mr. QUINLAN. None of the 55,000 prisoners that I mentioned in my opening remarks to the committee are in private facilities, but there are other Federal prisoners that the Bureau of Prisons is responsible for who are in private facilities.

I would mention first and foremost, approximately 3,500 of whom who are in community correctional centers, halfway houses. In addition, we have many, I think about 1,000 Federal prisoners who are in privately run-for-profit facilities. These include juveniles and short-term sentenced aliens.

We are also working on developing a privately-owned lease facility that we would operate. We are looking in the Oklahoma City area. This lease would be for a holdover facility, which is a facility where we house prisoners temporarily while they are in transit from one prison to another. This is something that we are looking for as a result of leasing authority that we received in the fiscal year 1990 budget.

In summary, Congressman Rogers, we probably have around, I would say 4,500 prisoners or so in private facilities.

Mr. ROGERS. That is where you contract with that separate agency to take care of your prisoners, correct?

Mr. QUINLAN. That is correct.

Mr. ROGERS. Now, we gave you leasing authority last year.

Mr. QUINLAN. That is correct.

Mr. ROGERS. How has that worked out?

Mr. QUINLAN. The request is in the developmental stage, but we are very optimistic that the Airport Authority at Will Rogers Airport in Oklahoma City will privately fund and build a holdover facility that we will lease, operate and use for Federal prisoners.

Mr. ROGERS. You will staff it?

Mr. QUINLAN. We will staff it.

Mr. ROGERS. You will simply pay them rent for your building?

Mr. QUINLAN. That is correct.

Mr. ROGERS. Are you doing that anywhere else now?

Mr. QUINLAN. No, Congressman. We had no authority to lease for that until this fiscal year. And I am reminded by Mr. Houk that the Senate in their appropriation committee report authorized us to only do one lease until we see how it works.

Mr. ROGERS. So you will have it when, this coming year?

Mr. QUINLAN. We hope certainly within the next 12 months.

Mr. ROGERS. That could offer some real potential for taking care of this shock load of prisoners, couldn't it?

Mr. QUINLAN. I think it can. I think that there are some economies that can be gained through the private sector, that will be able to build without following some of the Federal procurement rules that sometimes drive up the cost. These leased facilities should come on board quickly and cost-effectively.

Mr. ROGERS. Well, I know the state of Kentucky is doing that now; I think it have several prisons where it has contracted with private developers which built the facilities and the state leases them. In fact, there is one going up in my district just now, just announced, and they are going to be in operation in a matter of months. From day one to occupation is a matter of months, rather than years; and the likelihood is, it sounds like, they are going to do it cheaper than the government, so it is a bargain for the taxpayers, it appears.

Mr. **Regula**. Your facilities, are they minimum, moderate or maximum?

Mr. **Rogers**. I am not sure.

HOLDOVER FACILITY

Mr. **Regula**. And what is the definition of a holdover facility?

Mr. **Quinlan**. A holdover facility, Mr. Regula, is a facility that is solely designed for short term incarcerations, one night to seven nights instead of a traditional facility, which houses prisoners for an average of probably about five years.

The reason for the Oklahoma City location, I might point out, is that the U.S. Marshal Service operates a prisoner transportation network using Boeing 727 aircraft to transport prisoners long distances. Their aircraft are housed at Will Rogers Airport in Oklahoma City, so it would be very propitious to the Bureau of Prisons to have a facility right there. We currently use a facility about 25 miles away in El Reno, Oklahoma to house holdovers, but that facility is very much needed for medium security prisoners.

Mr. **Regula**. You bring them in——

Mr. **Quinlan**. We transport them in by bus and then the U.S. Marshals transport them out on their aircraft.

PRISON LEASING POLICY

Mr. **Rogers**. I am told by staff that the OMB does not like the leasing concept. Are you familiar with their attitude towards it?

Mr. **Quinlan**. Yes. While I hate to speak for OMB on that point, I am advised that OMB is concerned about the scoring of the long-term leasing costs. Their interpretation, I believe, is that the long-term lease cost has to be scored in the year in which the original appropriation is made.

Mr. **Rogers**. So assuming, under that understanding—let me see if I understand correctly. If you contracted with private industry to build a prison, and your lease payments let's say amount to $20 million, OMB would say in the year that you contracted for that prison, that all of the cost, $20 million, is scored in one year, the first year; is that right?

Mr. **Quinlan**. That is the way they have, up until now, interpreted it, but I understand that they have been talking to us about this issue. It may be possible to come to some sort of a compromise. But currently, they would score the entire $20 million in one fiscal year.

Mr. **Rogers**. Well, that would gain this subcommittee nothing then in terms of dollars.

Mr. **Quinlan**. Well, the fact is it would not gain the Bureau of Prisons anything. If we were to score the entire cost of the lease up front, we might be able to build three prisons in 1991 dollars with what the 20-year lease cost might be.

Mr. **Rogers**. Well, when you now build a prison over what, a three-year span of time, you stretch out those outlays over a three-year period.

Mr. **Quinlan**. That is correct.

Mr. **Rogers**. As far as scoring goes——

Mr. QUINLAN. The budget authority scoring is actually all done in the first year. However, obligations and outlays would be spread out over the life of the project.

Mr. ROGERS. Yes. The BA, that spends out over several years. So by this time next year, Mr. Director, do you think we will have a pretty good feel for how it is working out in Oklahoma?

Mr. QUINLAN. Oh, absolutely. We are moving ahead with the project, and I am very optimistic. I beleive they are very anxious to do this. They have already identified space for it. We are obviously anxious because it provides a tie-in with the U.S. Marshals' aircraft, which would be very desirable for us and the Marshals Service. It will save a lot of time and transportation costs. Security would be increased because we wouldn't have to transport the prisoners via buses from the 25-mile-away institution.

Mr. ROGERS. Well, maybe we can get the OMB to go out there and take a look at it and maybe spend four or five months inside looking at it.

Mr. QUINLAN. We are very optimistic that the OMB will agree so that we can come up with a solution that will help us and the committee and the Congress solve this tremendous budgetary crisis of trying to fund the expenditures for new institutions.

Mr. ROGERS. Well, I am going to wait until the second round. I think my 10 minutes will probably expire.

Mr. EARLY. We will have a trial, Mr. Quinlan. We will get six people from OMB and put them in prison for 12 month. Then we will let them report after the 12 months. That would be the way to do that.

A lot of people would suggest that they would be more entitled to be there than some of the others.

Mr. ROGERS. Are you suggesting that we do a study in that fashion?

Mr. EARLY. No. I am suggesting we put them there.

Mr. Regula?

Mr. REGULA. They would probably agree if you took six from Congress, too.

Mr. EARLY. That would be a fair match.

Mr. ROGERS. I would like to continue off the record.

[Off record discussion.]

Mr. REGULA. Thank you, Mr. Chairman.

OVERCROWDING

Mr. REGULA. I note you have 65 percent overcrowding. Would not overcrowding contine the tensions, and ultimately to the point that we see when we see riots in prisons? I don't think there have ever been any in the federal prisons, if I am not mistaken. They are pretty largely confined to state prisons.

Mr. QUINLAN. We have not, knock on wood, Mr. Regula, had any serious disturbances recently, but the potential for those kind of situations occurring is greatly enhanced by the level of overcrowding. Particularly in some of our institutions, I should point out, because they are more than 100 percent over design capacity.

Those institutions are sometimes a tinderbox, because you have situations where the program areas were designed for, let's say, 500, but you have 1,000 people. The lines waiting for different programs are much longer. People could get agitated if it is a hot day, or if it is raining or cold. And so, you know, the potential for problems is there.

We have been successful through good management practices and good staff dedication to manage our institutions even with high overcrowding.

ESCAPES

Mr. **Regula**. What is your experience on break-outs? It must be very minimal.

Mr. **Quinlan**. Our experience on break-outs is fairly good.

I should mention, Mr. Regula, that we have a classification system in the Bureau of Prisons that allows us to divide our prisons into six security categories. The lowest category is minimum security and the highest is the maximum security U.S. penitentiary in Marion, Illinois.

In secure facilities, which have a fence around them, level two through level six, there are very few, if any, escapes.

In the level one facilities, we have on average about two escapes per week. There are walk-a-ways in minimum security facilities.

Mr. **Regula**. These would be white collar crimes?

Mr. **Quinlan**. Yes, some are white collar criminals.

We had a situation this weekend at the Atlanta camp, an inmate walked away. He did not qualify for a furlough to attend his mother's funeral. He left anyway, came back Monday morning. But he did escape.

RECIDIVISM

Mr. **Regula**. What have you done any tests on the element of recidivism? What does your empirical data show on that issue?

Mr. **Quinlan**. The data is very, very consistent.

Over, I think, 20 years of research that has been done on Federal offenders shows that 40 percent of the offenders that we release will be back in custody in three years.

Now, that statistic is not that different from the recidivism rates that have been studied at state institutions. One thing we find is a true predictor of better chance at being able to stay out of prison is aging.

As the population gets older, as people get up into the mid to late thirties, recidivism rates decline markedly.

Mr. **Regula**. Do you make any attempt in assigning prisoners to get them as close to families as possible on the assumption that family visits would contribute, perhaps to some measure, in avoiding recidivisms?

Mr. **Quinlan**. Absolutely. That is one of our underlying premises to place offenders in the most appropriate institution from a security perspective, that is closest to their home.

Unfortunately, Congressman Regula, you know, that does not always work out. The closest institution may, in fact, be 100 percent over-capacity and we may have to send someone further away. But our goal is to keep them as close to home as possible.

Another complicated factor is if there is a prisoner in the nearest institution who the inmate must be separated from, then we will move him to another facility.

INMATE LITERACY

Mr. Regula. In your facilities, do you try to offer educational opportunities that will hopefully make them productive?

You mentioned literacy in your statement—that will give them some potential measure for succeeding in a legitimate pursuit?

Mr. Quinlan. Absolutely.

We have a number of educational programs. We offer Adult Basic Education, which is basically grammar school, to every sentenced offender who comes in who can't read and write at the eighth grade level. Adult Basic Education is the only mandatory program that we offer other than work. They must attend this program for 90 days.

As mentioned in my statement, we propose to increase the Adult Basic Education period to 120 days. If the Committee would agree or the Congress would agree on our request.

Those inmates who don't complete that level in 90 days are encouraged to stay beyond that time. However, if they don't chose to do so, we don't require them to.

We also have, in addition to the adult basic program, a high school equivalency program and we offer some college courses.

We also have an extensive array of vocational training programs. Some institutions have as many as 15 different vocational training programs. Program availability depends on the type of institution and the length of time that the prisoners are going to be there.

We are working very hard to try to give inmates the skills that they need to survive in a civilian society when they are released. Many times the offenders choose not to take advantage of it.

Mr. Regula. I was going to say do you have any percentage on how many participate in the self-improvement programs?

Mr. Quinlan. I would have to provide that for the record, Congressman Regula. I do not know.

[The information follows:]

JOINTLY RUN CORRECTIONAL FACILITIES

Mr. REGULA. Do you have any experience with building joint facilities with a state system, for example? I don't mean share the full building, but rather share the location, thinking in terms of maybe they would be better, maybe bus access and utilization parking utilities, et cetera?

Mr. QUINLAN. We have constructed Federal prisons near State facilities in a number of places. It has been more coincidental though, than deliberate. I am thinking primarily of the facilities in New York at Ray Brook and also at Otisville, where there are State prisons adjacent to our facilities which makes it more convenient, as you say. Bus transportation, hotel accommodations and other support services are improved.

Also one of our new Federal prison complexes will be built in Canyon City, Colorado, which is near by a State prison complex. This was again not necessarily by design. We didn't go out there specifically looking to locate close to a State prison. However, it is conducive to allowing the families of the offenders to maximize their chances for getting public transportation or other kinds of local services that would support them.

REHABILITATION

Mr. REGULA. Has the thrust of the prison system shifted to more rehabilitation in recent years than was true in earlier years?

Mr. QUINLAN. Well, rehabilitation is a term that has somewhat been misinterpreted over the years. We still feel that it is very difficult to make people become rehabilitated. They have to make voluntary decision to change.

What we have done in the Bureau of Prisons over the last couple of years is really expand the opportunities for rehabilitation. For example, through the drug treatment initiative and the literacy initiatives—we believe that through offering good programs, as well as motivating and guiding people as strongly as we can, we established the best chance of having them choose viable and worthwhile endeavors.

I am really encouraged, particularly with the drug treatment program, Congressman Regula. We believe we have designed and will be implementing, with the help of the Congress, in the next fiscal year one of the best, if not the best, drug treatment program for offenders in the country.

The fact is, the National Institute of Drug Abuse is so excited about what we are embarking on, that they have given us some feedback that we are on the cutting edge of drug treatment in the country.

RECIDIVISM RATE

Mr. REGULA. Does your recidivisms rate compare to, let's say, the state prison systems around the country? Do we get a different type of prisoner, I guess I am really asking?

Mr. QUINLAN. We do get a different type of offender.

Our offenders for the most part are older. The average offender is 37 years old, and has four felony convictions on his or her record.

State offenders on average probably are in their early twenties, and probably only have one or two prior convictions.

Mr. **Regula**. So their pattern of activity changes as they get older?

Mr. **Quinlan**. Well, what we have found is that Federal offenders have graduated up to the more sophisticated crimes. The Federal crimes that people are prosecuted for require a great deal more sophistication in many cases.

These crimes include high stake drug conspiracies—50 percent of our population was committed for drug offenses. These are not your average criminal who knocks over liquor stores or rapes or robs. These are people who are out to make millions of dollars. They steal from people's wallets, I suppose, through drugs.

Mr. **Regula**. Very interesting.

I will submit the rest of my questions for the record.

CHANGES IN FEDERAL PRISONS

Mr. **Early**. Mr. Quinlan, I think Mr. Regula's last question really indicates the change that the prison system is going through. In your statement you tell us that in 1980, 25 percent of the prisoners were incarcerated for drug related offenses; today it is 50 percent and it is going to go much higher.

You are going to be like the local or state prison unless you change.

Mr. **Quinlan**. That is very possible.

Mr. **Early**. Chairman Smith has asked that our good friend and colleague on the Appropriations Committee, Mr. Lehman, be allowed to ask some questions, and submit some for the record.

Congressman Lehman?

Mr. **Lehman**. Thank you, Mr. Chairman, and I want to thank Mr. Quinlan, and also Mr. Wade Houk who came and met with us previously about this problem that I am going to talk about today.

I have six questions.

The first question I am going to put into the record.

MILITARY BASE CLOSURES

And the second question, last week the Assistant Secretary of the Defense for Base Closures and the Appropriations Subcommittee on Military Construction told me during a hearing that DOD has identified for the Bureau of Prisons certain sites to temporarily relieve overcrowding.

DOD is waiting to hear back from the Bureau. Are you familiar with this effort and could you tell me whether you will take advantage of any of the sites identified by DOD?

Mr. **Quinlan**. Congressman Lehman, is that part of the base closures initiative or part of the Commission on Alternative Utilization of Military Facilities? These are two different initiatives.

Mr. **Lehman**. Well, you can deal with both of them, because some of it can be joint use, and others can be base closures where you would be able to use these bases entirely or partially for drug rehabilitation or whatever.

Mr. **Quinlan**. We have several initiatives that we have currently ongoing with the military.

INMATE PARTICIPATION IN EDUCATION PROGRAMS

Actuals (1988-1989) and estimated (1990-1991) enrollments of inmates in education programs are presented below. Percent of completions is provided in parenthesis.

ENROLLMENTS	1988	1989	1990	1991
Adult basic education	17,614(48%)	17,716(57%)	19,664(57%)	21,828(57%)
Adult continuing education	12,425(77%)	17,460(84%)	19,380(84%)	21,512(84%)
General education development	5,048(48%)	6,336(45%)	7,336(45%)	7,807(45%)
Post secondary education	9,213(66%)	10,877(77%)	12,073(77%)	13,402(77%)
Occupational education	14,615(62%)	17,195(65%)	19,086(65%)	21,186(65%)
English as a second language	3,096(35%)	4,533(33%)	5,032(33%)	5,585(33%)

The first one is the base closures initiative which would hopefully result in the transfer to the Bureau of Prisons of land over time for the construction of new prisons or land and structures for conversion to minimum security Federal prisons.

There are 95 bases on the base closures list, and most of them will not start to close until later years. We have targeted some of those bases which are in those geographic areas where we have a need for additional capacity.

Unfortunately, to our knowledge, there are none of the 95 bases that have been identified that have existing brigs or correctional facilities that can be easily converted to Federal Bureau of Prisons medium security housing needs. Unfortunately, they would be useful only for minimum security.

On the Commission on Alternative Utilization of Military Facilities on which I serve, there have been a number of buildings and pieces of land identified, including up to 5,000 buildings and/or pieces of land with potential conversion to minimum security Federal prisons. This was required by the 1988 Drug Abuse Act, and the military has been very cooperative in identifying these 5,000 facilities.

But there are also two other competing uses for surplus military facilities. One is for the homeless and one is drug treatment programs.

The third initiative that we are working on with the military, which I mentioned earlier to the Chairman and members of the Committee, is an initiative with the Department of Defense to possibly use some of their underutilized military brig space for Federal prisons. That is something that I am meeting in the next week or so with the Assistant Secretary of the Army, Susan Livingstone, to try to pursue.

Mr. LEHMAN. Without belaboring the point state and federal prisons are overcrowded, and military bases are going to be less used. Federal prisons can provide alternatives for communities that are going to be economically hard hit by base closures, so you have a way to cushion some of the fallout.

Mr. QUINLAN. Absolutely.

Mr. LEHMAN. Would you support efforts to grant priority use of military-based-prisons—I might add that in some of the joint uses, you can use minimum security prisons to do creative and helpful work on the prison bases themselves?

Mr. QUINLAN. Absolutely.

In fact, we have done that for a number of years in Florida and Alabama.

We now have over 20 military bases around the country where we have prisoners either on active or deactivated bases. About 20 military bases are being used.

I agree that it is a good idea that the Federal Bureau of Prisons be given priority. The fact is we are one of the highest ranking agencies in terms of priority for base closure land and facilties.

The States are also given priority. However, as a result of the base closures legislation, their priority is lower than the Federal Bureau of Prisons. The States also can acquire the space.

Mr. LEHMAN. And fourth, for the record, Mr. Quinlan.

STATE AND LOCAL ACQUISITION OF CLOSED MILITARY BASES

And five, if state and local governments are interested in obtaining closed military bases to use for prisons, would their requests be transferred to the Department of Defense through your agency?

Mr. **Quinlan**. The request would actually go, under current regulations, to the Office of Justice Programs.

Mr. **Lehman**. The office of what?

Mr. **Quinlan**. The Office of Justice Programs handles requests from the State governors for Federal surplus land for prison use.

Mr. **Lehman**. On the bases of the Department of Justice?

Mr. **Quinlan**. I am sorry, Mr. Lehman, I am informed by Mr. Houk that the request would go directly to the Department of Defense.

Mr. **Lehman**. I see.

All right. Thank you.

Number six is for the record.

And I want to thank my colleague, Mr. Early, for letting us have this time.

Mr. **Early**. Thank you very much for your questions, Mr. Lehman.

There is one thing that bothers me on that. The Department of Defense told Mr. Lehman that they were waiting for you to get back to them.

Mr. **Quinlan**. Pardon me for the delay, Mr. Chairman, in answering that question. Mr. Houk informs me that we have had a list of 12 underutilized brigs for about 13 days from the Department of Army. We are analyzing that and will be getting back to the Army.

Mr. **Early**. Thirteen days.

STAFFING INCREASE

You request $91 million for 4,000 additional positions to improve staffing at existing institutions.

Will these additional funds allow you to achieve your preferred staff to inmate ratio of one to three?

Mr. **Quinlan**. Yes, it will, Mr. Chairman. I might point out that these positions are very much needed, particularly in the areas of health services, drug treatment, literacy, and human resource development, critical areas to us. Also being able to give us the additional positions will allow us to enhance security, help improve our interaction with inmates, and reduce inmate idleness and tension in our institutions.

Mr. **Early**. I would like you to provide for the record how the 55,000 inmates breakdown according to the six ratings that the Bureau has.

Mr. **Quinlan**. Sure. Absolutely.

[The information follows:]

Prison Population by Security Level

Security level:	*As of 3/21/90*
1	12,786
2	6,576
3	8,131
4	9,059

5	4,425
6	379
Administrative [1]	9,144
Detention	5,062
Total	55,562

[1] Includes all security levels, males/females, holdovers, and medical.

PRISON POPULATION INCREASE

Mr. EARLY. This 4000 increase in positions would be almost a 25 percent increase in staff. Do you have the capability to hire and train 4000 new correction officers in one year, in addition to your nominal replacements?

Mr. QUINLAN. Yes, we do, Mr. Chairman.

We have been working with the Treasury Department and the Federal Law Enforcement Training Center in identifying our potential training needs and their plans help address those needs. We have also been looking at other alternatives to augment those capabilities. I am satisfied that we will have the resources available to recruit, hire, and train these additional staff at the same level of training that we have provided to our staff over the past 20 years.

Mr. EARLY. You must be the biggest agency there.

Mr. QUINLAN. We have a large personnel.

Mr. EARLY. I mean as far as hiring.

Mr. QUINLAN. We are told that we are the fastest growing Federal agency in terms of personnel.

Mr. EARLY. Terrible.

ACTIVATION OF NEW FACILITIES

Now, with regards to new facilities, you request $50 million to activate a number of new facilities.

Have there been any schedule changes which will delay the activation of these facilities?

Mr. QUINLAN. There have been some schedule changes which I would, if I could, request that we may get to the Committee in the record.

Mr. EARLY. You may put that in the record.

Mr. QUINLAN. Yes, sir.

[The information follows:]

ACTIVATION DELAYS

For planned activities shown in the 1991 Congressional budget request, we anticipate that the Federal Correctional Institution in Manchester, Kentucky will be delayed approximately 6 to 9 months in completion. This delay is primarily associated with site problems. In addition, it is possible that there will be other delays and we will advise the Committee if other changes occur. Delays in prior year activations are reflected in the 1991 Congressional Budget request.

PRISON POPULATION

Mr. EARLY. Now, on prison population adjustment, you request $24.5 million to handle an increase of 6,050 in prison population in fiscal year 1991.

Doesn't this request partially duplicate your request for the facility activation since 3,300 of the 6,050 increase will be achieved through new facilities?

Mr. **Quinlan**. It is not duplicative, Mr. Chairman.

The resources requested for the activation of new facilities provides for the additional staffing requirements and activation costs including start up supplies, equipment and fixed costs such as utilities. The inmate care and program costs such as food and health care are budgeted through increases in the overall Bureau Prisons' population adjustment.

OMB CIRCULAR A-76

Mr. **Early**. In fiscal year 1990, your work years were reduced by 208 in order to comply with OMB circular A-76, contracting out requirements.

What functions do you propose to contract out other than the ones you have already spoken to Mr. Rogers and Mr. Regula about?

Mr. **Quinlan**. The areas that we are studying under A-76 are the two prison hospitals at Springfield, Missouri and Rochester, Minnesota. We think that there might be an opportunity to save resources—

[Off record discussion.]

Mr. **Early**. Back on the record. Go ahead, conclude.

Mr. **Quinlan**. In the A-76 study that we are in the process of conducting right now, we think there might be a possibility of conserving resources through the contracting out of our two prison hospitals.

Mr. **Early**. For the record, will you tell us what it will do to the cost of health care in your facilities?

Mr. **Quinlan**. That is what we want to look at, Mr. Chairman. We think that we provide a high level of medical care for Federal prisoners at a cost-effective price because we have the help of the Public Health Service in providing some of our medical care. However, it has been shown in some isolated cases where the private sector has been able to provide medical services to us in a more cost-effective way. For example, in Duluth, Minnesota where we have a contract with St. Luke's Hospital, they provide our medical services and have done so for the last three or four years in a cost-effective way. We want to see if that can be expanded to a larger size institution, and obviously to a much greater level of responsibility, that of running a full prison hospital.

Mr. **Early**. What impact will these changes have on your current operation? I also want to know if you are going to realize the savings anticipated by OMB from this type of operation.

Mr. **Quinlan**. I would have to submit that for the record, Mr. Chairman.

Mr. **Early**. You can submit that information for the record. I have other questions that I will submit for the record. I am going to yield to Mr. Rogers.

Excuse me, Mr. Dwyer, do you have any questions? You are not in a hurry.

Mr. **Dwyer**. No.

Mr. **Early**. Mr. Rogers?

Mr. **Rogers**. Mr. Chairman, I think you asked my questions. It was good to see you.

Mr. **Early**. Thank you very much, Mr. Rogers. Mr. Dwyer?

FAIRTON, NEW JERSEY

Mr. **Dwyer**. Thank you, Mr. Chairman.

Mr. Quinlan, can you tell me something about the facility in New Jersey and how it is coming along? What is the status of it?

Mr. **Quinlan**. It is coming along very nicely. The facility in Fairton, New Jersey, is located about 45 miles from Philadelphia and it will be dedicated on April 27th of this year or in about 40 days.

We will have a 550-bed medium security facility. We will use one of the housing units for detention cases because of the initial need for additional detention space in the Northeast, particularly in the Philadephia/New Jersey area. We plan to expand the facility in the next year or so with another unit, which will also be dedicated to detention cases from that Northeast area.

DETENTION VS. MINIMUM SECURITY

Mr. **Dwyer**. How do you differentiate between detention and minimum security, for my own edification?

Mr. **Quinlan**. Detention cases are basically anywhere from a minimum security to a maximum security inmate, because they are being held prior to trial. When you have that kind of a scale of offenders, you have to build the facility for the most secure offender. They must be housed separately, since they are not sentenced, they are not required to work, they are brought to the main dining room at a time when the other prisoners are not present. Their programs are pretty limited because they are generally in that facility for only a few months. The detention facilities will have some minimum custody prisoners, but generally the majority are going to be medium or high security prisoners.

Mr. **Dwyer**. How has the reception been in the area?

Mr. **Quinlan**. The reception has been extraordinary. I was personally involved in helping the people in Fairton, New Jersey, make the decision to build a prison. The fact is the location had been considered for a Federal prison in the late 1970s, and the community had decided they didn't want it. The facility wound up being constructed in Otisville, New York, where I became Warden in 1980.

During the time I was in Otisville, a reporter came up and asked how it was going. He took a look around, talked to the people in the community, and found that the Otisville community loved us. He went back and wrote the story, and the Fairton community decided they wanted a second try. They sent a delegation of community leaders from Fairton up to Otisville and they met with our community relations board, and decided they wanted a prison.

They are very, very supportive. In fact, the last I heard, they would like a second prison.

Mr. **Dwyer**. Is that just the opposite of what is happening around the country?

Mr. **Quinlan**. Isn't it.

Mr. **Dwyer**. You wrote to the Chairman in February about a reorganization of the regions. Do you want to tell us something about that? How does it affect New Jersey?

Mr. **Quinlan**. It wouldn't affect New Jersey directly. The Northeast region, like all of the Federal Bureau of Prisons regions, has become greatly overstretched in terms of their responsibilities.

When the Bureau of Prisons regionalized in 1974, Mr. Dwyer, the Bureau of Prisons had a total of 27 institutions in the entire system, so each region had about six institutions.

We now have regions that have 20 institutions, and we propose to reconfigure the geographic breakout so that no region would have any more than 12 institutions. This will bring the services of that regional office closer to the institution. They will be able to provide the required technical assistance. This is particularly important in an agency that is growing as rapidly as we are. We need to provide our staff with close guidance and oversight and that will be possible with this request, if it is approved.

Mr. **Dwyer**. Thank you, Mr. Chairman.

Mr. **Early**. Thank you. Mr. Regula?

Mr. **Regula**. No, sir.

Mr. **Early**. Mr. Quinlan, Chairman Smith and the Ranking Member Mr. Rogers have really made an effort to cooperate and work with you. So I hope you will continue to work with the Chairman and the Ranking Member as you have in the past.

Mr. **Quinlan**. I appreciate the support of this committee and particularly the Chairman. Thank you very much.

[The following questions were submitted to be answered for the record:]

QUESTIONS SUBMITTED BY CONGRESSMAN ALEXANDER

Federal Prison System

Site Acquisition

QUESTION: The budget justifications state that BOP currently has a site search underway for a leased Federal Correctional Institution (FCI). The community leaders and people of Forrest City, Arkansas, support having such a facility located in their area. In determining the site for such an FCI, what consideration will be given to community support for having such a facility located in its area?

ANSWER: Community support including the endorsement by local officials and Members of Congress is vitally important in site selection of any facility.

QUESTION: What criteria will be used in selecting the site for a leased FCI, and what weight will be given to each criterion?

ANSWER: The following criteria are used for citing a leased Federal correctional facility:

-- Location in an area of the country where the Federal Bureau of Prisons is experiencing current overcrowding or a region where projections indicate large numbers of Federal offenders will come into our system in the future.

-- A minimum of 200 to 250 acres of relatively flat buildable land of reasonable configuration (i.e., with roughly equal length and width) and with adequate visual buffers along the boundaries.

-- Available at no cost to the government.

-- Free from environmental difficulties including protected "wetlands areas", significant archaeological or historic resources, habitats of threatened or endangered species, farmland preservation areas and prime agriculture land. Not located within a flood plain area.

-- Located within 50 miles of a large population center to ensure the facility the availability of community resources for staff housing, goods and services.

-- Adequate public utility services to the site.

-- Adequate fire protection services nearby, with a public-service fire company preferred.

-- An accredited full-service hospital recognized and licensed by the state within one hour's driving time.

-- Close proximity to interstate highway systems and public transportation, preferably with commercial ground and air service nearby.

-- Proximity to higher education facilities, with accredited colleges or universities and a wide variety of technical schools.

-- Community support including endorsement by local officials and Members of Congress.

-- The willingness to enter into a lease agreement that will be subject to the availability of annual appropriations.

The most critical factor is the geographical area of the country from which inmates are being sentenced. Factors such as location within 50 miles of a large population center (50,000 or more), free of environmental problems, availability of utilities at the site, adequate fire protection, medical services and educational opportunities are of equal importance. Community and Congressional support are vitally important. Also important is the willingness to enter into a lease agreement which will be subject to the availability of annual appropriations.

QUESTION: When do you expect to have the site selection for the leased Federal Correctional Institution completed?

ANSWER: A site has already been targeted for the leased facility. We are in the developmental stage of entering into an agreement with the Airport Authority at Will Rogers Airport in Oklahoma City to privately fund and construct a holdover facility to be used by the Federal Bureau of Prisons and U.S. Marshals Service.

QUESTION: What inmate capacity do you expect the leased FCI to have?

ANSWER: We propose an 800 to 1,000 bed facility.

QUESTION: What level of security do you expect the proposed leased FCI to have?

ANSWER: It will be a secure facility housing inmates from all security levels.

QUESTION: When do you expect the leased FCI to be ready for use?

ANSWER: At this time, we anticipate activation in the spring of 1992.

QUESTION: The budget justifications state that BOP is currently involved in site searches for five Federal Correctional Complexes. What criteria are being used for selecting these sites?

ANSWER: The same criteria listed above except a minimum of 1,000 to 1,200 acres would be required and exclude the lease provision would be excluded.

QUESTION: What weight is given to each of the criterion used?

ANSWER: As stated above, the most critical factor is the geographical area of the country from which inmates are being sentenced. Community support including the endorsement by local officials and Members of Congress is also vitally important.

QUESTION: In such site searches, what consideration is given to active community support for having a federal correctional facility located in its area?

ANSWER: As noted above, community support is vitally important.

QUESTION: What inmate capacity do you expect each of the five FCCs to have?

ANSWER: The capacity can range from 2,000 to 2,750.

QUESTION: What level of security do you expect each of the five FCCs to have?

ANSWER: Federal Correctional Complexes will include three or four independent facilities of different security levels. For example, a correctional complex we are planning will have 500 minimum-security beds, 1,000 low-security beds, 850 medium-security beds and 500 high-security beds.

QUESTION: The budget justifications state that, in addition to the leased FCI, BOP is currently involved in site searches for three Federal Correctional Institutions to be built by and owned by the Federal Government. What criteria are being used for selecting these sites?

ANSWER: The site criteria is the same as listed above for a leased FCI excluding the lease provision.

QUESTION: What weight is given to each of the criterion used?

ANSWER: Again, the geographic area is critical and community support is very important.

QUESTION: In such site searches, what consideration is given to active community support for having a Federal Correctional facility located in its area?

ANSWER: As long as the other selection criteria are met, community support is very important.

QUESTION: What inmate capacity do you expect each of the three FCIs, which are to be built by and owned by the Federal Government, to have?

ANSWER: A Federal Correctional Institution is composed of a medium security facility to house 750 to 850 inmates, and an adjacent camp to house 150 to 250 minimum security inmates.

QUESTION: What level of security do you expect each of these three FCIs to have?

ANSWER: The facilities will house inmates requiring minimum to medium security.

QUESTION: The budget justifications state that BOP expects to have the five Federal Correctional Complexes and the three Federal Correctional Institutions, excluding the leased FCI, completed by January, 1994. When do you expect to complete the site selection for each of the five FCCs?

ANSWER: Sites have already been targeted for the five complexes with development and design of some of these sites already underway. The National Environmental Policy Act requires agencies to conduct Environmental Impact Statements (EIS) before making a final decision on a project. It generally takes six to twelve months to complete an EIS once a community is targeted. We anticipate completing the EIS process on all five complexes by Spring 1991.

QUESTION: When do you expect to complete the site selection for each of the three FCIs?

ANSWER: We have completed the EIS process on two of the FCIs and the third will be completed within the next several weeks. Advertisements for the architects/engineers for the design of two of these FCIs have been published.

QUESTION: As a part of its activities in considering and/or selecting a site for its facilities, is BOP required to prepare an Environmental Impact Statement in compliance with the National Environmental Policy Act?

ANSWER: Yes.

QUESTION: If the response to the above question is affirmative, when does BOP expect to initiate the EIS process for the proposed leased Federal Correctional Institution?

ANSWER: During the Spring of 1990.

QUESTION: When does the Bureau of Prisons expect to initiate the EIS process for each of the five Federal Correctional complexes?

ANSWER: Two sites are in the EIS process. Staff are working with targeted communities and should begin the EIS process by summer 1990 for the others.

QUESTION: When does the Bureau of Prisons expect to initiate the EIS process for each of the three federal Correctional Institutions to be built by and owned by BOP?

ANSWER: The last EIS of the three FCIs will be completed within a few weeks.

QUESTIONS SUBMITTED BY CONGRESSMAN EARLY

Federal Prison System

Alternatives to Incarceration

QUESTION: What is the projected savings per prisoner associated with electronic monitoring versus incarceration?

ANSWER: Based on the U.S. Probation Service's estimates electronic monitoring costs between $12 and $15 per day. For comparison purposes, the average daily cost to incarcerate a prisoner in a level 1 Federal prison facility is approximately $28 per day. While it appears that there is a savings of approximately 50 percent a day, only a small number of inmates are eligible for participation in the program under current guidelines. Our 1991 request will provide for those that are eligible.

QUESTION: Could your requested increase of $25.5 million to fund the projected increase in prisoner population be reduced by providing additional funds for electronic monitoring?

ANSWER: No, the $25.5 million provides for those offenders that a Federal judge has sentenced to Federal prison. We believe it is our responsibility to carry out the orders from the court and that the judge considered alternatives to institution confinement in his/her decision. It should be noted that approximately 60 percent of the 133,000 Federal offenders were under supervision in the community in 1989.

QUESTION: Last year $2 million was provided for special curfew parole. How is this program working? Are you continuing this program in 1991?

ANSWER: The Federal Bureau of Prisons was not provided $2 million for special curfew parole last year. Under the special curfew parole program inmates have their parole date advanced up to 60 days by the U.S. Parole Commission, if warranted. These offenders are placed under the supervision of the U.S. Probation Service. Resources to operate this program were derived from the U.S. Probation

Service (1 position) and the U.S. Parole Commission (2 positions). No additional resources are requested.

QUESTION: Again since this program is cheaper than incarceration, could savings be had by expanding the program in lieu of providing funds for incarceration?

ANSWER: No. While it is cheaper to release prisoners than to keep them incarcerated there is a relatively small percentage of prisoners who would be eligible for early release.

Staffing

QUESTION: Will you have to sacrifice quality in order to bring on this many new personnel?

ANSWER: No. While hiring 4,000 new personnel is a monumental task, the Bureau of Prisons has begun implementing plans to recruit, hire and train an ample pool of line staff as well as managers. Approval of the 1991 request will provide an additional 184 staff to further enhance our efforts.

QUESTION: Your staffing increase of 4,000 assumes a lapse rate of 50 percent (2,000 workyears). Considering the magnitude of this increase, do you believe you will be able to achieve a lapse rate of 50 percent or will it more likely be lower?

ANSWER: We plan to begin filling positions upon enactment of the 1991 appropriation. If the appropriation is passed near the beginning of the fiscal year, we believe we can meet the lapse rate of 50 percent, however, it may not be possible if passage of the appropriation slips considerably.

QUESTION: Your request of 883 positions for activating new facilities assumes a lapse rate of approximately 42 percent. Why did you not use this lower lapse rate for the staffing increases?

ANSWER: The lapse rate used when requesting positions to activate new facilities varies because the lapse is calculated based on the date the new facilities are scheduled to come on line. We begin staffing facilities several months before construction is completed so that operation coincides with completion.

Activate New Facilities

QUESTION: You identify approximately 3,300 beds associated with these activations. Do the number of beds identified reflect the number the institution was designed for or the number of beds you actually plan to fill?

ANSWER: The 3,317 beds associated with the activation of new facilities represents design or rated capacity. In reality, because of overcrowding systemwide, these facilities will be double bunked shortly after activation, housing considerably more inmates than the facility was designed for. For example, our recently activated facility in McKean, PA is rated for 648 beds but there were 1,177 inmates there as of March 15, 1990.

Population Adjustment

QUESTION: In 1990, you projected an average prisoner population of 56,400. What is your average population at this time, and what are your current projections for 1990?

ANSWER: While the average daily population through February is 53,432, the number of Federal prisoners incarcerated as of March 22, 1990 is 55,624. This is an increase of approximately 8 percent for the first six months of 1990. If the growth rate continues to rise at the same rate, the number of prisoners incarcerated by September could exceed 59,000 and the Bureau of Prisons should reach its projected average daily population of 56,400.

A-76

QUESTION: In 1990 your workyears were reduced by 208 in order to comply with OMB Circular A-76 contracting out requirements. What impact will these changes have on your operations? Are you going to realize the savings anticipated by OMB?

ANSWER: If the Federal Bureau of Prisons's study of contracting out our two Medical Centers in Springfield and Rochester proves to be cost effective, then there will be savings. However, we have just started the A-76 studies, and are about to advertise in the Commerce Business Daily. The study is projected to last 18 to 24 months.

QUESTION: As you recall the Committee opposed the "rent-a-prison" concept of contracting out to private sources for the operation of a federal prison because we believe this to be an inherent function of the government. Is A-76 a back-door approach to this privatization initiative?

ANSWER: No, not at the present level of effort.

QUESTION: In your personal and professional opinion, do you believe that the prisons should be candidates for A-76?

ANSWER: This is a very complex philosophical issue. Privatization of corrections raises important legal, administrative, cost and quality of service questions and deserves careful analysis and exploration. We do not believe that private detention companies can or should replace our current Federal Prison System. Rather, we want to determine if the private sector offers a valid and cost effective option to assist the Bureau of Prisons in meeting the projected growth in the inmate population.

The pilot project with a private sector firm to manage, staff and operate a prison for sentenced aliens will provide useful information in this regard. We do believe there are certain functions which can be contracted out, for example, health services, teachers, and Community Correction Centers.

Buildings and Facilities

QUESTION: What was the total amount available for new construction from all sources for 1990.

ANSWER: The total amount available for new construction in 1990 is $1,300,248,000. The Department of Justice Appropriations Act provided $304,502,000, the Department of Transportation Appropriations Act provided $1,000,000,000. Of these amounts $4,254,000 was sequestered. This excludes an additional $109 million which is projected to be available from the Office of National Drug Control Policy's Special Forfeiture Fund at the end of 1990.

QUESTION: What impact did sequestration have on the new construction program? Were you forced to eliminate any projects or did you just scale back on projects?

ANSWER: The sequestration has not had a significant effect on new construction, we hope to be able to merely scale back projects.

QUESTION: Considering your projected requirements for bedspace over the next several years and your current problems with overcrowding, why are you requesting a new construction program in 1991 that is only 20 percent of your 1990 funding?

ANSWER: The funding currently approved for the construction of new prisons, the acquisition of surplus facilities for conversion to correctional use and the expansion of existing institutions will add about 33,000 beds when completed. Coupled with our 1991 request for 6,175 new beds and plans for 1992 we will be able to keep pace with projected increases in Federal inmate population and reduce prison overcrowding to approximately 30 percent by 1995.

QUESTION: You have included construction of a new prison within your base for the first time -- in prior years all new construction projects were considered program increases. Since you are requesting this project in your base, can we infer that this prison is to replace an older prison that you plan to close down?

ANSWER: No, funds requested in the base are not to replace an older prison, but represent an attempt to establish a minimum level of resources to deal with the reality of a ever-increasing inmate population.

Prison Leasing

QUESTION: For 1991, you propose two more such leases. Since the Congress was able to provide over $1.4 billion in construction of prisons in 1990, are you still convinced that there is a need for these leases? Don't you believe it is a little premature to request approval of two more lease proposals before we have received the results of the 1990 test? What types of facilities are you proposing to lease in FY 1991?

ANSWER: Our 1991 budget does not propose two more leases. We plan to evaluate the lease option, as required by the Senate, before expanding this option.

QUESTIONS SUBMITTED BY CONGRESSMAN REGULA

Federal Prison System

Inmate Health Care

QUESTION: With the Bureau's plans for new construction, expanded facility expansion, and projections of increased inmate populations, it would seem that this situation will put great strains on the Bureaus's inmate medical and health care system. What steps are being done to respond? Are more medical facilities needed? How many more personnel are needed and what can be done to improve recruitment?

ANSWER: Currently, the Bureau has medical/psychiatric/ chronic care capacity of 1,600 beds. This capacity is not sufficient to meet current needs. Projecting to 1995, when the population is estimated to reach 95,100, the Bureau estimates it will need a minimum of 3,100 health care beds.

Health Care Bedspace: With current health care capacity of 1,600 and a projected caseload of 3,100 beds in 1995, the Bureau would be short 1,500 beds. To address this need the Bureau is pursuing several courses of action.

The Bureau is attempting to acquire use of space at the United States Public Health Service's (USPHS) Gillis W. Long Hansen's Disease Center located in Carville, LA. Through an interagency agreement with the USPHS now in draft form, the Bureau will acquire approximately 200 beds for long-term chronic care.

In addition, the Bureau plans to build approximately 500 health care beds at a Correctional Complex planned for Butner, NC. Funding for this complex has been provided. This leaves the Bureau approximately 800 beds short, which this agency plans to address in future budget requests.

The estimates of future demand are based on current levels of service and several factors discussed below that will increase the proportion of inmates requiring health care services.

Aging Population: Although inmates 50 years or older constitute only 12 percent of the total inmates population, this age group constitutes 30 percent of the inmates currently in medical referral centers. From 1980 through 1989 the inmate population in the over 50 age bracket increased from 9 percent of the inmate population to 12 percent. With increasing sentence lengths and the aging general population, it is estimated the proportion of inmates in the over 50 bracket will constitute 15 percent of the general inmates population by 1995. Consequently, the Bureau expects corresponding increases in the percentage of inmates requiring some form of medical care.

AIDS: From 1984 to 1989 the number of inmate with end-stage AIDS increased from 1 to 35. Based on sampling of the inmate population, it is estimated approximately 2 percent of the total Bureau inmates population are HIV positive. Assuming the percentage of inmates who test HIV positive remains constant, and given longer inmates sentences, the number of inmates requiring hospitalization in one of the Bureau's medical facilities is likely to increase.

Kidney Dialysis: The number of inmates requiring kidney dialysis has increased from 9 in 1979 to 27 in 1989. Since there is a strong relationship between kidney disease and the use of drugs, and with the increased emphasis on drug enforcement, it is expected the number of inmates requiring kidney dialysis will increase substantially.

Positions Needed and Recruitment of Health Care Professionals: Initially, health care professionals for the Carville facility will be provided by the USPHS through an interagency agreement. By 1993 the Bureau will assume responsibility for providing health care services, and an estimated 36 health care positions will be needed. For the proposed Butner Medical Facility an estimated 145 health care positions will be needed.

The Bureau of Prisons continues to have difficulty attracting health care professionals at current salaries. Recently special pay provisions for Physician Assistants (PAs) was approved by OPM, and this increase has been instrumental in reducing the number of PA vacancies.

Concerning physicians, the salaries and benefits now provided through the general services schedule are inadequate. The Bureau currently has 45 vacancies out of 150 authorized positions in the physician category. With the phase down of the National Health Service Corps (NHSC), a major source of physicians will disappear. About 50 percent of the Bureau's physicians now come to the Bureau as obligated scholars from the NHSC program.

Several steps have been taken to improve recruitment of health care professionals. A health care recruitment team has been established for the sole purpose of recruiting health care professionals. Health care recruitment brochures have been prepared. Recruitment teams attend major medical meetings so as to encourage health care professionals to join the Bureau.

QUESTION: How many AIDS patients are in the medical system? How are HIV positive inmates handled by the Bureau?

ANSWER: Currently, the total AIDS cases is 139. The total number of inmates who are HIV positive is 491. Inmates who are known to be HIV positive but do not require hospitalization or intensive care are mainstreamed in the regular population. AIDS inmates receive counseling, education, and medical treatment as needed.

Construction

QUESTION: Does the Bureau have plans for the construction or purchase of an underground prison facility? Does the Bureau anticipate a need for such a facility?

ANSWER: The Bureau has established a need for a facility that would provide approximately 50 beds for inmates who are not a management problem but, because of their resources, would be subject to outsider-assisted escape attempts. Consequently, this facility would have to be very secure from outside assault. In this context, an underground facility was considered as an alternative. Investigation of underground facilities, however, indicated that such facilities were problematic. The Bureau has subsequently designed a unit, which is not underground, into a new facility which will meet its need for this group of inmates.

QUESTIONS SUBMITTED BY CONGRESSMAN LEHMAN

Federal Prison System

Prison Military Bases

QUESTION: How many prisons does the Bureau of Prisons currently operate on military bases?

ANSWER: The Bureau of Prisons currently operates 16 prisons on military bases. Twelve of the sixteen facilities are located on active military bases. Two of the twelve facilities on active military bases are housing Pennsylvania inmates on a reimbursable basis in response to a recent emergency situation at the State Correctional Institution at Camp Hill, Pennsylvania. The remaining four are on "de-activated" or closed military bases.

QUESTION: Mr. Quinlan, I commend you on the excellent job you are doing in managing an extremely overcrowded prison

system. Many state systems that are not as overcrowded as the Federal system are having a much more difficult time running their prisons. In fact, I understand that over thirty state prison systems are operating under court order because prison overcrowding has resulted in unconstitutional conditions in those states. Do you think that we should expand the role of the Federal Prison System to take the overflow of inmates from the state systems?

ANSWER: Even after the completion of our current construction program which is the largest capacity expansion program in history of the Bureau of Prisons, the Federal Prison System will still be 30 percent overcrowded. Thus, it will be unlikely that we will be in a position where we could absorb the overflow of inmates from state systems.

QUESTION: I understand you are a member of the Alternative Use Commission. Can you give me any indication of what the Commission will recommend with regard to using closed military bases for prisons?

ANSWER: The purpose of the Alternative Use Commission is to review unused or underutilized Department of Defense facilities or parts of facilities that can be used or renovated to serve as minimum security prisons, drug treatment facilities for non-violent drug abusers, and facilities to assist the homeless.

At the present time, the Bureau of Prisons is reviewing the 4,000 to 5,000 documents submitted by the Defense Department that describe buildings and land on military installations for possible use as minimum security correctional facilities. We anticipate that several sites may meet our primary criteria -- location in an area of the country where we are experiencing overcrowding or in an area where projections indicate large numbers of Federal offenders will come into our system in the future.

We are working very closely with the President's Economic Adjustment Committee in the Office of the Secretary of Defense which is responsible for coordinating the efforts of base reuse for those facilities identified in the Base Closure and Realignment Act. Several bases scheduled for closure have been targeted where a portion of the base would be used to construct a correctional facility or where existing buildings could be converted for inmate housing.

Monday, March 19, 1990.

Salaries and expenses

Summary Statement

Fiscal Year 1991

The United States Parole Commission is requesting, for 1991, a total of $9,869,000, 103 permanent positions and 98 workyears. This represents a net decrease of $631,000, 33 positions and 33 workyears from the 1990 appropriation enacted.

The United States Board of Parole was created by Congress in 1930. The Parole Commission and Reorganization Act of 1976 (Public Law 94-233, effective May 14, 1976) retitled the agency as the United States Parole Commission. Placed within the Department of Justice for administrative purposes, the Commission is an agency with independent, decision-making powers set forth by statute. The Commission has parole jurisdiction over all eligible Federal prisoners, wherever confined, and continuing jurisdiction over those who are released on parole or as if on parole (mandatory release).

National parole policy is reviewed by formal Commission deliberation at least quarterly. This continual study and review is designed to monitor and refine parole practices throughout the Federal system.

On a cooperative basis, the Commission uses the services of the staff employed by the Federal Prison System, who are assigned to the correctional institutions throughout the nation. The staff prepares classification summaries, progress reports and other reports concerning parole applicants.

Field supervision of released prisoners is provided by U.S. Probation Officers who are employed by the U.S. Probation Service in the Administrative Office of the U.S. Courts. According to statute, they function as "parole officers" for Federal prisoners. Reports concerning the adjustment of parolees and mandatory releasees are prepared by these officers and submitted to the Commission.

As part of the Comprehensive Crime Control Act of 1984 (Public Law 98-473), the United States Sentencing Commission was established to develop and issue comprehensive guidelines for Federal cases. As a result of this, the current Federal parole system is scheduled to be phased out. Because the Sentencing Commission was not appointed until October 1985, an extension for the sentencing guidelines was enacted. These guidelines went into effect on November 1, 1987 resulting in a decrease in the Parole Commission's workload. The abolishment of the Commission is expected to occur by the end of 1992.

U.S. Parole Commission

Salaries and expenses

Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and Expenses

For necessary expenses for the United States Parole Commission, as authorized by law, [$10,500,000]‸. $9,869,000

(18 U.S.C. 4202-04, 4212, 4255, 5005, 5041; Department of Justice Appropriations Act, 1990, additional authorized legislation to be proposed.)

Explanation of changes

No substantive changes proposed.

---

[1] The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

(Dollars in thousands)

Activity	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Parole..........................	136	131	$10,500	136	131	$10,584	103	98	$9,869	-33	-33	-$715

Long-Range Goal: To make decisions relative to grants and denials of parole, conditions of parole, supervision of parolees and mandatory releasees, recommital in event of violation of conditions of supervision, and termination of supervision as outlined in the Parole Commission and Reorganization Act of 1976.

Major Objectives:
To establish, with the aid of statistical data, a national paroling policy and promote the consistent exercise of discretion in the paroling process, including the development and application of specific guidelines for decision-making so that the duration of terms of imprisonment throughout the Federal system will be equitable for those prisoners over whom the Commission has jurisdiction.

To make fair decisions regarding the grant or denial of parole which are fair to the prisoners and which adequately protect the public welfare, within specific time requirements for decisions established by law.

To provide forceful supervision for released parolees and mandatory releasees to enhance community protection and the rehabilitation of such released offenders.

To promptly modify or revoke the parole or mandatory release of any individual who violates the conditions of release.

Base Program Description: The Parole Commission and Reorganization Act provides for nine Commissioners, who are appointed by the President with the advice and consent of the Senate. One Commissioner is designated as Chairman. Each of the five Regional Offices of the Commission is under the supervision of a Commissioner and three Commissioners comprise the National Appeals Board in Chevy Chase, Maryland. Hearing Examiners working out of the Regional Offices, interview prisoners eligible for parole and make recommendations to the Commissioners. These hearings are conducted by examiner panels at all Federal prisons on a bi-monthly schedule. Examiners also conduct revocation hearings at State and local facilities, as required. Summaries of the hearings are recorded, then transcribed and sent to the Regional Office for the initial review and decision of a Commissioner.

An appeal system is in effect to permit review of parole decisions and must be completed at the National Appeals Board within 60 days.

Professional level personnel in the area offices coordinate the work with the Federal Prison System Institutions and the Probation Officers attached to each United States District Court.

The Commission's Case Operations and Program Development section gives functional supervision to Regional Hearing Examiners and Analysts. It provides quality control of case decisions, coordinates the training program, develops procedures to implement Commission policy including a comprehensive manual.

The General Counsel's Office advises the Commissioners and staff on interpretation of the agency's enabling statutes and policy, drafts implementing rules and regulations and assists U.S. Attorneys' Offices in defending the Commission against lawsuits brought by prisoners and parolees. The office is also a resource for staff on problems involving the processing of requests for information under the Privacy Act of 1974, as amended in 1975. Responds directly to requests submitted under the Freedom of Information Act. Finally, has responsibility for analyzing applications for exemption from prohibitions imposed by Federal law against persons who have been convicted of certain crimes from occupying labor union, management or pension fund positions, and ensuring that the hearings under the Administrative Procedures Act are properly conducted.

The Commission's legal staff also participates with the State Department and other units of the Department of Justice on various phases of the development of treaties and implementing legislation for the exchange of prisoners with other countries.

Accomplishments and Workload:

1. A total 38,069 individual decisions regarding the grant, denial or reduction of parole, as required by statute, were made during 1989.
2. A total 5,211 National Appeals Board considerations were made during 1989 as required by statute.
3. Supervision was provided to 18,000 parolees, special parolees and mandatory releasees from October 1, 1988 to September 30, 1989.
4. Development of methods for increasing hearing panel reliability in guideline assessments.
5. Refinement of the offense severity and salient factor score scales used by the Commission.
6. Refinement of the Parole Decision Recording and Monitoring System which automates many manual, paper-oriented processes and to provide current parole statistics of codefendants.
7. Conducting an evaluation of parole supervision practices.

The workload of the Parole Commission is presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Hearings:				
a. Initial	12,860	8,409	5,419	3,731

Total	5,534	5,211	4,930	3,575

---

*Includes Pre-Hearing Reviews for Initial Hearings, Pre-Release Reviews and Revocation Hearings.

**Includes Dispositional Hearings.

Program Changes:	1991 Base Perm. Pos.	1991 Base WY	1991 Base Amount	1991 Estimate Perm. Pos.	1991 Estimate WY	1991 Estimate Amount	Increase/Decrease Perm. Pos.	Increase/Decrease WY	Increase/Decrease Amount
Parole	136	131	$10,584	103	98	$9,869	-33	-33	-$715

A net decrease of $715,000, 33 positions and 33 workyears is requested due to the anticipated decrease in the number of hearings as a direct result of the enactment of the Sentencing Commission Guidelines which took effect on November 1, 1987. This decrease in personnel and related costs is a continuation of the phase-down of the Commission, which is expected to be completed by the end of 1992.

The net decrease consists of the following net changes:

Reimbursement with Bureau of Prisons. The increase of $385,000 would provide for nine reimbursable Examiner/Analyst positions. As the Commission continues to phase-down in FY 1991, the anticipated increased use of Federal Bureau of Prisons personnel would be required to offset the impact of a major Reduction-In-Force. Of significance to the Commission is its ability to maintain a stabilized workforce in proportion to the change in workload so that all Congressionally mandated regulations and deadlines can be met without any adverse effect. One area of special concern is the potential for a high lapse rate in our Examiner/Analyst corps. The Commission does not wish to be placed in a reactive posture of attempting to bring on new employees as we try to meet our workload demands. For this reason a proactive posture of increasing the number of reimbursable positions with the Federal Bureau of Prisons is seen as necessary to avoid the deleterious effect of losing staff at a faster rate than the workload decreases. Additionally, while the number of hearings are decreasing, the number of Federal Institutions our staff will be traveling to will increase from 58 currently on-line to as many as 66 to 72 in 1991. This increase in the number of institutions offsets the workload decrease, to a degree, by causing our Examiners to continue spending up to three weeks a month in travel status. The increased complexity of the cases has also placed increased demands on high quality, time-consuming reviews that must be conducted in the Regional Offices.

Contract Typists. The Commission has for several years used Contract Typists to supplement clerical support. Contract Typists are hired to perform clerical duties in lieu of full-time employees who would be entitled to severance pay during a Reduction-In-Force. The increase of $100,000 will allow the Commission to hire Contract Typists during the phase-down.

Decreased Workload. A decrease of $1,200,000, 33 positions and 33 workyears is requested due to the anticipated decrease in the number of hearings as a direct result of the enactment of the Sentencing Commission Guidelines which went into effect on November 1, 1987. This personnel decrease is a continuation of the Parole Commission's phase-down, which is expected to be completed by the end of 1992.

OPENING REMARKS

Mr. **EARLY**. The committee is pleased to welcome again the Chairman of the Parole Commission, Mr. Benjamin F. Baer.

Mr. Baer, you may proceed with your statement.

Mr. **BAER**. Thank you, Mr. Chairman. I would like to introduce my new budget officer, Carol Clark, and Linda Marble, who are with me today.

[The biography of Ms. Clark follows:]

CAROL ANNE CLARK

Carol Anne Clark is the Budget Officer for the U.S. Parole Commission. She has worked for the U.S. Department of Justice since 1976 with the exception of 2 years, 1986 and 1987, when she worked for the Federal Deposit Insurance Corporation and the National Aeronautics and Space Administration in Florida. In 1988, she returned to the U.S. Department of Justice in Washington as an Administrative Management Specialist. She was subsequently promoted to her present position with the U.S. Parole Commission.

Mrs. Clark was born in Chicago, Illinois on September 23, 1940, and grew up in the Chicago area. She graduated from Jones Commercial High School. After graduation Mrs. Clark worked for Continental Illinois National Bank & Trust Company, Wade Advertising Company, and TWA as a flight attendant.

Carol Anne Clark was married to the late James H. Clark. She has 3 daughters. Mrs. Clark was active in the PTA, Girl Scouts and various church and school activities. She is a member of Trinity Lutheran Church in Titusville, Florida.

OPENING STATEMENT

Mr. **BAER**. Mr. Chairman and Members of the Committee, I am pleased to have the opportunity to appear before you in support of the 1991 budget request for the United States Parole Commission. The 1991 budget request is for $9,869,000, 103 permanent positions and 98 workyears. This represents a net decrease of $631,000, 33 positions and 33 workyears from the 1990 appropriation enacted.

Increases are requested to continue utilization of reimbursable agreements with the Bureau of Prisons for analyst positions and to employ contract typists. Both of these will allow the Commission to reduce its full-time employment and avoid costly reductions-in-force while still meeting its workload needs.

The decrease in funding is necessitated as a direct result of the enactment of the Comprehensive Crime Control Act of 1984, and the implementation of the Sentencing Commission guidelines which took effect on November 1, 1987.

The Parole Commission's workload has already begun to diminish and will continue to do so. Therefore, a reduction in funding is being sought as a direct result of the decrease in workload.

This concludes my statement, Mr. Chairman. I appreciate this opportunity to present the Parole Commission's budget request to the Subcommittee.

PHASEOUT OF PAROLE COMMISSION

Mr. **EARLY**. Mr. Baer, this Member thinks that the Parole Commission has also done an outstanding job over the years. Although I am disappointed that the Parole Commission is being phased out, I am surprised to see the morale as good as it appears to be at the Parole Commission. I think that speaks well of you as the boss of the agency, and speaks well of all of the people involved who are trying to make a contribution to the justice system and to this country.

You have listened to the testimony from Mr. Quinlan, who has suggested that the Bureau might have 95,000 prisoners by 1995. There is no question in this Member's mind that we need alternatives, and I am not soft on crime. Did you request any new programs that were cut by OMB?

Mr. **BAER**. Yes, sir, Mr. Chairman. There were two very small programs. We had asked to fund a program which we referred to as the Hyattsville project, in which the Commission put a couple of——

Mr. **EARLY**. Is that the program, Mr. Baer, that involves taking the most serious offenders that might be going back out on the street, not because of parole, but because their time is up, and supervising them?

Mr. **BAER**. Yes, sir. We call it that because it is located in the Hyattsville probation office of the district of Maryland. All of the parolees or releasees—most of them are mandatory releasees—are parolees who we know are very poor risks. Most of them have very severe, long, prior records. Almost all of them are drug users. Anybody who knows anything about risk will tell you that these are very poor risks and very likely to recidivate.

So what we did, from our meager resources, was put a couple of positions there so there would be a probation officer and an assistant responsible for approximately 30 cases instead of the normal caseload of about 60 or 70. I thought we could demonstrate that by putting a few more resources in supervising these people when they come out—being on top of them, helping them where it is necessary, and imposing strict surveillance—we could reduce the number going back to prison.

This is a very small pilot, but I think we have demonstrated that it is cost-effective and provides better public protection.

Mr. **EARLY**. I would think that the program isn't going to produce perfect results, because you are singling out the most difficult threats, aren't you?

Mr. **BAER**. Yes, sir.

Mr. **EARLY**. For the record, provide what would be needed to implement that program totally.

Mr. **BAER**. When you say totally——

Mr. **EARLY**. What was suggested with the three positions that were eliminated.

Mr. **BAER**. I am sorry. I misunderstood you. I thought you meant you perhaps wanted us to duplicate it across the country, which I think ought to be done down the road.

[Additional information follows:]

HYATTSVILLE MONITORING PROJECT

Three positions would be needed to fund the Intensive Supervision Project in Hyattsville, Maryland. The positions needed are two analysts at the GS-13 and GS-12 levels and a clerk-typist at the GS-6 level at a cost of $111,000. In addition costs of $6,000 are needed for mileage, a car phone, supplies and incidentals for a total of $117,000 to fund the program in its entirey.

MONITORING OF PAROLEES

Mr. EARLY. I can think of a specific case, Mr. Baer, that was in the paper, where a prisoner who we released amputated the arms or the limbs of an individual, a child.

Mr. BAER. That was a California case.

Mr. EARLY. The article read as if that person had been paroled, but as I understand it, that person had completed his sentence.

Mr. BAER. Yes, sir. I understand California no longer has an indeterminate sentence system. In my opinion, that is a mistake. That person was not paroled, that means that he was not released through a discretionary decision made by a parole board. His time was served and he had to get out, period.

Mr. EARLY. But would that type person fall under continuous monitoring?

Mr. BAER. That type of person, like many other people that leave both State and Federal prisons, should be monitored after they leave prison. My concern is that people who want to be tough on crime say, "Send them to prison and forget about them." The point is that every single person sent to prison is going to be coming out, if not tomorrow, then next week or next year.

Mr. EARLY. I think that is a perfect example of that, as far as——

Mr. BAER. Yes, sir.

Mr. EARLY. I think that the American people often get the wrong impression of our justice system, that the person was paroled or whatever. A program like the Hyattsville program, which would monitor that type of individual, should be implemented.

Mr. BAER. I might say, Mr. Chairman, that a staff person of OMB went out and looked at that program. At our OMB hearing, they said that it was a good program, but it ought to be budgeted in the budget component of the judiciary. As you know, the probation officers are part of the judiciary even though they are our agents in reference to parolees. .

Mr. EARLY. What would be the benefits of that program to the community, Mr. Baer?

Mr. BAER. The benefits to the community are that these people that are going to be out there, former prisoners, are going to be watched much more closely. If they have needs, those needs should be met in the community. For example, one of the prisoners had severe psychiatric problems. Our staff spent numerous hours contacting various local and State agencies and finally got him into a Maryland mental health facility. Otherwise, he would have been back in the Bureau of Prisons facility at Springfield or Rochester at a great cost to the Federal Government.

Mr. EARLY. So would it enhance public protection in your professional opinion, Mr. Baer? You have been in the business a long time, would it be cost-effective?

Mr. BAER. Yes, sir, Mr. Chairman, in my opinion it would be cost-effective and provide better public protection.

WORKLOAD

Mr. EARLY. What has happened with your workload in view of the abolition——

Mr. BAER. As we projected, the hearings are going down. The initial hearings are about 40 percent of what they were two years ago. The revocation hearings have continued to remain about the same at this point, which is what we expected. The rescission hearings are about the same. The total number of hearings, though, are going down slightly.

Mr. EARLY. On revocation hearings, Mr. Baer, I understand that revocation hearings are now held in the prison; is that correct?

Mr. BAER. At this point in time under the present system, approximately 85 percent of revocation hearings are held at a Bureau of Prisons facility. That is because either, one, the parolee has been convicted of another offense, even though it may be minor; or two, at the preliminary interview, which is conductd very soon after the warrant is executed by the marshal, he admits to technical charges. For example, he admits to the use of drugs. In these circumstances, our Commissioner can make a finding of probable cause, and he is returned to prison for the revocation hearing.

NEW SENTENCING GUIDELINES

Mr. EARLY. I understand that with the law for revocation hearings, prisoners will have to be transported from the institutions to the courts. We had marshals here testifying about how overworked they are—they weren't complaining, they never complain. The Marshals Office would have one marshal for 10 inmates in D.C. I don't understand how one thinks that that can work.

Mr. BAER. I think, Mr. Chairman, you are referring to the supervised releasees who are committed under the new sentencing guidelines. The law puts those people under the jurisdiction of the judiciary, rather than an executive branch agency. In Massachusetts, in New Jersey, in all of the 50 States, when a prisoner leaves a prison and he is being supervised, he is under the jurisdiction of an executive branch agency. There is no place in the country where he is under court jurisdiction once he leaves prison.

Mr. EARLY. So what happened in Massachusetts. For revocation hearings, prisoners are going to have to be taken from Danbury, Connecticut to Boston, Massachusetts.

Mr. BAER. On a supervised release——

Mr. EARLY. What is the difference between supervised release and parole?

Mr. BAER. When Congress passed the 1982 act, it abolished parole.

Mr. EARLY. But we didn't do anything different with the individual.

Mr. BAER. But then the Sentencing Commission provided for a determinant sentence with a period of what is called supervised release, because changes in the law took away the word "parole," thus there is no agency making a discretionary release decision.

Mr. EARLY. How long have you been in the business, Mr. Baer?

Mr. BAER. A long time.

Mr. EARLY. Well, you talk more like a bureaucrat as far as—and I am not saying it critically—you don't justify what OMB does, although you blame the Congress.

U.S. Parole Commission
Salaries and expenses
Justification of Adjustment to Base
(Dollars in thousands)

Mandatory increases:	Amount
1. One additional compensable day.. The annual salary rate for Federal employees is based on 260 paid days. FY 1991 has one more compensable day (261) than 1990 (260). Appropriate personnel benefits are included in this figure.	$25
2. 1990 Full-year pay increase impact on 1991... This request provides for the full-year pay increase of 3.6 percent as contained in the general provisions of the U.S. Treasury, Postal Services and General Government Appropriations Bill, 1990, for civilian and military personnel to be effective in January of 1990. The Department will be required to absorb the total pay raise in 1990. The requested increase of $194,000 is the amount required for full-year funding in 1991. NOTE: The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.	194
3. 1991 pay increase.. For the first time, the Administration is proposing to include the costs of the pay increase effective in the budget year with the initial budget request. This request provides for 50 percent of the proposed 3.5 percent pay increase effective in January of 1991. The Department will be required to absorb half of the costs of this pay raise. The amount requested, $54,000, is the cost of the pay increase for approximately three-quarters of the year assuming a 50 percent absorption.	54
4. Health Benefits.. The Federal Employees Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. The requested increase of $20,000 provides funds for actual increased costs from pay period 1 to pay period 2, projected for a full year.	20

5. Federal Employee's Compensation Act (FECA) - Unemployment Compensation.................................. $2

This increase reflects the billing provided by the Department of Labor for the actual costs in 1989 of employees' unemployment compensation. The 1991 amount will be $2,000 over the 1990 base.

6. GPO printing costs.. 3

The Government Printing Office (GPO) is currently projecting a seven percent increase over the 1990 printing costs of $41,000. An additional $3,000 will be required in 1991.

7. Employee data and payroll services.. 2

Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems, maintenance and payroll accounting, are based on the number of employee records maintained. The rate of $177.58 per record in 1989 will be raised to $188.23 per record for 1991. The change is based on anticipated uncontrollable cost increases of 6 percent for the operation of the Justice Employee Data Service. An increase of $2,000 will be required in 1991.

Total uncontrollable increases... 300

Decreases (Automatic non-policy):

1. Federal Telecommunications System (FTS)... -85

In 1991, the General Services Administration (GSA) is to have the FTS 2000 system fully implemented. At present GSA projections indicate costs for current FTS minute usage charges will decrease from 34 cents per minute to 18 cents per minute. The requested reduction of $85,000 from a 1990 base of $258,000, reflects this decrease.

2. GSA Rent.. -131

OMB reduced the GSA rent needs for 1991 because of the Parole Commission's phase-down and the GSA requirement that Government offices reduce the average square feet per person.

Total decreases.. -216

Total adjustments to base.. 84

Mr. **Baer**. I am blaming—if you ask that—I mean Congress passed that.

Mr. **Early**. I am going to yield to Mr. Dwyer.

Mr. **Dwyer**. No questions.

Mr. **Early**. Mr. Baer, the Commission, the Bureau of Prisons, the Marshals Service, the Probation Office—our justice system depends on how those four agencies work together.

In 1990 your staffing was lowered from 161 permanent positions to 136. Does this reduction affect your ability to carry out your mandated responsibilities?

Mr. **Baer**. We are able to carry out our responsibility—we are doing it during this current fiscal year with those resources.

Mr. **Early**. Do you think you will be able to carry out your mandate with the staffing level proposed for 1991?

Mr. **Baer**. In 1991, we are taking a big drop. We will do our best to carry out our statutory responsibilities.

Mr. **Early**. That is a very diplomatic answer while not answering, I guess. We will submit the other questions for the record.

Mr. **Baer**. Thank you, Mr. Chairman.

Mr. **Early**. Thank you very much. With that, we will conclude the hearing and recess until 10:00 a.m. tomorrow.

[The following questions were submitted to be answered for the record:]

QUESTIONS SUBMITTED BY CONGRESSMAN EARLY

U.S. Parole Commission

QUESTION: You propose an increase of $485,000 to reimburse 9 Bureau of Prisons examiner/analyst positions. Do you currently have any such reimbursable positions, and if so how many?

ANSWER: The Parole Commission currently supports, on a reimbursable basis with the Bureau of Prisons, 9 analyst and 1 legal technician positions.

QUESTION: I believe you have thoroughly examined the electronic monitoring program. How effective is it and do you believe it would be a mistake to expand it?

ANSWER: I believe home confinement with intensive supervision, using the tool of electronic monitoring, is a viable community alternative for non-dangerous offenders who would otherwise be in halfway houses. There are many prisoners who do not need the services of a halfway house. Electronic monitoring participants must abide by a curfew monitored in part through electronic surveillance. Participants are restricted to their homes, except for the purpose of employment or other approved activities. Such activities may include participation in drug counseling or church services, with prior approval given by the supervising officer. The pilot projects thus far have shown that offenders can be placed in a home confinement program with an acceptable degree of accountability. We also know that it is very labor intensive, but it is cost-effective relative to the expense of placing an offender in a halfway house. I believe it would be a mistake not to expand the program.

QUESTION: The Bureau of Prisons is proposing in their budget request a very modest request of $1 million for electronic monitoring and a very large increase of $25 million to handle the projected cost of additional prisoners in their facilities. Considering the tight budget squeeze we are in, and the fact that electronic monitoring is so much cheaper, how would you react to a proposal to offset the projected increase in prisoner population with a like increase in prisoners shifted to electronic monitoring?

ANSWER: The Bureau of Prisons is already at 168 percent of capacity. I believe the $25 million increase requested by the Bureau of Prisons is to handle the current overcrowded population level and the projected continued prison population increase. The $1 million request for electronic monitoring is to test the program further in ten pilot districts. Based on the findings in the pilot districts perhaps more funding could be provided to it, offsetting the cost of prison construction. Electronic monitoring is a viable alternative to prison for a significant number of prisoners for all or part of their confinement.

WEDNESDAY, MARCH 21, 1990.

1991 BUDGET REQUEST

Mr. SMITH. Continuing with our review of the Department of Justice, we will now hear testimony from the Immigration and Naturalization Service, which requests $884,349,000 in fiscal year 1991. In addition, the INS will have $110 million available to it from the Immigration User Fee Account, $90 million from Examinations Fees, and $37.6 million from Legalization Fees for a total of $1,121,917,000. We will insert in the record at this point the INS fiscal year 1991 budget justifications.

Immigration and Naturalization Service

Salaries and Expenses

Summary Statement

Fiscal Year 1991

The Immigration and Naturalization Service (INS) is requesting a total of $884,349,000, 12,522 positions and 12,260 workyears for 1991. This represents an increase of $42,052,000 over the 1990 enacted level of $842,297,000. The major program thrusts included in the 1991 request are described below.

Basic Enforcement

The 1991 budget request includes a program increase of 200 positions, 75 workyears and $16,327,000 to enhance the operations of the Border Patrol, particularly in drug interdiction activities. The Patrol has a unique role and important presence in the Nation's overall anti-drug effort. These resources will allow the personnel committed to interdiction operations to be expanded. Resources are also included to increase the number of drug-tracking canine teams, to acquire additional electronic equipment for detection of illegal border crossings, and to purchase additional aircraft. In several locations passive physical security devices will be installed to prevent alien and drug smugglers from driving across the border and circumventing established checkpoints.

The budget request also includes $12,688,000 for construction projects which directly support the Border Patrol's mission. Funding is included for the first phase of construction of a new traffic checkpoint at San Clemente, California, replacing the existing inadequate checkpoint on Interstate Highway 5. The budget includes resources for two traffic checkpoints in the vicinity of Marfa, Texas. Both proposed facilities will be strategically located on routes leading from the Big Bend National Park area that have been favored by drug and alien smugglers. The request includes funding to expand the Border Patrol stations at Brownfield, California, and Ysleta, Texas. In both of these locations existing facilities are overcrowded due to the assignment of additional Patrol Agents.

INS enforcement operations rely heavily on quick access to automated data bases. The Service frequently uses data maintained in the National Crime Information Center (NCIC) through the communications linkages of the National Law Enforcement Telecommunications System (NLETS). The budget request includes $75,000 for the expansion of NCIC/NLETS to additional INS field offices.

Overall enforcement operations also depend on an efficient, safe and reliable vehicle fleet. The need for replacement vehicles has become a matter of considerable concern to INS. The lack of replacements will increase maintenance costs and reduce operational efficiency. The 1991 request includes $8,437,000 replacement vehicles to begin improving the condition and reliability of the fleet.

While the land border Inspections program has experienced limited growth since the mid-1980's, border traffic growth has been proportionally much greater. INS has kept pace with this workload growth by instituting measures to improve the productivity of existing personnel through training and the development of more efficient inspectional techniques. Although the use of temporary full-time personnel has alleviated some problems stemming from the shortage of permanent personnel, this expedient is no longer an acceptable alternative to fully trained, full-time permanent personnel. INS was criticized in a Department of Justice audit for becoming reliant on temporary inspectors. The 1991 request includes 104 positions and $1,306,000 to convert 104 temporary inspectors to permanent status.

Detention Facilities -- Expansion of Capacity

INS has become increasingly involved in the detention and deportation of criminal aliens as a result of provisions in the Immigration Reform and Control Act of 1986 (IRCA) and the Anti-Drug Abuse Acts of 1986 and 1988. These new laws have placed greater stress on detention facilities and personnel and led to overcrowding in several Service Processing Centers (SPCs). Problems have been most evident at the Krome SPC, located in Miami, Florida.

The expansion of the capacity of the Krome SPC is essential for a number of reasons. Due to Congressional restrictions, the Service cannot detain criminal aliens at Krome until the facility's security rating is adequate to allow potentially violent felons to be held there awaiting deportation. Criminal aliens have been transported from Florida to other locations, either INS owned or contract detention, at considerable cost to the Government. The 1991 budget request includes $4,500,000 for the construction of a 300 bed dormitory at the Krome SPC. This will be a level 3 secure structure (under Bureau of Prisons classification) with lock-down provisions to meet standards for the detention of criminal aliens.

Anti-Discrimination Initiative

IRCA defines a role for INS in the area of anti-discrimination through the employer sanctions program. A new enforcement program has been implemented in conjunction with a significant informational campaign designed to encourage voluntary compliance with the law by educating the Nations's employers and employees of their rights and responsibilities under IRCA. Results to date indicate that the informational and educational efforts are effective and that compliance is improving. Many violations of sanctions provisions are minor and easily corrected through voluntary efforts by employers.

However, evaluations of the implementation of the sanctions program indicate that many employers do not yet have a complete understanding of the anti-discrimination requirements of the law and related guidelines. In addition, many workers are not familiar with the anti-discrimination provisions of the statutes. In order to remedy these deficiencies and increase compliance with all aspects of the law, the 1991 request includes $884,000 for materials to be used in an anti-discrimination public information campaign directed at both employers and workers. Public announcements and bilingual printed materials will be developed and distributed as a part of this National effort.

Resources are also included for the Telephone Verification Project which will provide employers with a simple, effective means of determining a prospective employee's work eligibility in cases where there may be some uncertainty about an individual's work authorization documents. The availability of this information will encourage compliance with the employer sanctions statutory requirements. The budget includes $92,000 for this purpose.

Audit-Related Activities

The audit of INS, conducted by the Department of Justice Audit Staff and issued in February 1989, noted that the existing Financial Accounting and Control System (FACS) has numerous deficiencies and was an outmoded and labor intensive accounting system. To remedy this deficiency, the 1991 budget includes $400,000 to begin the conversion of FACS to the Department of Justice Financial Management Information System.

Program Decreases

Program decreases of 60 positions, 417 workyears and $22,127,000 are requested in order for INS to fund its mandatory increases of $ 41,095,000 and 132 FTE workyears and remain within the targeted budget levels established by the Administration. Also included in this request are A-76 management and productivity savings of 110 positions, 110 workyears and $643,000 from the Information and Records Management program, and a reduction of $13,133,000 in data and communications systems costs which will be covered by the Examinations Fee Account. The A-76 savings will be possible by contracting out mail and file type activities to private industry. Additional reductions of $7,849,000 are requested to absorb the costs to implement P.L. 101-173, the act amending the method by which premium pay is determined for irregular unscheduled overtime duty.

Immigration and Naturalization Service
Salaries and expenses
Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses

For expenses, not otherwise provided for, necessary for the administration and enforcement of the laws relating to immigration, naturalization, and alien registration, including not to exceed $50,000 to meet unforeseen emergencies of a confidential character, to be expended under the direction of the Attorney General and accounted for solely on his certificate; purchase for police-type use (not to exceed [620] for replacement only) without regard to the general purchase price limitation for the current fiscal year, and hire of passenger motor vehicles; acquisition, lease, maintenance and operation of aircraft; and research related to immigration enforcement; [$828,300,000], of which not to exceed $400,000 for research and [$7,188,000] for construction shall remain available until expended: Provided, That none of the funds available to the Immigration and Naturalization Service shall be available for administrative expenses to pay any employee overtime pay in an amount in excess of $25,000: Provided further, That uniforms may be purchased without regard to the general purchase price limitation for the current fiscal year[: Provided further, That for fiscal year 1990 and hereafter capital assets acquired by the Immigration Legalization account may be made available for the general use of the Immigration and Naturalization Service after they are no longer needed for immigration legalization purposes: Provided further, That title 8, United States Code, section 1356(n) is amended by deleting "in excess of $50,000,000 after "Immigration Examinations Fee Account," and by deleting "At least annually, deposits in the amount of $50,000,000 shall be transmitted from the 'Immigration Examinations Fee Account' to the General Fund of the Treasury of the United States": Provided further, That not to exceed $5,000 shall be available for official reception and representation expenses]. (94 Stat. 96-98; 22 U.S.C. 1621-1645; 50 U.S.C. App. 2001-2017; Department of Justice Appropriations Act, 1990; additional authorizing legislation to be proposed.)

504

$884,349,000

17,188,000

[For carrying out efforts at National Drug Control and the President's initiative to combat violent crime, $16,891,000, for additional Border Patrol agents to improve drug interdiction efforts and for additional investigators and other staff needed to increase the apprehension and detention of criminal aliens.] (Department of Transportation and Related Agencies Appropriations Act, 1990.)

Explanation of changes

1. The first change reducing the limitation on the purchase of passenger vehicles will nevertheless, accommodate the Service's replacement needs.

2. The second change will allow the Service to use an additional $10,000,000 appropriated for construction on a no-year basis.

3. The third change deletes language enacted on a permanent basis in 1990 which will no longer be required.

4. The fourth change deletes language enacted on a one-time basis in the Department of Transportation's annual appropriations act.

Congressional Appropriation Actions: P.L. 101-162 and P.L. 101-164 reduced the 1990 President's Budget Request by -1,780 positions, -1,175 workyears, and -$51,768,000. Other adjustments were necessary to support the enacted 1990 appropriation.

1990 Sequestration: Decreases are required by the Omnibus Budget Reconciliation Act of 1989 to meet budget levels established by Sequestration in 1990.

Reprogrammings: The reprogramming of positions, workyears, and budget authority reflects the effect of a permanent reprogramming in 1989.

Long-Range Goal: Ensure that the entry of applicants for admission into the United States is controlled in a manner that is consistent with the National interest, facilitate the entry of qualified applicants, and identify and deny admission to those not qualified; provide support to the Adjudications program by approving or denying applications and petitions for benefits that are sent to ports of entry for remote adjudication during inspector standby time; and issue Border Crossing Cards at ports of entry.

Major Objectives:

Inspect (in cooperation with other Federal agencies) all applicants for admission into the United States.

Facilitate the entry of qualified persons through ports of entry.

Prevent the entry of inadmissible applicants through ports of entry.

Detect fraudulent documents including those representing false claims to U.S. citizenship or permanent residence status and seize conveyances used for illegal entry.

Adjudicate applications and petitions at ports of entry in order to efficiently utilize inspector standby time.

Base Program Description: The function of this program is to enforce and administer the immigration and nationality laws with respect to the inspection of all persons seeking admission into the United States. Applicants for admission into the United States are inspected at ports of entry to determine if they qualify for admission and if so, under what conditions. This process is coordinated with the Department of State, U.S. Customs Service, Department of Agriculture and local port authorities. Determination of inadmissibility is based on examination of the applicant, related documents or prior information. Local and National lookout systems containing information relating to excludable aliens are available for use at each port of entry. Inadmissable aliens are denied entry into the United States. Any criminal activity discovered in the inspection process is referred for appropriate investigation. Applications and petitions for a full range of benefits under the immigration laws are adjudicated during periods of standby time at most ports of entry during non--peak workload hours. Applications for Border Crossings Cards are presented directly to ports located on the United States/Mexican border where they are adjudicated and issued by inspection personnel.

Accomplishments and Workload: Accomplishments of the Inspections program are presented in the following table:

			Estimate	
Item	1988	1989	1990	1991
Persons Inspected-Appropriated...	341,078,321	377,537,247	414,000,000	414,000,000

Seizures of Illegal Drugs.........	2,671	2,329	2,450	2,450

Explanation

During 1989, the Inspections program experienced very high workload levels. Total inspections were 428,700,451, of which approximately 134,000,000 involved U.S. citizens. A total of 843,449 inadmissible aliens were intercepted, representing a rate of 2.0 detections per 1,000 inspections, continuing the high level of interceptions noted in recent years. Improvements in methodology and techniques of detecting fraudulent attempts at entry into the United States are ongoing. Significant rises were noted in measures pertaining to detecting inadmissible alien applicants. Operational innovations leading to improvements in both border enforcement and facilitation of international travel continued to receive priority during the past year.

With the passage of P.L. 99-500, the Department's 1987 Appropriation Act, an Inspections User Fee Account was established. This legislation, which provides for the collection of a $5 user fee from each U.S. citizen and alien arriving in the United States from foreign locations (other than Mexico, Canada or adjacent islands) by commercial air or sea transportation, has allowed the Inspections program to provide more effective services at all airports and seaports Nationwide. On a continuing basis, INS is now able to supplement its appropriated resources by charging the Immigration User Fee Account for the cost of existing and new officers at certain locations, including inspectional overtime, costs associated with improved fraud detection, and other related activities.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Inspections....................................	1,057	1,523	$82,582	1,161	1,473	$80,607	104	-50	-$1,975

The extensive use of temporary Immigration Inspectors is a problem in the operation at the land border ports of entry. Because temporary Immigration Inspectors receive only on-the-job training and no formal training, they never achieve the performance and productivity levels of the permanent staff. INS was criticized in a recent DOJ audit for heavy reliance on temporary employees. The audit report specifically cited the lack of formal training of these employees. To address these concerns, the 104 officers now employed on a temporary basis at land border locations should be replaced with permanent officers. In the Southern region nine ports of entry with 47 positions would be affected by this change. In the Western region six ports of entry with 55 positions would be affected, while the Eastern region has two such positions at only one port.

The land border inspections function has received only limited additional resources since 1985. Increased flows have been managed primarily by productivity improvements and the more efficient allocation of resources. The replacement of 104 temporary inspectors with permanent personnel will have a positive impact on productivity at all affected ports-of-entry. This change requires 104 additional permanent positions, and $1,306,000. The additional funding is for salary, overtime and benefits costs. No additional workyears are required to accomplish this change since these workyears are already in the base.

Program decreases of -50 workyears and -$3,281,000 are necessary for the Immigration and Naturalization Service to meet budget targets established by the Administration and more closely align authorized positions with funded workyears.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Border Patrol...........	4,852	4,561	$262,647	4,852	4,561	$276,488	5,052	4,636	$290,504	200	75	$14,016

Long Range Goal: Ensure that the entry of persons into the United States between ports of entry is controlled in a manner that is consistent with the National interest as established and provided by Congress by preventing entry of persons who have not been inspected and by detecting and apprehending illegal aliens within the United States.

Major Objectives:

Deter uncontrolled entry into the interior of the United States by the rapid detection, interception, and apprehension of illegal entrants at or near the border.

Between ports of entry, interdict drug smugglers, potential terrorists and criminals or deter them from attempting illegal entry.

Cause persons seeking admission into the United States to present themselves at designated ports for inspection.

The requested resource increases will: (1) augment the Patrol's enforcement effort on the Nation's land borders by increasing the hours of border linewatch and traffic checkpoint coverage, and (2) enhance the productivity of operations through the use of electronic surveillance and detection equipment to extend the area of coverage by agents on the line.

Base Program Description: The function of this program is to deter or prevent illegal entry or locate and apprehend aliens and other illegal entrants at or near the border. The Border Patrol has primary responsibility for drug interdiction between the ports of entry on the southern land border. In addition, the Patrol conducts numerous interagency drug task force operations with other Federal, State and local law enforcement agencies through its participation in Operation Alliance along the southern border. To further assist the Border Patrol in this endeavor, all Border Patrol agents receive Drug Enforcement Administration Title 21 cross-designation authority in their basic training in Glynco, Georgia. Border Patrol officers engaged in surveillance activities to prevent entry or apprehend those who have illegally crossed the borders are supported by computer-monitored electronic ground sensors which alert them to illegal entries. Additional support is provided by observation aircraft, low light level television systems and infrared viewing devices. Patrol officers use a wide assortment of vehicles adapted to local terrain and operational requirements, including motorcycles, all-terrain vehicles, boats and horses. In addition, linewatch traffic check operations are conducted along major routes

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Border Patrol.................	4,852	4,561	$276,488	5,052	4,636	$290,504	200	75	$14,016

Increases of 200 positions, 75 workyears and $6,727,000 are requested to enhance the commitment of personnel to the Patrol's successful drug interdiction efforts, a critical element in the Nation's anti-drug strategy.

The increase in funded workyears will be used to fill Border Patrol agent positions on the southwest border. The additional agents will provide for an enhanced border control program by increasing the hours of border linewatch and traffic checkpoint coverage. One of the most productive areas in the interception of illegal drugs for the Patrol is through the use of checkpoint operations. Checkpoint activities provide the agents with the ability to seize drugs being smuggled along the highways, as well as, arrest illegal alien smugglers away from the border. Drug smugglers that are detected at the checkpoints have either successfully escaped detection at the ports of entry or the loads have been "muled" across the border and then loaded into vehicles for transport into the interior of the country. The increase in agents, combined with the use of canines trained in sniffing out concealed drugs or people, will expand the effectiveness of traffic checkpoints. In addition to the traffic checks, the additional agents will provide for quicker responses to the numerous sensor intrusion alerts along the border, which often result in the interception of illegal aliens and narcotics smugglers. The increased number of agents will also enable the Patrol to respond to the alerts with the appropriate size of tactical force, particularly when confronting criminal aliens armed with automatic weapons, and to counter the increase in drug smuggling across the border. It is anticipated that as the Anti-Drug Act resources added to the U.S. Coast Guard and Customs Service begin to affect the smuggling operations, drug traffickers will be forced to use ground routes between the ports of entry that are the Patrol's area of responsibility.

An increase of $8,600,000 is requested for the Border Patrol to purchase low-light-level television (LLLTV) Systems, infrared night scopes, and portable ground sensors with mobile sensor receivers. The increased use of technology will enhance the productivity of Border Patrol operations and allow the Patrol to achieve higher apprehension levels.

The first line of defense for border enforcement requires the ability to detect and locate illegal entries occurring between the ports of entry. The Patrol relies increasingly on electronic surveillance and detection equipment to provide around-the-clock support for extending the area of coverage of the agents on the line. Since many of the illegal entries are attempted under the cover of darkness, additional LLLTV systems and night vision scopes will be obtained to provide constant surveillance of the border in areas of high illegal alien traffic and alien and drug smuggling activities.

The mobile sensor systems consist of portable ground sensors and mobile sensor receivers. Because these mobile sensors are portable, they can be used to target areas for a limited period of time where alien smuggling activity is suspected. Use of the mobile sensors will allow task force operations to be conducted with minimal disruption of normal sector patrol operations.

of travel to restrict access to the interior by illegal aliens. Transportation centers are placed under surveillance for the same reason. The Border Patrol also assists in the enforcement of the Employer Sanctions program, which is designed to eliminate employment sources for illegal aliens.

Accomplishments and Workload: Accomplishments of the Border Patrol program are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Deportable Aliens Apprehended	969,214	891,147	850,000	875,000
Smuggled Aliens Apprehended	50,122	50,876	48,500	50,800
Smugglers Apprehended	10,373	13,794	13,180	13,800

Border Patrol apprehensions in 1989 were down 8.1 percent nationwide from the previous year and have remained below the pre-IRCA levels for each of the last three years. However, apprehensions have been increasing along the Southern border since the latter half of 1989. In the last five months of 1989, apprehensions along the Southern border increased by 24.3 percent above the same period in 1988. Other-than-Mexican (OTM) apprehensions increased from 34,305 in 1987 to 60,162 in 1989. The majority of the OTM's are from politically unstable and economically stressed Central American countries.

As part of the Administration's Southwest Border Drug Task Force, Operation Alliance, the Border Patrol increased its drug interdiction efforts along the southwest land border. The Patrol plays a key role in drug interdiction between the land ports of entry. Cross-designation authority and drug training have enhanced the Border Patrol Agent's ability to intercept narcotics being smuggled across the border. Mobile corridor task forces have concentrated Border Patrol resources into known drug trafficking areas that have produced a significant increase in the seizures of illegal drugs along the border. In 1989 the Patrol surpassed the number of seizures for both cocaine and marijuana over 1988's record level. In 1989 the Border Patrol seized 25,748 pounds of cocaine compared to 13,006 pounds in 1988, and 503,003 pounds of marijuana up from 321,483 pounds in 1988. The total number of drug seizures was 5,441 in 1989, a 67 percent increase over the 3,257 drug seizures in 1988.

The Patrol has instituted a canine program for the detection of aliens and narcotics being smuggled into the United States. The dogs have been successful in the detection of drugs and aliens, working primarily on traffic checkpoint inspections. The canine program has also been involved in a drug education and awareness program. The Patrol actively participates in school drug education programs, with over 9,787 individual school presentations made to a total audience of over 967,230 students.

INS has placed greater emphasis on criminal alien apprehensions and enhanced narcotics interdiction activities. These efforts will continue to result in the removal of an increasing number of criminal aliens and narcotics smugglers from the United States. The Border Patrol criminal alien program facilitates the apprehension of criminal aliens within the surrounding border areas, thereby reducing the number of crimes committed against both United States citizens and aliens.

As such, they will be a critical component of the Patrol's strategy to increase its drug interdiction efforts without impeding accomplishment of its basic statutory mission.

An additional $1,000,000 is requested to increase the Patrol's canine program and air surveillance activities, and to construct physical security devices along the southern border. The canines will be used in several border enforcement roles such as detecting aliens being smuggled across the border in vehicles and train box cars. Additional aircraft operations are vital for rapid response to the numerous sensor alerts and to assist in the tracking of people and vehicles along the border. Various physical security devices are needed in several locations to prevent alien and narcotic smuggling loads from being driven across the border and onto highways leading away from the border areas.

A program change of $897,000 is requested in order to meet funding levels established by the Administration.

A decrease of -$3,208,000 is necessary to absorb the costs to implement P.L. 101-173. These reductions will be made in travel, transfers and other general expense items. This law amends 5 U.S.C. 5545 (c)(2) allowing that effective October 1, 1990, the payment of administratively uncontrollable overtime will be paid on a maximum rate of 25 percent of the rate of basic pay for a position instead of being based on the salary of GS 10 step 1.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Investigations............	1,627	1,529	$94,871	1,627	1,584	$103,471	1,650	1,551	$97,097	23	-33	-$6,374

Long Range Goal: Enforce the Immigration and Nationality Act within the interior of the United States; identify law violators and gather evidence of violations of the Immigration and Nationality Act and related criminal laws; and initiate appropriate criminal prosecution or provide information to support administrative action to effect removals from the United States.

Major Objectives:

Investigate and apprehend aliens who commit major criminal offenses, with emphasis on international criminal alien organizations involved in narcotics trafficking, subversion, terrorism, and other serious or violent criminal activities.

Identify employers who violate Section 101 of the Immigration Reform and Control Act (IRCA) of 1986 by hiring aliens not authorized to work in the United States and deter the employment of illegal aliens through education or institution of fines and prosecution of such employers.

Prosecute and deter arrangers and facilitators who conspire with and assist aliens to fraudulently obtain immigration benefits or perpetrate major fraud schemes.

Prosecute aliens who illegally apply for and collect benefits from government entitlement programs, prevent the filing of fraudulent claims, and support civil proceedings to recover benefits illegally obtained.

Provide investigative support to other Service branches by locating aliens who have absconded from deportation or exclusion proceedings, develop grounds for denial of petitions and applications, and obtain government evidence in administrative proceedings.

Base Program Description:

The function of this program is to detect criminal law violations and identify violators through covert operations and other investigative procedures, and initiate criminal prosecution or administrative action. Cases investigated involve multinational criminal alien organizations engaged in racketeering, smuggling, counterfeiting, prostitution, official corruption, weapons and narcotics trafficking, employers who knowingly hire illegal aliens, and individual aliens who entered the United States illegally to find employment. Investigative task forces concentrate the resources of a local office, or combine the resources of several offices, to identify the members and activities of a criminal organization. Administrative investigations are accomplished through traditional investigative techniques, such as interviews at places of residence and employment, and reviews of civil and business records. Investigations often require the service of subpoenas and search warrants to obtain evidence or to gain access to employment sites where illegal aliens are working.

Accomplishments and Workload: Accomplishments of the Investigations program are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Cases received	48,308	64,404	64,500	64,500
Cases completed	37,052	55,851	56,000	56,500
Cases completed resulting in adverse action against illegal aliens 1/	16,672	24,556 2/	24,600	24,900
Cases authorized for prosecution	6,211	6,063	6,100	6,200
Deportable Aliens Apprehended	37,026	60,989	61,000	61,000
Productivity: Cases completed per workyear	28	30.2	33.2	33.0
Apprehensions per workyear	28	36.3	39.8	39.3
Employer Compliance Inspections	...	14,706	14,700	14,700

1/ An adverse action against the subject of an investigation may include: conviction, deportation, denial of benefits, termination of benefits, and/or recovery of funds.
2/ Workload data differs from 1991 President's Budget due to updated statistical information received in the interim.

The focus of the Investigations Program reflects three basic enforcement priorities of the Immigration and Naturalization Service: enforcement of employer sanctions, removal of criminal aliens, and detection and deterrence of fraud. Recently enacted legislation has been a catalyst to traditional enforcement efforts in Investigations.

IRCA requires expeditious deportation proceedings against any alien convicted of an offense which renders him or her deportable.

The Anti-Drug Abuse Act of 1986 broadened the range of drug violations subjecting an alien offender to exclusion or deportation, and requires that INS respond promptly to referrals of aliens arrested for controlled substance violations.

The Marriage Fraud Amendments Act and IRCA expanded INS' obligations and ability to detect and deter fraud during the legalization process, the employment eligibility verification process, and the acquisition of legal benefits through spousal and fiance(e) relationships.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease

Long Range Goal: Reduce the number of illegal aliens entering the United States by conducting pro-active criminal investigations that target major alien smuggling conspiracies.

Major Objectives:

Identify smugglers of illegal aliens.

Investigate and apprehend smugglers of illegal aliens, concentrating resources on major violators.

Prepare sufficient evidence to support U.S. Attorneys in obtaining convictions of smuggling violators.

Increase deterrent efforts such as conveyance seizures, drug seizures, extraterritorial prosecutions, fines and sentences.

Base Description: The Anti-Smuggling program has as its primary function the curtailment and prevention of the growth of the illegal immigrant population in this country by locating, apprehending and prosecuting alien smugglers involved in extensive smuggling operations, and by locating and apprehending those deportable aliens who use such means to enter the country without detection. While the large majority of alien smugglers apprehended by INS enforcement personnel are considered minor violators who operate independently and infrequently, a growing number of these violators are associated with large-scale, highly organized criminal conspiracies. Quite often, these professional organizations are simultaneously involved in other illegal activities such as narcotics and weapons smuggling, extortion, kidnapping, peonage, and document fraud on an international scale. Special Agents identify these organizations through interviews, the use of informants, surreptitious surveillance, as well as, undercover and task force operations.

Accomplishments and Workload: Accomplishments of the Anti-Smuggling Program are presented in the following table:

			Estimates	
	1988	1989	1990	1991
Smuggling Principals Apprehended (Anti-Smuggling)	8,898	2,540*	3,175	3,810
Smuggling Principals Apprehended (Servicewide)	13,200	14,455*	13,573	13,987
Cases Completed	6,138	2,614	3,137	3,764
Prosecutions				
Major	850	1,248	1,360	1,482
Minor	3,650	291	317	345
Convictions (Defendants):				
Felony	1,121	1,306	1,631	2,019
Misdemeanor	3,698	396*	411	431
Sentences (Months-All Charges)	24,758	17,779	18,668	19,601
Conveyances Seized	9,677	14,400	14,700	14,900

*Decreases in these categories reflect both the loss of a large number of senior and skilled agents to other programs and an emphasis on high priority, complex cases.

The increased focus on reducing illegal immigration is reflected in the higher numbers of alien smugglers apprehended and successfully prosecuted. The Service apprehended 14,455 smuggling principals in 1989. A total of 1,539 cases were prosecuted in 1989, resulting in 1,702 individuals convicted. As an adjunct to criminal prosecutions, the Service seized 14,400 conveyances (cars, trucks, vessels, and airplanes) used in smuggling.

In 1989 and continuing into 1990, the Anti-Smuggling program will focus on the identification, apprehension and prosecution of major alien smuggling organizations, particularly in those instances where there is the likelihood of conspiracy. The program continues to concentrate extensive investigative efforts against broadly diversified smuggling organizations engaged in infant smuggling, hostage/extortion situations, corporate smuggling, drug and counterfeit document trafficking, and terrorist activities. Since 1986, the program has been a part of the Southwest Border Interdiction Program under Operation Alliance. One hundred and twenty-three of its special agents are cross designated in support of drug interdiction activities.

In 1989, the Anti-Smuggling program implemented a Productivity Improvement Program designed to determine the most cost effective placement of resources by standardizing the process of evaluating performance in the conduct of criminal investigations at the agent and unit level. Through the collection and evaluation of such performance measures as the efficiency, quality, timeliness and effectiveness of investigative efforts and program operations, a more cost effective deployment of resources resulted.

Program Changes:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Anti-Smuggling................	352	331	$21,077	338	318	$20,552	-14	-13	-$1,525

Program decreases of -14 positions -13 workyears and -$761,000 are necessary for the Immigration and Naturalization Service to meet budget targets established by the Administration.

A decrease of -$764,000 is necessary to absorb the costs to implement P.L. 101-173. These reductions will be made in travel, transfers and other general expense items. This law amends 5 U.S.C. 5545 (c)(2) allowing that effective October 1, 1990, the payment of administratively uncontrollable overtime will be paid on a maximum rate of 25 percent of the rate of basic pay for a position instead of being based on the salary of a GS 10 step 1.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Detention and Deportation.............	1,537	1,578	$151,316	1,537	1,643	$157,869	1,537	1,547	$151,611	...	-96	-$6,258

Long Range Goal: Detain, until ready for removal, aliens subject to exclusion and deportation proceedings who are likely to abscond or represent a danger to public safety and security. Maintain and further develop a system that ensures that every case involving a deportable or excludable alien is processed expeditiously and that the alien is removed from the United States when appropriate.

Major Objectives:

Promptly remove deportable and excludable aliens and avoid detention to the greatest extent possible.

Ensure that adequate alien detention capability is available by staffing and maintaining seven accredited INS Service Processing Centers (SPCs), and detaining aliens when necessary in non-INS facilities which meet INS standards.

Allow apprehension activities to operate at full capacity by quickly removing detained aliens.

Base Program Description: The Detention and Deportation program is a critical element in the structure of the Service. Its functions are the detention, exclusion, explusion, removal, parole and deportation of aliens. Service and non-Service (contract) facilities are used to detain, until ready for removal, those aliens subject to deportation or exclusion proceedings who are likely to abscond or whose freedom at large would clearly represent a present danger to public safety and security. In the performance of the deportation function, the Service maintains a system of controls that ensures that every case involving a deportable alien is efficiently and correctly processed and, if necessary, the alien's removal from the country is effected promptly.

Accomplishments and Workload: Accomplishments of the Detention and Deportation program are presented in the following table:

			Estimates	
	1988	1989	1990	1991
Detention				
a. Aliens detained (Total)..........	92,799	104,639	95,850	98,300
INS Facilities.................	51,527	74,925	53,676	56,126
Non-Service Facilities.........	41,272	60,075	42,174	42,174
b. Number of detention days.........	1,408,966	2,349,970	2,132,610	2,187,660
INS Facilities................	766,188	1,234,073	1,167,834	1,222,884

			Estimates	
	1988	1989	1990	1991
Non-Service Facilities.........	642,778	1,115,897	964,776	964,776
c. Average stay in detention (days).	15.2	22.5	22.2	22.2
Expulsions				
a. Aliens expelled (b+c+d+e)........	939,853	861,169*	706,735	706,735
b. Voluntary departures under docket control........................	13,345	30,686	25,183	25,183
c. Voluntary departures not under docket control.................	900,866	796,793	653,904	653,904
d. Deportations effected............	23,178	30,097	24,700	24,700
e. Exclusions effected.............	2,464	3,593	2,948	2,948
f. Deportable aliens located, percentage expelled...............	96%	93%	93%	93%
g. Expelled aliens, percentage detained.......................	9.9%	12.1%	13.5%	13.5%
Recognizance, Bond and Supervision				
a. Aliens released on recognizance..	7,064	11,040	12,000	12,000
b. Aliens placed on bond............	20,288	27,797	30,000	30,000
c. Aliens placed under supervision..	154	187	200	200

*Workload data differs from 1991 President's Budget due to updated statistical information received in the interim.

The Detention program accomplished its mission during 1989 through the operation of seven SPCs. Through an expansion program, the combined rated capacity of these seven facilities is now 2,239 detainees. INS utilizes six private contract detention facilities, located in Los Angeles, El Centro, Denver, Laredo, Houston, and Seattle. These facilities provide 673 bed spaces for INS. A standard statement of work for contract facilities has been developed and will be used for future contracts with private sector entities. INS also contracts with over 900 state and local prisons and jails for bedspace to detain aliens. In 1989, 774,321 detention days were provided through contract sources.

Congressional appropriations language prohibits INS from detaining criminal aliens at Krome Service Processing Center in South Florida until its security rating is high enough to allow the use of the facility for potentially violent felons awaiting deportation. Approximately 180 convicted criminal aliens are released from Federal, State and local facilities per month in the Miami District. In addition, INS enforcement efforts in the Miami District have located 1,798 criminal aliens in 1989. Placement of these criminals in facilities outside of Florida is extremely expensive and inefficient. Therefore, INS is seeking funding for the construction of a 300-bed Level 3 men's dormitory on Service-owned land at the Krome facility. This item is discussed in further detail under the Justification of Program and Performance material for the Construction and Engineering program.

This request also reflects the transfer of base resources totalling $2,400,000 from the Detention and Deportation program to the Construction and Engineering program for the renovation and maintenance of detention facilities. Additionally, in 1990 the Administration plans to use $10,000,000 in excess asset forefeiture funds to increase detention space at 5 existing detention facilities.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Detention and Deportation....	1,537	1,643	$157,869	1,537	1,547	$151,611	...	-96	-$6,258

Program decreases of -96 workyears and -$5,953,000 are necessary for the Immigration and Naturalization Service to meet budget targets established by the Administration and more closely align authorized positions with funded workyears.

A decrease of -$305,000 is necessary to absorb the costs to implement P.L. 101-173. These reductions will be made in travel, transfers and other general expense items. This law amends 5 U.S.C. 5545 (c)(2) allowing that effective October 1, 1990, the payment of administratively uncontrollable overtime will be paid on a maximum rate of 25 percent of the rate of basic pay for a position instead of being based on the salary of GS 10 step 1.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Employer and Labor Relations.	51	50	$3,880	51	50	$4,231	51	48	$4,811	...	-2	$580

Long Range Goal: Advance cooperation and voluntary compliance of employers, labor organizations, workers and other groups with the employer sanctions provisions of the Immigration Reform and Control Act (IRCA) of 1986. Oversee the establishment and operation of systems to verify the immigration status of aliens applying for benefits under Aid to Families with Dependent Children (AFDC), Medicaid, unemployment compensation, and food stamp programs as required in Section 121 of IRCA.

Major Objectives:

Advance cooperation and voluntary compliance of employers, labor organizations and workers with employer sanctions provisions of IRCA.

Provide information to the public, Congress and others regarding voluntary compliance aspects of IRCA.

Encourage the hiring of United States citizens and legal resident aliens.

Establish systems to verify the immigration status of applicants for benefits such as AFDC, Medicaid, unemployment compensation and food stamps.

The requested program increase will fund the reproduction and distribution of informational materials and the establishment of an Anti-Discrimination Campaign.

Base Program Description: The function of this program is to increase public understanding of employer and employee responsibilities under IRCA and to obtain voluntary compliance with the employer sanctions provisions of the Act. Employer and Labor Relations personnel inform employers and community groups of the employment requirements under IRCA and the associated criminal/civil penalities for violations. They counsel employers who are in violation of the law and create and assist in special initiatives to facilitate the availability and hiring of legally authorized workers.

In addition, it is a requirement of IRCA that an alien's immigration status be verified at the time of application for a benefit under certain entitlement progams administered by the Departments of Health and Human Services, Agriculture, Labor, and Education. The Employer and Labor Relations program is responsible for providing the verification system for the documentation and status of alien applicants. This system, known as the Systematic Alien Verification for Entitlements Program (SAVE), serves as a means of identifying trends and usage levels by the aliens of fraudulent, counterfeit or altered immigration documentation to obtain Federally subsidized benefits and employment in the United States.

Accomplishments and Workload: Accomplishments of the Employer and Labor Relations Program are presented in the following table:

			Estimates	
Item	1988 1/	1989	1990	1991
Servicewide Informational and Educational Contacts	...	963,191	500,000	500,000
Servicewide Public speaking engagements (participation in seminars and conferences, discussions with trade, professional and labor organizations)	...	1,302	650	650
State agencies participating in SAVE (Systematic Alien Verification Entitlement) Program	...	92	150	150
Queries made against SAVE database.....................	...	1,951,476	2,500,000	5,000,000

1/ Program began functioning as a separate unit in 1989.

Since the passage of IRCA in 1986, over two million employers have been educated regarding their requirements under the law. This has been accomplished through personal contacts, seminars, and discussions with community organizations, trade associations and agricultural groups. Radio and television ads were prepared and used. In addition, information packets were distributed to 12,000 colleges, universities and technical schools to inform students of documents required when seeking employment.

A plan was developed to identify and educate new businesses about their responsibilities under IRCA.

A plan was developed to re-educate businesses about IRCA at the conclusion of Service proceedings when they are found to be in violation of IRCA.

Programs were developed to distribute IRCA-related anti-discrimination material and information.

Systematic Alien Verification for Entitlements (SAVE) Program:

The SAVE Program has successfully established an automated database housed and maintained by a private contractor that contains over 25,000,000 Service Record "A" files. The SAVE Program is supported by the Alien Status Verification Index (ASVI) and has the capability of being accessed by seven different methods including voice data response via touch-tone telephone.

All 50 states and territories currently participate in SAVE verification resulting in the automated database being queried approximately 8,000 times per day. Each query is equivalent to a "check" against an INS record by an entitlement issuing authority in order to determine alien applicants eligibility for federal monies. During 1989, 1,951,476 queries were made to the ASVI database. These numbers are expected to increase as several more State agencies, the Department of Education, and the Department of Housing and Urban Development begin using the system.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Employer and Labor Relations..................	51	50	$4,231	51	48	$4,811	...	-2	$580

An increase of $884,000 is requested for the reproduction and distribution of informational pamphlets and flyers and public service announcements to enhance public awareness of the sanctions provisions of IRCA, with particular emphasis on the establishment of an Anti-Discrimination Campaign.

Section 102 of IRCA contains provisions prohibiting employment discrimination on the basis of national origin and citizenship status. Although the Employer and Labor Relations program has conveyed the anti-discrimination message to employers and employees since the passage of IRCA, the General Accounting Office (GAO) report "Immigration Reform: Status of Implementing Employer Sanctions After the Second Year" completed in November 1988, concludes that although no pattern of discrimination is evident, some employers did not fully understand the anti-discrimination provisions of IRCA.

Specifically, GAO estimates that 22 percent of employers were not aware that IRCA had passed and that of those employers aware of the IRCA provisions, as many as 20 percent did not clearly understand the law's major provisions. These findings support the need for increased public education.

Program decreases of two workyears and $170,000 are requested in order to meet budget levels established by the Administration.

A decrease of -$134,000 is necessary to absorb the costs to implement P.L. 101-173. These reductions will be made in travel, transfers and other general expense items. This law amends 5 U.S.C. 5545 (c)(2) allowing that effective October 1, 1990, the payment of administratively uncontrollable overtime will be paid on a maximum rate of 25 percent of the rate of basic pay for a position instead of being based on the salary of GS 10 step 1.

Activity: Citizenship and Benefits	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Adjudications and Naturalization.........	...	...	...	...	...	...	...	...	...	...	...	...
Refugees and Overseas....	105	178	$11,817	105	178	$13,169	105	168	$12,043	...	-10	-$1,126
Total..................	105	178	$11,817	105	178	$13,169	105	168	$12,043	...	-10	-$1,126

Beginning in 1990, the adjudications and naturalization activities, previously funded under salaries and expenses, are to be funded through the Immigration Examination Fee account. Therefore, this budget activity contains only resources to adjudicate petitions and applications for benefits related to claims for refugee status and asylum under the Immigration and Nationality Act; and verify claims on applications and petitions by conducting immigration investigations. This activity contains resources for oveseas operations with the exception of pre-clearance inspections.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm Pos.	WY	Amount
Refugees and Overseas.....	105	178	$11,817	105	178	$13,169	105	168	$12,043	...	-10	-$1,126

Long-Range Goal: Approve qualified applicants for refugee status and for admission into the United States; adjudicate petitions and applications for benefits under the Immigration and Nationality Act (INA); and verify claims on applications and petitions by conducting immigration investigations. Coordinate and implement overseas enforcement initiatives directed against illegal immigration, fraud and related activities. Establish beneficial liaison with host governments, United States agencies and others to ensure mission related information sharing.

Major Objectives:

Coordinate with United States missions abroad and represent United States immigration policy interests and concerns to host governments, international organizations, and private voluntary agencies.

Receive and adjudicate applications for persons requesting entry into the United States as refugees in accordance with the INA and yearly consultations between the President and the Congress.

Serve in a pivotal role, in the Service's overseas deterrence and law enforcement initiatives.

Establish relationships conducive to the collection and dissemination of information of importance to the United States.

Maintain established pre-clearance sites in overseas locations throughout the world.

Conduct investigations to verify entitlement to benefits under the INA and to prevent fraud, alien smuggling, and other violations of immigration laws.

Adjudicate applications and petitions for benefits applied for under the INA from individuals seeking admission into the United States as immigrants.

Provide planning, coordination, review, and evaluation of the Service's asylum program. Promptly and consistently adjudicate asylum claims from aliens not in exclusion or deportation proceedings.

Base Program Description: This program adjudicates refugee applications, processes parolees, conducts investigations for preference and relative visa petitions, and conducts records checks and background investigations as required at overseas Service offices. Officers assigned to this program provide assistance to citizens and lawful permanent residents abroad regarding adoptions, immigration or parole of alien spouses and children, and other benefits under the INA. They review requests for the use of the Attorney General's authority to grant humanitarian parole into the United States for deserving individuals, and coordinate the Service's interdiction program with other participating Federal agencies. The latter program, with the assistance of the Coast Guard, provides for the interdiction and return to countries of origin of individuals attempting to reach our shores illegally. Another function of this program is to identify and deter potential illegal entrants at the source or in third countries through which they travel enroute to the United States. Deterrence is initiated by INS officers stationed in specific countries acting in concert with law enforcement authorities in those and surrounding or collaborating countries. The program also maintains established pre-clearance sites in locations throughout the world. Asylum officers adjudicate all asylum requests arising from aliens not in expulsion proceedings, including persons seeking admission at ports of entry and those in the United States whether in or without lawful status.

Accomplishments and Workload: Accomplishments of the Refugees and Overseas program are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Refugees Applying for Entry				
Pending/Backlog (1)	42,417	85,349	115,349	143,349
Received	125,176	175,621	180,000	160,000
Completed	97,735	132,689	150,000	132,000
Adjudications Completed				
Pending/Backlog (1)	1,944	1,982	2,082	3,082
Received	27,062	24,043	28,000	28,000
Completed	27,143	23,985	27,000	27,000
Investigations (Individual cases)				
Pending/Backlog	2,553	2,803	3,053	3,303
Received	5,500	5,500	5,500	5,500
Completed	5,000	5,250	5,250	5,500
Smuggling Prevention Actions (2)	100	200	200	270
Diplomatic Liaison				
Completed	600	1,000	1,000	1,450
Public Service Completed	4,500	6,000	6,000	6,400
Asylum Adjudications (3)				
Pending/Backlog (1) and (4)	73,109	75,993	51,933	56,933
Received	60,736	101,679	50,000	45,000
Completed	13,357(5)	102,795(6)	70,000	40,000

(1) These are uncompleted cases at year-end.

(2) With the creation of the Office of Foreign Operations overseas deterrence of potential illegal entrants has become a continuing responsibility of this decision unit. These actions are distinct from investigations of individual cases.

(3) Under regulations effective October 1, 1988, responsibility for new asylum claims would shift to asylum officers operating under this decision unit.

(4) Excludes Mariel Cuban cases which are being adjudicated under the Cuban Adjustment Act.

(5) Excludes 54,000 cases withdrawn or closed for lack of prosecution; mostly Cuban adjustment cases.

(6) Includes 64,000 cases withdrawn or closed for lack of prosecution; mainly Central American cases on which initial processing and follow-up efforts were expended.

Major Accomplishments:

In 1989, major accomplishments were primarily in the area of operational effectiveness. In concert with the Anti-Smuggling staff, a major training exercise was provided to officers, staff, and other interested groups in the Bangkok District office. Successful case completions in breaking smuggling activities have been linked to the relationship of the Foreign Operations program and the Anti-Smuggling Program. The increasing number of Soviet refugee applicants being processed has required the three-fold augmentation of staff in Rome and the placement of staff in Moscow to conduct interviews.

Refugee and asylum adjudication training was significantly enhanced and over 300 INS staff members attended one of the 10 courses organized during calendar year 1989. A completely revised training syllabus was produced and distributed to all participants.

An enormous surge of Central American asylum applicants was successfully addressed through the creation of asylum task forces at the South Texas border and in Miami and Los Angeles.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Refugees and Overseas.........	105	178	$13,169	105	168	$12,043	...	-10	-$1,126

Program decreases of -10 workyears, and -$916,000 are requested to meet budget targets established by the administration and more closely align authorized positions with funded workyears.

A decrease of -$210,000 is necessary to absorb the costs to implement P.L. 101-173. These reductions will be made in travel and other general expense items. This law amends 5 U.S.C. 5545 (c)(2) allowing that effective October 1, 1990, the payment of administratively uncontrollable overtime will be paid on a maximum rate of 25 percent of the rate of basic pay for a position instead of being based on the salary of a GS 10 step 1.

Activity: Immigration Support

This activity includes the resources for construction, communications, records management, automated data processing, training of personnel, research and development, field management, legal proceedings and the alien documentation program (ADIT). In addition, it provides a capacity to scientifically examine and analyze documents to assist in the identification, investigation and prosecution of major conspiracies which provide fraudulent documents to smuggled aliens.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Training..................	101	96	$10,956	101	108	$11,105	107	101	$10,893	6	-7	-$212

Long Range Goal: Establish and maintain an employee development system that meets the needs of management and individual employees and complies with regulatory requirements.

ior Objectives:

ovide basic training for all new recruits and advanced technical training for journeyman officers, and develop updated rricula for the basic and journeyman training programs.

ain INS supervisors, managers, management officials and executives, and provide technical training programs to meet equirements that are satisfied by in-Service programs.

ase Program Description: The function of the Training program is to provide the staff and the resources necessary to aintain an employee development program that meets the diverse training needs of this agency's workforce. Training equirements are identified annually and are revised, as needed, due to new regulations, legislation, or organizational eeds. The program is accomplished in a variety of ways: through in-Service training using INS instructors, through rograms conducted by other Federal agencies, by private contractors, or in combined presentations using Service and non-ervice resources.

ccomplishments and Workload: Accomplishments of the Training program are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Workload Production/Training				
Starts:				
Border Patrol Basic	883	1,117	288	836
Immigration Officer Basic	938	1,187	432	536
Detention Officer Basic	150	143	144	144
Completions:				
Border Patrol Basic	460	1,026	200	420
Immigration Officer Basic	525	775	520	400
Detention Officer Basic	130	131	100	120
Journeyman Officer Training	625	650	650	2,880
Basic Supervisory Development	260	260	260	260
Management Development	198	200	200	200
Executive Development	24	25	25	25
Extension Training	521	600	600	600
Contact Representatives and Docket Clerks	96	120	120	120
Regional/Central Office Training	2,580	2,550	2,550	2,550

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Training....................	101	108	$11,105	107	101	$10,893	6	-7	-$212

Program decreases of -7 workyears and -$97,000 are necessary for the Immigration and Naturalization Service to meet budget targets established by the Administration and more closely align authorized positions with funded workyears.

A decease of -$115,000 is necessary to absorb the costs to implement P.L. 101-173. These reductions will be made in travel, transfers and other general expense items. This law amends 5 U.S.C. 5545 (c)(2) allowing that effective October 1, 1990, the payment of administratively uncontrollable overtime will be paid on a maximum rate of 25 percent of the rate of basic pay for a position instead of being based on the salary of GS 10 step 1.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Data and Communications...	221	208	$59,246	221	208	$55,134	181	170	$40,209	-40	-38	-$14,925

Long-Range Goal: Establish and maintain automated and electronic technical support to increase the efficiency and effectiveness of INS' operational, administrative and managerial functions; provide a comprehensive and coherent framework for the acquisition and management of information systems resources pursuant to the Strategic Plan for Information Systems; provide the optimal level of automation support; provide communications to support all of INS' informational needs; produce and issue alien identification (ID) documents and provide an automated ID verification system; provide radio and electronics equipment and systems required by the INS to support its law enforcement functions; and promote the sharing of information with other Federal agencies to reduce the paperwork burden, to both the public and INS.

Major Objectives:

Ensure the cost effectiveness of new information systems through the use of contemporary techniques for quantifying and justifying automated data processing (ADP) based systems and data bases.

Improve the quality, reliability, interconnection, maintenance, and upgrade the accessibility of existing database systems.

Install and maintain INS' major mission and management oriented systems throughout the Service.

Improve the efficiency and effectiveness of voice and data communications throughout the Service.

Provide office automation support for word processing, local tracking, analysis, and electronic mail.

Provide automated intrusion detection capabilities at selected Border Patrol sectors consisting of a variety of sensor and imaging equipment with centralized monitoring at the sector for dispatch and reporting purposes.

Provide an effective maintenance program and equipment replacement and upgrade schedule to ensure effective continuity of operation of data, communications and electronics capabilities.

Base Program Description: The function of this program is to provide direct support to the Service's operational organizations as well as administrative support functions in the areas of ADP, radio, and electronics systems. This includes: (1) improving the effectiveness and efficiency of Service functions through the use of computer resources in information processing; (2) providing for the operation of data and communications networks; (3) maintaining the cost effective production and issuance of secure alien identification cards; and (4) providing radio communications, telephone call handling, intrusion detection (sensors), and electronic security equipment and systems.

Accomplishments and Workload: Workload is best expressed in narrative form since program efforts directly contribute to increasing the productivity and effectiveness of operating programs. Accomplishments include the following:

I. ADP SYSTEMS

1. Systems Planning -

The 1991 request represents the fourth year for the INS automation program as defined in the Automated Information Systems (AIS) Strategic Plan. Accomplishments include a contract that was implemented in 1989 to support software development and maintenance needs of INS, and several ADP hardware procurements, including three major purchases of ADP workstations in 1988 and 1989 that will provide ADP equipment to support processing needs throughout INS field offices. The Department of Justice computer centers continue to be the primary facilities for centralized ADP processing for the Service.

2. Systems Operation -

The following operational systems have recently been expanded and/or proliferated to support 200 INS sites: (1) the Central Index System houses records for over 30 million individuals and supports both state and Federal government access to the SAVE program; (2) the Non-Immigrant Information System currently maintains over 90 million records and supports the Visa Waiver program as well as other mission operations; (3) the casework systems, including the Deportable Alien Control and the Naturalization Casework Systems, were expanded to additional sites; (4) subsystems of the Service's Financial Management Information System; (5) the redesigned and renamed Operational Activities Special Information System (OASIS) includes the Automated Information System Criminal Alien Program, the Seized Vehicle Information System, and the Fraud System; and (6) the Fees and Applications Receipt and Entry System (FARES) is operational for adjudication case tracking and fee receipting at four Regional Service Centers and five district offices. In support of the Immigration Reform and Control Act (IRCA) of 1986, contract support has provided planning, integration, training, development, implementation and operation of systems to support mandated requirements. A fraud detection system under OASIS was refined and enhanced. Development of other enforcement systems to support Employer Sanctions was initiated.

A data entry plus A-Files and mail management contract was implemented in 1989 in support of Legalization Adjustment Processing System (LAPS), Phase II, and additional enhancements were made to support the Replenishment Agricultural Worker (RAW) provision of IRCA.

Contracts were competitively acquired in 1988 and 1989 for ADP equipment in support of adjudications and other responsibilities and include the acquisition of microcomputers and other associated equipment for INS field offices.

Port of Entry Automation system operation and maintenance is continuing at six port of entry prototype sites (Laredo, Nogales, Calexico, Honolulu, Agana and Shannon). An interagency border inspection system effort has been initiated involving Department of State, U.S. Customs Service and INS. At this time, a joint steering committee and working group has been established; automation strategies have been approved; an implementation schedule has been identified; funding responsibilities have been identified and approved; and six ports of entry have been automated. A direct link between the Interagency Border Inspection System and the National Crime Information Center was established in FY 1989. Telecommunications implementation has been started between U.S. Customs Service and INS. Interagency data exchange activities have been intitiated between INS, USCS and DOS. During FY 1990, nine ports of entry are expected to be automated.

II. ALIEN DOCUMENTATION (ADIT)

In 1989 the new Immigration Card Facility equipment contract was implemented to support a higher volume of card production and improved security features.

III. DATA COMMUNICATIONS

The Service's data communications network (INSINC) has been expanded to more than 250 of INS' field offices allowing for immediate access to INS systems on the Justice Data Center's mainframe computers. INSINC has been expanded to include access to at least two non-INS information sources--the National Law Enforcement and Telecommunications System (NLETS), which provides information from state law enforcement systems, and the FBI's National Crime Information Center (NCIC), which provides interstate criminal justice information on wanted, missing and unidentified persons; stolen vehicles and guns, and other properties and individual criminal histories. INSINC is targeted for priority transition to the GSA mandated FTS 2000 network.

IV. ELECTRONICS SUPPORT

1. Radio Systems -

INS has commenced a major initiative to bring all radio systems and equipment into compliance with standards established by the Office of National Drug Control Policy. This initiative started with Department of Defense (DOD) funding.

2. Surveillance Systems -

Low-light-level television (LLLTV) Systems are being expanded to additional Border Patrol sectors. Individual agent, night vision scopes for field use, as well as infrared scopes and Forward Looking Infrared (FLIR) equipment for aircraft, are part of the intrusion detection initiative. Closed-circuit television systems at service processing centers are also supported by this program.

The Computer Assisted Detection and Reports Enhancement (CADRE) system, providing sensor and dispatch functions, has been installed for use at eight Border Patrol sectors. A major upgrade in software and hardware is underway.

3. Systematic Alien Verification for Entitlement (SAVE) Program -

The SAVE Program, standardized since October, 1985, is now available to all states for alien benefit verification. During 1989, the Automated Fingerprint Identification System (AFIS) project successfully demonstrated the capability to positively identify criminal aliens and repeat offenders of immigration law. This was accomplished by implementing a prototype advanced technology, computer-based fingerprint identification-storage-retrieval system in the San Diego Border Patrol Sector.

Program Changes:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Data and Communications........	221	208	$55,134	181	170	$40,209	-40	-38	-$14,925

Program changes of -40 positions, -38 workyears, and -$14,925,000 are requested for this program. An explanation of each change is listed below:

Funding of $75,000 is requested for the expansion of the National Crime Information Center/National Law Enforcement Telecommunications System (NCIC/NLETS). Expansion of NCIC/NLETS to additional field offices will enhance INS efforts to respond to increasing criminal alien activities.

An enhancement of $92,000 is requested to support the Telephone Verification project (IRCA phone) mandated by the Immigration Reform and Control Act of 1986. This system will allow employees to determine the employment eligibility of a job applicant when an employer is unsure of the validity of the applicant's work authorization documents. Telephone verification will encourage employer compliance with the Anti-Discrimination and Work Authorization provisions of IRCA by making employment eligibility easier to determine.

OMB Circular A-127 calls for each agency to consolidate and integrate their multiple accounting systems into a single Departmental system. An increase of $400,000 is requested to begin conversion of the current batch-mode Financial Accounting and Control System (FACS) to the Financial Management Information System (FMIS) used by the Department. A special audit by the Department identified FACS as a weakness. FMIS is a modular system by design and implementation of the software can be accomplished to suit INS. Development of an "evolutionary strategy" will be done in 1990 to plan for gradual conversion to FMIS in accordance with Government-wide and Departmental policy.

A program change of -40 positions, -38 workyears and -$2,359,000 is requested in order to meet budget levels targeted by the Administration and more closely align authorized positions with funded workyears. Additionally, $13,133,000 is shifted from the Data and Communications base program to the Examinations Fee Account. The Administration's position is that since the Adjudications and Naturalization program is no longer appropriated, all related support services should be funded from the Examinations Fee Account.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Information and Records Management...........	1,067	1,192	$51,589	1,067	1,192	$54,160	1,012	1,006	$52,201	-55	-186	-$1,959

Long-Range Goals: Provide information in a timely and professional manner to the public and government agencies on immigration procedures, policies, plans, activities, status, benefits and eligibility, including the Immigration Reform and Control Act's (IRCA) provisions and initiatives. Administer Servicewide Information Services and Records programs designed to provide support to INS' operating components and other United States law enforcement agencies, as well as, State and local governments seeking the status of aliens under the provisions of the Immigration and Nationality Act. Ensure the reliability of automated and manual data generated by INS information systems (contractor and in-house); ensure efficient records management in the life cycle of records; and apply principles of information engineering and modeling that contribute to cost-saving and efficiency efforts in the area of data integrity. Improve mail and correspondence management practices by increasing efficiency and reducing and/or holding mail costs to a minimum, and continue to initiate and implement standards for uniform correspondence throughout INS.

Major Objectives:

Ensure Servicewide compliance with the Freedom of Information and Privacy Acts (FOIA/PA).

Provide analytical and technical expertise on statistical matters, and statistics upon which to base policy decisions.

Respond to 85 percent of all telephone inquiries from the public within three minutes, all in-person inquiries received from the public within 15 minutes, and all written inquiries received from the public within 20 days.

Maintain a reliable and accessible Nationwide Reform Act "800" telephone information service.

Develop and install advanced automated telephone systems to improve the public's access to immigration information.

Respond to information and status requests from the public, INS operating components, state and local governments, law enforcement agencies, and other Federal government agencies.

Provide analytical and technical expertise on manual and electronic record collection, capture, storage, processing and retrieval.

Improve the control, accountability and availability of INS records through increased training, technical and operational assistance in the maintenance and use of manual and automated records systems.

Contribute to the development of the most efficient/cost effective use of manual and automated records systems and resources and ensure that INS responsibilities related to automated records systems contribute to the quality and integrity of the system databases.

Ensure the accurate and timely issuance of Service regulations, directives, operating instructions and forms.

Improve INS workload data and productivity measurement and ensure timeliness, quality and completeness of all INS statistical data.

Develop, analyze, and publish timely, high-quality immigrant and non-immigrant statistics in annual statistical yearbooks, special bulletins, and reports for policy making at agency and Congressional levels.

Establish and maintain liaison with Federal and State agencies, and National and international organizations involved in the collection and/or analysis of immigration related statistics.

Base Program Description: The functions of this program are to (1) provide responses to inquiries from the public and private sectors; local, state and Federal agencies; and the various branches of government, by telephone, in-person, and in writing, (2) maintain alien records and files from which data may be readily obtained to respond to requests from both in and outside the Service; (3) develop guidelines, policies and procedures and responses to FOIA/PA requests; (4) Compile, analyze and evaluate statistics for use in preparing regular and special reports about Service operations and work accomplishments; (5) provide for the coordination, development, preparation and review of the Service's regulations, directives, operating instructions and forms, to ensure that these materials are issued and published in accordance with established Federal regulations and laws; and (6) monitor and ensure internal compliance to standards for systems and Service delivery.

Accomplishments and Workload: Accomplishments of the Information and Records Management Program are presented in the following table:

Item	1988	1989	Estimate 1990	Estimate 1991
Information Services:				
On-Hand/Receipts - Correspondence	428,721	461,983	550,000	550,000
Completions - Correspondence	409,253	465,478	500,000	500,000
Inquiries:				
Ask Immigration (AI) Telephone System	4,575,277	5,233,593	6,000,000	6,500,000
Immigration Telephone System (Other)	1,144,163	983,643	800,000	700,000
Reform Act "800" Telephone System	1,467,246	1,206,276	500,000	250,000
In person	5,138,967	4,017,225	4,000,000	3,800,000
Record Completions:				
Files created	833,048	969,547	1,000,000	950,000
Records verification	629,161	746,987	800,000	750,000
Files transferred and requested from Others/FRC's	1,711,796	2,313,372	2,500,000	1,800,000
Files Connection	3,411,042	3,993,318	4,500,000	3,800,000
Refiles	4,227,850	4,684,651	4,800,000	4,500,000
Mail Processing	9,694,719	11,816,049	12,500,000	12,000,000
FOIA/PA:				
On Hand/Receipts - FOIA/PA	34,652	32,265	33,000	33,000
Completions - FOIA/PA	31,554	30,493	30,000	30,000

As of December 1989, fully automated Ask Immigration (AI) systems were operating at 55 field offices, an increase of 20 over 1988. A completely automated IRCA "dial 800" information system has provided information on all major provisions of IRCA to over 3.1 million callers from the 50 states, Puerto Rico and the Virgin Islands through December 1989. Twenty-nine sites have Immigration Direct Information Access Lines (IDIAL) for the walk-in public to select AI information, an increase of 15 over 1988.

The Alien Files Accountability and Control Systems (AFACS) was installed in nine additional field offices for a total of 25 sites, thus expanding the control of approximately 10.2 million or 80 percent of all active alien files. Further, AFACS operations were expanded from the standard mini-computer to a personal computer version which added alien file tracking capabilities to other Service files and forms, and interfaces were developed to other Service automation systems.

An electronic records workstation prototype was developed. The station includes an optical disk, optical scanner, barcode technology and electronic transmission capabilities, for testing records automation systems.

In 1989, the Service purchased and installed 25 sets of postage metering equipment and provided the guidance for its proper use. The Service now has purchased and installed 62 of 88 sets needed to complete the metered mail equipment procurement in accordance with the requirements of the U.S. Postal Service.
It is estimated that over 27,000 statistical reports were completed and that almost 3,000 inquiries were answered.

Program Changes:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Information and Records Management................	1,067	1,192	$54,160	1,012	1,006	$52,201	-55	-186	-$1,959

Program change of 55 positions, -76 workyears, and -$1,316,000 is requested in order to meet budget targets established by the Administration and more closely align authorized positions with funded workyears.

As part of the Administration's continuing commitment to implement management and productivity improvements, a savings of -110 permanent positions, -110 workyears and -$643,000 will be achieved by contracting out mail and file type activities to private industry. The same level of service will be maintained. The reduction is based on a recent Departmental review of personnel performing commercial functions.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Intelligence.............	55	52	$2,763	55	52	$3,069	52	49	$2,844	-3	-3	-$225

Long Range Goal: Develop an international immigration intelligence capability for the collection, analysis and dissemination of information regarding global migration patterns and trends, and provide meaningful intelligence support on a regular basis to INS' operational components for enhanced effectiveness and efficiency.

Major Objectives:

Provide intelligence assistance and support required for maximum operational effectiveness of INS field components.

Provide strategic intelligence assessments to INS management for consideration in short-term and long-term operational planning.

Maintain liaison with appropriate United States and foreign government agencies on immigration and national security matters including the movement of known or suspected international terrorists.

Furnish assistance in the detection of fraudulent identity documents to international law enforcement agencies and international air carriers.

Provide technical support and assistance in the prosecution of major document counterfeiters, alien smugglers and other violators of the Immigration and Nationality Act and new provisions of the Immigration Reform and Control Act (IRCA).

Act as coordinator for the Operational Activities Special Information System (OASIS), a Servicewide intelligence computer system.

Base Program Description:

This program provides strategic and tactical intelligence support to Service offices enforcing the provisions of the Immigration and Nationality Act, and assists other Federal agencies in addressing national security issues. The Service's document laboratory is a critical component of the program. Intelligence support contributes to efforts aimed at preventing the entry of illegal aliens, terrorists and narcotics traffickers, and detecting fraudulent documents, alien smuggling, false claims to citizenship and other frauds.

Accomplishments and Workload: Accomplishments of the Intelligence program are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Cases received for examination of fraudulent documents	935	1,901	2,100	2,300
Cases completed for examination of fraudulent documents	800	1,901	2,100	2,300
INS Intelligence Inputs Processed at EPIC	18,418	16,347	16,500	16,500
Queries of INS Databases at EPIC	24,655	19,020 1/	19,000	19,000
Positive INS Responses Provided to Queries	3,893	3,367	3,000	3,000

1/ Decrease reflects the fact that an increasing number of offices have the equipment to query INS databases directly and need not go through EPIC.

Program Changes:

	1991 Base Perm. Pos.	1991 Base WY	1991 Base Amount	1991 Estimate Perm. Pos.	1991 Estimate WY	1991 Estimate Amount	Increase/Decrease Perm. Pos.	Increase/Decrease WY	Increase/Decrease Amount
Intelligence	55	52	$3,069	52	49	$2,844	-3	-3	-$225

Program changes of three positions, three workyears, and -$110,000 are requested in order to meet budget targets established by the Administration and more closely align authorized positions with funded workyears.

A decrease of -$115,000 is necessary to absorb the costs to implement P.L. 101-173. These reductions will be made in travel, transfers and other general expense items. This law amends 5 U.S.C. 5545 (c)(2) allowing that effective October 1, 1990, the payment of administratively uncontrollable overtime will be paid on a maximum rate of 25 percent of the rate of basic pay for a position instead of being based on the salary of a GS 10 step 1.

Research and Development	4	4	$535	4	4	$540	4	4	$530	...	...	-$10

Long-Range Goal: Improve INS' capability to detect and apprehend illegal entrants. Provide technological guidance in support of all INS operations.

Major Objectives:

Research, develop, apply, and evaluate surveillance technologies and systems to more effectively detect illegal alien and related drug intrusions over thousands of miles of border with emphasis on automation, reliability, and low cost.

Develop methods based on statistical techniques to support Service operating programs in detecting illegal alien and drug related smuggling, setting bond levels, reducing costs of detention and deportation, and detecting marriage fraud.

Provide liaison with the Federal, industrial, and university research and development communities to stimulate, maintain, and integrate technical work relevant to high priority interests of INS.

Base Program Description: The function of the Research and Development program is to examine problems of the Service and to develop new or adopt existing technologies for their solution. The objectives of this program are pursued through in-house, contract, interagency agreement and information interchange activities. These activities cover signal processing radar, infrared imaging, low light level television, stationary and mobile platforms, communications, microprocessing, data processing, automatic controls, digital and analog techniques, pattern recognition, simulation, test and evaluation, and systems analysis.

Accomplishments and Workload: The Research and Development program seeks to maintain a technological base in areas crucial to the successful execution of INS operations. Workload is best expressed in narrative form which directly contributes to increasing the productivity and effectiveness of operating programs. Accomplishments include the following:

Initial investigations were made into automatic fingerprint analysis, a complex and relatively new technology. It may be applicable to many of INS' problems with respect to positively identifying illegal and criminal aliens. Research and Development is now in the process of gathering valid data to evaluate the use of this technology.

The pre-production phase of a two part analysis has been completed regarding the Improved Image-Enhancement Vehicle which is being developed in conjunction with the Department of the Army and will allow both the military and INS to use a low cost, automated, mobile surveillance system.

Research and Development personnel are completing the second, and final phase of a feasibility analysis to develop a novel approach to high-quality, low-cost uncooled infrared imaging based on semiconductor fabrication technology combined with new miniaturization fabrication techniques.

Reseach and Development personnel applying discriminate analysis, artificial intelligence, and linear programming techniques as they relate to law enforcement and adjudications programs in profile analysis for vehicle traffic at the border, bond settings, and marriage fraud.

The second phase of a three phase detention and deportation optimization study is being completed. The study will determine the most cost effective manner in which to transport detainees.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Research and Development................	4	4	$540	4	4	$530	...	...	-$10

A program change of -$10,000 is requested in order to meet budget targets established by the Administration and more closely align authorized positons with funded workyears.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Construction and Engineering............	16	15	$6,972	16	15	$7,110	13	12	$24,101	-3	-3	$16,991

Long Range Goal: Provide adequate facilities for all INS operating units so that they can fulfill their requirements to administer the Immigration and Nationality Act.

Major Objectives:

Construct, alter and maintain effective, safe, energy conserving, and attractive facilities.

Construct border patrol stations at Brownfield, CA and Ysleta, TX.

Construct traffic checkpoints at Marfa, TX and Alpine, TX.

Construct a 300 bed lock-down dormitory at Krome, FL Service Processing Center.

Construct a traffic checkpoint at San Clemente, CA.

Base Program Description: The function of this program is to provide for the acquisition, design, construction, alteration, repair, maintenance, and management of all buildings, structures, and facilities for which the Service is the owning or leasing agency. Space is acquired through the General Services Administration (GSA), by lease, by INS construction and through assignment by airport authorities. New inspection facilities are coordinated as necessary with U.S. Customs Service, Public Health Service, Department of Agriculture, GSA, state, county, local airport and foreign authorities. Office space requirements are coordinated with GSA.

Accomplishments and Workload: Accomplishments of the Construction and Engineering program are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Major New Construction Projects.............	26	18	25	25
Verify GSA billings.........................	493	453	460	460
Building Evaluations........................	15	18	18	18
Design Support Projects.....................	20	15	25	30
Airport Projects............................	30	25	25	25
SF-81/144 (Request for Space) sent to GSA (Servicewide) 1/...........................	60	60	72	72

1/ These workload statistics reflect the number of actions processed and are not necessarily driven by available resources. The documents included in this item are initiated for increases in space, decreases in space, relocation of offices, revisions to existing space, consolidation of operations, and GSA-mandated moves.

While the limited resources in 1991 will affect the location and amount of space acquired, it will not reduce the number of SF-81's processed.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Construction and Engineering...............	16	15	$7,110	13	12	$24,101	-3	-3	$16,991

Resources totalling $17,188,000 are requested in support of the Detention and Deportation program and the Border Patrol program. Of this request, $4,500,000 will be required to expand detention capacity. The construction and upgrade of three traffic checkpoints and construction of two Border Patrol stations will require an increase of $12,688,000.

An increase of $4,500,000 is requested for the expansion of the Federal Detention Facility at the Krome Service Processing Center in Southern Florida. These funds will allow construction of a 300-bed lock-down men's dormitory. The construction of lock-down dormitories and segregating cells at the Krome detention facility will allow us to separate aliens detained for criminal violations or drug apprehensions from the non-criminal detainees, providing greater security and safety for detainees as well as for Service employees and the general public.

To support the expansion of basic enforcement efforts, an increase of $2,688,000 is required for the construction and upgrade of two Traffic Checkpoints and two Border Patrol stations. Of this increase, $194,000 is required to move the Alpine, Texas Checkpoint on Highway 118. The existing traffic checkpoint must be moved from its present location near Marathon, Texas to a point approximately five miles south of Alpine, Texas to more effectively interdict drug and alien smuggling traffic exiting the Big Bend National Park area. Also included in this request is $194,000 to construct the Marathon, Texas Checkpoint on Highway 67. The Marathon Checkpoint, on Highway 67 is a new traffic checkpoint which will be located approximately four miles south of Marfa, Texas in order to effectively interdict alien smuggling traffic and drugs exiting the Big Bend National Park area. Adequate facilities are required at these checkpoints in order that the agents may conduct a proper and safe inspection of all vehicular traffic. Checkpoint facilities are used in the same manner as a Border Patrol station, only on a much smaller scale. The agents at these facilities conduct license and warrant checks, monitor sensors used to detect walkarounds of the checkpoint, and hold suspected immigration violators and other criminals. Agents must remain at these checkpoints for their entire shift. Adequate shelter is needed by the officers for protection from extreme heat and humidity. Canines are often used at the checkpoints to detect drugs and persons being smuggled within vehicles. The animals must also be protected from the harsh climate in these areas.

Traffic check operations are conducted by the Patrol along roads and highways leading away from the border for the inspection of persons and vehicles which may have surreptitiously entered into the United States. Checkpoints are strategically placed in areas that are known to have high volumes of alien and drug smuggling activities due to their relatively easy access away from the border and into the interior of the country. Checkpoints funnel illegal alien movements and smuggling loads to locations where the Patrol can readily detect and apprehend the alien or drug smuggler and seize any contraband. The traffic checkpoint is the first line of defense in many border areas where it is operationally more advantageous to allow the surrounding terrain to force the flow of traffic to a location away from the immediate border to a point where the Patrol, with fewer agents can detect and arrest illegal border crossers.

This increase includes $2,300,000 required for construction of two critically needed Border Patrol Stations on the southern border, Brownfield, California and Ysleta, Texas. The Brownfield station is losing its lease and will be required to move by 1991. The Brownfield station is the hub of the most active Sector on the Southern border. Ease of illegal access to a rapidly growing industrial area immediately adjacent to the border forebodes increased levels of illegal entry and drug smuggling at this critical station. Futhermore, operations must be geographically located near the Brownfield airport for access and effectiveness in covering present and predicted high volumes of illegal aliens on foot and high risk vehicle crossings in that area.

The Ysleta Border Patrol station will also be losing its lease and will be forced to vacate in 1991. This station with 65 agents is the hub of the second most active Border Patrol sector and is critical as an effective anti-smuggling and drug interdiction station.

An increase of $10,000,000 is requested for the first phase of the construction of a new traffic checkpoint and border patrol station on Highway 5 in San Clemente, California several miles South of the current checkpoint. The INS-owned buildings at the current location were originally occupied in 1971 by 30 officers and staff. Currently, the staff numbers 133. The present checkpoint frequently must be closed during heavy traffic periods because the traffic backups create safety problems. There are five highway lanes which are narrowed to three at the inspection point. The new facility will provide 16 inspection points, allowing an even flow of traffic regardless of volume.

The funds included in this request will be used for architectural/engineering work, an Environmental Impact Statement, project study reports, and transmittal fees required by the Department of Transportation. The $10,000,000 requested will cover resources needed for the first phase of this construction project to be completed in 1992 with an additional $23,920,000.

This request also reflects the transfer of base resources totalling $2,400,000 from the Detention and Deportation program to the Construction and Engineering program for critical renovation and maintenance of detention facilities.

Program decreases of -3 positions, -3 workyears and -$197,000 are necessary for the Immigration and Naturalization Service to meet budget targets established by the Administration.

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Field Management and Support............	302	284	$18,346	302	284	$20,079	289	266	$18,444	-13	-18	-$1,635

Long Range Goal: Provide management direction to field units that implement major policy and management decisions for more than one program.

Major Objectives:
Ensure effective law enforcement and uniform implementation of INS policy, procedures and operational goals; provide efficient service to the public; and devise techniques and procedures for responding to regional and local conditions and circumstances.

Base Program Description: The function of this program is to provide management direction and support for the implementation and operation of regional and field activities and functions. This program includes managers and supervisors who are charged with responsibility for, and exercise authority over, multiple programs.

Accomplishments: The Field Management and Support program provides management direction to field units on implementing INS policy and initiatives. This Program provides the necessary management direction and administrative support at the field level for the Service's committment to strengthen its enforcement efforts as well as improve service to the public.

Program Changes:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Field Management and Support...............	302	284	$20,079	289	266	$18,444	-13	-18	-$1,635

Program decreases of -13 positions, -18 workyears and -$1,120,000 are necessary for the Immigration and Naturalization Service to meet budget targets established by the Administration and more closely align authorized positions with funded workyears.

A decrease of -$ 515,000 to absorb the costs to implement P.L. 101-173. These reductions will be made in travel, transfers and other general expense items. This law amends 5 U.S.C. 5545 (c)(2) allowing that effective October 1, 1990, the payment of administratively uncontrollable overtime will be paid on a maximum rate of 25 percent of the rate of basic pay for a position instead of being based on the salary of GS 10 step 1.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Legal Proceedings......	487	458	$28,606	487	458	$30,193	466	438	$28,993	-21	-20	-$1,200

Long Range Goal: To provide legal representation for the United States Government in all cases and matters arising before Immigration Judges and the Board of Immigration Appeals; represent INS in all other contested administrative hearings in which the agency is involved; provide legal advice and support to INS operating personnel; represent INS in all cases being tried in the Federal courts; and consult, train and provide legal support for interagency efforts in combatting the threat to the Nation posed by illegal alien criminals.

Major Objectives:

Provide training for attorneys and enforcement personnel in employer sanctions.
Represent the Service before administrative bodies and Federal courts in employer sanctions matters.

Provide litigation and consultation support to interagency task force operations to effect the expeditious deportation of criminal aliens and thereby reduce costs of incarceration.

Provide litigation assistance in Federal and local drug and organized crime task forces.

Provide litigation support in developing removal strategies for criminal aliens to effect their expeditious exclusion and/or deportation.

Furnish legal counsel and training in immigration law for enforcement officers of state, local, and other Federal agencies for identification and expeditious processing of alien drug traffickers and criminals.

Base Program Description: INS attorneys represent the Service before Immigration Judges, the Board of Immigration Appeals, the Merit Systems Protection Board, the Equal Employment Opportunity Commission, and Boards of Contract Appeals. The program provides litigation support in agency litigation being conducted in United States District Courts, Courts of Appeals, and the Supreme Court. Attorneys advise the Central Office, regional commissioners, district directors, and border patrol sector chiefs regarding legal matters arising at all levels of agency operations. The attorneys also assist interagency task forces in developing cases and removal strategies for criminal aliens.

Accomplishments and Workload: Accomplishments of the Legal Proceedings program are presented in the following table:

Item	1988	1989	Estimate	
			1990	1991
Non Sanctions Workload:				
Trial Attorney Appearances	196,789	236,516	237,000	237,000
Cases Prepared	197,474	241,517	242,000	242,000
Preparation of Legal Briefs	15,199	17,392	17,400	17,400
Legal Consultation	142,202	153,458	153,500	153,500
Legal Memos 1/	...	9,572	9,600	9,600
Collection of overdue debts ($000's)	$16,100	$10,000	$6,100	$6,000
Sanctions Workload: 2/				
Notices of Intent to Fine:				
- Received	...	4,905	9,800	19,600
- Completed	...	4,652	9,300	18,600
Consultations and Legal Advice Completed	...	32,858	35,000	40,000
Legal Opinions and Memoranda	...	5,446	6,000	7,000
Training Completed	...	1,333	1,500	1,700
Administrative Law Judge Cases:				
- Received	...	1,088	1,300	1,500
- Completed	...	776	900	1,100
Administrative Law Judge Case Appearances Completed	...	485	600	800
Other Administrative Law Judge Materials Completed	...	7,608	9,000	11,000

1/ Legal Memos completed is a significant workload measure that was not reported in previous years.

2/ No sanctions workload statistics were recorded until 1989.

Other accomplishments include:

Sanctions

Establishment of a Mock Hearing Program which has ensured the quality of the cases being litigated. As a result the INS has received favorable decisions in all cases tried before an administrative law judge to date. These decisions are crucial to the development of employer sanctions law.

Creation of Employer Sanctions Litigation and Computerized Forms Manuals. For the first time in the history of the INS there is a litigation manual that provides field attorneys with a ready reference tool on how to prepare for and conduct a sanctions hearing. This has proven to be an effective time-saver in that it reduces the amount of research time spent by an attorney in preparation for a case. The Computerized Forms Manual provides forms for pleading, discovery requests, and motions. The forms are available through the computer system (AMICUS) to which all INS attorneys have access. This innovation has reduced the number of hours that are required to produce the documents necessary to litigate a sanctions case, raising the productivity of the INS attorneys.

Creation of an Employer Sanctions Legal Advisory Committee. This vehicle has been most successful in resolving complex legal issues as well as providing field offices with input on major employer sanctions legal matters. The Committee meets six times a year.

Creation of a Comprehensive Employer Sanctions Attorney Training Course. Over 120 Service attorneys have been trained in this program. As a result of this training INS Sanctions' attorneys are better able to prepare employer sanctions cases. This level of preparation has enabled the Service to settle rather than litigate approximately 80 percent of all sanctions cases. This course has received approval from most state bar associations having a continuing legal education requirement.

Publication of the Employer Sanctions Newsletter. This publication, now in its second year, provides a communications link between the General Counsel's Office and all Service personnel in the field. It publishes summaries of recent sanctions decisions, regulations, and sanctions developments around the country. It also lists a calendar of scheduled sanctions trials.

Criminal Aliens

Last year, the General Counsel established a Criminal Enforcement Division to work with the internal INS investigative units and to advise and train INS Special Assistant U.S. Attorneys. The division staff has begun revision of the Service's search and seizure manual, and is preparing a manual for all U.S. Attorneys dealing with the trial of immigration related offenses. The Division maintains close relations with the various sections of the Department of Justice's Criminal Division. Further, the staff reviews all undercover operations and provides planning and policy guidance regarding criminal enforcement priori-ties. During the past year, the number of INS attorneys assigned to various U.S. Attorney offices to prosecute aliens involved in criminal activity has increased from five to 14.

INS criminal attorneys also worked with the Executive Office of Immigration Review and representatives of the State penal systems to set up a program to identify criminal aliens incarcerated in state institutions and bring them to a deportation hearing prior to their release.

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Pos.	WY	Amount
Legal Proceedings......	487	458	$30,193	466	438	$28,993	-21	-20	-$1,200

Program changes of -21 positions, -20 workyears, and -$1,200,000 are requested in order to meet budget targets established by the Administration and more closely align authorized positions with funded workyears.

Activity: Program Direction	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount

Total....................	554	521	40,450	554	521	42,115	504	473	52,131	-50	-48	10,016

This activity provides for the overall administration and management of the Service.

Activity: Program Direction	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Executive Direction and Control...........	99	93	$6,954	99	93	$7,141	92	86	$6,858	-7	-7	-$283

Long Range Goal: Increase the effectiveness of the Service through the use of Mission Plan goals and strategies; formulate and coordinate meaningful and consistent policy; provide program direction throughout all levels of the Service; and evaluate policy with a view toward recommending practical changes.

Major Objectives:

Provide for continuity, coordination and control of the overall management and administration of INS.

Direct Servicewide policy and implementation responsibilities.

Implement Immigration Reform.

Improve agency responsiveness through continued enhancement of management systems including:

- maintaining and refining delegations of authority and requirements for accountability for national policy direction, regional implementation, and district and sector execution, including appropriate control of resources;

- continuing to emphasize and institutionalize INS' Management by Objectives (MBO) system with further integration between mission and priority planning and systems of resource allocation and control; and continuing rapid development of information systems to meet the needs of management and immigration policy formulation.
- Increase leadership in the formulation of national immigration policy.

Base Program Description: The function of this program is to effectively execute the provisions of the Immigration and Nationality Act and related policies through the development and implementation of immigration programs and the management of resources. Included in this program are duties related to: (1) providing executive direction and control of the service; (2) providing management to the service in the areas of legal counseling, legal opinions, contracting, Equal Employment Opportunity and litigation; (3) furnishing accurate and prompt responses to Congressional and public inquiries; (4) administering and maintaining an effective budgeting system, and (5) developing and evaluating policies and systems to improve the effectiveness of Service programs.

Accomplishments and Workload: Accomplishments of the Executive Direction and Control program are presented in the following table:

Item	1988	1989	Estimates 1990	 1991
Congressional Affairs:				
Telephone replies	26,068	24,108	24,000	24,000
Written replies	5,687	5,389	6,000	6,000

Major areas of emphasis have been improved. More effective management of the agency and enhanced operational effectiveness have been achieved through the concentration of effort on high-priority activities and immigration policy leadership.

Program Changes:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Executive Direction and Control...............	99	93	$7,141	92	86	$6,858	-7	-7	-$283

Program decreases of -7 positions, -7 workyears and -$283,000 are necessary for the Immigration and Naturalization Service to meet budget targets established by the Administration.

	1990 Appropriation Enacted			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Administrative Services...	455	428	$33,496	455	428	$34,974	412	387	$45,273	-43	-41	$10,299

Long Range Goal: Provide the full-range of administrative support services to all programs on a timely basis in compliance with laws, policies, and external and internal requirements.

Major Objectives:

Provide personnel and equal opportunity support services and program direction.

Provide accounting support services and program direction.

Provide property management, procurement support and program direction.

Provide overall management direction and control for all management programs and the full-range of security, safety and health support activities.

Base Program Description: The function of this program is to provide for the development, implementation, direction, evaluation and operation of administrative support systems and services that meet internal operational and managerial needs and externally mandated requirements. The major functions within this program include: personnel; accounting; equal employment opportunity; procurement; property management; fleet mangement; security and health; and other miscellaneous general services which benefit all programs within INS.

Accomplishments and Workload: Accomplishments of Administrative Services program are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Personnel Actions	72,245	92,365	114,000 1/	143,000 1/
Bills	67,171	27,034	28,000	28,700
Vouchers	199,641	254,929	256,000	257,000
Collection of Fines, Fees, etc. ($000's)	479,400	371,878 2/	372,000 3/	380,000 3/
EEO Eval. & Asst. Mgmt. Officials	420	458	545	583

1/ Increases in personnel actions are due to normal changes in the personnel and pay status of employees and the hiring of temporary and intermittent employees.

2/ Decrease due to termination of temporary resident phase of the Legalization program.

3/ Decreases in the collection of fines and fees are due a the lower percentage of application fees being collected and the additional amount of time being spent on the processing of fines against airlines.

Program Changes:

	1991 Base Perm. Pos.	1991 Base WY	1991 Base Amount	1991 Estimate Perm. Pos.	1991 Estimate WY	1991 Estimate Amount	Increase/Decrease Perm. Pos.	Increase/Decrease WY	Increase/Decrease Amount
Administrative Services	455	428	$34,974	412	387	$45,273	-43	-41	$10,299

In 1991, funding is requested to replace those vehicles that exceed the Federal Property Management Regulation's replacement criteria in the Border Patrol and the Detention and Deportation programs. Many of these vehicles are in the 100,000 to 200,000 mile range and are uneconomical to maintain. The replacement vehicles will contribute to efficiency in operations that require the use of motor vehicles for patrolling the immediate border, traffic checks on highways, and transporting detained aliens.

The $8,437,000 requested for replacement vehicles will allow the Border Patrol program to purchase 355 vehicles at a cost of $5,878,000 and the Detention and Deportation program to purchase 57 vehicles at a cost of $2,559,000.

Program decreases of -43 positions, -41 workyears and -$1,360,000 are necessary for the Immigration and Naturalization Service to meet budget targets established by the Administration.

Immigration and Naturalization Service

Salaries and Expenses

Status of Congressionally Requested Studies, Reports, and Evaluations

1. The Senate Appropriations Committee Report 101-144 required the Immigration and Naturalization Service to alleviate delays at the Honolulu International Airport by filling existing vacancies, adding positions as required, and ensuring that sufficient inspectors at the airport are bilingual in English and Japanese. The Committee further required the Service to report to the Committee by April 1, 1990, on progress in taking corrective action.

   The Service will submit the report by April 1990 as required. Plans have been developed to increase staffing at the airport, subject to approval of a reprogramming of funds to augment the resources available from the Immigration User Fee Account. A substantial portion of the existing officer staff is bilingual and capable of conducting primary inspections interviews in Japanese. The new visa waiver form, I-791, has been printed in Japanese and has been distributed. These actions will facilitate the inspection of all passengers and will reduce delays.

2. The Senate Appropriations Committee Report 101-144 directed the Immigration and Naturalization Service to provide quarterly reports on refugee approvals and rejections worldwide. Quarterly reports were also required regarding staffing needs and availability for refugee processing including workload assumptions. These reports are being provided as required.

3. The Senate Appropriations Committee Report 101-144 notes that Oakdale, Louisiana, will eventually have more than 2,400 federal inmates within its city limits, with an accompanying risk of breakouts and emergencies. In view of this, the Committee directed the Service to explore the feasibility of an emergency warning system for Oakdale residents in the vicinity of the detention facility.

   The Service was to report to the Appropriations Committee by January 1, 1990, identifying the utility and cost for implementating a computerized safety system. This study has been delayed. It is anticipated that it will be completed by the end of February 1990.

4. The Conference Report (House Report 101-299), on the 1990 Department of Justice Appropriation required the Service to report to the House and Senate Appropriations Committees regarding the effectiveness of an expanded prototype of the Automated Fingerprint Identification System (AFIS), as well as the merits of the system on a region-wide basis. The report is due by April 15, 1990. Full implementation of the prototype at six additional sites is projected to take place in the fourth quarter of FY 1990. Therefore, the final report on the effectiveness of implementation at the additional sites will be delayed until the fourth quarter. An interim report will be provided by April 15, 1990.

1/ The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

Justification of Adjustments to Base

(Dollars in thousands)

Mandatory increases:	WY	Amount
1. Annualization of 154 new positions..	77	$2,320

This provides for the annualization of 154 positions approved for the Training and Detention and Deportation programs in the 1990 Congressional Budget.

	Approved 1990 Increase	Annualization Required
Annual salary rate of 154 approved positions..............................	$3,224	...
Less lapse (50%)........................	-1,598	$1,598
Other compensation.....................	325	259
Net compensation.....................	1,951	1,857
Associated employee benefits...........	461	463
Total costs subject to annualization.	2,412	2,320

	WY	Amount
2. Annualization of 109 additional positions	55	2,588

This provides for the annualization of 109 additional positions provided to the Investigations program for the President's Anti-Crime Initiative.

	Approved 1990 Increase	Annualization Required
Annual salary rate of 109 approved positions..............................	$3,414	...
Less lapse (50%)........................	-1,707	$1,707
Other compensation.....................	295	295
Net compensation.....................	2,002	2,002
Associated employee benefits...........	586	586
Total costs subject to annualization.	2,588	2,588

		WY	Amount
3.	One additional compensable day The annual salary rate for Federal employees is based on 260 paid days. During 1991 there is one more compensable day (261) that 1990 (260). Appropriate personnel benefits are included in this figure.	...	$1,710
4.	1990 full-year pay increase impact on 1991 This request provides for the full-year pay increase of 3.6 percent as contained in the general provisions of the U.S. Treasury, Postal Services and General Government Appropriations Bill, 1990, for civilian and military personnel to be effective in January of 1990. The Department will be required to absorb the total pay raise in 1990. The requested increase of $19,858,000 for full-year funding in 1991. Note: The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 payraise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and build into the 1991 base.	...	19,858
5.	1991 pay increase This request provides for 50 percent of the proposed 3.5 percent pay increase effective in January 1991. 1/ The amount requested, $6,352,000, is half the cost of the pay increase for approximately three-quarters of the year assuming a 50 percent absorption.	...	6,352
6.	Senior executive service pay increase This request represents the 1991 costs of the pay increase for executive level employees and senior executive service employees. This pay raise is to be effective in January of 1990, but will be absorbed completely for the first year. In 1991, an increase of $242,000 is necessary for this requirement.	...	242
7.	Special salary rates This request provides increases as authorized by law in 5 U.S.C. 5303. The Office of Personnel Management (OPM) has approved these rates for positions where retention and recruitment of qualified applicants is a problem. The Department's request represents coverage of 33 authorized special rates.	...	1,446

1/ The 1991 budget requests an increase to fund reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected as a mandatory increase and built into the 1991 base.

	WY	Amount
8. Administratively Uncontrollable Overtime (AUO) P.L. 101-173 increased the limit on AUO payments from 25 percent of a GS-10 step 1 to 25 percent of total compensation. Since most law enforcement agents in the Department are compensated at levels above a GS-10 Step 1, this act increases the Department's AUO payments substantially. Total increased costs for the Immigration and Naturalization Service are $11,071,000.	...	11,071
9. Health benefits The Federal Employees' Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1990, the actual contribution to health insurance increased. The requested increase of $4,780,000 provides funds for actual increased costs from pay period 1 to pay period 2, projected for a full year.	...	4,780
10. Federal Employees' Retirement System (FERS) This request provides for the additional costs in 1991 necessary to continue the implementation of the Federal Employees' Retirement System Act of 1986, P.L. 99-335. The Act established a retirement program for Federal civilian employees hired after December 31, 1983, who are covered by social security for employees under the Civil Service Retirement System who chose to transfer to the new system. The increased requirement for 1991 is based on actual agency payments for the basic FERS annuity, Social Security and thrift savings.	...	1,332
11. Federal Employees' Compensation Act (FECA) - Workers' Compensation This increase reflects the billing provided by the Department of Labor for the actual costs in 1989 of employees' accident compensation. The 1991 amount will be $945,000 over the 1990 base.	...	945
12. GSA rent GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $2,192,000 is required to meet our commitment to GSA.	...	2,192
13. Government Printing Office (GPO) printing costs The GPO is currently projecting a 7 percent increase over the 1990 printing costs of $2,114,000. An additional $148,000 will be required in 1991.	...	148

	WY	Amount
14. Employee data and payroll services Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems, maintenance and payroll accounting, are based on the number of employee records maintained. The rate of $188.23 per record in 1990 will be raised to $199.52 per record for 1991. The change is based on anticipated uncontrollable cost increases of 6 percent for the operation of the Justice Employee Data Service. An increase of $152,000 will be required in 1991.	...	152
15. Foreign allowances Allowances for Government employees in foreign areas are determined by the Department of State (DOS). The State Department anticipates a 10 percent increase in 1991. The requested increase of $387,000 provides 10 percent more than the $3,870,000 budgeted for 1990.	...	387
16. Distributed administrative support Under the Foreign Affairs Administrative Support agreement an annual charge is made by the DOS for administrative support items. The amount of this charge is determined by the DOS. The DOS advises that a 10 percent increase in foreign operations costs is anticipated. The increase of $141,000 is based on a 1990 base availability of $1,410,000.	...	141
Total mandatory increases	132	$55,664

Decrease (Automatic non-policy):	WY	Amount
1. Nonrecurring costs for expansions of the Machine Readable Visa (MRV) program and the Automated Fingerprint Identification Systems (AFIS)	...	-$7,000
2. Nonrecurring costs of personnel equipment for 154 positions received in 1990	...	-249
3. Nonrecurring costs of vehicles required to support Detention operations	...	-2,356
4. Nonrecurring costs of employee transfers associated with 154 positions received in 1990	...	-487
5. Nonrecurring costs associated with full field investigations for 154 positions received in 1990	...	-263
6. Nonrecurring costs of personnel equipment for 109 Investigations positions	...	-1,234
7. Nonrecurring costs for vehicles	...	-833
8. Nonrecurring costs for radios	...	-80
9. Nonrecurring costs associated with full field investigations for 109 Investigations positions	...	-188
10. Nonrecurring costs savings due to conversion to FTS 2000 In 1991, the General Service Administration (GSA) is to have the FTS 2000 system fully implemented. At present GSA projections indicate costs for current FTS minute usage charges will decrease for 34 cents per month to 18 cents per minute. The requested reduction of $1,879,000 from the 1990 base, represents this decrease.	...	-1,879

Immigration and Naturalization Service

Immigration Legalization

Summary Statement

Fiscal Year 1991

The Immigration Reform and Control Act of 1986, Title II, Sections 201-204, established a Legalization program which provides temporary resident status to aliens who entered the U.S. illegally or lapsed into illegal status prior to January 1, 1982, who resided continuously in the U.S. since then, and who are not excludable. It also adjusts the status of these people to permanent resident status after 18 months of temporary status upon showing general admissibility and basic citizenship skills. Section 202 further provides for adjustment to permanent resident status of certain Cubans and Haitians who entered the U.S. prior to January 1, 1982.

To support the final year of this program in 1991, the Immigration and Naturalization Service will require $37,568,000 and 488 reimbursable workyears. The cost of the program is to be paid from fees collected from applicants for permanent resident status and from funds carried forward from the temporary resident phase of the program.

Section 201 of the Act calls for the Attorney General to prescribe a fee schedule to charge aliens for filing for adjustment. The fees collected will be available without fiscal year limitation, to cover all the administrative and other expenses incurred in connection with processing applicants for Legalization (except adjusting Cubans and Haitians), and will include expenses of the Federal Bureau of Investigation (FBI) and other Federal agencies.

Immigration and Naturalization Service

Immigration Legalization

Justification of Program and Performance

Activity Resource Summary
(Dollars in thousands)

Activity: Immigration Legalization

Long Range Goal: To receive, process, review and subject to final action all applications submitted for temporary and permanent resident status under the Immigration Legalization Program, authorized by the Immigration reform and Control Act of 1986, P.L. 99-603, Title II, Sections 201-204.

Major Objectives:

- Operate temporary legalization offices in key locations throughout the country to receive applications for permanent resident status.
- Operate four regional processing centers to receive completed applications from the legalization offices, review, and approve or deny the applications.
- Enter into deportation proceedings those aliens who attempt to acquire permanent resident status fraudulently.
- Provide high speed data and communications systems support for the various offices to support the application receipt, review, and decision making processes.
- Provide reliable and accurate information and records support for the various offices so that information needed for the review of applications is correct and provided in such a way that processing is expedited.
- Provide necessary intelligence and document analysis to prevent the approval of fraudulent applications supported by falsified documents.
- Provide the representation needed by the Service in all legal proceedings generated by the program, primarily due to deportation proceedings and hearings that will result from the denials of applications for permanent resident status.
- Assure adequate management and administrative support is available in the field and in the Central Office so that the operations of the legalization offices and regional processing centers are efficient and services to those offices are timely.

Base Program Description:

On May 5, 1987, the legalization offices began accepting legalization applications from aliens. Applications were reviewed for completeness and interviews of aliens and alien families were conducted. If claims appeared legal, then applicants were recommended for approval and work authorization cards were issued. Voluntary agencies were paid a fee by the Service for assisting aliens in completing their application packages and in scheduling processing through INS offices.

After INS accepted an alien's application for temporary residence, final approval was reserved until name, fingerprint and other security checks could be made. These checks were made at one of four regional processing facilities. If the application was approved, a temporary resident card was issued. Fraud profiles were developed and matched against incoming alien applications. To the greatest extent possible, fingerprint checks with the FBI and State law enforcement officials were done on a tape to tape match. Data entry was a major cost item at these regional processing facilities. The process of converting temporary residents to permanent residency will require a similar procedure.

There are adjudications, records, and intelligence personnel at the regional processing facilities. Adjudications staff will review all recommended denials and sample the recommended approvals. Intelligence personnel use sophisticated document examination techniques to analyze alien applications and supporting materials in order to detect fraud.

Aliens who are denied temporary or permanent resident status will either voluntarily leave the country or enter into the appeals process. In the Legal Proceedings program, attorneys represent the agency in litigation arising from the new program in appeals and in cases resulting from denials of applications for temporary and permanent resident status.

The Construction and Engineering program supports the leasing of the legalization offices and the regional processing centers. Currently, 39 legalization offices are open. An additional 37 legalization offices are now co-located with district offices or suboffices to maintain a presence in areas with insufficient workload to justify a separate legalization office. In 1991 39 legalization offices are expected to be open at the beginning of the year to receive applications and to provide assistance to applicants in submitting their required materials. These offices will be closed during the year after the expiration of the application submission deadline.

The Administrative Services program provides limited administrative support to the Central Office and the regional offices to assist in managing legalization operations. Non-personnel resources are provided for supplies, guard services contracts for the legalization offices, background investigations for temporary INS employees, printing, supplies and various other expenses needed to support the ongoing program.

In 1991, a reduction of 90 positions and 233 workyears is proposed. This is consistent with the phasedown of the program. Staff will be needed to complete the processing of applications for permanent status and close the program down. Other changes reflected in the 1991 request include reductions due to the nonrecurring cost of equipment purchases, contract services which have been completed, and a phasing down of operations as a result of the completion of the permanent resident phase of the legalization program.

Accomplishments and workload: The workload for the Immigration Legalization Program is presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Applicants for temporary resident status	1,113,665	273,882	...	...
Applicants adjusted for temporary resident status	1,086,858	415,730	35,167	...
Applicants for permanent resident status	...	808,271	725,000	117,000
Alien files opened	1,113,665	273,882	...	...
General searches completed	5,011,493	1,369,410	600,000	...
Information services inquiries	3,467,246	1,206,276	500,000	250,000
Cases received for examination at document laboratories	11,308	5,818	245	...
New INS data inputs at El Paso Intelligence Center (EPIC) processed	1,814	3,375	3,400	3,400
Queries researched at EPIC	2,465	3,375	3,400	3,400
Positive INS responses to queries received by EPIC provided	389	588	600	600

Workload figures are based on planning assumptions developed for the Immigration Legalization Program, taking into consideration the interrelationships of the indicators and the completion of the temporary resident phase of the program. In November 1988, the permanent resident phase began and will continue for two years. The program ends in 1991 following the completion of processing of all applications.

Immigration and Naturalization Service
Status of Congressionally Requested
Studies, Reports, and Evaluations
Under the Immigration Reform
and Control Act of 1986

1. Visa Waiver Pilot Program

Under the Act, the Attorney General and the Secretary of State are authorized to conduct a pilot program for certain nationals from up to eight low-risk countries to enter the United States for up to 90 days without non-immigrant visas. Prior to implementation of a pilot project, the Attorney General must certify to the Congress that a system to monitor such entries and subsequent departures is in place. A report evaluating the visa waiver program and its impacts must be made to the Congress no later than two years after the start of the program.

Status: INS is continuing its efforts to enhance and expand its automated systems to support a visa waiver program. In conjunction with this effort, the Anti-Drug Abuse Act of 1988 included funding of a pilot program for the development of a machine readable travel document. These efforts will be coordinated as required in view of the similarities of their objectives.

2. Triennial Report on Immigration Impacts

The Act formally assigns responsibility for a Triennial Report on Immigration to the President. Actual responsibility for the preparation of the report is shared by the various affected Federal agencies, including INS. The INS is responsible for gathering and analyzing data on the numbers and types of aliens legally admitted to the United States and an estimate of the resident illegal alien population. The first report to the Congress was due in January 1989 and an updated report is due every three years thereafter.

Status: The first triennial report was completed and submitted to Congress by the White House.

3. Report on Implementation of Employer Sanctions

For three years after the implementation of employer sanctions, the INS will report annually to the Congress on the implementation and impacts of this program. Included in the reports will be an analysis of the adequacy of the employment verification system, the results of demonstration projects, the impact on the flow of illegal aliens and violations of nonimmigrant visa status and the impacts on the U.S. labor market (to be done in cooperation with the Departments of Labor and Health and Human Services and the Department of Justice Office of the Special Counsel).

Status: The report is in the final draft stages pending submission and consolidation of the Department of Labor sections into the report. The final report will be submitted to Congress in the early spring, 1990.

Report on the Legalization Program

Two legalization reports, due three and five years following ICRA passage are required by the Immigration Reform and Control Act. The first report, which will provide the Congress with a description of the legalized population and include information on their origins and demographic characteristics, is the responsibility of INS.

Status: The survey of legalized aliens conducted under contract by Westat, Inc. was completed in the summer of 1989. Data analysis has been completed and a second draft of the report has been finalized. The report will be submitted to Congress in the early spring, 1990.

Immigration and Naturalization Service

Immigration User Fee

Summary Statement

Fiscal Year 1991

The Immigration and Naturalization Service (INS) will require 1,524 workyears and $110,000,000 in 1991 to continue implementation of this program. The cost of this program is to be paid entirely from fees collected from each individual arriving in the United States aboard a commercial aircraft or vessel from foreign locations (other than Mexico, Canada, or adjacent islands).

The Immigration User Fee Account was established in the 1987 Appropriation Act for the Department of Justice, (P.L. 99-591). Section 205 of the law directs the Attorney General, effective December 1, 1986, to charge and collect a $5 user fee from each individual arriving in the United States, aboard a commercial aircraft or vessel, from foreign locations (other than Mexico, Canada, or adjacent islands). All fees collected are to be deposited in an Immigration User Fee account. Section 205 of the law also directs the Secretary of the Treasury to reimburse, out of the Immigration User Fee account, the Immigration and Naturalization Service for the amounts paid to: provide immigration inspection and pre-inspection services for commercial aircraft and vessels; provide overtime immigration inspection services for passengers of commercial aircraft and vessels, administer debt recovery, including the establishment and operation of a National Collections Office; expand and operate information systems for non-immigrant control and debt collection; detect fraudulent documents used by air and sea passengers traveling to the United States; and provide detention and deportation services for excludable aliens arriving on commercial aircraft or vessels.

In conformance with the specific provisions of the legislation and the program objectives outlined in the Senate Appropriations Committee Report 99-425, the Immigration and Naturalization Service is able to staff airport and seaport facilities at a level that will ensure that immigration inspection services are sufficient to meet the demands of the travelling public, that the fees are collected and deposited in a timely manner, and that a consistently effective enforcement posture is maintained in the inspection of all arriving aircraft and vessels.

Immigration and Naturalization Service

Immigration User Fee Account

Justification of Program and Performance

Activity: **Immigration User Fee Account**

This budget activity includes resources for the payments of specific expenses necessary in providing immigration inspection and pre-inspection services for commercial aircraft and vessels, providing overtime immigration inspection services for commercial aircraft and vessels, administering debt recovery, expanding and operating information systems for non-immigrant control and debt collection, detecting fraudulent documents, and providing detention and deportation services for excludable aliens arriving on commercial aircraft or vessels.

Long Range Goal: To utilise the capabilities provided in the establishment of the Immigration User Fee Account (P.L. 99-591); to provide and maintain sufficient resources to carry out immigration inspection and pre-inspection services for commercial aircraft and vessels; to administer debt collection activities and enhanced data systems support for non-immigrant control and debt collection, and maintain an effective enforcement posture regarding the inspection of passengers on all arriving aircraft and vessels.

Major Objectives:

-Pay expenses incurred in the inspection of aliens and citizens arriving from foreign territories via air or sea.

-Expand pre-inspections activities to other locations worldwide.

-Increase the Inspections program staff as required at selected airports and seaports.

-Improve the administration of debt recovery, including the establishment of a National Collections Office.

-Develop new data systems, and expand and upgrade existing ones to monitor and control non-immigrant travel, detect fraudulent documents, and manage debt collection.

-Provide for the detention and deportation of excludable aliens arriving on commercial aircraft or vessels.

-Increase resources devoted to conducting investigations of major smugglers using air carriers.

-Conduct training for representatives of foreign carriers and immigration authorities on the detection of fraudulent documents.

Base Program Description:

The user fee provision, contained in P.L. 99-591 was formulated to alleviate this imbalance by providing a mechanism to allow for sufficient resources for INS to staff airport and seaport facilities at a level that will insure that inspections services are sufficient to meet the demands of the traveling public and that a consistently effective enforcement posture is maintained in the inspection of all arriving aircraft and vessels.

The funding estimate for 1991 will enable INS to be reimbursed for expenses related to the inspection of aliens and citizens arriving at airports and seaports from non-contiguous foreign nations, i.e., the cost of existing and new officer positions and related inspectional overtime, the provision of automated data support, costs related to forensic document analysis, fraud detection and improved debt collection, and expenses associated with the detention and deportation of excludable aliens arriving on commercial aircraft or vessels.

Since the inception of the User Fee program, steady growth has been experienced in foreign air and sea travel, thereby increasing the demand for inspections services. This has required increased resources and staffing by INS, primarily in the Inspections program and in support programs.

Accomplishments and workload: The workload of the Immigration User Fee Fund Account is presented in the following table:

	1988 Actual	1989 Actual	1990 Estimate	1991 Request
Total persons inspected at airports and seaports......	48,351,522	51,163,204	54,000,000	54,800,000
Smugglers apprehended (anti-smuggling)................	368	220	225	230
Deportable aliens apprehended (investigations)........	432	168	170	170
Cases completed (investigations)......................	31	42	42	42
Cases completed (anti-smuggling)......................	300	128	147	161
Convictions of smugglers (total)......................	225	78	140	155
Number of detention days..............................	51,000	214,937	237,565	237,565
Average stays in detention (days).....................	4.3	26.6	29.4	29.4

Immigration and Naturalization Service

Immigration Examinations Fee Account

Summary Statement

Fiscal Year 1991

The Immigration and Naturalization Service (INS) is requesting 1,649 workyears and $90,000,000 for adjudication and naturalization services. Consistent with Congressional intent, the cost of these services is to be funded from fees collected from individuals applying for benefits under the provisions of the Immigration and Nationality Act.

The Immigration Examinations Fee Account was established in the Department of Justice Appropriation Act, 1989 (P.L. 100-459). Section 209 of the Act amends 8 U.S.C. 1356 by establishing a separate account into which the Attorney General may deposit adjudication fees collected under the regulations governing INS. All deposits to the account are paid out of this appropriation for expenses in providing immigration adjudication and naturalization services. The resources to be made available are used to adjudicate applications and petitions for benefits under the Immigration and Nationality Act and to provide necessary support to the Adjudications and Naturalization program.

Section 303 of the Immigration Reform and Control Act of 1986 provides for a Replenishment Agricultural Worker (RAW) program. Based on a joint determination between the Departments of Labor and Agriculture, in consultation with the Department of Commerce, the number of RAW workers required in the U.S. will be identified annually. This will occur by October of each year and may be done at other times during the year should an agricultural worker shortage emergency occur. Once this number is identified, INS will adjust its workload and resource estimates accordingly.

Immigration and Naturalization Service

Immigration Examinations Fee Account

Justification of Program and Performance

Activity: Immigration Examinations Fee Account

This budget activity includes resources for the payments of specific expenses necessary to adjudicate applications and petitions for benefits provided under the Immigration and Nationality Act and to naturalize eligible aliens in a timely, efficient and equitable manner.

Long-Range Goal: To utilize the authorities provided in the establishment of an Immigration Examinations Fee Account (P.L. 100-459); to provide and maintain sufficient resources to facilitate the efficient, timely adjudication of applications and petitions for benefits provided by law; and to naturalize all eligible applicants.

Major Objectives:

Provide automated capabilities to Regional Service Center (RSC) and District Office (DO) operations to achieve currency, quality, consistency, equity, and efficiency objectives detailed below.

Assure that benefits are provided to those entitled under the Immigration and Nationality Act, and denied to those not entitled, in a prompt and courteous manner and without undue burden on the public.

Attain and maintain a current workload in adjudicating applications and petitions for benefits provided by Law.

Attain and maintain currency in naturalization and citizenship cases.

Manage resources in response to workload so that applicants will receive decisions of consistent quality and timeliness in all geographic jurisdictions of the Immigration and Naturalization Service.

Assure adequate support to perform Adjudications and Naturalization activities.

Base Program Description:

The Immigration Examinations Fee account, established by Public Law 100-979, provides for the depositing into a separate U.S. Treasury account, all adjudications fees collected under the regulations governing the Immigration and Naturalization Service. All deposits to the account are to be available until expended for the adjudication of applications and petitions for benefits and for necessary support for the adjudications and naturalization programs. Beginning in 1990, the adjudications and naturalization activities, previously funded under Salaries and expenses, are funded in this account.

The workload of the Adjudications and Naturalization program is expected to change in 1990 and subsequent years. This increase is primarily the result of the Legalization and Special Agricultural Workers programs provided for in the Immigration Reform and Control Act of 1986, P.L. 99-603, and the conditional residence required in the Immigration Marriage Fraud Amendment of 1986, P.L. 99-639. In 1991 it is estimated that 1,649 workyears and $90,000,000 will be required to address this workload. Without these additional resources, backlogs will develop in this program, the quality of service provided to the public will deteriorate, and the major objectives of this program will not be achieved.

With a permanently larger base of legal aliens applying for benefits, the Adjudications and Naturalization program is expecting a permanent workload increase. As aliens become permanent residents and are naturalized, it is expected that they will apply for benefits at least at the same rate as other legal aliens have.

Data systems improvements will provide enhanced access to Service databases to support Adjudications processing. Expansion of the Fee and Application Receipt Entry System/Computerized Application System, the Marriage Fraud System, and the Student/Schools System are essential components of this enhancement.

Additional records, legal and intelligence program personnel will be added at the RSCs to improve RSC operations.

Accomplishments and Workload:

Accomplishments of the Adjudications and Naturalization program are presented in the following table:

Item	1988	1989	Estimates 1990	 1991
Adjudications:				
Applications and Petitions received......................	2,245,487	2,440,682	2,800,000	3,000,000 1/
Applications and Petitions completed (a+b)2/.............	2,286,787	2,603,481	2,845,000	3,025,276 1/
a. completed within program....	1,375,671	1,635,763	1,925,000	2,105,276
b. Completed using immigration inspector standby time at ports of entry............	911,116	967,718	920,000	920,000
Pending, end-of-year............	408,075	245,276	200,276	175,000

Naturalization:	1988	1989	Estimates 1990	 1991
Applications and petitions received..........................	410,000	422,933	420,000	420,000
Applications and petitions completed.......................	406,011	437,832	440,000	440,000
Pending end-of-year..............	215,630	226,992	206,992	186,992
Persons naturalized..............	241,891	236,269	250,000	275,000

1/ Receipts and completions reflect increases in applications and petitions submitted by newly legalized aliens, aliens affected by the Marriage Fraud Amendment of 1986, and aliens affected by other provisions of IRCA.

2/ Includes Border Crossing Cards.

3/ The 1988 and 1989 workload actuals are being displayed in the Immigration Examinations Fee Account even though at that time it was part of the salaries and expenses budget.

Program Changes:

This submission reflects a decrease in the operating level of the program which was related to fee receipt projections available in the first quarter of 1990. As the receipt projections for FY 1990 and FY 1991 are reassessed and revised upward, the operating level of the program will also increase pending notification of the Congress through a Reprogramming Notification as required by law.

Opening Statement

Mr. Smith. The new Commissioner of the INS is Mr. Gene McNary. Since this is your first time before the Subcommittee, we will insert your biographical sketch into the record.

[The biography of Mr. McNary follows:]

Gene McNary

Gene McNary was sworn in as Commissioner, U.S. Immigration and Naturalization Service (INS) on October 26, 1989, following nomination by President George Bush and unanimous confirmation by the U.S. Senate. Prior to that appointment, he was elected to four terms as Chief Executive, St. Louis County, Missouri, 1975-1989. His previous public offices include two terms as Prosecuting Attorney, St. Louis County, 1967-1974, and a term as Assistant Public Defender, St. Louis County, 1963-1966.

Gene McNary was born in Muncie, Indiana on September 14, 1935. He attended the Executive Institute for Advanced Study at Washington University, St. Louis, Missouri; completed courses in International Affairs Program, Washington University; J.D., Indiana University, Bloomington, Indiana; B.S., Finance, Indiana University. He served in the U.S. Army Reserve.

He served as President of the Missouri Association of Prosecuting Attorneys. He served on various boards, including the East-West Gateway Coordinating Council, the Missouri Association of Counties, and the Regional Commerce and Growth Association. He established the Friendship Alliance with Beijing, China. He was the GOP Primary candidate for Governor of Missouri in 1972 and 1984 and the GOP candidate for U.S. Senate in 1980. He served as Chairman of the Missouri President Ford Committee, 1975-1976 and he was the St. Louis County Chairman, Bush/Quayle 1988.

Gene McNary is married to Susan McNary.

Mr. Smith. Do you have a statement?

Mr. McNary. Yes, sir, Mr. Chairman.

I would like to first of all introduce the INS people I brought with me. Tom Perrelli, Comptroller, is seated here to my right. Don Mueller is the Budget Director. Bill Cook, General Counsel; Edward Lynch is Special Assistant in charge of Policy Development. Lawrence Weinig, Acting Associate Commissioner for Examinations. Dr. Elizabeth MacRae, Associate Commissioner for Information Systems; and Mike Williams, who is Acting Assistant Commissioner in charge of the Border Patrol. I am hopeful that, with this team, we will be able to answer the questions that are presented.

Mr. Chairman, I am pleased to have the opportunity to appear before you in support of the 1991 budget request for the Immigration and Naturalization Service. While I have submitted a more detailed statement for the record, I would like to very briefly summarize our budget request.

This budget request includes 12,522 positions, 12,260 workyears, $884,349,000. This includes an increase of 134 positions and $42 million over the 1990 post-sequester appropriation level. When funds from the non-appropriated fee accounts are taken into consideration, total resources available to INS in 1991 would be over $1.1 billion.

The 1991 budget request will enable us to deal with the many critical and sensitive issues involved in administering the Immigration and Nationality Act.

Immigration and Naturalization Service

Immigration Emergency Fund

Summary Statement

Fiscal Year 1991

The Immigration Emergency Fund, authorized by the Immigration Reform and Control Act of 1986 and funded by Public Law 101-162, provides for possible emergencies in border patrol and other enforcement activities, and for reimbursement to States and localities for assistance in meeting an immigration emergency, subject to Presidential determination and Congressional notification. The budget anticipates no use of the $35,000,000 appropriated in either 1990 or 1991. No additional funds are requested for 1991.

Obligations......................................	...	...	...
Outlays..	...	...	...

BASIC ENFORCEMENT

Under enforcement-related activities, we are requesting for the Border Patrol 200 positions, 75 workyears, and $16,327,000 to enhance the operations of the Border Patrol's drug interdiction efforts and to increase our interdiction of illegal aliens along the southern border. The funding will support increases in the number of drug-tracking canine teams, sensors, helicopters, and the installation of passive physical border control devices.

I would like to note that our efforts in the war on drugs continue to show impressive results. During the fiscal year 1989, Border Patrol agents made 5,441 drug seizures, with an estimated street value of almost $1.2 billion. Early indications are that this level of seizures will continue through 1990.

The budget includes $12,688,000 for construction projects that directly support the Border Patrol mission. Funding of $10 million is included for the first phase of construction of a new traffic checkpoint at San Clemente, California, which will replace the existing, inadequate checkpoint on Interstate Highway Five. In addition, the budget includes $388,000 for two traffic checkpoints in the vicinity of Marfa, Texas, strategically located on smuggling routes leading from the Big Bend National Park area. Funding of $2,300,000 is also requested to replace the overcrowded and inadequate Border Patrol stations at Brownfield, California, and Ysleta, Texas.

The funding of $8,437,000 is requested to replace 412 vehicles in the Border Patrol and the Detention and Deportation programs that exceed the Federal Property Management Regulation's replacement criteria. Agents working in these programs depend heavily on an efficient, safe, and reliable vehicle fleet.

The extensive use of temporary immigration inspectors has become a problem at the land border ports-of-entry. Because temporary inspectors only receive on-the-job training, they never achieve the performance and productivity levels of the permanent staff. This request addresses that deficiency and includes funding of $1,306,000 for the conversion of 104 temporary inspectors to permanent status.

The budget also includes $75,000 for the expansion of INS's access to the National Crime Information Center/National Law Enforcement Telecommunications System to enhance INS's efforts in successfully responding to increasing criminal alien activities.

FEDERAL DETENTION FACILITIES

With regard to Federal detention facilities, an increase of $4.5 million is requested for the construction of a 300-bed lock-down men's dormitory at our Krome, Florida, detention facility. The lock-down provisions of this structure will meet standards set by the Congress for the detention of criminal aliens, which is a significant problem for INS in Florida.

ANTI-DISCRIMINATION

With regard to anti-discrimination, provisions prohibiting employment discrimination on the basis of national origin and citizenship status are contained in IRCA. A recent GAO report estimated that 22 percent of the employers were not aware that IRCA had passed. To remedy this deficiency, $884,000 is requested for the reproduction and distribution of informational pamphlets and flyers and public service announcements to enhance public awareness of the sanctions provisions of IRCA, with particular emphasis on an anti-discrimination campaign.

Funding of $92,000 is requested to support the telephone verification project mandated by IRCA. Telephone verification will encourage employer compliance with the anti-discrimination and work authorization provisions of IRCA by providing a simple, effective means of determining a prospective employee's work eligibility.

The audit of INS, conducted by the Department of Justice Audit Staff, noted that the existing Financial Accounting and Control System (FACS) was inadequate to handle the volume of transactions being generated within INS due to the growth of the agency. In order to remedy this deficiency, the budget requests $400,000 to begin the conversion of FACS to the Department of Justice's Financial Management Information System.

OTHER PROGRAM CHANGES

Other program changes include some program decreases that are requested for INS that reflect management and productivity savings and allow the Service to meet targeted budget levels established by the Administration. In addition, reduction of $11.1 million is requested to offset costs associated with the implementation of Public Law 101-173, the act amending the method by which premium pay is determined for administratively uncontrollable overtime (AUO) duty. This reduction will be achieved by instituting cost-saving measures.

This concludes my formal statement on behalf of the Immigration and Naturalization Service. I appreciate this opportunity to present the Service's budget request to the subcommittee. My Comptroller Tom Perrelli and I will be glad to respond to any questions that you may have.

[The prepared statement of Mr. McNary follows:]

DEPARTMENT OF JUSTICE
IMMIGRATION AND NATURALIZATION SERVICE

STATEMENT OF THE COMMISSIONER
GENE MCNARY
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE, THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to have the opportunity to appear before you in support of the 1991 budget request for the Immigration and Naturalization Service. This budget request includes 12,522 positions, 12,260 workyears and $884,349,000. This includes an increase of 134 positions and $42,052,000 over the post-sequester 1990 appropriation level. When funds from the non-appropriated Legalization Fee, Immigration User Fee, and Immigration Examinations Fee accounts are taken into consideration, total resources available to INS in 1991 will be over $1.1 billion.

The 1991 budget request will enable us to deal with the many critical and sensitive issues involved in administering the Immigration and Nationality Act. The budget request includes important program increases, primarily in the enforcement area, which will allow the INS to operate more effectively.

Basic Enforcement

The 1991 budget request includes enhancements of $38,833,000 for enforcement-related activities. For the Border Patrol program, we are requesting 200 positions, 75 workyears, and $16,327,000 to enhance the operations of the Border Patrol's drug interdiction efforts, a critical element in the Administration's National Drug Control Strategy, and to increase our interdiction of illegal aliens along the southern border. The funding will support increases in the number of drug-tracking canine teams, sensors, helicopters and the installation of passive physical devices to prevent alien and drug smugglers from driving across the border and bypassing established ports-of-entry. I would like to note that our efforts in the War on Drugs continue to show impressive results. During FY 1989, Border Patrol Agents made 5,441 drug seizures with an estimated street value of almost $1.2 billion. These figures represent an increase of 2,184 seizures and almost $500 million over FY 1988 totals. Early indications are that this level of seizures will continue through 1990.

The budget includes $12,688,000 for construction projects that directly support the Border Patrol mission. Funding of $10,000,000 is included for the first phase of construction of a new traffic checkpoint at San Clemente, California, which will replace the existing, inadequate checkpoint on Interstate Highway Number Five. The new facility will accommodate 16 inspection lanes, compared to three lanes at the present location. It will eliminate traffic backups and provide both physical barriers to protect our agents, as well as an overhead walkway for officer and public safety. In addition, the budget includes resources of $388,000 for two traffic checkpoints in the vicinity of Marfa, Texas, strategically located on routes leading from the Big Bend National Park area, which are frequently used by drug and alien smugglers. Funding of $2,300,000 is also requested to replace the seriously inadequate Border Patrol stations at Brownfield, California, and Ysleta, Texas.

Additionally, funding of $8,437,000 is requested to replace 412 vehicles in the Border Patrol and the Detention and Deportation programs that exceed the Federal Property Management Regulation's replacement criteria. Agents working in these programs depend heavily on an efficient, safe and reliable vehicle fleet. Many of these vehicles are in the 100,000 to 200,000 mile range and are uneconomical to maintain.

The extensive use of temporary Immigration Inspectors has become a problem at the land border ports-of-entry. Because temporary Inspectors only receive on-the-job training, they never achieve the performance and productivity levels of the permanent staff. INS was criticized in a Department of Justice audit for its heavy reliance on temporary inspectors. This request addresses that deficiency and includes funding of $1,306,000 for the conversion of 104 temporary inspectors to permanent status.

The budget also includes $75,000 for the expansion of INS' access to the National Crime Information Center / National Law Enforcement Telecommunication System (NCIC/NLETS) to enhance INS's efforts in successfully responding to increasing criminal alien activities.

Federal Detention Facilities

As a result of provisions in the Immigration Reform and Control Act of 1986 (IRCA) and the Anti-Drug Abuse Acts of 1986 and 1988, INS is increasingly involved in the detention and deportation of criminal aliens. These changes have placed greater stress on detention facilities and personnel and have led to overcrowding in several Service Processing Centers. Problems have been most evident at the Krome Service Processing Center, located in Miami, Florida.

By Congressional directive, the Service cannot detain criminal aliens at Krome until the facility's security rating is high enough to allow it to hold potentially violent felons awaiting deportation. Because of this restriction, criminal aliens have been transported, at great cost, from Florida to other locations - either to INS-owned or contract facilities. An increase of $4,500,000 is requested for the construction of a 300-bed lock-down men's dormitory at Krome. The lock-down provisions of this structure will meet standards set by the Congress for the detention of criminal aliens. Further, a 1990 Supplemental Appropriations language request is pending to use $10 million in unanticipated assets forfeiture funds to increase detention space at five existing INS facilities.

Anti-Discrimination

For Anti-Discrimination activities, the budget request includes $976,000. Provisions prohibiting employment discrimination on the basis of national origin and citizenship status are contained in IRCA. A recent GAO report estimated that 22 percent of employers were not aware that IRCA had passed and that of those employers aware of IRCA provisions, as many as 20 percent did not clearly understand the law's major provisions. To remedy these deficiencies and increase compliance with all aspects of the law, $884,000 is requested for the reproduction and distribution of informational pamphlets and flyers and public service announcements to enhance public awareness of the

Sanctions provisions of IRCA, with particular emphasis on the establishment of an Anti-Discrimination Campaign.

Funding of $92,000 is requested to support the Telephone Verification project mandated by IRCA. This system will provide employers with a simple, effective means of determining a prospective employee's work eligibility in cases where there may be some uncertainty about an individual's work authorization documents. Telephone verification will encourage employer compliance with the Anti-Discrimination and Work Authorization provisions of IRCA by making employment eligibility easier to determine.

Financial Management Improvements

The audit of INS, conducted by the Department of Justice Audit Staff and issued in February 1989, noted that the existing Financial Accounting and Control System (FACS) had numerous deficiencies and was inadequate to handle the volume of transactions being generated within INS due to the growth in the agency's appropriation and establishment of three major fee accounts since 1986. In order to remedy this deficiency, the budget requests $400,000 to begin the conversion of FACS to the Department of Justice's Financial Management Information System.

Other Program Changes

Various program decreases are requested for INS that reflect management and productivity savings and allow the Service to meet targeted budget levels established by the Administration. In addition, reductions of $11.1 million are requested to offset costs associated with the implementation of P.L. 101-173, the act amending the method by which premium pay is determined for irregular unscheduled overtime duty. These reductions will be achieved by instituting cost saving measures, including reductions in discretionary travel, permanent change of station moves, overtime and vehicle replacements.

Conclusion

This concludes my formal statement on behalf of the Immigration and Naturalization Service. I appreciate this opportunity to present the Service's budget request to the Subcommittee. My staff and I will be glad to respond to any questions you may have.

GRAMM-RUDMAN-HOLLINGS SEQUESTRATION EFFECTS

Mr. SMITH. You say you will take care of the sequestration problem by cost-saving measures. What are these cost-saving measures? Are they across the board or in certain specific areas? What are they?

Mr. McNARY. Tom Perrelli will answer.

Mr. PERRELLI. Mr. Chairman, the reductions for the year will be taken in a reduced vehicle buy for 1991 and in discretionary travel and overtime. The decision of the Service was to try to minimize the impact on the operating programs; namely, the law enforcement programs. So, Commissioner McNary has made some cuts in travel and overtime this year and plans to continue that policy next year.

Mr. SMITH. What type of vehicles are you talking about?

Mr. PERRELLI. Well, basically, they would be Border Patrol and detention vehicles.

Mr. SMITH. Automobiles?

Mr. PERRELLI. Automobiles, yes.

Mr. SMITH. What is the impact? Are you not replacing old ones, or are you just not going to have as many?

Mr. PERRELLI. Well, the intent in the 1991 budget request was to sort of establish—and I put this in quotes—"a revolving fund" for the routine replacement of vehicles. Over half of our vehicles are beyond the GSA limits in terms of suitability.

Mr. SMITH. So you will not reduce the number, but you won't replace them as fast?

Mr. PERRELLI. That is exactly it.

Mr. SMITH. Okay. You can do that in one year, can you, or two years?

Mr. PERRELLI. The plan is that the money would be a permanent part of the base, and we would begin—instead of a three-year cycle, we would have to stretch it out to a four-year cycle before they all would be replaced.

Mr. SMITH. Well, you did this last year, and then you do it again this year. Then you get a lower base. How is this going to affect this account? How long can you do this?

Mr. PERRELLI. Well, I would be foolish if I said we could do this forever. We cannot do this forever. Basically, the plan was to try to add additional Border Patrol agents this year. The request is for 200 Border Patrol positions. We are simply going to push back hiring into the later part of the year.

Mr. SMITH. You eventually will have to cut personnel.

Mr. PERRELLI. Yes. In the out-years, you eventually would have to come down.

Mr. SMITH. I mean you would have to cut the increase in personnel? That is what I am really talking about.

Mr. PERRELLI. Yes. An example of that is what this Committee did in 1990. You added 200 Border Patrol agents, which we desperately needed, but the money that was provided by this Committee and which we gratefully accepted, half of it had to be used just to absorb the pay raise. And, you can't continue that too far into the out-years before there has to be a reduction.

Mr. **Smith**. I was surprised at what you said about people not knowing about IRCA and especially employer sanctions. Tell us about this. We thought there was a big campaign going on, and that everybody was supposed to know about it.

Mr. **McNary**. Well, the GAO report indicates that 22 percent were not aware of IRCA. We have had an extensive program. I can have someone go into that, but we have contacted a million businesses.

Mr. **Smith**. What was wrong with the program we had that 22 percent of the businesses surveyed knew nothing about it? Did they not ever get any notices or not read the notices or what? What was the problem?

Mr. **Perrelli**. In previous congressional hearings, there was serious concern about the actual publicity program that was used, that it wasn't effective enough and it wasn't targeted to the specific groups. There was almost a year of congressional inquiry into that program. So there simply is a concern about all these people being aware. There was money requested in this budget for publicity.

IRCA AWARENESS

Mr. **Smith**. Well, do you think it was not targeted enough? What was the problem with the program?

Mr. **Perrelli**. In hindsight——

Mr. **Smith**. Well, it is hindsight, but what was the problem?

Mr. **Perrelli**. Commissioner McNary in his confirmation hearings did promise that in his administration we would do a better job.

Mr. **Smith**. That doesn't answer the question. What was wrong?

Mr. **McNary**. I do not think it was a broad enough campaign—it was too targeted at personal contacts. However, it was not a wasted effort as 78 percent were aware of the program.

Mr. **Smith**. But you didn't have a list then to reach everybody involved, is that it?

Mr. **McNary**. Yes, we just did not have the publicity campaign that would create the awareness, and that is important. What we are talking about with this appropriation is an awareness campaign that makes it clear to everyone.

Mr. **Smith**. Well, how will this campaign differ from what you did in the past? How will you reach that 22 percent?

Mr. **McNary**. Direct mail and television—just the various media outreaches that can be used to bring it to people's attention.

Mr. **Smith**. Have you identified what type of business groups these are, this 22 percent?

Mr. **McNary**. I don't think we have, Mr. Chairman.

Mr. **Smith**. How do you design a campaign to get to them if you don't know the nature of how they differ from the other 78 percent that did hear about?

Mr. **McNary**. First of all you find out where the 22 percent are. This is in the GAO report, and we will take a close look at that, and then adjust the campaign to include those areas. We have had more of a "rifleshot" with personal contacts, and it has been a great effort. There are a lot of people that could be advised and informed, and I am sure that there are some small businesses as well.

Mr. SMITH. You don't at this point, then, have a specific campaign in mind?

Mr. McNARY. We don't.

Mr. SMITH. We don't want the money just to be spent to reach the same 78 percent that already know about it. Do you have a campaign in mind to reach the 22 percent that did not know about it?

Mr. McNARY. I don't have a plan that I can give you or a budget that specifies each expenditure into what area of publicity. We do know, in general, the kind of publicity campaign that we would go into. We will submit that for the record later.

[The information follows:]

IRCA AWARENESS CAMPAIGN

Currently, we are in the process of developing a publicity campaign that would foster the awareness and importance of the Immigration Reform and Control Act. As soon as it is available, it will be submitted to the Subcommittee.

Mr. SMITH. Mr. Kolbe, do you have a question on this?

Mr. KOLBE. I do, but that is all right. I will wait, Mr. Chairman.

EMPLOYER SANCTIONS

Mr. SMITH. It is a concern that you are not reaching all of these employers. Some of them don't know about the sanctions, and sanctions are necessary, I think. Some Members disagree, but I think you can't expect to administer the laws unless you have sanctions.

We gave the INS all the money we thought you needed for this purpose so people would know. Then we later find out that there are employers that use as a defense that they didn't even know about the law. It is an important thing, don't you think?

Mr. McNARY. Yes, sir.

Mr. SMITH. Find out who those 22 percent are and go after them with a campaign that gets you right down to them. It doesn't do any good to spend more money on the same 78 percent.

Mr. McNARY. That is right, Mr. Chairman. I wasn't here, and I didn't administer that campaign. I can tell you that a year from now there won't be 22 percent who don't know about IRCA.

BORDER PATROL SEIZURES

Mr. SMITH. Now, tell me about seizures at the border. I know you have Border Patrol numbers of more drug seizures than anyone else. It has been a major player in the attempt to try to keep drugs from coming into the country. Tell us something about that. What is the size and nature of these seizures? Are they just people in automobiles that are coming across the border?

Mr. McNARY. We have got some numbers here that are maybe more specific than you are looking for.

Mr. SMITH. Good.

Mr. McNARY. The number of seizures with regard to marijuana, 1,570.

Mr. SMITH. Do you have the quantity, average quantity or anything like that?

Mr. McNary. I don't know. Mike, do you know?

Mr. Williams. In terms of tonnage or breakdown of marijuana and cocaine, no.

Mr. Smith. Are they small amounts or large amounts?

Mr. Williams. They vary, sir. They vary from just personal-use seizures to large tonnages of marijuana. We have seized as much as a ton of cocaine at a checkpoint.

Mr. Smith. Tell us about the ton of cocaine. Was that at a checkpoint?

Mr. Williams. Yes, sir.

Mr. Smith. What kind of vehicle was it in?

Mr. Williams. Well, there have been several seizures almost reaching that level. They have been in either a motorhome, a truck, or a semi. There have been some seizures hidden in compartments of automobiles. They are very sophisticated in the way they conceal the cocaine. You you can make a lot more profit on a small amount of cocaine than you would with marijuana. We have had marijuana concealed under fruit, under vegetables with ice on top of it, in large semi-trucks. We also found drug-related money that has been hidden in compartments.

INS' CANINE PROGRAM

Mr. Smith. How do you find it? I mean, you know, you get cars coming one after the other, a whole line of them waiting there to get across. How can you identify which car has drugs?

Mr. Williams. A lot of it has to do with the nervousness of the driver, and the experience of the agent on the checkpoint. A big asset has been our canine program, our sniffer dogs that can sniff out drugs as well as people.

Mr. Smith. But not money.

Mr. Williams. We have had some "hits" on money, sir.

Mr. Smith. Is that right?

Mr. Williams. Yes, sir. If the people that handle the money have been handling marijuana or cocaine, the dogs have hit on the money.

Mr. Smith. Then that has been a very successful program.

Mr. Williams. Yes, sir.

Mr. Smith. Do you have those at every checkpoint?

Mr. Williams. No, sir. We hope to double our efforts next year on the number of dogs we have. When you think about running a checkpoint 24 hours a day, and the number of checkpoints we have across the country, and that a dog can work for 20 to 30 minutes at a time, then it needs a break. We are not up to speed because we have a shortage of dogs.

Mr. Smith. Well, tell us about the number you need, the number you don't have.

Mr. Williams. Well, sir, we right now have approximately 70 dogs, and we would like to double that at this point.

Mr. Smith. Would that give you coverage?

Mr. Williams. It would make a significant inroad into our effectiveness.

Mr. Smith. But you still wouldn't have them there at all times?

Mr. Williams. No, sir.

Mr. Smith. Do you have any numbers showing what it would take?

Mr. Williams. I can get that for you, sir.

Mr. Smith. I think we need to extend in the record some pretty detailed information on this canine program. Obviously, people can't do what a dog can do.

Mr. Kolbe. If the gentleman would yield?

Mr. Smith. Yes.

COST OF THE CANINE PROGRAM

Mr. Kolbe. I have had an opportunity at the border to see this canine program at work. It is phenomenal and very successful. For the record, how do you figure the cost per canine team? Is it based on just the care and feeding of the dogs, or do you include personnel costs in there?

Mr. Williams. We include the initial cost of acquiring the dog and training the dog and the handler. We have the agents already on-board, and we have volunteers from the Officer Corps ranks who want to be handlers. We send them to training and then match them up with a dog.

Mr. Kolbe. Mr. Chairman, one other question on that. Does that mean if the volunteer becomes a canine handler he is taken off of other duties? Does that take him away from other responsibilities?

Mr. Williams. The officer will be enforcing the immigration laws as well as the drug-related laws. Whether he is on the checkpoint with the dog or without the dog, he is going to be there enforcing the laws, assisting the other agents. As I have indicated, the dogs will take breaks, and the agent will continue to be there to process the numbers of people that we apprehend. It will not be detracting from our enforcement, to answer your question.

Mr. Kolbe. Thank you, Mr. Chairman.

Mr. Smith. What kind of a cost per canine do we have?

Mr. Williams. Well, this is a rough estimate, but about $6,000 per dog. That includes the training of the agent. Then there is a minimal cost in terms of feed and veterinary care.

Mr. Smith. Very little cost compared to the money seized.

Mr. Williams. Yes, sir. Just in the money alone that the drug dogs have seized, we have many, many times over acquired drug-related moneys in relation to the cost.

Mr. Smith. Well, you are only proposing another increment in what could be a big program. Why are you not proposing a bigger increment?

Mr. Perrelli. Well, we are proposing, Mr. Chairman, to double the number of canine units from 70 to 140.

Mr. Smith. Well, I know, but it is still going to leave, what, 80 percent of your capacity unfunded or something like that? Is that right?

Mr. Williams. Well, we would be doubling our canine force under the proposed budget, and that is pretty significant.

Mr. Smith. Well, is that the fastest you can increase? Why is that the amount you decided to increase?

Mr. Williams. Based on our budget, that is what we felt we could afford this year.

Mr. SMITH. Isn't the canine program a more productive way to spend money than some other way?

Mr. WILLIAMS. Well, it is, sir. It is productive, but there are other things we need, such as low-light television and sensors, and those kinds of things that also make our job easier and make us more effective.

Mr. SMITH. It seems like to me that that canine program is even more important than adding people. Isn't it?

Mr. WILLIAMS. It is important, sir.

Mr. SMITH. I mean, you get a lot more for your—$6,000 for a canine is not—you know, you train them and it is for several years, probably.

Mr. WILLIAMS. Well, we also have a congressional mandate to apprehend aliens. The drug dogs, although they are effective at the checkpoint to sniff out people in vehicles cannot work alone. We need agents on the line to apprehend illegal aliens and smugglers of parrots and guns and other things we run into. So, the dogs are very effective at our checkpoints, but with the other responsibilities of alien apprehension, we feel we are balanced in our approach.

Mr. SMITH. Can you do it now, or are you going to be able to tell us what the optimum would be in a canine program?

Mr. WILLIAMS. I could get that to you, sir. I would prefer to ask my staff.

Mr. SMITH. Yes. Understand, we couldn't do it all in one year anyway if you wanted us to, but——

Mr. WILLIAMS. Yes, sir. But I can get those figures for the record, sir.

Mr. SMITH. Yes, what the goal would be.

Mr. WILLIAMS. Yes, sir.

[The information follows:]

BORDER PATROL CANINE UNITS

The Patrol currently has 71 canine units within the nationwide program. (A canine unit consists of one dog and one handler.) The 1991 budget enhancements would allow for an additional 79 dogs to be placed along the southern border bringing the level to an optimum 150 units. The additional 79 canines would provide for 24-hour canine coverage capability on all of the southern border checkpoints. However, this 24-hour canine coverage capability does not imply that the Patrol has 24-hour operations at all of the checkpoints. There are several factors which prevent 24-hour operations, such as weather conditions, peak traffic flows and shortages in officer staffing. The Patrol has also factored into the total number of canines required, the necessity to continue the highly successful school presentations, which use the dogs as part of the Drug Demand Reduction education program.

MACHINE-DOCUMENT READERS

Mr. SMITH. What about the machine-readable visa program? How is that coming? Is it helping?

Mr. MCNARY. Dr. MacRae.

Ms. MACRAE. This is going along very well as part of the major effort we call Interagency Border Inspection System, IBIS, which is a joint effort with Customs and the State Department to automate the borders entirely. If you remember, we talked to you two years ago about the machinery, the documents, and about the IBIS program. It is going along very nicely. It is supported both by appropriated funds and by the inspection user fee funds. We are cooperating very well with the Department of State and with Customs. We have installed nearly 16, or by the end of this year we will have installed the IBIS system in nearly 16 airports. We are putting over a thousand new machine-document readers in airports and locations throughout the country by the end of this year. I think it is going very well.

Mr. SMITH. You are receiving full cooperation from all of the agencies involved?

Ms. MACRAE. Yes, absolutely.

Mr. SMITH. It gets you some immediate information, does it?

Ms. MACRAE. It works very nicely. It works very well. It saves the effort of the individual at the port-of-entry who doesn't have to type things in. You can put a passport or a visa through there; it reads it very nicely.

Mr. SMITH. Mr. Rogers.

Mr. ROGERS. To follow up on the machine-readable visa, are we turning up people who have warrants outstanding against them with the system?

Ms. MACRAE. We identify fraudulent passports, fraudulent visas with that system. The major impact is that it allows us to process people through the checkpoints much faster. You don't have to have an agent who sits there and types in someone's name. You simply pass it through; it records the information from the individual's passport visa, or other document and sends it to our automated look-out system, combined with Customs and State. That is the advantage of it. Also it is designed through the look-out system to find passports which are reported stolen or fraudulent. We can identify, in some cases, passports which are fraudulent, and or our agents on the spot also have personal expertise to do that as well.

Mr. ROGERS. Well, are you spotting some fraudulent passports with it?

Ms. MACRAE. Sometimes, yes.

Mr. ROGERS. How many?

Ms. MACRAE. Offhand I don't know. I can get that information for you.

COUNTRIES WITH MACHINE-DOCUMENT READERS

Mr. ROGERS. You say there will be a thousand of those machines in operation by the end of this fiscal year?

Ms. MACRAE. That is correct.

Mr. ROGERS. On all coasts, all ports of entry?

Ms. MACRAE. Yes, 54 separate locations will have them.

Mr. ROGERS. Now, in what countries do we have machines which that are compatible with your machines?

Ms. MACRAE. Which countries have passports which are machine-readable?

Mr. ROGERS. Yes.

Ms. MACRAE. Okay. The United States, of course; Australia; Canada; Finland; France, Germany, the Netherlands, and the United Kingdom issue machine-readable passports. All the countries which belong to the International Civil Aeronautics Association are actively looking at the machine-readable passports, visas and identification cards. Our identification card for aliens is one of the documents which our machine readers can read; our so-called green card is already readable by these gadgets.

Mr. **Rogers**. Do we have these machines in operation on the Mexican posts, stations, checkpoints?

Ms. **MacRae**. Yes.

Mr. **Rogers**. Are we turning up any people at those checkpoints on the Mexican border with fraudulent ID cards?

Ms. **MacRae**. I can get that information for you.

Mr. **Rogers**. Well, do that, but give me a rough estimate now.

Ms. **MacRae**. Offhand, I don't know. I am sure we are.

[The information follows:]

Detection of Fraudulent Documents at United States—Mexico Ports-of-Entry

The Immigration and Naturalization Service intercepted approximately 28,000 persons attempting to enter the country using various types of fraudulent documents. Ninety-three percent (approximately 26,000) were detected along the U.S.-Mexico border. The fraudulent documents were discovered through a variety of means that included discovery through the use of machine readers.

DETECTION OF FRAUDULENT DOCUMENTS

Mr. **Rogers**. Does anybody here know?

Mr. **Perrelli**. The plan for the land borders was three stations this year.

Ms. **MacRae**. That is August. The machine-readable documents—it is a fair question. I need to get you these things. The question is: Is it the machine reader that turns up the fraudulent document, or is it the expertise of the person at the booth? It is probably more the expertise of the person at the booth to recognize that something looks wrong with the documents, and that is as it should be. Our people at the inspection stations are experts. They know what they are doing. They are very qualified people.

Mr. **Kolbe**. Would the gentleman yield on that point?

Mr. **Rogers**. Yes.

Mr. **Kolbe**. You said they are issuing visas now in Mexico that are machine-readable. Do you have them at all of our consulates?

Ms. **MacRae**. The State Department issues machine-readable visas.

Mr. **Kolbe**. One hundred percent of our Mexican visas?

Ms. **MacRae**. No, not all of them. Only Santo Domingo? I am sorry. I was a little bit ahead of myself.

Mr. **Kolbe**. I thought that was what you were going to say. I don't think you have the program very well established at this point.

Ms. **MacRae**. We are working on all of those.

Mr. **Kolbe**. It is too bad we don't have Mr. Early here. He would handle this in much greater detail. I know his concern is there is no coordination between your agency and the State Department on this issue.

Ms. **MacRae**. I think that is not correct. The State Department is moving ahead as they see fit. They issue the visas. The visa waiver program is also in place. Those people will not have visas. So whether the visa is machine-readable or not will not make a difference.

MACHINE READABLE GREEN CARDS

Mr. KOLBE. If I might ask one question on green cards They are not issued by the State Department are they, but entirely by your agency?

Ms. MACRAE. That is our area.

Mr. KOLBE. You do not have machine-readable green cards yet on that order, do you?

Ms. MACRAE. All the new green cards are machine-readable.

Mr. WEINIG. I am Lawrence Weinig, Acting Associate Commissioner for Examinations. Presently, there are two versions of the alien registration card, the I-551 form. They are both machine-readable. The border crossing card, the I-586, which is issued to regular Mexican border crossers, is also machine-readable.

Mr. KOLBE. So anybody who is getting a green card today is getting a machine-readable one? At what point will we have 100 percent machine-readable?

Mr. WEINIG. Some of the early readers that Customs put out were not fully compatible with the I-551. Those machines are being converted now so that all machines will be able to read the documents that are machine-readable.

Mr. KOLBE. At what point would you say that virtually a hundred percent of the green cards at border will be machine-readable? When will we have complete replacement of the old cards?

Mr. WEINIG. Currently, we have just begun a program to replace the older edition of the alien registration card, the I-151 which had been issued. There are probably 12 or 13 revisions of which go back to the 1940's and 1950's. We are currently looking at replacing those now, but we are trying to work it in. We also have all the legalization applicants or the temporary residents will be coming up to gain permanent residence. So, we have a rather large volume of alien registration cards that are coming through the pipeline now, and we haven't made any decisions yet about acquiring additional equipment. It is a fairly substantial outlay for new factory equipment to issue the cards.

Mr. MCNARY. It seems to me that if we doubled our capacity, which would be a $4 million bill—is that correct?

Mr. WEINIG. Something like that.

Mr. MCNARY. We could have all the green cards machine-readable within a year. Is that fair?

Mr. WEINIG. Maybe two.

FUNDING FOR MACHINE-READABLE DOCUMENTS

Mr. ROGERS. Well, are you requesting money in your current request, more money for that system?

Mr. MCNARY. No, we are not in this budget.

Mr. ROGERS. Is there money in your base for the machine-readable?

Mr. PERRELLI. For 1991, for the IBIS program—correct me if I'm wrong—there is $8 million in the inspection user fee account for that program, but we do not have funding in the appropriated accounts. For 1990, we had $7 million in the appropriated account and roughly $5.3 million in the user fee account. So we are trying to keep it going, but it won't be at the same funding level as the previous year.

Mr. ROGERS. Do I hear you correctly that there is no money that you are requesting or have available that will allow you to increase the machine-readable program beyond what it is now?

Ms. MACRAE. The inspections user fee, which had covered about half of what we spent in 1989 and 1990, that will continue. We expect that to continue. We have not requested money from base appropriations to continue it.

Mr. ROGERS. Well, will those funds, then, allow you to continue to increase the coverage of the machine-readable?

Ms. MACRAE. At the airports.

Mr. ROGERS. Only at the airports?

Ms. MACRAE. Only at the airports.

Mr. ROGERS. So, we don't have any plans to increase machine-readable at the checkpoints?

Ms. MACRAE. In fiscal 1991, there are other administration priorities that we felt were more important.

Mr. ROGERS. I'm sorry?

Ms. MACRAE. There were other administration priorities in 1991.

Mr. ROGERS. The answer is no, right?

Mr. MCNARY. Well, not exactly. The project was put together before I got here and before we started talking about some of these things. I think that is vitally important. I don't know what it is called; it is some kind of adjustment for the authority to fund doubling that capacity, and getting everything on line is a priority with me. We will work on trying to expedite it.

Mr. ROGERS. Do I hear you saying you might request the committee for a reprogramming of funds for that purpose?

Mr. MCNARY. Yes, sir.

Mr. ROGERS. That is the word I was looking for. Can we look forward to hearing from you on that?

Mr. MCNARY. Yes.

AUTOMATED FINGERPRINT INDENTIFICATION SYSTEM

Mr. ROGERS. Closely related, I guess, in a certain sense, is the so-called AFIS, Automated Fingerprint Identification System. I understand the demonstration test was completed last year at the San Diego sector, as was the report on the repeat crossers that it was designed to measure. Can you describe the results and the test and whether or not it was successful?

Ms. MACRAE. The basic prototype test last year proved that, indeed, the technologies will work. We put a lot of extra effort into trying to see if it was feasible at all. I believe you were down there and saw it yourself?

Mr. ROGERS. No, I was not. I would like to at some point.

Ms. MACRAE. I thought Mr. Early was there. It is a very interesting process. We used approximately $1.3 million of the funds you provided for that test. We are using $2 million this year of funds that we have in the base appropriation to do a prototype in an operational setting. In other words, will it really work? You've got people in the field, ordinary training, not a special test at all. Will it really work? Can you do it fast enough? That is what we are testing this year. I think it looks quite promising.

Mr. **Rogers**. Would you tell us in a couple sentences how the test works and what it is intended to measure?

Ms. **MacRae**. It basically is intended to identify the person that you have in custody or that is crossing the border. It includes a fingerprint reader, a check against a national data base or a master data base of similar fingerprints to identify whether the person is in the data base, and whether the person is who he says he is in the data base. That's basically what its intent is.

The idea is to identify both criminal aliens who might be trying to cross the border or to identify people who have been crossing the border several times, perhaps with false names each time.

Mr. **Rogers**. And tell us what you are finding.

Ms. **MacRae**. We did a study last year of about 50,000 people that we apprehended; about 39,000 of those were distinct, different individuals. Of those 39,000, say 40,000 distinct individuals, 20 percent of them had crossed the border more than once. So, there is a 20-percent repeat crossing rate. Most of the time when they crossed the second time, they gave a false name. A couple of times they gave a false sex. [Laughter.]

Mr. **Rogers**. Have you devised a system to discover that? [Laughter.]

Ms. **MacRae**. Most of the time they give a correct nationality. The results showed that 7 percent of those repeat crossers were giving a different sex on the repeat times through—seven percent. Ninety-three percent gave the same sex each time. It makes you wonder.

OPERATIONAL FIELD TEST AT SAN CLEMENTE

Mr. **Rogers**. And what percent of them have outstanding warrants or charges against them?

Ms. **MacRae**. I don't know.

Mr. **Mueller**. We are just now setting up at the San Clemente checkpoint a system, as an operational field test, that will run different names against the California justice system data base. It has about six million criminals in its data base. That just went on line in the last week or so, and when we called out there they didn't have any information readily available as to whether we had any criminal hits on it. The idea would be that, as we get somebody at the traffic checkpoint at San Clemente, if they look like criminals, then we will do this automated fingerprint check and run it through the California justice system data base, and see if they are criminals. But it is just too early. We will know in probably the next month or so how effective it is.

Ms. **MacRae**. The initial test was basically to see if the equipment will work at all, and as an extra piece, how many repeat offenders we catch. That was the basic purpose last year. This year we are doing a more operational setting to see, in a limited area, if it will really work to find what we need to know, and criminal offenders are one of those.

AUTOMATED FINGERPRINT IDENTIFICATION SYSTEM

Mr. **Rogers**. So is the machine-read fingerprint system working in operations?

Ms. **MacRae**. Yes, it does that. It will read fingerprints.

Mr. **Mueller**. We have got one in place now at San Diego, and as I said, at the San Clemente traffic check. We are going to set up five more in the San Diego sector as the year progresses. So, this will be our live field test.

Mr. **Rogers**. How long does it take to read a fingerprint?

Mr. **Mueller**. If you go against the six million names, it takes something like an hour for the computers to sort through all of this.

Mr. **Rogers**. That is the California data base?

Mr. **Mueller**. Yes. There is a link-up that is called the Western Identification Network, and that is in eight states out West. If you do that entire search, then it runs in to more like an hour-and-a-half. California is the biggest of the data bases.

Mr. **Rogers**. So what you are saying to me is that as this thing goes into operation, you are going to have to use something other than a fingerprint to get an initial indication.

Mr. **Mueller**. An agent's experience. Someone will have to say this guy looks like a bad guy, and let's check him further. In the past if we submitted fingerprints to the FBI, we would wait a couple of weeks. Now we can hold them for an hour or so while we run this check against the California criminal justice system database to find out if we have a bad guy.

Mr. **Rogers**. So this time next year you will be able to give us a pretty good reading of whether or not this thing is effective and would be good to expand to other posts?

Mr. **Mueller**. Yes, sir.

ALIEN APPREHENSIONS

Mr. **Rogers**. I notice that alien apprehensions by the Border Patrol continued to go down through fiscal year 1989, since the IRCA came aboard and in the latter part of 1989 they went up.

Has that continued and why is that?

Mr. **McNary**. It is a combination of things. The information supplied to me indicates that we had more people on the border. So there was a relationship between actually apprehending people just because we were better prepared, which runs counter to the usual argument that we want to see apprehensions go down as a reflection of fewer people coming across.

We also have a problem, though, with increased fraudulent documents, people are able to get fraudulent documents, and therefore, feel as though their chances of getting a job in the country are better and they are willing to take a chance.

Mr. **Rogers**. Will the machine readable instruments pick up those fraudulent cards that enable people to cross the border illegally?

Ms. **MacRae**. They are certainly going to pick up some of them.

Mr. **Rogers**. Why would it not pick up all of them?

Ms. **MacRae**. It depends on what kind of card it is. If it has the right kind of numbers in the back and has a photo substitution on the front, it might not pick them up as a fraudulent document. It depends on how good the card is. There are some very good cards that are very difficult to pick up.

There are very few. The thing is that the agent looking at the card and putting it in the machine, is going to catch a lot of the cards that are bad. Their experience allows them to see that something is wrong.

Mr. ROGERS. Okay.

Mr. McNARY. Congressman, one other thing that may be is obvious, but I did not mention it, and that is the turmoil in Central America and the economy in Mexico. Some of those economic and political conditions have led to more people coming up and crossing the border.

DRUG SMUGGLING THROUGH PORTS-OF-ENTRY

Mr. ROGERS. Now, we learned last week, of a very major drug seizure in California of cocaine. I forgot the tonnage but it was a huge amount.

It was probably smuggled through a point-of-entry along the southern border, according to the law enforcement people who were involved in the seizure.

I mean we are talking tons, and tons, and tons, of cocaine. And I realize your agency's primary mission is not to seize drugs; you are to guard our borders for illegal aliens and the like, but incidental to that, of course, is this law enforcement function that you are finding yourself with, especially with the drug smuggling.

What kind of trends are we seeing with respect to points-of-entry the smuggling of dope?

Mr. McNARY. As you know, we have the El Paso Intelligence Center, EPIC, and they make an analysis and give us trends. According to EPIC, the bulk of the cocaine coming into the country is through the land ports-of-entry, predominantly concealed in compartments of trucks and automobiles.

Heroin is brought in almost totally through the land ports. This is done either by individuals carrying the drug concealed on their bodies or in their vehicles. Heroin is generally not hidden in vehicle compartments. Marijuana is being smuggled into the country, split roughly 50/50 between official ports-of-entry and areas between the ports. Drug shipments coming through the ports are concealed in vehicles or in cargo. Marijuana smuggled between the ports, is either driven or carried across the border to drop points from which shipping to the interior takes place.

Over the past several years, there has been an increase in acts of violence against Border Patrol agents; 124 in 1988 compared to 202 in 1989.

So, those are some of the statistics.

CROSS DESIGNATION AUTHORITY

Mr. ROGERS. Well, the Administration announced last week that Customs Agents will be given DEA cross designation authority, as Border Patrol Agents receive now.

And are your inspections agents receiving that designation, and if not, would it be worthwhile to do so?

Mr. **Weinig**. Not that I am aware of at this point. I would have to check it further. I am not aware of anything.

Mr. **Rogers**. Would that be worthwhile for them to get DEA cross designation?

Mr. **Weinig**. It might very well be worthwhile.

Mr. **Rogers**. Pardon me?

Mr. **Weinig**. It might very well be worthwhile.

WORKLOAD AT POINTS-OF-ENTRY

Mr. **Rogers**. Now, what about the workload at points-of-entry; are we coping successfully workload with the load; do you have enough people there?

Mr. **McNary**. Are you talking about land border?

Mr. **Rogers**. Yes, your land borders, please.

Mr. **Weinig**. In the 1991 budget request, we have asked for an additional 104 permanent positions for the land borders. We believe that by staffing up to our current authorized strength, and together with converting over some 104 temporary workers, we should have enough to handle the land border problems. At airports, of course, with the fee account, the problems are a little bit different.

Some of the airport authorities have indicated that they have problems now, and that we are not able to clear the passengers quickly enough. Currently, we have a reprogramming which would put another 300 positions out to our airports for the use of the fee account there.

We believe this will keep up with the increases in traffic and things that we are experiencing at the airports.

Mr. **McNary**. Congressman, on the land border, my view is that we are using bandaids. If you have been to San Diego, CA, and I am told that from Washington State and El Paso it is the same, we have long lines of cars waiting with delays.

And I think that can be corrected. It takes facilities and it takes more manpower, but a modest land border fee would provide that money and people who are waiting there for a half an hour, or sometimes longer, would gladly pay that fee to defer that expense.

I think that is something that should be looked at.

LAND BORDER CROSSING FEE

Mr. **Rogers**. What, a crossing fee?

Mr. **McNary**. Yes, sir, a vehicle fee.

Mr. **Rogers**. How much?

Mr. **McNary**. I do not know. It is big money. It seems to me it is logical and would solve that problem and maybe even spill over to help with some border control; a dollar is a $300 million yield. Fifty cents would be $150 million.

Mr. **Rogers**. Are you going to be proposing such a charge?

Mr. **McNary**. Well, I can respond to any questions. [Laughter.]

Mr. **Rogers**. Obviously you have to have authority from the Congress to do that, would you not?

You cannot do it administratively, can you?

Mr. **McNary**. No, sir.

SOVIET REFUGEES

Mr. **Rogers**. Now, let me switch gears to you. On the Soviet refugee problem in Moscow; can you tell us how that is moving?

Mr. **Cook**. My name is Bill Cook and I am the General Counsel at the Immigration Service. Since we moved to the Washington Processing Center, late last year, we have received about 165,000 applications, which because the applications are required of people 21 and over only, we estimate to reflect about 330,000 individuals.

During that same period, from August of 1989, through February, with six officers on site in Moscow, we have processed nearly 16,000 applications in Moscow, 16,000 persons, of which 41 percent or 6,400 were approved.

The balance of those were denied, but were offered parole pursuant to the Attorney General's parole authority offer of December 8th of 1988.

The month of February is the first full month on which we have statistics during which the so-called Lautenberg Amendment was in effect, and being applied.

During that month, we interviewed 3,150 individuals for refugee status in the United States. The overall approval rate again was about 41 percent. However, a large number of those people are Armenians. The approval rate for category individuals, people who would have been covered by the Lautenberg Amendment, which would be Soviet Jews, Evangelicals and Ukrainian Catholics, was 91 percent; 92 percent for Soviet Jews; and that was specifically 866 out of 944 applications.

Eighty-nine percent for Evangelicals and 100 percent for Ukrainian Catholics. I believe the Armenian approval rate was somewhere down around 5 percent.

With respect again to the Vienna pipeline, from October of this fiscal year, we have processed another 33,000 Soviets with an approval rate of 99 percent. So that is both pre- and post-Lautenberg Amendment status.

There are still remaining 2,174 applicants who are to be interviewed by INS and 1,035 individuals who are registered with the Agency in Rome, but have yet to file an application. We anticipate that we will have all of those people interviewed and processed by April first of this year.

There are currently about 14,500 people in Rome who have been approved for refugee status who are awaiting final travel authorization, which is done by the State Department and the voluntary agencies. So, those people are beyond INS processing; they have already been approved and are awaiting travel arrangements and transit to the United States.

COSTS ASSOCIATED WITH SOVIET REFUGEES

Mr. **Rogers**. How are you handling the costs associated with this?

Mr. **Cook**. We project the 1990 costs to be about $9.4 million and my understanding is that we are going to be looking to a request for money—it is not a reprogramming, it is a spending plan out of the Examinations Fee account.

My office has done a legal analysis and we feel it is an appropriate expenditure, since the money is being used for adjudication purposes.

Mr. PERRELLI. In that regard, Congressman Rogers, the Commissioner petitioned the Attorney General for advice as to how to proceed with the funding of this program. On the 14th of March, he did respond suggesting that we fund the program with carryover funds from the examinations fee account.

The Service is preparing a reprogramming request to the Department that will go to the Congress. There is the risk that OMB may turn down that request, but we do not see that we really have any choice and we must go on record as requesting the movement of the funds.

The rationale last year for the movement of funds for that purpose was that this was not an adjudicatory function. This particular program was not anticipated by Congress nor ourselves in that case, but the Service has to address the ongoing issue, it happened last year, it is going to happen this year, and it certainly is going to happen next year in 1991.

We will, more than likely, submit a budget amendment for 1991 to address the issue of the Soviet refugees.

Mr. SMITH. Will the gentleman yield?

Mr. ROGERS. Certainly.

Mr. SMITH. I just want to point out to you, Mr. Commissioner, I know you have not been on the job very long, that you need to get budget amendments to us as quick as possible. Do not wait for a reprogramming. It is more difficult to reprogram because sometimes you want to shift money from one appropriation account to another and we do not do that in reprogrammings.

It is important that you forward these shifts in funding before we mark up, if you possibly can.

Mr. MCNARY. Yes, sir.

Mr. ROGERS. Did I hear you say that you may not have authority to use the examinations fee?

Mr. PERRELLI. Well, I will defer to the General Counsel and the Department on that issue, but from my perspective, as the financial officer, I have yet to fund this program; which we have to. The precedent is that the Examinations Fee Account was established last year and that it could be used for that purpose.

The alternative would be a supplemental, which I just do not think is appropriate, not in the current climate.

Mike Roper, do you want to comment on that?

Mr. ROPER. My name is Mike Roper and I am the Department's Controller. I would say at this stage, just let the process work. We have not even sent the request to OMB yet. It would be premature to suggest that they are going to turn it down.

SUPPLEMENTAL APPROPRIATION ALTERNATIVE

Mr. ROGERS. My understanding is that the State Department has cleared a request with OMB for the supplemental for $70 million for this problem.

I just wondered maybe why?

Mr. **Perrelli**. I am sure that is the handle that they are putting it on.

Mr. **Rogers**. Yes, but why did you not also try submitting a request?

Mr. **Perrelli**. Well, that is a pretty good question.

Mr. **Rogers**. Perhaps you did not think that you needed to because you think you are certain of your position on the examinations fee, is that correct?

Mr. **Perrelli**. I still do not feel that supplementals are very viable in the current budget climate. We did propose three alternatives to the Attorney General. One was the use of the Immigration Emergency Fund, the second was the supplemental and the third was the use of the Examinations Fee account.

We have been given their advice, and we are going to pursue that course of action.

WEAKNESSES IN INTERNAL COST CONTROLS AND MANAGEMENT

Mr. **Rogers**. Okay.

Now, my final question, Mr. Commissioner: as you know, the INS has been the subject of criticism over the years, with respect to weaknesses in internal cost controls and management.

What problems have you identified and what steps have you proposed or implemented in response to those criticisms?

Mr. **McNary**. Well, I came in with a clear mandate from Congress, the President and the Attorney General to get this agency; its management and financial situation under control.

I think that in the short time, since the first of the year, that we have taken some measures to centralize the management and shortly we will have a reorganization chart to submit.

Some of the financial measures that have been undertaken are: a full-time Financial Management Information System (FMIS) project team has been appointed and dedicated solely to this financial task. Personnel services and benefits have been centralized under specific control of headquarters program managers. Financial decisions are now being made by headquarters considering service-wide priorities, objectives and needs. The Office of the Comptroller has been restructured to reinforce resource management and support the decision to centralize control over personnel salaries and benefits.

An automated system to track and follow-up all audit findings has been implemented. The Comptroller has been and will continue to conduct a monthly review of each finding and its status to ensure that critical findings are quickly resolved and that realistic priorities are maintained.

The field office funding system has been developed to improve INS's funds accounting and control mechanisms. We are determined, I am determined, that we are going to get control of the budget, personnel and procurement; and management is going to operate in a coordinated and cohesive manner.

Mr. **Rogers**. Well, Mr. McNary, welcome aboard and good luck.

Mr. **McNary**. Thank you, Congressman Rogers.

CANINE UNITS

Mr. Smith. Mr. Kolbe?

Mr. Kolbe. Mr. Chairman, thank you.

Let me begin by follow-ups on a few things that have already been mentioned by either the Chairman or my colleague, Mr. Rogers.

First of all, on the subject of the canine units, I would appreciate it if you might tell us about the doubling of the number of the canine units from 70 up to 140 that you referred to. If you might submit for the record, what kind of coverage that will give us on our border crossing points where we have high drug interdiction?

In other words, are we going to have 24-hour coverage with canine units at these points?

The Chairman was asking as to why we were not doing more in that area.

[The information follows:]

Border Patrol Canine Units

The Patrol currently has 71 canine units within the nationwide program. (A canine unit consists of one dog and one handler.) The 1991 budget enhancements would allow for an additional 79 dogs to be placed along the southern border bringing the level to an optimum 150 units. The additional 79 canines would provide for 24-hour canine coverage capability on all of the southern border checkpoints. However, this 24-hour canine coverage capability does not imply that the Patrol has 24-hour operations at all of the checkpoints. There are several factors which prevent 24-hour operations, such as weather conditions, peak traffic flows and shortages in officer staffing. The Patrol has also factored into the total number of canines required, the necessity to continue the highly successful school presentations which use the dogs as part of the Drug Demand Reduction education program.

IMMIGRATION REFORM AND CONTROL ACT

Mr. Kolbe. Going back to something that the Chairman talked about—the citations on the IRCA. Can you give us details on the number of citations that have been issued and the number of either civil or criminal charges that have been filed against employers?

Mr. Perrelli. Could we supply that for the record, because it is rather detailed?

Mr. Kolbe. Yes.

[The information follows:]

Employer Sanctions Citations

Initially, citations were required by statute. They were issued from June 1987, through May 1988. At that time, full enforcement of employer sanctions began and citations were replaced by optional warnings. During the period from June 1987, through May 1988, a total of 2,322 citations were issued.

Full enforcement of employer sanctions resulted in 1989 in the issuance of 2,108 warnings and 3,547 fines assessed against employers. The total value of the assessed fines was $13,172,639.

EMPLOYER SANCTIONS CITATIONS

Mr. Perrelli. Is there a follow-up question to that?

Mr. Kolbe. I would like to have that for the record.

The information I am seeking is some understanding as to whether or not the program has been at the citation level or whether we are moving against major violators of the program with criminal charges? I would like to know how many of those have been filed and whether or not any of those have yet been resolved through either settlement or in the courts?

Mr. **Perrelli**. Could I refer to Mr. Lempres for a minute?

Mr. **Kolbe**. Yes, sir.

Mr. **Lempres**. I am Mike Lempres, the Executive Commissioner of the Service.

We just, last Monday, in fact, Bill may know this better than I, there is a large case against a company identified as Peidmont Quilting Company that I believe has been settled.

There were criminal charges involved and the initial amount of the fine was set at a half a million dollars. I am not sure whether it has been finally settled.

Mr. **Cook**. It was settled on Thursday of last week and we settled for $225,000 in civil fines. It was the largest sanctions award that we have had to date.

In addition, several of the individuals pled guilty in the case and are awaiting sentencing on criminal charges. It is an example of a very successful investigation and prosecution. We hope to use that as a model for future cases in this fiscal year.

RESPONSE OF EMPLOYERS TO IRCA

Mr. **Kolbe**. What has been the general response of employers to the program? Is it your view that they generally want to comply but it is a matter of not knowing what the law is? Or is there a pattern of non-compliance which you see in certain areas of the country or certain industries?

Mr. **Lempres**. No, sir.

For the most part, employers have been very cooperative and seek to comply. There are some practical problems involved in the sense that fraudulent documents are so prevalent, but employers are, for the most part, willing to seek the documentation and to look at that documentation.

There is an issue as to how much responsibility they are willing to take to follow-up on making sure that documentation is, in fact, valid.

Mr. **Kolbe**. What responsibility do they have to follow-up? If I am a small business person and I look at the documentation and it appears okay to me because I do not have a criminal investigating expertise. What am I supposed to do?

Mr. **Lempres**. That is where it stands at this point, sir, that it is the responsibility of the employers, as you stated, at that level.

We, at our level, are looking to reduce the number of documents that an employer can rely upon for identification purposes. We are moving, for example, to get three documents that an alien with valid work authorization can provide to an employer.

As it stands now, there are dozens of documents that an employer can rely on.

EMPLOYMENT AUTHORIZATION DOCUMENTS

Mr. **Kolbe**. Can you tell me what those would be; what your plan is?

Mr. **Lempres**. Yes, it would be an EAD, an employment authorization document, which would be a tamper-proof card. We are in the process of putting those cars out across the country, although right now, they are only being issued in the Eastern Region as a test run. It would be what is known as the green card, and it would come out in the same, essentially a tamper-proof document that they could rely on.

Mr. **Kolbe**. That is not now a tamper-proof document, is it?

Ms. **MacRae**. Yes, it is tamper-proof.

Mr. **Kolbe**. Yes, but there are some green cards that are not tampered proof, is that correct?

Ms. **MacRae**. The very old ones, perhaps about a million of the total 8 million we have issued, are the very old green cards. These new ones are certainly tamper-proof.

Mr. **Kolbe**. But the new ones are not?

Ms. **MacRae**. The new ones, with enough money, you can tamper with anything. They are basically very high quality counterfeit-proof cards.

Mr. **Kolbe**. And the third document would be what?

Ms. **MacRae**. Those are just the two.

Mr. **Kolbe**. Just the two?

Ms. **MacRae**. Of course, for citizens, United States citizens, they will have whatever documents they have. These cards are for aliens.

Mr. **Lempres**. I am sorry, there is a third card that escaped my attention. Those two would cover over 90 percent of what we are talking about.

There is a third which is an exception and right now, I have forgotten.

Mr. **Kolbe**. Okay.

So I am an illegal alien and I go in to get a job and I say, yes, I am a U.S. citizen and I show a birth certificate.

Mr. **Lempres**. We do not currently issue documents for U.S. citizens in any way, so that you have identified a rather glaring problem.

ALIEN APPREHENSION

Mr. **Kolbe**. Well, in time some laws will be passed so that this problem will not exist.

Commissioner, can you tell me, what the number of apprehensions along the U.S./Mexico border have been of Mexican nationals and the pattern of those apprehensions?

There was some reference to this earlier and you referred to the number from Central America, but regarding IRCA, I am trying to get some understanding of the pattern. Have we seen an increase, a decrease or any demonstrable change as a result of the passage of IRCA?

Mr. **McNary**. Well, that is roughly 1.6 million apprehensions down to 800,000 apprehensions. It has almost been cut in half.

In 1986, there were 1,692,000 apprehensions. This is Mexican and other-than-Mexican. In 1989, there were 891,000.

Mr. **Kolbe**. And do you attribute that to the immigration law?

Mr. **McNary**. Yes.

EMPLOYER SANCTIONS

Mr. Kolbe. Since the immigration law mandated a certain amount of time which people had to have been in the United States to qualify, as times passes there will be more Mexican nationals who would not qualify under that and who may be in the same position as long as you have jobs in the United States.

Is it your view that gradually we will see that number go back up again? Or do you believe that the sanctions are going to keep the number down?

Mr. McNary. Well, I believe if we can make the sanctions effective we can keep the numbers down. I am concerned about the ease with which fraudulent documents can be tendered at the present time. If we can correct that, I believe that the sanctions will keep the apprehensions down and will keep illegal immigrants from crossing the border.

Not to belabor this, but I have found in the short time that I have been here, that there are deterrents and especially with the other-than-Mexicans, in south Texas a show of the ability to detain, was sufficient to turn away large numbers. We went from 100 a day down to 15 or 20 a day who were coming across the border.

It was a definite deterrent to see the tents that were put up—40 tents for detention—and to make it clear that if they came across the border, they would be detained. It would not just be border crashing.

I think that the fact that there are not jobs here has a deterrent effect. I mean these are by and large not criminal type people. If there is not a job and they are told that they will be detained, it has a deterrent effect.

With regard to the Mexicans, that is a different question and frequently we find that—as you have already discussed—that there is a lot of running back and forth across the border. However, we are concerned because the number of people who are going on into the interior and going to some of the cities is growing.

In my judgment, the two things that we have discussed, the fingerprint system and the detention capability, those are two things crucial to getting control of the border with regard to San Diego and El Paso and places where we have a complete lack of border control move with aliens running back and forth.

GENERAL ARREST AUTHORITY

Mr. Kolbe. Well, this is not the immigration subcommittee, but I still have some serious doubts about the viability of the program and whether or not we are really going to get a handle on that.

Changing the subject, to something else Mr. Rogers was talking about; cross-certification with DEA. There is a piece of legislation that has been introduced by the ranking republican on the immigration subcommittee, Mr. Smith, to give general arrest authority to INS, do you favor that?

Mr. McNary. Yes, sir.

Mr. Kolbe. You do?

Mr. McNary. Yes, in fact, having a background in law enforcement, I was surprised coming into this job that INS did not have that arrest authority.

Mr. **Kolbe.**

The reason that INS has not had that authority in the past, is that INS has been primarily in the business of apprehending illegal aliens.

It has not been in the business of law enforcement along the border; nor in the business of drug enforcement. That is a new area of responsibility.

What does this say about blurring the basic responsibilities of the agency?

Mr. **McNary.** Times change and the drug problem has always been with us but not in the degree and magnitude that it is now. When we seize $1.2 billion worth of drugs, just in the course of doing our duties, then clearly we are a principal in the drug fight, whether we like it or not.

Since we are a principal, I think that arrest authority for carrying contraband, certainly should go with the enforcement effort.

Mr. **Kolbe.** If your agents have general arrest authority, do you think that your mission is going to be fundamentally altered, or are you still going to be primarily an agency that is responsible for immigration along the border?

Mr. **McNary.** No. Clearly our charge is to control immigration along the border, and the drug factor is incidental to that.

Mr. **Kolbe.** But you do not see the general arrest authority changing fundamentally?

Mr. **McNary.** No, sir, not while I am there.

Mr. **Kolbe.** Well, I would be concerned about it as it shifts the general tone.

Clearly an agent that now has general arrest authority has a different outlook on the job.

I am not saying that in a negative way. I do not think I would be against it. But I am pointing out it is a question that needs to be thought about very carefully, because I do think that it does alter the character of your service in terms of your mission.

Mr. **McNary.** Well, that argument would apply in almost every area. I think that is where management of an agency comes in, and we can adjust our mission and handle the enforcement tools that go with it, and still stay on target.

Mr. **Rogers.** Will the gentleman yield?

Mr. **Kolbe.** Of course.

RESPONSIBILITIES OF INS AT BORDER

Mr. **Rogers.** At your major drug crossing points, is DEA active with you there, on trying to catch the drugs coming across?

Mr. **McNary.** No, we carry that responsibility. We have a station at the crossing point.

Mr. **Rogers.** Yes, does DEA assist you in any way in trying to stop the drugs at the check points?

Mr. **McNary.** No, if we make a seizure then we have to contact DEA to come in and make the arrest—which is, foolish.

Mr. **Kolbe.** I do not know if this is what you are getting at, but DEA does not stand duty at border crossings?

Mr. **McNary.** No, border responsibility is INS's.

Mr. **Rogers.** And Customs, and the seizure of illegal drugs?

Mr. **Kolbe**. If you have a major cash seizure and you are going to have an investigation, at that point, DEA comes in?

Mr. **McNary**. Yes.

Mr. **Rogers**. Thank you.

PHYSICAL BARRIERS AT SAN DIEGO

Mr. **Kolbe**. We had some discussion last year, and last summer I had an opportunity to be in San Diego to see the problem with physical barriers there.

I think it is safe to say that you had a public relations disaster with that issue, and yet, it is very clear when you see that four-mile field, wide-open with people racing across to the highway and becoming completely lost at that point.

We need to do something to try to control that crossing point.

You have got something in your budget with regard to cement barriers. I assume that has to do with providing some kind of cement barriers in this area. Are we going to go forward with that project? What is the plan?

Mr. **McNary**. The plan is to go forward with the bollards, which are like concrete border markers. They will be four feet apart and are designed to control traffic. Additional lighting and sensors are included in the budget. We hope to have it in place quickly.

Mr. **Kolbe**. Has there been any discussion with groups in the San Diego-Tijuana area about this, trying perhaps to lay the groundwork a little better than we did the last time on this?

Mr. **McNary**. On the ditch?

Mr. **Kolbe**. Yes. I think we had a public relations disaster with the ditch. [Laughter.]

What I am asking is are we trying to lay the groundwork in advance on this time so that we will not have the hue and cry from immigration rights or groups that might be very much opposed to this otherwise?

INTERNATIONAL BOUNDARY AND WATER COMMISSION

Mr. **McNary**. We've been working with the Boundary Commission.

Mr. **Lempres**. The International Boundary and Water Commission, IBWC, is in an international body. We have been talking with them. There have been some problems, they report, on both sides of the border. Areas of the border are not clearly marked, and there's minor incursion one way or another, largely inadvertent. They may be involved in placing border boundary markers along the area we're talking about which would also have the effect of stopping drive-throughs. We've been approaching them at that level.

Mr. **Kolbe**. The IBWC is involved in this project?

Mr. **Lempres**. We have been talking with them about the feasibility of the project, hoping to getting through to them with some input from their Mexican counterparts.

Mr. **Kolbe**. You're not suggesting that these things are border markers, are you?

Mr. **Lempres**. Among the functions that they serve is to mark the border.

Mr. **Kolbe**. Every four feet?

Mr. **Lempres**. It will be a well marked border.

Mr. **Kolbe**. It will be a well marked border, in one spot at least. Explain to me the reason why we're doing this with IBWC. This is a new one. I wish I had known about it, they were just here yesterday or the day before.

Mr. **McNary**. Well, for the reasons that you've been concerned about public relations.

Mr. **Kolbe**. That IBWC will be able to handle this because it's an international commission? What have been the results so far of the discussions?

Mr. **Lempres**. Tentatively they've been very supportive of moving ahead. There's not been any kind of formal decision made.

Mr. **Kolbe**. You have something in your budget this year for this project?

Mr. **Perrelli**. Yes.

Mr. **Kolbe**. IBWC does not.

Mr. **McNary**. I think it's going to come out of our budget.

Mr. **Kolbe**. Well, it'll be your budget and your money, but they will just be the sponsoring agency for it?

Mr. **McNary**. Well, it seems to me that we're talking about putting it on the border. That's our objective.

Mr. **Kolbe**. Right at the border?

Mr. **McNary**. Yes, correct. That's our objective right now. We'd be on the border and they would work with us and help with the public relations.

Mr. **Kolbe**. I think that might help some of the public relations ideas. I wish I'd known about this one when they appeared before us to ask what kind of effort they are making on this. Perhaps we'll take this up with Commissioner Gunaji.

CENSUS COUNT

A final area of questions, Mr. Chairman, on the Census.

I think in 1980 we had a fairly good working agreement between the Census Bureau and the INS. Both of these agencies come under our appropriations purview.

Can you tell me what kind of agreement you have this year and what your approach is going to be during the critical next three or four weeks of the Census count?

Mr. **McNary**. Our approach is to avoid high-profile, spectacular types of activities that would serve to intimidate anyone from cooperating with the Census takers. We have issued four pages of directives—specific instructions as to what to avoid and what to do. We are controlling the operations from the Central Office so that, in certain cases, if there's a survey of employer sanctions at a place of employment or a search warrant, it's cleared through the Central Office.

I think that we've done everything we can. The Census Bureau has made it clear that none of this information is available to INS or any other agencies; it's all confidential and can't be used against an alien.

We've done everything we can do short of violating our oath to enforce the law. I think that we are obligated to enforce the law.

Mr. **Kolbe**. Well, you are obligated to enforce the law, but I think we are also obligated to have an accurate Census count.

The television coverage this week of your sweeps at LA Airport are not very helpful in providing for an accurate Census count.

You and I know that the information the Census gathers can't be turned over to you. But you're talking about people who do not have that knowledge and are inherently suspicious for obvious reasons. I think we have to do more than just say we are going to be mindful of this. I think we have to make an extra effort to make sure we get an accurate count.

It seems to me that low-keying your operations for three or four weeks is not going to significantly damage the security of the United States.

I just don't believe, from what I have been able to see, that there has been the kind of cooperation between Census and INS in the 1990 Census that we had 10 years ago.

Mr. **McNary**. I don't agree, Congressman. I've spent much time up here on the Hill talking to Congressmen who are concerned about the Census from the States that are directly affected. We have had good meetings and have sent out directives and statements which were cleared by Congressmen Edwards and Sawyer.

We've been as responsive as we can. If there are aliens coming into an airport who are illegal aliens, I don't think you're saying to me that we shouldn't enforce the law.

PUBLICIZED SWEEPS

Mr. **Kolbe**. No. It's highly publicized sweeps that I'm talking about.

Mr. **McNary**. Well, this wasn't a sweep, and I don't think we're doing sweeps and raids as they were done prior to 1980. So with regard to that kind of activity, a moratorium in 1980 on sweeps and raids was a big difference in the conduct of INS techniques.

I'm told that after that moratorium in 1980, we really didn't go back full steam to that kind of law enforcement technique. So, now in 1990, when someone looks for a moratorium, it's a different ballgame.

Mr. **Kolbe**. You're saying you're using entirely different techniques that do not require the moratorium that was offered in 1980?

Mr. **McNary**. That's correct. I think IRCA and the employer sanctions made a difference in the techniques that are used by INS. It's a new enforcement technique that Congress provided to enforce laws that prohibit aliens from working in the country.

So, that's been the direction of the enforcement rather than wholesale sweeps and raids and rounding people up. Not to say that it hasn't happened on occasion. But, as a general law enforcement tactic, it hasn't been a part of the effort.

IMMIGRATION ISSUES IN WASHINGTON STATE

Mr. **Kolbe**. Thank you, Mr. Chairman.

Mr. **Smith**. Congressman Dicks, a member of the committee has a couple of questions to ask you.

Mr. **Dicks**. Thank you very much.

Mr. McNary, I have a couple of questions I want to ask, but I want to make an opening comment. That is, I represent the Tacoma, Washington area. And I just want to compliment you. Your people in the region who have come down there and helped us on some problems we had.

Richard Smith has been very helpful. We've had some problems with some illegal aliens who are involved in the tar Black tar heroin activities. And you really helped us get those people removed. And I just want you to know we appreciate it, and we appreciate the cooperation that Mr. Smith has given us.

DELAYS IN PROCESSING AT AIRPORTS

Just recently, on another matter, on immigration inspectors, Aviation Daily reported that there's been INS delays of up to four hours at Seattle-Tacoma Airport. Non-citizens have been detained aboard aircraft while U.S. citizens have been passed through. At times there have been as few as four inspectors to handle three or four 747s landing at the same time.

Seattle-Tacoma has been promised 13 new inspectors, but they have yet to receive them.

Can you tell us why this situation has occurred and whether—we understand that there is a reprogramming pending that may help resolve this matter.

Mr. McNary. Yes, sir. You've hit it on the target all the way down the line. It was approved yesterday. Those 13 inspectors will be added immediately.

Mr. Dicks. Well, we appreciate that. Because we have 18 out there, at least we have 18 now and then to get 13 more will bring us up to a higher level.

I just would also add too that this summer we are going to have the Goodwill Games in the Puget Sound area. We expect an enormous influx of people during the summer for about a 17-day period late in July and early August.

I guess they used to use part-time people or something. But anything you can do to help us in that respect, we would deeply appreciate it.

Mr. McNary. We are aware of that and we will.

DELAYS IN PROCESSING ALONG NORTHERN BORDER

Mr. Dicks. Good. Now, the other problem is, in my colleague, Al Swift's district. I know you've got problems on the southern border, but we've got some problems on the northern border at Blaine, Washington.

Can you tell us what the factors are? What is causing the delays in processing southbound Canada-U.S. border crossings at Bliame, Washington?

Mr. McNary. Well, to the best of my knowledge, they are the same problems we have in San Diego and El Paso and places where we don't have the facilities and inspectors to move large numbers of people through quickly.

Mr. Dicks. Do the Canadians have a similar problem or is it just us, do you know?

Mr. **Weinig**. My knowledge of it is limited, but the Canadians—and I don't know port by port—but the Canadians sporadically will run into the same sorts of problems that we do.

INSPECTIONS PROGRAM

Mr. **Dicks**. Well, anything you can help us on the border up there, we would appreciate.

One other question that comes to mind. As I look at your budget, in 1989 you had $110 million for inspectors. And then it went down to $105 million, but then, as I understand it, with the reprogramming, will come up to about $115 million.

Now as we look at 1991, is there going to be an adjustment in the 1991 budget so we can stay in that $115 million level?

Mr. **Perrelli**. Congressman, the Service will be submitting a budget proposal to make the adjustment. Those levels that you are reading from were really forecast 18 months ago.

Mr. **Dicks**. Yes. I'm not being critical. We were just wondering if that was going to happen.

Mr. **Perrelli**. There is not a mechanism in the budget process that allows an amendment where we can readjust those numbers to reflect the actual revenues that we intend to collect. That's the answer.

Mr. **Dicks**. So it will stay at $115 million. Okay.

Thank you very much, Mr. Chairman.

COMMERCIAL BUILDING AT THE BORDER

Mr. **Smith**. The city of San Diego extended their city limits so that they have a big commercial area right next to the border, apparently so that it will be easier for workers to go home at night.

Is that expansion causing any trouble for the INS? Have they built commercial buildings there next to the border?

Mr. **Williams**. Yes, sir. "Maquilladora" is the twin-plant concept. There has been heavy and light industry complexes built on both sides of the border. In some cases, right up to the border.

We are making adjustments to our enforcement of people crossing despite the fact that the building and heavy growth has occurred in that area.

Mr. **Smith**. What have you had to do then, man the border between the buildings?

Mr. **Williams**. Yes, sir. We have to patrol the border between the fence and the buildings. It's not all along the border. It's in bits and pieces along the border. Although all indications are that if you drive down there, there's more coming.

In support of what the Commissioner said about the bollards, we are optimistic that the placement of some of these barriers will prevent at least the drive-throughs, if not the illegal entries on foot.

Mr. **Smith**. Several years ago, we were down along the border at 2 o'clock in the morning and it seemed that people were coming through without any problems.

Is that still going on now, or have employer sanctions curtailed illegal entry?

Mr. **Williams**. I think the employers in that immediate area are complying with the law. It is the aliens destined to the agricultural and other interior forms of employment. They are not going to be employed right there along the border.

Mr. **Smith**. Well, Mr. Commissioner, I just wanted to mention to you something that should be obvious to you by now.

You are an action agency. You don't have the luxury of time. You don't have time to think about new ideas for very long, or things will roll right on by. We want to cooperate with you, if we can.

But, again, I want to say that whatever budget adjustments that you believe need to be made, you need to get to us before we up the bill or before it passes anyway. Don't depend on reprogrammings because we can't reprogram from one appropriation account to another, just within the appropriation.

Some of the things you are talking about in response to Mr. Rogers' questions would not be reprogrammable.

Any more questions?

Mr. **Rogers**. I don't; except, Mr. Chairman, our colleague, Bill Lowery had submitted some questions for the record in regard to the San Diego activities which he would like to have answered.

Mr. **Smith**. That's fine. The rest of the questions we will submit for the record.

[The following questions were submitted to be answered for the record.]

QUESTIONS SUBMITTED BY CONGRESSMAN SMITH

Immigration and Naturalization Service

Russian Refugees

QUESTION: What actions is the Immigration and Naturalization Service (INS) taking to accommodate the surge in Russian refugees over the past several months?

ANSWER: INS has taken a number of steps to accommodate the processing requirements for Soviet refugees. As of the end of February 1990, the Washington Processing Center (WPC), the administrative support center for Moscow processing, has received approximately 165,000 registrations for refugee interviews during 1990. It is important to remember that, since only Soviets 21 years of age and older are required to fill out preliminary questionnaires, the actual number of registrants for interview could be 330,000 (assuming an average Soviet family consists of 2 adults and 2 children under the age of 21 years).

During this same time period, the INS office in Moscow, with six officers on site, has processed nearly 16,000 persons for refugee status in Moscow. Of this total, approximately 6,400 Soviets have been approved for refugee status. Those denied have been offered entry into the United States under the Public Interest Parole Program that was initiated by the Attorney General on December 8, 1988.

In February, the first full month during which INS Moscow processed Soviets under the Lautenberg Amendment, 3,150 individuals were interviewed for refugee status in the United States. Of that total, 944 were Soviet Jews, with 866 or 92 percent approved. Eight Ukrainian Catholics or Orthodox were processed and all were approved. Overall, 91 percent of all "category" cases were approved. The approval rate for all Soviets interviewed during February was 41 percent.

Vienna-Rome Pipeline. For the first two months of 1990, the INS district office in Rome had processed nearly 33,000 Soviets for refugee status with an approval rate of 99 percent. Soviets in the Vienna-Rome pipeline not yet interviewed by INS include: 2,174 applicants waiting for INS interview and 1,035 individuals registered with voluntary agencies in Rome but not yet presented to INS for interview. Rome anticipates that all Soviet interviews will be completed by April 1, 1990.

Approximately 14,500 approved Soviet refugee applicants are in Rome waiting to travel to the United States, but do not yet have U.S. sponsors or travel arrangements. These port interview processing activities are the responsibility of the Department of State and the involved voluntary agencies.

QUESTION: How do you plan to finance these additional costs?

ANSWER: As it is expected that Soviet refugee processing will continue at this level in 1991 and beyond, INS expects these costs to continue indefinitely. The Administration is currently reviewing funding options for this ongoing program.

QUESTION: What impact will this have on 1991?

ANSWER: We estimate that the continuing cost of Soviet Refugee processing will be approximately $6.0 million in 1991.

Immigration User Fee

QUESTION: The Committee is receiving complaints that, although there are sufficient funds in the Immigration User Fund, the INS is not providing additional inspectors at international airports to handle the growth in foreign passengers to the United States. Is this true, and if so, why?

ANSWER: Since the inception of the User Fee Account in December 1986, the INS has been able to double the number of air and sea inspectors from 557 to 1,173. Current law does not permit these Immigration User Fees to be directly applied to the specific location where they were collected in the form of new positions. The enabling legislation for the account, while specifically exempting air and sea passengers arriving from the contiguous territories, directed that User Fee funds be used to fund only operations at existing pre-inspection stations. Our largest and busiest pre-inspection stations are located in Canada and consequently serve only those passengers destined for the United States from contiguous territory. While these passengers pay no user fee, user fee money is expended to pay for the inspectional services they receive. In fact, U.S. airports service both user fee and user fee exempt arrivals.

During 1989, approximately 41 million air and sea passengers applied for entry into the United States. Of that number, 15 million arrived from contiguous territory. As these figures illustrate, more than a third of the air and seaport inspectional workload pays no user fee, yet must be inspected.

In addition to the mix of paying and nonpaying arrivals, some airports have experienced rapid and unexpected growth in both facilities and the number of foreign flights arriving.

QUESTION: The purpose of establishing this fund was to enable INS to handle fluctuations in the numbers of foreign travellers arriving through our airports and seaports. Is there an increase in foreign travel and are the airports justified in their complaints?

ANSWER: International travel has increased by six percent annually. Some airports have experienced more growth than others and will receive a greater degree of attention and resources to alleviate delays being experienced.

Examinations Fee Account

QUESTION: In 1989 you originally estimated collections into the Examinations Fee account of $76 million, but actually collected $140 million. Your estimates for fee collections in 1990 are reduced to $104 million. What is the reason for this decline and, based on your actual experience to date, have you revised your estimate?

ANSWER: The reason for this decline was the change in fee receipts from the Special Agricultural Workers (SAW) program. Our fee receipts estimated for 1990 and 1991 have been revised upward and are the basis for our resource planning in the Examinations User Fee.

QUESTION: Again, based on your latest experience, is your 1991 estimate of $107.8 million still valid?

ANSWER: No, this estimate has been revised based on revised workload estimates. We currently estimate that receipts in 1991 will be $177.8 million.

QUESTION: You propose a reduction in obligations in 1991 from $103 million to $90 million. What programs are slated for reductions?

ANSWER: Our estimates for 1991 are in the process of being revised upwards to the $178 million level. At this time we do not anticipate program reductions.

Immigration Emergency Fund

QUESTION: In 1990, $35 million was appropriated for the Immigration Emergency Fund which was established to cover costs associated with an immigration emergency. What is your definition of an emergency and could you provide some examples from past years which would have qualified?

ANSWER: An "immigration emergency" is a situation that is determined as such by the President and is so certified by the President to the Judiciary Committees of the Congress. The fund may only be utilized when the President makes this determination.

The primary factors to be considered by the President in evaluating the existence of an immigration emergency would be the knowledge that a substantial number of aliens who lack documents authorizing entry to the United States appear to be ready to embark or have already embarked for the United States; that the normal procedures of the Immigration and Nationality Act or the current resources of the INS would be inadequate to respond effectively to the influx of these aliens; and that the influx of these aliens could endanger the welfare of the United States or any community within the United States.

Under these criteria, a situation such as the one that existed during the Mariel Cuban boatlift crisis of 1979-1980 would be considered an emergency.

QUESTION: There were reports several months ago of a recurrence of the migration of Central American refugees into Texas. I understand that the problem has gone away, but if the refugees had continued arriving in large numbers, would that have qualified as an Immigration Emergency?

ANSWER: The recurrence of Central Americans migrating to South Texas has largely stopped. Once increased numbers of Central Americans were apprehended, INS promptly showed a very visible and strong detention/deterrence posture. Within a two-month time frame, the number of Central American's being apprehended had returned to normal. While INS may have had to request supplemental funding if increased enforcement efforts were required, the situation was never likely to constitute an "immigration emergency", as defined above.

QUESTION: There are some who believe that the impact on State and local services of the previous influx of Central Americans and Haitian refugees constitutes an immigration emergency. What is your position on this issue?

ANSWER: In addition to the Presidential determination and certification requirements, Section 113 of the Immigration Reform and Control Act (IRCA), the Immigration Emergency Fund provision, provides for "... reimbursement of States and localities in providing assistance as requested by the Attorney General in meeting an immigration emergency ..." Since the President has not determined that an immigration emergency exists and the Attorney General has thus not requested State or local assistance, use of immigration emergency funds is not permitted.

Program Reductions

QUESTION: In your 1991 request you propose two program reductions: First, a $22 million reduction associated with sequestration being applied twice, and second, your having to absorb $7.8 million for administratively uncontrollable overtime (AUO). What programs will you reduce in order to absorb these cuts?

ANSWER: All programs are affected by the reductions required within the structure of the overall budget. The absorption of the $7.8 million for AUO occurs only in those programs which have personnel receiving AUO.

QUESTION: In most cases, aren't the expenses you propose for reduction, the same expenses you reduced in 1990 in order to absorb sequestration and the cost of the 1990 pay raise? What impact will it have on your operations to reduce these expenses two years in a row?

ANSWER: These reductions are reflected in reductions in positions and workyears, as well as reductions shown in general expenses. The impact is somewhat mitigated by efforts directed at more efficient assignment and use of personnel and by the conservative use of supporting resources.

QUESTION: What was your request to OMB and what programs were you forced to eliminate in order to get down to the amounts now before the Congress? Are these program reductions a direct result of your not obtaining your full request of OMB?

ANSWER: OMB cut two major items from the INS budget request. The first was in the Border Patrol program, where OMB reduced the Service's initial request by 249 workyears and $18,041,000. Included in this reduction were $10,134,000 for reductions in workyears and $7,907,000 for equipment. In addition, a cut of $3,500,000 for journeyman officer training at the Artesia, New Mexico training facility was appealed.

Construction

QUESTION: You request $4.5 million to expand the Krome Detention Center. Is this expansion designed to handle criminal aliens?

ANSWER: Yes. The $4.5 million will allow for construction of a 300-bed lock-down men's dormitory. The construction of lock-down dormitory and segregating cells will allow the separation of aliens detained for criminal violations or drug apprehensions from non-criminal detainees, and provide greater security and safety for detainees as well as for Service employees and the general public.

QUESTION: Is there a shortage of detention space in Krome, Florida region?

ANSWER: Yes. The Service cannot detain more criminal aliens at Krome until the facility security rating is high enough to allow it to hold potentially violent felons awaiting deportation. The $4.5 million will upgrade Krome to meet standards mandated by the Congress for the detention of criminal aliens.

QUESTION: You also request an increase of $10 million to construct a traffic checkpoint at San Clemente, California. I understand that an additional $24 million will be required in 1992 to complete the project. Why did you not request full funding for this project?

ANSWER: The construction of a traffic checkpoint at San Clemente will be done in three phases. The expected completion date of the project, contingent upon availability of funding, is 1997. In view of this time period, we decided that funding should be requested in 1991 and 1992.

QUESTION: What would be the impact if this $10 million was denied or deferred?

ANSWER: Current traffic flow on the five-lane highway which feeds into the three-lane San Clemente traffic checkpoint is approximately 110,000 vehicles per day. During periods of heavy traffic, the current checkpoint frequently must be closed to alleviate traffic congestion and backup. An additional concern is the lack of adequate space at the current facility to accommodate officers and staff. Since 1971, the number of officers and staff has grown from 30 to 133.

If the proposed facility is delayed or denied, traffic congestion and backups will continue to occur and INS will have to continue its policy of closing the facility as necessary in order to accommodate traffic flow. San Clemente is the busiest Border Patrol traffic checkpoint and plays a key role in the INS's effort to apprehend illegal aliens and interdict drugs. Continued frequent closing of the checkpoint seriously restricts these efforts.

QUESTION: Please describe the need for two additional checkpoints in Texas, and two Border Patrol Stations in California and Texas?

ANSWER: The two traffic checkpoints are located in Texas, one in Alpine, Texas on Highway 118, the other near Marathon, Texas on Highway 67. They are needed to interdict drug and alien smuggling traffic along established smuggling routes. The Brownfield, California and Ysleta, Texas stations are losing their leases. They are both at the hub of active sectors on the southern border. It is critical that each station remain near its current geographical location, strategically located near alien and drug smuggling routes.

Program Increases

QUESTION: You request $16 million and 200 positions to enhance Border Patrol drug control activities. How will these funds be utilized?

ANSWER: Increases of 200 positions, 75 workyears and $6,727,000 are requested to enhance the commitment of personnel to the Patrol's drug interdiction efforts. The additional agents will be utilized in border control and traffic checkpoint coverage. An increase of $8,600,000 is requested for low-light television systems, night scopes, and portable ground sensors. The increased use of technology will enhance the productivity of operations.

QUESTION: Considering the almost $4 million cut for AUO/ sequestration against the Border Patrol, will you be able to train, equip and move these new agents?

ANSWER: Yes, we will be able to train, equip and move the new agents. However, for the 200 new positions, we have been funded only 75 workyears. This will necessarily limit the number of new employees we can hire.

QUESTION: You request $8.4 million to purchase 412 additional cars. According to page 66 of your request, you purchased 818 vehicles in 1990. Aren't these 412 vehicles already in your 1991 base and isn't this program growth duplicative?

ANSWER: The 412 vehicles requested in 1991 are not duplicative of vehicles purchased in 1990. These 412 vehicles will replace 412 high mileage vehicles (100,000+ miles each) that are currently in our fleet. Over one-half of INS' vehicle fleet of approximately 6,000 vehicles is eligible for replacement according to GSA vehicle replacement standards.

QUESTION: Isn't the $884 thousand requested for outreach associated with IRCA-related employment discrimination duplicative of amounts provided for that purpose to the Office of Special Counsel?

ANSWER: No. The $884,000 requested for the IRCA/Employer Sanctions anti-discrimination campaign will be used by INS to complement separate but related anti-discrimination efforts reflected in the Office of Special Counsel's budget.

Machine Readable Visas

QUESTION: What is the status of the machine-readable visa program begun in 1989?

ANSWER: INS and Customs are in the final stages of deploying upgraded document readers to support the new machine-readable visas. The final upgrade of all Customs's readers is scheduled for June. Upgraded readers will be able to read visas, passports and I-551's (new and old). A total of approximately 1,100 document readers capable of reading visas will be installed by the end of June in approximately 54 ports-of-entry. INS and Customs have installed new architecture and upgraded readers at the following sites: Detroit, San Diego, Nogales, Boston, Miami, San Francisco, San Juan, Dallas, Houston and JFK Airport. Los Angeles and Honolulu will become operational in May. Equipment has been ordered or is scheduled to be ordered this fiscal year for the following airports: Orlando, Seattle, Chicago, Dulles Airport, Atlanta, Charlotte, and Toronto. INS and Customs are in final stages of installation of a communications line between the Department of Justice and the United States Customs Service.

At the same time, INS and Customs have developed the Interagency Border Inspection System (IBIS), a single mainframe-based system for all primary lookout queries, building on Customs' Treasury Enforcement Communications System (TECS II). That system is being phased into ports-of-entry based on an agreed-to interagency plan for 1991 through 1992 -- contingent upon fund allocations. These agencies have established a joint systems group, based initially at the Customs Data Center, to develop and operate the single system. Treasury has established a timely connection between TECS II and National Crime Information Center (NCIC) data bases. Action is being taken to establish additional communication links between Justice, Treasury, State and other agencies involved with IBIS. Final testing is underway on a communications link between DOJ and Customs. The IBIS working group has developed a systems architecture that integrates the economics and versatility of small and large computers and the plan is modified on an as-needed basis. The IBIS working group and associated agency functional areas are in the initial stages of developing an Interagency Inspections Strategic Plan and feasibility study of an interagency border data center, to support law enforcement and case management missions of the U.S. Government at the border. INS, in coordination with the Department of State is deploying machine-document readers at the ports-of-entry most likely to receive machine-readable visas.

QUESTION: What is the current timetable for completion of this system?

ANSWER: By 1992, the Interagency Border Inspection System (IBIS) is expected to be in place at all international airports and pre-inspections sites. This system will then be able to support machine readability at all sites.

QUESTION: How much have you requested to continue implementation and does this fully fund your 1991 requirements?

ANSWER: Although no funding for IBIS has been requested in the Salaries and Expenses Appropriation, the Inspections User Fee contains $7,993,000 for continued implementation of IBIS initiatives in 1991 at air and sea ports-of-entry.

QUESTIONS SUBMITTED BY CONGRESSMAN EARLY

Machine Readable Visa

QUESTION: How much money will be spent by INS for the machine-readable visa program in 1990?

ANSWER: In 1990, INS will spend $10,030,000 for the Interagency Border Inspection System (IBIS) that includes deployment of machine-document readers at the ports-of-entry most likely to receive machine-readable visas from persons entering the country.

QUESTION: What is the current status of the machine-readable visa program at the ports-of-entry? Is it on schedule or is there slippage? If there are delays, what is the problem?

ANSWER: INS and Customs are in the final stages of re-deploying upgraded document readers to support the new machine-readable visas. The final upgrade of all Customs's readers (preparatory to the Interagency Border Inspection System (IBIS)) is scheduled for June. Upgraded readers will be able to read visas, passports and I-551's (new and old). A total complement of approximately 1,100 document readers capable of reading visas will be installed by the end of June in approximately 54 ports-of-entry. INS and Customs have installed the new IBIS architecture and upgraded readers at the following sites: Detroit, San Diego, Nogales, Boston, Miami, San Francisco, San Juan, Dallas, Houston and New York's JFK Airport. Los Angeles and Honolulu will become operational in April. Equipment has been ordered or is scheduled to be ordered this fiscal year for Orlando, Seattle, Chicago, Dulles, Atlanta, Charlotte, and Toronto. INS and Customs are in final stages of installation of a communications line between the Department of Justice and Customs.

INS and Customs have developed the IBIS, a single query, mainframe-based system for all primary lookout queries, building on Customs' Treasury Enforcement Communications System (TECS II). That system is being phased into ports-of-entry based on an interagency plan for 1989 through 1992 -- contingent upon fund allocations. These agencies have established a joint systems group, based initially at the Customs Data Center, to develop and operate the single system. Customs has established a timely connection between TECS II and National Crime Information Center (NCIC) data bases. Action is being taken to establish additional communication links between Justice, Treasury, State and other agencies involved with IBIS. Final testing is being conducted on a communications link between DOJ and Customs. The IBIS working group has developed a systems architecture that integrates the economics and versatility of small and large computers and the plan is modified on an as needed basis. The IBIS working group and associated agency functional areas are in the initial stages of developing an Interagency Inspections Strategic Plan and feasibility study of an interagency border data center, to support law enforcement and case management missions of the U.S. Government at the border. INS, in coordination with the Department of State, is deploying machine-document readers at the ports-of-entry most likely to receive machine-readable visas.

The IBIS/machine-readable visa program at ports-of-entry is on schedule.

QUESTION: How many ports-of-entry now have a machine-readable program? Where are these ports-of-entry located?

ANSWER: A total complement of approximately 1,100 document readers capable of reading visas will be installed by the end of June 1990 in the following 54 ports-of-entry.

Detroit, MI
San Francisco, CA
San Juan, P.R.
Los Angeles, CA
Nogales, AZ
Atlanta, GA
Philadelphia, PA
Bangor, ME
Dulles, VA
Toronto, Canada
Vancouver, Canada
Anchorage, AK
Freeport, ME
Portland, OR
Kansas City, MO
Milwaukee, WI
St. Thomas, V.I.
Oakbrook, IL
San Diego, CA
Boston, MA
Houston, TX
Chicago, IL
Laredo, TX
Seattle, WA
Baltimore, MD
Denver, CO
Agana, GU
Montreal, Canada
Winnipeg, Canada
Bermuda
New Orleans, LA
Cleveland, OH
Pittsburgh, PA
Tucson, AZ
Duluth, MN

Dallas, TX
Honolulu, HI
Calexico, CA
Newark, NY
Minneapolis, MN
Charleston, SC
Shannon, Ireland
Edmonton, Canada
Calgary, Canada
Nassau, Bahamas
St. Louis, MO
Ft. Lauderdale, FL
San Antonio, TX
Vermont
Glynco, GA
Beehive/Salt Lake, UT

INS and Customs have installed the new IBIS architecture and upgraded readers at the following sites: Detroit, San Diego, Nogales, Boston, Miami, San Francisco, San Juan, Dallas, Houston and New York's JFK airport. Los Angeles and Honolulu will become operational by May 1990.

QUESTION: How many ports-of-entry don't have a machine-readable visa program?

ANSWER: Approximately 250 ports-of-entry do not have a machine-readable visa program.

QUESTION: Are all ports-of-entry scheduled to implement a machine-readable visa program in the near future?

ANSWER: The IBIS system is being phased into ports-of-entry based on an agreed-to interagency plan for 1989 through 1992 -- contingent upon fund allocations. By 1992, the system is expected to be in place and will be able to support machine readability at all international airports and pre-inspection sites. Due to the technology for land and sea ports-of-entry still being in the developmental stage, we cannot project a definitive date as to when all land and sea ports-of-entry will have machine-readable visa capabilities.

QUESTION: **What is the timetable for implementing machine-readable visas at all ports-of-entry?**

ANSWER: By 1992, the IBIS system is expected to be in place and able to support machine readability at all international airports and pre-inspection sites. Because the technology for land and sea ports-of-entry is still in the developmental stage, we cannot project a definitive date as to when all land and sea ports-of-entry will have machine-readable visa capabilities.

QUESTION: **Have you made any changes in program plans and implementation schedules?**

ANSWER: The program plans and implementation schedule have been modified on an as-needed basis. These modifications are due to factors such as funding and timetables for communications installations, construction, etc.

QUESTION: **What is included in the request for machine-readable visas? How will these funds be used in 1991?**

ANSWER: Although no funding for IBIS has been requested in the Salaries and Expenses Appropriation, the Inspections User Fee contains $7,993,000 for continued implementation of IBIS initiatives in 1991 at air and sea ports-of-entry.

QUESTION: **Could the machine readable project be accelerated with additional funds?**

ANSWER: Yes, like most programs, additional resources would accelerate implementation.

QUESTION: **What was in INS's request to OMB for machine-readable visas? How does this differ with the President's budget request?**

ANSWER: The Salaries and Expenses Appropriation request did not contain funding for machine-readable visas; however, the Inspections User Fee did contain $7,993,000 for continued implementation of IBIS initiative in 1991. This is also the case with the President's budget request.

QUESTION: **Have you encountered any difficulties in coordinating this project with the Department of State and Customs? Could you provide some specific examples of how INS, Customs, and the Department of State have coordinated their efforts in implementing machine-readable visas?**

ANSWER: We have not experienced any difficulties in coordinating this project with the Department of State and Customs.

INS and Customs have developed the IBIS, a single query mainframe-based system for all primary lookout queries, building on Customs' Treasury Enforcement Communications System (TECS II). That system is being phased into ports-of-entry based on an agreed upon interagency plan for 1989 through 1992 -- contingent upon fund allocations. These agencies have established a joint systems group, based initially at the Customs Data Center, to develop and operate the single system. Customs has established a timely connection between TECS II and NCIC data bases. Action is being taken to establish additional communication links between Justice, Treasury, State and other agencies involved with IBIS. Final testing is underway on a communications link between DOJ and Customs. The IBIS working group has developed a systems architecture that appropriately integrates the economics and versatility of small and large computers and the plan is modified on an as-needed basis. The IBIS working group and associated agency functional areas are in the initial stages of developing an Interagency Inspections Strategic Plan and feasibility study of an interagency border data center, to support law enforcement and case management missions of the U.S. Government at the border. INS, in coordination with the Department of State, is deploying machine document readers at the ports-of-entry most likely to receive machine-readable visas.

Currently, two INS employees are working at the Customs data center in Newington, and the three agencies participate in bi-weekly meetings, as well as the IBIS Steering Committee.

QUESTION: Are there any technological problems which have arisen which may delay the implementation of the machine-readable program?

ANSWER: We do not anticipate any technological problems which will delay the implementation of the machine-readable visa program.

QUESTION: Has INS determined the total cost of full implementation of the machine-readable program?

ANSWER: INS cannot determine the total cost of full implementation of the IBIS and, therefore, the machine-readable program, until the development cycle for land and sea ports-of-entry has been completed.

Other Questions

QUESTION: Are there overnight detention facilities for illegal female entries in all Border Patrol Sectors? It is my understanding that there wasn't one in the El Paso Sector. Has this situation changed? (El Paso Sector - all of New Mexico and the Western part of Texas).

ANSWER: In those Border Patrol Sectors where there are no INS Service Processing Centers available, the sector must make use of non-Service detention space through liaison with the local sheriff. If the local jail has space for female detainees, it is usually given to the Border Patrol provided it is readily available. Local county authorities have priority use over INS detainees.

The situation in El Paso has not changed. Availability of space is negotiated on a day-to-day basis with local authorities.

QUESTION: If illegal entries (both female and male) are not held overnight, what is the process? On average, how long are they detained?

ANSWER: Those aliens not held overnight are processed by the Border Patrol and placed on an Order of Recognizance (after the issuance of an Order to Show Cause) for a hearing to be set at a later date.

Aliens are detained at a Sector office until such time as all the proper paperwork has been completed. The length of time depends upon availability of staffing and number of aliens to be processed.

QUESTION: What is done with the information collected on the forms at the ports-of-entry by the Border Patrol/INS officers? (The form is the I-213 form; it requests name, address, date of birth, country of origin, etc.)

Is this information sent to Washington or somewhere else to be entered in a computer file?

At the present time there is no way to verify the information on these forms, is there? So we are relying on these illegal entries to provide us with correct information?

ANSWER: The bulk of the information is retained, consolidated and analyzed at the Sector level, and used for reporting on workload and apprehension trends. In cases where aliens do not agree to leave the country, data is entered into our system for tracking the cases of deportable aliens. On the bulk of the I-213 forms there is no easy way to verify the information provided by the aliens. Therefore, we are relying on the aliens to provide correct information.

QUESTION: The committee directed the Border Patrol to conduct a test of an Automated Fingerprint Identification System (AFIS) in the San Diego Sector to give us an indication of recidivism rate of illegal entries, among other things. What were the recidivism statistics as a result of this study. (This study was conducted during a 45-day period in June to August of 1989.) Please provide a summary of the recidivism study for the record.

ANSWER: INS contracted with the California Department of Justice to conduct the recidivism study and develop an action plan for implementation of an AFIS system. The prototype technique employed was to collect self-reported descriptive data (i.e., name, sex, nationality, age) and Border Patrol-reported apprehension data (i.e., date, time, station) for each of approximately 50,000 consecutive apprehensions within the San Diego Sector, while also collecting fingerprint impressions from which positive identification of the persons apprehended could be established.

Two kinds of analyses were performed. The first used the apprehension as the unit of count; it is designed to answer questions of the form, "Of all apprehensions in the Sector, what proportion involve subjects who are under age thirty, are a particular nationality, or female, etc.?" The second kind of analyses used the individual person as the unit of count; it is designed to answer the questions of the form, "Of all the persons apprehended in the Sector, how many of them are apprehended a second time within two days, or use different names on subsequent apprehensions, or cross at a different place the second time?".

The test met the requirements set forth by Congress with the following results:

. The main finding of the report was the 21 percent minimum rate of recidivism during the study, verifying the long-felt need for alternative approaches in reducing the repeated crossing attempts.

. The use of AFIS technology may be possible in the environment of Border Patrol operations.

. The study has shown that an AFIS system may be developed at a reasonable cost, utilizing new methods of on-line matching for identifying alien criminals in a relatively short time period.

. The steps toward AFIS implementation have been defined.

. The analysis of the 45-day study provides empirical data on the recidivism problem and furthers research on the characteristics of persons who illegally cross the border in the San Diego Sector.

. The total number of apprehensions which met the data quality edits of the second portion of the analysis was 52,697. The total number of different persons identified was 39,579. Thus the average apprehensions per subject measured in this 45-day period was 1.3, though some subjects crossed many more times than that.

. The study was able to provide data on the frequency of recidivism, indicating that of the 39,579 different persons who were apprehended, 31,266 were apprehended only once (79 percent), 5,616 were apprehended twice (14 percent) 1,618 apprehended three times (4 percent), up to 13 apprehended 6 times (.03 percent).

. The study was able to provide data on four descriptors of self-reported data recorded on the 8,313 subjects apprehended more than once. The percentages reflect the number of times that the descriptors were recorded the same on subsequent apprehensions as on the first apprehension. The accuracy of names provided was 18 percent, sex 93 percent, nationality 98 percent and date-of-birth 94 percent.

QUESTION: The FBI is moving towards an automated fingerprint identification system, and many State and local law enforcement officers already use automated fingerprinting ID systems. I can foresee a need for INS to utilize this technology, too. What plans does INS have to utilize automated fingerprint ID in the near future?

ANSWER: We are proceeding, through the INS systems development cycle, to employ AFIS as a support "tool" for INS enforcement and service functions. In 1989, a preliminary investigation of the capability was completed with demonstration of equipment/system in San Diego Border Patrol operations.

Presently, we are conducting the feasibility and cost benefits analysis and taking action toward establishment of an Initial Operations Capability (IOC) in the San Diego area. The IOC will be accomplished through services of the Western Identification Network (WIN), a consortium of states sharing criminal AFIS data bases. By joining WIN, the Border Patrol and other INS programs in San Diego will have the capability to perform 200 potential criminal alien searches a day, by 1990 year end.

Based on the demonstration of AFIS technology and study of the recidivism phenomenon, the INS plans to expand the AFIS capability to six localities in Southern California during 1990 for further operational testing.

By November of this year, requirements analysis and IOC evaluation will have progressed to the state where substantiated recommendations can be made regarding national development.

QUESTION: Aren't you now placing fingerprints on the permanent resident card?

ANSWER: Yes, we currently capture a fingerprint image on the Legal Permanent Resident Card. The print cannot be used in the AFIS systems we are currently working with in Southern California. However, our AFIS study may show we can use this print in an INS-designed AFIS.

QUESTION: Provide for the record the names of State and local police agencies which now utilize automated fingerprint ID systems.

ANSWER: State AFIS systems:

Alaska Department of Public Safety
California Department of Justice
Georgia Bureau of Investigation
Illinois Department of State Police
Massachusetts State Police
Michigan Department of State Police
Virginia State Police/Dept. of Crim. Just. Svcs.
Washington State Patrol
Pennsylvania State Police (Contract Awarded)
Colorado Bureau of Investigations
Florida Department of Law Enforcement
Indiana State Police
Minnesota Bureau of Criminal Apprehension
New Mexico State Police
Tennessee State Bureau of Identification
Kentucky State Police (Semi-Operational)
North Carolina State Bureau of Invest. (Semi-Oper.)
Louisiana Dept. of Public Safety and Corr. (Semi-Oper.)
Iowa Dept. of Public Safety (Contract Awarded)
Delaware State Police (Contract Awarded)

QUESTIONS SUBMITTED BY CONGRESSMAN DWYER

Airport Inspection Delays

QUESTION: Commissioner Gene McNary, as you know, the $5 INS User Fee for passenger processing was designed to ensure that the travelling public, who are the ones paying for INS passenger processing, are the beneficiaries of the program. However, I am aware of frequent delays at this country's larger airports -- delays well in excess of an hour despite the fact that over $103 million is dedicated to this account in 1990; moreover, in 1991 additional collections of fees resulting from increased foreign travel are anticipated to be $110 million. What can you tell us about these delays and shortage of inspection agents?

ANSWER: According to Department of Transportation and Air Transport Association predictions, international air travel was expected to increase this year by 6 percent to 7 percent. In addition, several of the larger U.S. airports were expecting newly-constructed facilities to become operational during the fiscal year. The four regional offices forwarded their requests for additional positions based on these factors. The increases in traffic coupled with serious peaking problems have resulted in additional delays at some airports.

QUESTION: I understand there is a reprogramming that has been approved by OMB that we might be seeing shortly that would address this problem. Is this true? And, if so, when might this committee receive it?

ANSWER: The Office of Management and Budget approved the reprogramming on March 20, 1990. The notification was submitted to Congress on March 22, 1990. The Committees on Appropriations notified the Department that they had no objection to the proposal several days later.

QUESTION: How long did it take OMB to approve this reprogramming once INS sent it to them? Please be specific. And since this is supposed to be a dedicated user fee account solely for processing the travelling public, who in fact pay the fee, why is INS using these funds for other things -- such as pay raise, sequestration?

ANSWER: The reprogramming request was forwarded to OMB on February 27, 1990. It was approved on March 20, 1990. The account is used only for Immigration Inspections at airports and seaports, and related support services. Inspectors and support personnel must have their total compensation, including the cost of pay raises, paid from the Immigration Users Fee. Sequestration, where applied, is an automatic action in response to the law.

QUESTION: Most importantly, how exactly will this reprogramming address this problem?

ANSWER: The reprogramming adds 360 permanent positions and $11,973,000 to the Inspections program. The personnel involved in this expansion will be placed in locations which have experienced growth in traffic.

QUESTION: I understand there were 1,173 inspectors ($65 million) in 1989; 1,475 inspectors in 1990 ($75 million). Who decides how many and how these positions are allocated to particular airports? The INS Budget office? Recommendations from INS regional offices? Main Justice? or OMB?

ANSWER: The Inspections program at the Central Office in conjunction with the Regional Offices, decide the distribution of positions to the ports-of-entry.

QUESTION: What airports that the INS is aware of are experiencing inspection delays in excess of 45 minutes? Please provide in detail.

ANSWER:

PORT-OF-ENTRY	PROCESS TIME	REASON
Northern Region:		
Detroit, MI	60 minutes	facility design and staffing shortfalls
St. Louis, MO	60 minutes	facility design and staffing shortfalls
St. Paul, MN	1-2 hours	facility design and staffing shortfalls
Seattle, WA	1 hr. 40 mins.	facility design and staffing shortfalls
Portland, OR	50 mins.	staffing shortfalls

PORT-OF-ENTRY	PROCESS TIME	REASON
Eastern Region:		
Philadelphia, PA	60 minutes	staffing shortfalls
San Juan, PR	1 1/2 hours	staffing and overtime shortfalls
Newark, NJ	1 hr. 15 mins.	staffing shortfalls
New York City	1 hr. plus	staffing shortfalls
Southern Region:		
Houston, TX	1 hr. 15 mins.	staffing shortfalls
Miami, FL	60 minutes	staffing shortfalls
Orlando, FL	60 minutes	staffing shortfalls
Dallas/Ft. Worth	60 minutes	staffing shortfalls
Charlotte, NC	1-1 1/2 hrs.	staffing shortfalls
Western Region:		
San Francisco, CA	1 hr. 15 mins.	staffing shortfalls and peaking of arrivals
Honolulu, HI	60 minutes	staffing shortfalls
Los Angeles	1 hr. 15 mins.	staffing shortfalls

QUESTION: It is my understanding that you are contemplating the elimination of part-time employees (otherwise known as when actually employed -- WAE). It seems to me, however, given the seasonal nature of aviation travel that it would make more sense to have people available during peak travel months and peak travel hours. Part-time employees would give you more of this travel flexibility than full-time equivalent positions and also be more cost efficient.

If I am right in my assumption, then why would you even contemplate eliminating part-time positions?

ANSWER: The Service is not contemplating the elimination of seasonal employees, formerly termed WAEs. What INS has been mandated to do, under a Department of Justice audit conducted in 1989, is to eliminate as many temporary full-time positions as possible and to replace such positions with permanent full-time Immigration Inspectors.

The nature of international air travel, as well as the seasonal nature of some of our Northern land border ports-of-entry, will always necessitate the use of WAE employees.

QUESTION: What long term plans do you have to guarantee that passengers will be processed in a timely and efficient manner in 45 minutes or less?

ANSWER: Inspections goal has been to inspect arriving flights in one hour or less, as outlined in the Committee Report relating to the establishment of the user fee. If additional personnel resources become available, we could lower the inspection time at some airports but facility restrictions prevent us from lowering it to 45 minutes or lower at all airports. A number of other factors also impact on our ability to "guarantee" a specific inspection time. Weather, scheduling, country of origin, size of flight, and other variables all impact on our ability to inspect flights in a timely manner. If these factors were totally controllable, staffing and facilities could be provided which would guarantee a specific time.

Some Examples of Airport Inspection Delays

QUESTION: Is INS aware of that on March 5, 1990 Pan Am informed us that at JFK 151 people missed connecting flights and they had to pay for overnight lodging of 40 people. Only 17 of 30 INS inspection booths were staffed. Pan Am then had to absorb these costs and respond to complaints. Please comment. Is INS aware of these delays?

This past weekend, after the Port Authority had been told by INS that sufficient staff would be available, several carriers (KLM and Northwest) experienced delays in the International Arrivals Building (IAB) of over an hour. Of the 54 booths at IAB, I understand only 28 were staffed. For Pan Am, which operated their own terminal, only 16 of 30 booths were staffed. Please comment.

ANSWER: INS was made aware of the problems at JFK airport that day. We were informed that all available staff was on the primary line. However, during the peak period, a Pan Am flight arrived with 56 refugees on board followed immediately by an Aeroflot flight with 10 refugees. As the processing of passengers for refugee status expends considerably more time than regular traffic, the influx of these passengers during the peak period caused significant delays.

To alleviate the problem, the New York district is in the process of hiring 22 new inspectors who are expected to enter on duty in the near future. Additionally, Executive Commissioner Lempres met with the New York Port Authority and Kennedy Airport Airline Management Council on March 16 to discuss the shortage of staff and propose solutions. Mr. Lempres promised additional funding for the remainder of the quarter for overtime staffing.

Effect on Newark International Airport

QUESTION: These problems at JFK also impact Newark since inspectors are allocated out of the local offices. It appears that with totally inadequate staffing at JFK, local INS can't send more agents to Newark, where the problems aren't as severe. Are you aware of this problem?

ANSWER: Newark does not receive their staff from the New York District, but maintains its own district's employment. Newark's current shortages are due to an 80-percent increase in passenger traffic at that location in just two years. Newark has been allotted 12 additional user fee positions. With the additional funds provided by the reprogramming, the new officers should be on duty within 60 days.

QUESTIONS SUBMITTED BY CONGRESSMAN CARR

Immigration and Naturalization Service

QUESTION: As you know, there have been serious inspection staffing shortages in several international airports this year that have created delays and inconvenience to the travelling public, both foreign and domestic. What are you doing now to make sure that cities that have been experiencing traffic surges will have the necessary additional staffing in place and operating on the line during the heavy travel season?

ANSWER: INS intends to complete all hiring by year's end. To allow us to avoid the delays at the major airports we are making two adjustments to the current year plan; 1) for the near term, lessen the emphasis on exchanging temporary workyears for permanent until after the new hires are on-duty and fully trained, and 2) adjust the existing overtime reduction goals to reflect current workload increases. With the additional funds provided by a reprogramming, the Inspections program will receive 360 permanent positions and $11,973,000 which will be placed in locations that have experienced growth in traffic.

QUESTION: Since the inception of the visa waiver program, there has been a noticeable increase in the number of visitors to the U.S. from the eight participating countries. Is INS undertaking any efforts to compensate for this rise in traffic? Are additional inspectors to be assigned to airports? What funding is provided for these positions?

ANSWER: There has been an increase in the number of visitors from ~~all~~ countries, including the countries in the Visa Waiver Pilot Program. Whether the increase is the normal increase in traffic that we have seen through the years or attributable to the pilot program has not been determined. All traffic patterns are monitored closely for trends to assist in determining future year staffing needs. Funding for additional positions caused by any increase in traffic is provided as a component of the user fee.

QUESTION: In 1989, what percentage of the total detention days were paid for from the Inspections User countries (Canada, Mexico and the Caribbean)? What percentage was spent on persons who claimed political asylum?

ANSWER: The Detention and Deportation Program does not capture data regarding the detention cost of those individuals claiming political asylum. To gather this information, a case-by-case review would have to be conducted.

QUESTION: Is INS proposing any change to the delineation by which fees are collected? Are any efforts underway to collect fees on traffic from the exempt regions?

ANSWER: No proposals are being formulated at this time to increase the existing fee. However, the Service is currently reviewing proposals to change the exemption for arrivals from contiguous territory and the adjacent islands.

QUESTION: Would the imposition of collections have any effect on bilateral relationships such as the Free Trade Act agreement with Canada if exempt traffic is subject to fees?

ANSWER: No effect on bilateral relationships between the U.S. and either Mexico or Canada is expected. For example, Mexico currently charges an exit or airport departure tax for international air passengers departing from that country. Canada also charges a flat fee for any immigration-related processing at offices in that country. The Free Trade Agreement has not affected this.

QUESTION: A 1989 Justice Department audit criticized INS for the level of overtime spending in the Inspections program. What was the total amount spent on overtime at airports and seaports in 1988 and 1989? How much was spent on overtime at land border ports in the same two years? Has the amount spent per officer changed significantly during this period?

ANSWER: The amount has not changed significantly during this period:

	1988	1989
Air/Sea	$22.2 million	$23.3 million
Land	$11.0 million	$11.3 million

QUESTION SUBMITTED BY CONGRESSMAN ROGERS

Financial and Management Changes

QUESTION: Mr. McNary, as you know the INS has been the subject of criticism over the years with respect to weaknesses in internal cost controls and management. What problems have you identified and what steps have you proposed or implemented in response?

ANSWER: A plan is being developed and will be submitted to the Office of Management and Budget for the improvement of the Immigration and Naturalization Service (INS) budgeting and accounting systems. The major thrust of improvement is embodied in the transition to the Department of Justice Financial Management Information System (FMIS). It is through this effort that INS will unify and automate the budget and accounting process, strengthen financial controls, and realize improved financial management as a viable component of an improved overall INS management system. The following actions have been taken.

. A full-time FMIS project team has been appointed and dedicated solely to this major task.

. Personnel services and benefits (PS&B) have been centralized under the specific control of Headquarters Program Managers. Financial decisions on PS&B are now being made by Headquarters considering Servicewide priorities, objectives, and needs.

. The Office of the Comptroller has been restructured to reinforce resource management and support the decision to centralize control over PS&B.

. An automated system to track and follow-up all audit findings has been implemented. The Comptroller has been and will continue to conduct a monthly review of each finding and its status to ensure that critical findings are quickly resolved and that realistic priorities are maintained.

. A Field Office Funding System (FOFS) has been developed to improve INS funds accounting and control mechanisms. FOFS is currently undergoing an evaluation prior to Servicewide implementation.

Additionally, action has been taken to consolidate Regional Service Centers and Regional Processing Facilities within each region into a single processing facility under the direct control of Headquarters. Other restructuring to facilitate central control is also under development.

QUESTION: Do you anticipate proposing any other significant management changes within the Service?

ANSWER: Since becoming Commissioner, I have called for a complete review of the agency's existing management structure and the lines of authority between Headquarters, the four regions, and all other offices. Based on this review I anticipate proposing significant changes in INS to the Department of Justice (DOJ) and working to see that they are implemented. A wide variety of topics will be addressed, including the status of the Regional Offices and the centralization of some functions.

Land Border Inspections

QUESTION: You are requesting an additional 104 positions to replace temporary inspections personnel at ports-of-entry with permanent full-time personnel. Explain the reason for this increase.

ANSWER: This planned conversion does not require a net increase in available workyears, from which improved program performance would normally accrue. Instead, INS intends to improve the productivity of inspectors currently working in essentially full-time positions. The Service was criticized in last year's DOJ audit for its continued use of full-time temporary officers. The report concluded that the lack of formal training for these individuals detracted from the program's ability to determine admissibility. The INS' extensive 14-week training program was designed to allow the officer to accurately apply the Immigration and Nationality Act in determining admissibility. Untrained officers, even those working in positions that have in effect allowed them to operationally function as permanent employees, are not able to achieve the higher levels or enforcement productivity of the trained staff. INS believes that approximately a 20-percent improvement in productivity can be gained through formal training and continuation of post-academy on the job instruction.

QUESTION: You are also showing a reduction of 50 workyears in the Inspections program. Why are you reducing workyears at the same time you are increasing positions? Could the 50 workyears be utilized in all or part of 1991?

ANSWER: The planned reduction in total workyears (from 1,523 to 1,473) is expected to be offset by officer productivity gains expected with the availability of the 104 new permanent full-time positions and continued productivity gains resulting from automation.

QUESTION: Could the 50 workyears be utilized effectively in all or part of 1991?

ANSWER: The 50 workyears to be eliminated were not planned for use during 1991.

QUESTION: Several months ago, a twenty-ton drug seizure occurred in Los Angeles, California. It has been suspected that the drugs were transported into the United States through a southern border port-of-entry. What trends are the INS and other drug agencies seeing with respect to drug smuggling through land border ports-of-entry?

ANSWER: According to the El Paso Intelligence Center (EPIC) the land border ports-of-entry are a highly significant vulnerability point for drug smuggling. This assessment is based on an analysis of smuggling trends and patterns of activity.

The bulk of the cocaine coming into the country is across the land borders. It is predominantly concealed in compartments in trucks and automobiles.

Nearly all heroin is brought in through the land ports. This is done either by individuals who carry and conceal the substance on their bodies or in their vehicles. Heroin is generally not hidden in vehicle compartments.

Of the marijuana smuggled into the country, approximately 50 percent comes in through ports-of-entry, and 50 percent comes in between the ports. The drug shipments coming through the ports are concealed in vehicles and cargo. The marijuana smuggled between is either driven or carried across the border to drop points from which shipping to the interior takes place.

QUESTION: Your budget justifications state that inspections workload experienced at land border ports-of-entry has increased. Please provide summary data on these workload increases for the past four fiscal years?

ANSWER: Workload has increased significantly over the last four fiscal years, in both land and air/sea inspections. Specifically the data are as follows:

	1986	1987	1988	1989
Land Admitted	286,331,340	293,768,107	336,683,524	377,537,247
Land Inadm.	643,415	706,461	723,307	766,443
Air/Sea Admitted	41,662,507	45,232,315	48,351,522	51,163,204
Air/Sea Inadmissable	77,786	66,118	76,123	77,006

QUESTION: What impact has increased inspections had on the flow of traffic through ports-of-entry?

ANSWER: The ports-of-entry at Blaine, WA; Laredo, TX; San Ysidro, CA; El Paso, TX and Calexico, CA, have experienced dramatic increases in traffic volume over the past 5 years. In all of these locations, the saturation point has been reached. The physical facilities and road infrastructure have not kept pace with traffic volumes, nor have INS personnel enhancements. The situation in the Pacific Northwest, South Texas, and California is being addressed from all aspects of the problems. Border station facility improvement is ongoing and many local private sector groups are working on the infrastructure problem. While INS needs more inspectors at these locations, in several cases, even with every available lane being utilized, the flow of traffic is very slow with long backups during peak traffic periods. Thus, flow of traffic is impeded not only by a shortage of inspectors, but even more by facilities operating over their design capacity.

QUESTION: Have budget resources kept pace with the workload experienced?

ANSWER: No. In 1987, the Inspections program was authorized 1,108 positions and obligated $60,317,000. In 1989, the program was authorized 1,169 positions and obligated $67,987,000. Positions increased 6 percent while obligations grew by 13 percent. During the same period, the total number of land border inspections grew by 28 percent.

QUESTION: The current Inspections User Fee program is limited to fees collected at airports. What is your opinion of the advisability of a land border inspection fee to provide resources to address the workload problems?

ANSWER: A vehicle fee would generate sufficient funds to significantly enhance our staff and facilities at land border ports-of-entry. Additional revenues can also be generated by charging administrative fees for the issuance of documents and performance of many services provided at land border ports-of- entry (I-444 Mexican Border Visitors Permits, I-68 Northern Border Boat Permits, I-94 Arrival and Departure Records).

Information and Records Management A-76 Reductions

QUESTION: The 1991 request reflects program decreases of 55 positions, 186 workyears, and $1,959,000 for information and records management activities. How many of these positions are A-76 reductions? Of those, how many of these positions have been the subject of studies?

ANSWER: The reductions in resources in the information and records program is broken down as follows:

To meet with budgetary targets by the administration:

Positions	FTE	Budget Authority
55	-76	$1,316,000

Due to A-76 Reductions:

Positions	FTE	Budget Authority
-110	-110	$643,000

An A-76 study is in process on mail and file activities for the 110 positions and workyears reduced in the 1991 submission.

Dallas, Texas Consolidation

QUESTION: It is my understanding that the INS is undertaking a consolidation of its Dallas, Texas activities from three separate buildings to one leased for the same purposes by the General Services Administration, and that the first phase of this move began in September, 1989. What are the expenditures to date for this move, and have funds been reprogrammed for this purpose?

ANSWER: All funds for the actual physical move and the telephone installation, etc. were obligated in 1989 from the Administrative Services account. No operational funds were used. The move has been planned for two and one-half years and, thus, the funding for it was planned for 1989 prior to the start of the fiscal year. Those obligating documents covered both the 1989 and 1990 portions of the move since the same vendors were planned for both the move phases. The expenditures were $432,000 and cover the move that has taken place and the pending one. At present, the relocation of Service employees has been halted until a reprogramming notification is forwarded to and approved by Congress.

QUESTION: What are the total estimated costs of and reasons for this consolidation?

ANSWER: In addition to the $432,000 obligated in 1989 for the relocation of the three facilities, it is anticipated that approximately $5,000 in 1990 funds may be needed after the move is completed to move a few phone jacks or electrical outlets.

The GSA leases on the Southern Regional Office and Regional Processing Facility (RPF) in Dallas expire in 1989 with renewal options until 1991 and 1992, respectively. The relocation plans began two years ago with the submission of the required paperwork to GSA as a routine procedure in advance of a lease expiration. Since May 1987, the region has been housed in three separate buildings and the request to GSA specified that the new lease should be able to accommodate the employees housed in all three buildings, thereby promoting organizational efficiency.

San Clemente Traffic Checkpoint

QUESTION: You are requesting $10 million in no-year funds to undertake a relocation and expansion of the San Clemente Traffic Checkpoint. Please describe the project, including total cost, location, and facilities.

ANSWER: The site for the proposed facility is located within the boundaries of the Camp Pendelton Marine Corps base on Interstate 5, approximately three miles south of the present checkpoint in San Clemente, California.

The total cost of the project will be $32 million. The facilities will include the following structures and roadwork:

- 16 lanes for inspection of vehicles (approximately 3 miles of roadway)
- 4 secondary inspection areas with canopies to allow operation during inclement weather
- 16 inspection booths with canopies to allow for operation during inclement weather
- Border Patrol Station
- Covered walkway from inspection points to Station

QUESTION: What benefits are associated with this project?

ANSWER: Interstate 5 is a heavily traveled highway which is known to be a major route for alien and drug smugglers into Southern California. The present checkpoint frequently must be closed during heavy traffic periods because the traffic backups create safety problems. This situation is being exploited by alien and drug smugglers to avoid detection and apprehension.

The new facility would accommodate 100,000 vehicles per day and would allow a proper inspection of people and vehicles to be conducted safely and in a timely manner.

The Border Patrol Station at the current facility was built in 1971 for 30 agents and staff. The present staff level is 133 agents and is expected to increase to 225. The new Station will provide adequate space for these agents and administrative staff as well as holding rooms for males and females.

QUESTION: Since this checkpoint is located on a major Federal interstate highway, has the INS explored the possibility of financing the project with Federal highway funds?

ANSWER: INS requested the California Department of Transportation (CALTRANS) to use State Highway Trust Funds to accomplish the roadwork portion of this project. Although CALTRANS is willing to cooperate in the development of this facility, they are unable to provide funds for this project due to repairs of existing roads and bridges damaged by the recent earthquake.

Machine-Readable Visa System

QUESTION: Congress has provided funding over the last two years for development and implementation of a machine-readable visa system. Please summarize your accomplishments to date on this effort.

ANSWER: INS and Customs are in the final stages of redeploying upgraded document readers to support the new machine-readable visas. The final upgrade of all Customs's readers (preparatory to the Interagency Border Inspection System (IBIS)) is scheduled for June. Upgraded readers will be able to read visas, passports and I-551's (new and old). A total complement of approximately 1,100 document readers capable of reading visas will be installed by the end of June in approximately 54 ports-of-entry. INS and Customs have installed the new IBIS architecture and upgraded readers at the following sites: Detroit, San Diego, Nogales, Boston, Miami, San Francisco, San Juan, Dallas, Houston and New York's JFK airport. Los Angeles and Honolulu will become operational in May.

Equipment has been ordered or is scheduled to be ordered this fiscal year for Orlando, Seattle, Chicago, Dulles, Atlanta, Charlotte and Toronto. INS and Customs are in final stages of installation of a communications line between Department of Justice and Customs.

QUESTION: What is the status of your coordination with the State Department and Customs?

ANSWER: INS and Customs have developed the IBIS, a single query, mainframe-based system for all primary lookout queries, building on Customs' Treasury Enforcement Communications System (TECS II). That system is being phased into ports-of-entry based on an agreed to interagency plan for 1989 through 1992 -- contingent upon funds allocations. These agencies have established a joint systems group, based initially at the Customs Data Center, to develop and operate the single system. Customs has established a connection between TECS II and NCIC data bases. Action is being taken to establish additional communication links between Justice, Treasury, State and other agencies involved with IBIS. Final testing is being conducted of a communications link between DOJ and Customs. The IBIS working group has developed a systems architecture that integrates the economics and versatility of small and large computers and the plan is modified on an as needed basis. The IBIS working group and associated agency functional areas are in the initial stages of developing an Interagency Inspections Strategic Plan and feasibility study of an interagency border data center, to support law enforcement and case management missions of the U.S. Government at the border. INS, in coordination with the Department of State, is deploying machine-document readers at the ports-of-entry most likely to receive machine-readable visas.

QUESTION: Provide the total appropriations and obligations by INS in 1989 and 1990 (planned), as well as the specific sources of those funds.

ANSWER: The total annual allocations, obligations, and funding sources for IBIS funding in 1989 were as follows:

Allocations	Obligations Source	Funding Source
$6,720,000	$6,700,525	Inspection User Fee
$5,825,000	$5,006,900	Anti-Drug Abuse Act (S&E Appropriation)

The total annual allocations for IBIS funding in 1990 are:

Allocations	Funding Source
$5,030,000	Inspection User Fee
$5,000,000	S$E Appropriation

Funding supports telecommunications, commercial services, intra-agency services as well as capital investment.

QUESTION: I notice that no subsequent funding is proposed for 1991. Can you complete all planned development and installations with the resources provided to date?

ANSWER: All planned development and installations cannot be accomplished without additional funding from sources including the Inspection User Fee and the Salaries and Expenses appropriation.

QUESTION: How much could the INS effectively utilize in 1991 to continue this system?

ANSWER: Although no funding for IBIS has been requested in the Salaries and Expenses Appropriation, the Inspections User Fee contains $7,993,000 for continued implementation of IBIS initiatives in 1991 at air and sea ports-of-entry. Like most programs, additional resources for the Salaries and Expenses Appropriation would accelerate implementation of IBIS at land ports-of-entry.

Automated Fingerprint Identification System (AFIS)

QUESTION: Describe the prototype test conducted and the results. Was the test successful?

ANSWER: INS contracted with the California Department of Justice to conduct the recidivism study and develop an action plan for implementation of an AFIS system.
The prototype technique employed was to collect self-reported descriptive data (i.e., name, sex, nationality, age) and Border Patrol-reported apprehension data (i.e., date, time, station) for each of approximately 50,000 consecutive apprehensions within the San Diego Sector, while also collecting fingerprint impressions from which positive identification of the persons apprehended could be established.

Two kinds of analyses were performed. The first used the apprehension as the unit of count; it is designed to answer questions of the form, "Of all apprehensions in the Sector, what proportion involve subjects who are under age thirty, are a particular nationality, or female, etc.?" The second kind of analyses used the individual person as the unit of count; it is designed to answer the questions of the form, "Of all the persons apprehended in the Sector, how many of them are apprehended a second time within two days, or use different names on subsequent apprehensions, or cross at a different place the second time?"

The results met the requirements set forth by Congress with the following results:

- The main finding of the report was the 21 percent minimum rate of recidivism during the study, verifying the long-felt need for alternative approaches in reducing the repeated crossing attempts.

- The use of AFIS technology may be possible in the environment of Border Patrol operations.

- The study has shown that an AFIS system may be developed for a reasonable cost, utilizing new methods of on-line matching for identifying alien criminals in a relatively short time period.

- The steps toward AFIS implementation have been defined.

- The analysis of the 45-day study provides empirical data on the recidivism problem and furthers research on the characteristics of persons who illegally cross the border in the San Diego Sector.

Based on the successful demonstration of AFIS technology and study of the recidivism phenomenon, the INS plans to expand the AFIS capability to six localities in Southern California during 1990 for further operational testing.

QUESTION: Is the AFIS technology a feasible one for the mission of the Border Patrol?

ANSWER: The study constituted the preliminary investigation phase of systems design and development, and results were positive enough for the Border Patrol to participate in the Feasibility/Cost-Benefits/Requirements Analysis this fiscal year.

QUESTION: INS was directed to conduct a recidivism study in the eight stations of the San Diego Sector. What are the findings with respect to apprehension recidivism, or repeat crossings?

ANSWER: The total number of apprehensions which met the data quality edits of the second portion of the analysis was 52,697. The total number of different persons identified was 39,579. Thus the average apprehensions per subject measured in this 45-day period was 1.3, though some subjects crossed many more times than that.

QUESTION: Was the study able to measure the frequency of recidivism? If so, explain some of the results. For instance, what percentage of aliens came across more than once, or twice.

ANSWER: The study was able to provide data on the frequency of recidivism, indicating that of the 39,579 different persons who were apprehended, 31,266 were apprehended only once (79 percent), 5,616 were apprehended twice (14 percent), 1,618 apprehended three times (4 percent), up to 13 apprehended 6 times (.03 percent).

QUESTION: Did the study provide any information on the problem of false name or other identification reporting by apprehended aliens?

ANSWER: The study was able to provide data on four descriptions of self-reported data recorded on the 8,313 subjects apprehended more than once. The percentages reflect the number of times that the descriptions were recorded the same on subsequent apprehensions as on the first apprehension. The accuracy of names provided was 18 percent, sex 93 percent, nationality 98 percent and date-of-birth 94 percent.

QUESTION: The budget justifications state that alien apprehensions by the Border Patrol decreased through 1989 since the implementation of IRCA, but then increased during the last half of calendar 1989. Is that trend continuing in 1990 and why?

ANSWER: During October-December in FY 1989, the apprehensions totaled 155,631. The same period in FY 1990 totaled 209,064. The increase of 53,433 apprehensions can be attributed primarily to three reasons:

- The trainees of 1989 became working journeymen in 1990.
- The return to regular duty assignments of approximately 160 instructors.
- The political and economic uncertainties and turmoil which has existed in Central America and Mexico.

QUESTION: Can the AFIS be used by Border Patrol agents without unduly interrupting the other functions they are required to perform?

ANSWER: Fingerprinting criminal aliens only would not cause interruption to current functions, because criminal aliens are currently returned to the station for processing. Border Patrol would need additional staff to operate the AFIS equipment, as they could not assign an agent for the equipment operation function.

Major interruptions would occur if all aliens were to be entered in an AFIS since the majority of aliens are not currently fingerprinted and the processing is conducted away from the station under field conditions. Aliens cannot be fingerprinted in the field, as an officer's safety would be compromised. The San Diego Recidivism Study required an additional 25 agents to be assigned to the Sector to transport the aliens to a secure location in order to complete the study.

Soviet Refugee Processing

QUESTION: Can you update us on the processing of Soviet refugees in Moscow? What are the estimated costs associated with this and how do you plan to finance it for this year and 1991?

ANSWER: INS has taken a number of steps to accommodate the processing requirements for Soviet refugees. As of the end of February 1990, the Washington Processing Center (WPC), the administrative support center for Moscow processing, has received approximately 165,000 registrations for refugee interviews during 1990.

It is important to remember that since only Soviets 21 years of age and older are required to fill out preliminary questionnaires, the actual number of registrants for interview could be 330,000 (assuming an average Soviet family consists of 2 adults and 2 children under the age of 21 years).

During this same time period, INS Moscow, with six officers on site, has processed nearly 16,000 persons for refugee status in Moscow. Of this total, approximately 6,400 Soviets have been approved for refugee status. Those denied have been offered entry into the United States under the Public Interest Parole Program that was initiated by the Attorney General on December 8, 1988.

In February, the first full month during which INS Moscow processed Soviets under the Lautenberg Amendment, 3,150 individuals were interviewed for refugee status in the United States. Of that total, 944 were Soviet Jews, with 866 or 92 percent approved. Eight Ukrainian Catholics or Orthodox were processed and all were approved. Overall, 91 percent of all category cases were approved. The approval rate for all Soviets interviewed during February was 41 percent.

Vienna-Rome Pipeline. As of February 28, INS Rome has processed nearly 33,000 Soviets for refugee status during 1990, with an approval rate of 99 percent. Soviets in the Vienna-Rome pipeline not yet interviewed by INS include: 2,174 applicants waiting for INS interview and 1,035 individuals registered with voluntary agencies in Rome, but not yet presented to INS for interview. Rome anticipates that all Soviet interviews will be completed no later than April 1, 1990.

Approximately 14,500 approved Soviet refugee applicants are in Rome waiting to travel to the United States, but do not yet have U.S. sponsors or travel arrangements. These port interview processing activities are the responsibility of the Department of State and the involved voluntary agencies.

The Administration is currently reviewing funding proposals for this function in 1990.

As it is expected that Soviet refugee processing will continue at this level in 1991 and beyond, INS expects these costs to continue indefinitely. Alternatives are under consideration for funding these costs in 1991 and beyond.

QUESTIONS SUBMITTED BY CONGRESSMAN LOWERY

Immigration and Naturalization Service

QUESTION: The San Diego Sector of the Border Patrol has reported dramatic increases in the number of illegal alien apprehensions since mid-1989. On February 4, 1990, 2,823 illegal were apprehended in the San Diego sector alone. This was the second highest single day total since 1986. Almost 50 percent of all illegal entries occur in a 10-mile border area near San Diego. At the same time, legal crossings of individuals at the San Ysidro Port-of-Entry are also reaching record levels.

What portion of the planned 1991 increase in Border Patrol and INS inspectors will be devoted to the San Diego sector of the border?

Please provide for the record a breakdown of the planned increases in INS inspectors, Border Patrol agents and canine teams for the California/Mexico border.

ANSWER: With the increase of 75 funded workyears in 1991, the Border Patrol will bring on board an additional 96 agent trainees. This number of agents consists of two basic training classes of 48 agents per class. It is anticipated that one class will be assigned upon graduation from the academy to the San Diego Sector. The second class will also be assigned to the Southern land border. The areas experiencing high rates of illegal entries, including alien smuggling and drug smuggling will receive priority consideration for increased officer staffing.

The Patrol anticipates assigning one class of 48 additional agent trainees to the San Diego sector in 1991. In addition to the San Diego sector, the Patrol will be assigning one other class of 48 additional agent trainees to various sectors along the Southern border in 1991. It is possible that the El Centro Sector, which is responsible for part of the California/Mexico border, may receive additional agents from that class. However, the actual number to be assigned to any location will depend on the extent of illegal entries and smuggling activities occurring in that area as compared to other parts of the Southern border.

The canine program in the Western Region is in need of expansion to support both alien and narcotic detection operations. Each of the following sectors could incorporate additional canines into their operations at various stations within these sectors. The actual number of canines to be assigned to each location will depend on the anticipated volumes of smuggling activities as well as the availability of agents for training as canine handlers.

The following chart shows the current number of canines on duty and the requested increase in 1991.

Sector	On Duty	Requested Increase	Total
San Diego	7	18	25
El Centro	2	4	6
Yuma	5	5	10
Tucson	5	11	16
Livermore	0	2	2
Total	19	40	59

Of the 104 projected new land border Inspections positions, 45 (43 percent) will be assigned to the ports in California. All of these will be assigned to the San Diego District -- 37 to San Ysidro and 8 to Calexico.

QUESTION: INS is planning to assign additional Border Patrol agents to San Diego in 1990. How many new agents will be assigned to San Diego? How many agents are currently on duty and what is the authorized ceiling for this sector?

ANSWER: The San Diego Sector's current authorized ceiling for Border Patrol agents is 1,100. Of these positions, 770 are filled. In 1990, the Patrol has planned the placement of 144 agent trainees within the San Diego sector. This means that three of the four classes of new trainees to be brought on duty in 1990 will go to that sector.

QUESTION: Where will the passive barriers planned for the Southwest border be installed?

ANSWER: At the present time the only passive barriers planned for the Southwest border are in the San Diego Sector. Barriers currently under consideration are high intensity lighting for the Tijuana River levee area, replacement of existing fencing from the San Ysidro Port-of-Entry west to Dairymart Road and a vehicle barrier for the Otay Mesa area.

QUESTION: In view of the tremendous increases in passenger and pedestrian traffic at land ports-of-entry and the likelihood that budget pressures will limit personnel and facilities increases has INS looked at the concept of optional user fees to support commuter express lanes for regular border travelers at land ports of entry? Has INS discussed this issue with Customs? What are the pros and cons of this concept?

ANSWER: Yes, Inspections is involved in discussions with the U.S. Customs Service regarding Optional User Fees.

The concept of charging a fee for frequent crossers and commuters has merit and is not likely to create controversy if the fee provides a service (i.e., more rapid accessibility and clearance at the individual border crossing point).

Administration of fee collection could be a problem unless it is collected up front, perhaps once a year. The necessity of computer screening of border crossers will require the more rapid deployment of the IBIS system to land border ports. The border crosser user fee will work only if the fee provides for additional personnel and equipment to actually speed up the entry process for those utilizing the program. In some locations additional lanes will have to be added to allow for express lanes and as such may not be feasible at all locations.

QUESTION: Because of the increase in alien apprehensions, detention facilities in Southern California are well over capacity. Are there any plans to increase detention and deportation resources for this area in 1990 or 1991?

ANSWER: In 1990, a 400-bed Service Processing Center at Terminal Island, San Pedro, California will be operational. This facility will be used to detain criminal aliens. During 1991 a joint INS/Bureau of Prisons (BOP) contract facility providing 500 additional beds each for INS and BOP, to be situated in the Southwest corridor between California and Arizona, is planned and expected to be operational. These two new facilities will increase the availability of detention space by 900 beds for the Southern California area. In addition, the Asset Forfeiture Fund may be used to provide $10 million for additional detention space. A portion of these funds will be used to expand the El Centro Service Processing Center by 220 additional beds and increase the rated capacity to 564 detainees.

QUESTION: What action is INS taking to retain qualified INS and Border Patrol personnel in high cost areas? This is a particular problem in San Diego because Border Patrol agents are often lost to higher paying local law enforcement departments. Does INS award bonuses for second language proficiency? Do you support such incentives?

ANSWER: In the last quarter of 1988, a special salary rate for trainees entering on duty was established. The traditional grade 5 step 1 entry level pay was increased to grade 5 step 6. Grade 7 step 4 was authorized for individuals possessing a Bachelor's Degree in Criminal Justice or one year's experience as a sworn peace officer.

In addition to the higher entry level salaries, an acccelerated promotion system has been instituted for Border Patrol agents. Traditionally, trainees spent one complete year at the grade 5 level before being promoted to grade 7. Now, upon successful completion of the six and one-half month Probationary Examinations, they are promoted to grade 7. INS does not award bonuses for second language proficiency.

QUESTION: When will the new checkpoint at San Clemente, California be completed? Are there any plans to increase Border Patrol staff at this location as an interim measure?

ANSWER: Construction of the new checkpoint at San Clemente is dependant upon the availability of funding. Land for the checkpoint is being provided by the U.S. Marine Corps on a long-term, no-cost lease to the Service. However, due to the extensive freeway work required, the estimated cost for the new checkpoint is $34 million. In the 1991 budget submission, $10 million is requested to activate the project. The remaining funds will be requested in the 1992 budget. With full funding, the project can be completed by 1997.

Due to the limited space available in the existing station building, there are no plans to increase the current authorized staffing level of the San Clemente Station.

QUESTION: How is INS utilizing U.S. military and National Guard assistance to interdict illegal drugs on the Southwest border? Are there any exercises currently underway? Do you support this assistance?

ANSWER: INS and the Department of Defense have, on several occasions, conducted joint training operations along the Southwest land border of the United States. These operations are conducted to meet the training needs of both entities, while providing operational support in isolated areas not currently being addressed. The military provides INS/Border Patrol agents with training pertaining to small unit tactics, patrolling, map reading, land navigation, and other areas of expertise not currently possessed by Border Patrol agents.

The Border Patrol provides the military with training in tracking, counter-tracking, and other skills that are not possessed by the military personnel.

At the present time, there are no operations being conducted that involve the use of active-duty military personnel.

The Border Patrol is currently conducting an operation with the Texas Army National Guard along the Texas/Mexico border. This operation involves the temporary assignment of National Guard personnel to a Border Patrol sector to provide support in areas such as electronics equipment repair, helicopter and airplane mechanics, automobile mechanics, sensor repair, night vision equipment repair, and other fields of technical expertise in the National Guard inventory.

National Guard units have provided construction support on several occasions to the Border Patrol.

INS welcomes this assistance because it releases agents to concentrate on their primary duty of border control.

QUESTION: There have been reports of increased violence against Hispanics or aliens on the Southwest border, including two deaths. What is your evaluation of these reports?

ANSWER: Each report of violence involving Service employees and aliens is carefully investigated. We are particularly concerned about such increased violence insofar as these incidents often involve service employees.

WEDNESDAY, MARCH 21, 1990.

OFFICE OF THE INSPECTOR GENERAL

WITNESSES

ANTHONY C. MOSCATO, ACTING INSPECTOR GENERAL

ALLEN J. VANDER-STAAY, ASSISTANT INSPECTOR GENERAL FOR MANAGEMENT AND PLANNING

HARRY H. FLICKINGER, ASSISTANT ATTORNEY GENERAL FOR ADMINISTRATION

MICHAEL J. ROPER, DEPUTY ASSISTANT ATTORNEY GENERAL

ADRIAN A. CURTIS, DIRECTOR, BUDGET STAFF

Mr. SMITH. Next we have the Inspector General for the Justice Department. Their FY 1991 request is for $28,382,000. The Acting Inspector General, Anthony Moscato will testify. Do you have a statement?

Mr. MOSCATO. I have a prepared statement. If I may, I would like to submit it for the record, and briefly summarize it.

Mr. SMITH. All right. Please proceed.

Summary Statement

Fiscal Year 1991

The request for the Office of Inspector General (OIG) for 1991 totals $28,382,000, 380 permanent positions, and 350 workyears. This request represents an increase of $7,841,000, 84 positions, and 50 workyears over the enacted 1990 appropriation.

The primary mission of the OIG is to provide leadership and assist management in promoting economy, efficiency, and effectiveness within the Department; to enforce the fraud, waste, abuse and integrity laws and regulations of the U.S. within the Department; and to bring to justice those individuals or organizations involved in financial, professional or criminal misconduct relating to Department of Justice operations.

The OIG was created in the Department of Justice on April 14, 1989, as directed by Congress in the Inspector General Act Amendments of 1988, through the transfer of nine audit, investigation, and inspection entities from the bureaus in which they had been located (INS, BOP, USMS, DEA, and JMD) and their consolidation into a single new component of the Department.

The creation of "statutory" inspectors general began in the late-1970's. Over the last decade, Congress directed that such offices be established in all cabinet-level departments except Justice and Treasury. With the Inspector General Act Amendments of 1988, the Departments of Justice and Treasury were brought into the Inspector General community.

Given the increased emphasis on ethics in government, economy, and efficiency; the broad scope of the OIG's mission (the OIG is required to review the entire Department, including not only five major bureaus but also the Offices, Boards, and Divisions); and significant new reporting requirements it is essential that, like other Department components, the OIG make the most efficient and effective use of its resources. Having completed its transition period and examined all possible efficiencies, restructuring of functions and personnel, possible applications of technology, and reprioritization of workload, the OIG is requesting a program increase of 84 positions (50 for investigations, 20 for audit, and 14 for executive direction and control) and $6.2 million to meet critical investigation and audit requirements in 1991.

The major resource requests are summarized below:

Audit: The Departmental audit function was transferred from the Justice Management Division (JMD) to the OIG intact. With current resources, the Audit Division has been able to perform approximately 26 major internal audits and issue 300 external reports covering 929 contracts, grants, and other agreements. With the requested increase, an additional eight to ten major internal audits can be performed annually. While we are far from seeking the resources to cover the audit universe in total, we believe that an additional eight to ten major audits are essential and can have a very positive impact on the management of the Department.

Investigation: Selected investigation functions and associated resources were transferred to the OIG from only three bureaus: INS, USMS, and BOP. However, the OIG responsibility for investigations increased to cover 28 additional components of the Department of Justice, for a total of 31 Offices, Boards, Divisions, and Bureaus. In addition, statutory IG authorities expanded the investigative responsibilities within some of the bureaus which transferred resources. For example, the Bureau of Prisons integrity program formerly referred all of their criminal cases to the FBI, but those cases are now being handled by the OIG. Additional resources are needed to properly handle these authorities and responsibilities.

While approximately 38 percent of the base number of misconduct investigations falls under the auspices of the Department's Office of Professional Responsibility (OPR), the OIG continues to conduct these investigations consistent with a "Memorandum of Agreement Regarding Conduct of Investigations" between the two offices. In addition, the incoming investigative components brought with them many investigations for which they were responsible prior to the transfer. This caseload, plus the OPR cases and the expanded horizon of investigative responsibility means that additional investigative resources are required to properly handle them.

For 1991, approximately 1,876 investigations are projected to be opened representing a conservative estimated increase of 472 investigations over 1990. Including the 43 new agents requested for 1991, this caseload reflects a ratio of 1 investigator for every 16 new cases.

Executive direction and control: Although the Inspector General Act of 1978, as amended, provides for the appointment of an Inspector General and two Assistant Inspectors General, and sets the Inspector General's salary at Executive Level IV, no resources were provided to the Department for these positions. Additionally, resources for other senior management and administrative support activities were not provided. The resources necessary to manage and administer the newly created Office of the Inspector General were drawn from operational resources transferred to the OIG. The Inspector General will require the requested resources to manage the initial organization activities as well as the ongoing functions of the OIG. Moreover, the establishment of an in-house administrative capability is essential if the OIG is to maintain the statutorily mandated independence from the programs and operations of the rest of the Department.

Office of Inspector General

Salaries and expenses

Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses

For necessary expenses of the Office of Inspector General in carrying out the provisions of the Inspector General Act of 1978, as amended, [21,671,000] including not to exceed $10,000 to meet unforeseen emergencies of a confidential character, to be expended under the direction of the Attorney General, and to be accounted for solely on his certificate; and for the acquisition, lease, maintenance and operation of motor vehicles without regard to the general purchase price limitation.

$28,382,000

(Department of Justice Appropriations Act, 1990; additional authorizing legislation to be proposed.)

No substantive change proposed.

Congressional Action on Appropriations: The Congress funded an additional $2,238,000 and 20 positions, which includes transfers from the Immigration and Naturalization Service ($750,000) and the Drug Enforcement Administration ($156,000), and the retention of positions and funds ($1,332,000 and 20 investigator positions) in the OIG in lieu of being transferred to the Department's Office of Professional Responsibility. This amount was offset by reductions totaling $998,000 for annualization of the 1989 pay increase ($466,000) and Executive Direction and Control ($532,000 and 14 positions).

1990 Sequestration: As required by the Omnibus Budget Reconciliation Act of 1989, a total of $132,000 was sequestered from the Office of the Inspector General's 1990 enacted appropriation.

1/ FY 1989 Budget Authority reflects withdrawal of a proposed transfer of $333,000 from Department's Office of Professional Responsibility.

2/ The 1991 President's Budget reflects a program increase of $6,500,000. This increase erroneously included $258,000 for the 4% pay increase in 1991. The 1991 Congressional submission has been corrected to show a revised program increase of $6,242,000.

Office of Inspector General
Justification of Program and Performance
Salaries and expenses

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Audits, Investigations, and Inspections.......	296	300	$20,541	296	300	$22,140	380	350	$28,382	84	50	$6,242 1/

Long-Range Goal: To reduce the incidence of fraud, waste, abuse, misconduct, inefficiency, and financial non-compliance of Department of Justice programs and those activities funded by the Department.

Major Objectives: Provide balanced audit coverage to assist Departmental management in achieving more efficient and effective operations. This includes responding to specific requests for audit from Department management and others.

Monitor and safeguard an ADP capability in the Department by the effective performance of ADP audits by a centralized ADP audit group as well as by all IG regional audit offices.

Implement audit oversight and follow-up requirements established by legislation, regulation, or executive direction.

Close 500 or more criminal investigations. This level of closures will be accomplished by cross-training OIG investigators from the U.S. Marshals Service, Bureau of Prisons and the Immigration and Naturalization Service. This cross-training will enable management to operate in a more efficient and effective manner.

Train a cadre of investigators from different components within DOJ to handle administrative types of cases. This will enable investigators in the OIG to concentrate their resources on serious criminal matters. Complete 300 or more administrative cases in one year utilizing investigators from components who were trained by OIG.

Provide short-term management and compliance inspections to serve as an early warning system of problems which must be corrected by Departmental management.

Respond to specific requests from Departmental management for assistance with inspections to improve their programs or operations.

1/ The 1991 President's Budget reflects a program increase of $6,500,000. This increase erroneously included $258,000 for the 4% pay increase in 1991. The 1991 Congressional submission has been corrected to show a revised program increase of $6,242,000.

Base Program Description: The Office of Inspector General was created in the Department of Justice, as directed by Congress in the Inspector General Act Amendments of 1988, through the transfer of nine audit, investigation, and inspection entities from the bureaus in which they had been located (INS, BOP, USMS, DEA, and JMD) and their consolidation into a single new component of the Department.

The creation of "statutory" inspectors general began in the late-1970's. Over the last decade, Congress directed that such offices be established in all cabinet-level departments except Justice and Treasury. With the Inspector General Act Amendments of 1988, the Departments of Justice and Treasury were brought into the Inspector General community.

The establishment of these offices has been premised upon a growing commitment, in both the Executive Branch and the Congress, to the creation of mechanisms designed to enhance ethics and integrity in government and to identify and eliminate fraud, waste, abuse, and mismanagement of public resources. To that end, the purposes of the Office of Inspector General are several:

- to function as a focal point for heightened awareness across the Department of issues related to integrity in general and propriety and efficiency of resource management in particular;
- to investigate and resolve allegations of misconduct against officials and staff of the Department (a responsibility shared with the Office of Professional Responsibility);
- to conduct audits and inspections of activities and operations across the Department in order to identify and resolve inefficiencies and detect vulnerabilities in their operation;
- to provide clear and early warning of problems to both agency management and the Congress through implementation of the enhanced reporting requirements set forth in the Inspector General Act Amendments of 1988.

With the exception of the statutory reporting requirements established by the Inspector General Act Amendments of 1988, these purposes are not new to the Department of Justice. Indeed, the statutory mechanism used by the Congress to create this office; i.e., the transfer of approximately 300 staff who were identified precisely because they were engaged in substantive activities which lie at the core of Inspector General responsibilities, clearly demonstrates the prior existence of Departmental programs designed to investigate, detect, and resolve fraud, waste, abuse, and mismanagement. In addition, data provided in the annual report of the Office of Professional Responsibility, with which the Office of the Inspector General now shares investigative jurisdiction for allegations of staff misconduct, clearly demonstrates a heightened awareness of these issues throughout the Department of Justice (see exhibit 1, page 14).

In addition, consistent with the Act and guidance received from the Office of Management and Budget and the President's Council on Integrity and Efficiency, this office will emphasize 1) the need for early warning systems to detect potential problems before they develop, 2) the monitoring of corrective actions after potential weaknesses have been identified, and 3) the comprehensive reporting of problems, deficiencies and progress of corrective actions to the Attorney General and the Congress.

The major functions of the OIG include, audit, investigation, and inspection:

The audit function conducts, reports and tracks the resolution of financial (including financial statement and financial related) and performance (including economy, efficiency and program) audits of organizations, programs and functions within the Department, including expenditures made under Department contracts, grants and other agreements.

The investigation function detects and investigates for criminal prosecution violators of fraud, abuse and integrity laws which govern the Department or operations which are financed by the Department, and ensures that such allegations are considered for possible civil and/or administrative actions.

The inspection function performs program review, efficiency and compliance inspections of operations and programs within the Department, or financed by the Department, and of field and headquarters entities of Department organizations. This function also provides assistance to management at all levels of the Department.

The execution direction and control function establishes and maintains policy and program direction for the OIG. Specific responsibilities include policy development, legal counsel, Congressional affairs, planning, budget, finance, quality assurance and evaluation, personnel, training, procurement, automated data processing/network communications and general support services.

Accomplishments and Workload: Selected accomplishments of the OIG since its inception include the following.

- Established Office of the Inspector General on April 14, 1989:
  - Conducted the orderly transfer of approximately 300 persons, $20 million budget, 65 cars and all property from 9 Departmental components;

- Maintained and enhanced substantive operations:
  - Formulated agreement with the Office of Professional Responsibility for handling investigations;
  - Formed procedures to refer allegations of civil rights violations to the Civil Rights Division;
  - Received and initiated investigations of well over 645 complaints, in addition to the 892 pending at the time of transfer;
  - Executed 40 arrests since April 14;
  - Continued audits underway and completed Special Audit of U.S. National Central Bureau, Interpol;
  - Issued over 57 subpoenas under IG Act;
  - Completed 8 inspections and initiated 8 new inspections;

- Maintained continuity of legal authorizations for the IG:
  - Sought and received short-term delegation of law enforcement authorities from the Attorney General;
  - Submitted justification for permanent delegation of law enforcement authority to supplant the short-term delegation;

- Prepared and submitted the first Office of the Inspector General Semiannual Report;

- Initiated the preparation of a Law Enforcement Retirement Package to continue law enforcement retirement coverage for investigators transferred into the IG's Office;

- Established and publicized a Hotline telephone number and post office box to receive allegations and initiated an active public relations program regarding the function of the OIG and the need for employees to report misconduct violations to the OIG;

- Developed an OIG Security Program, completing the critical phase of initial background checks for almost 200 employees, which has allowed access to law enforcement sensitive and classified information when operationally necessary;

- Developed FY 1990 Annual Workplans for Audit (26 major audits and some 250 other reports covering over 900 audit-related grants and contracts) and for Inspections (approximately 40 comprehensive inspections);

- Revised DOJ Order 2900.6, Audit Follow-up and Resolution Policy, to ensure the role of the Inspector General in this process;

- Developed a complaint receipt mechanism and began the development of automated audit, investigations and inspections tracking systems;

- Structured an administrative staff to avoid redundancy with Departmental services yet maintain independence prescribed by the Inspector General Act;

- Procured automation equipment to enhance document production, improve field and local communications and to participate in the Department's Office Automation Strategy (Project EAGLE); and,

- Established the "Inspector General Manual", the authorized means to codify directives governing the operation of the OIG. Initial issuances include Directives Management Systems; Mission, Organization and Functions; Delegation of Authorities; and Budget Execution and Funds Control.

The following table displays the basic workload factors for the OIG.

Item	1988	1989	1990	Change	1991 Base Level	Change	1991 Request Level
Audits:							
Internal	-	26	26	-	26	9	35
External	-	929	929	-	929	-	929
U.S. Trustees	-	405	375	-30	375	-	375
Investigations	-	1,404	1,404	-	1,404	472	1,876
Inspections	-	21	22	1	22	3	25
Management Assistance and Evaluations	-	12	25	13	25	3	28

NOTE: The Office of Inspector General was established in the Department of Justice on April 14, 1989. Because the Act brought together 9 components from 5 Departmental organizations, comparative workload data for 1988 are not readily available. Data for 1989 are provided based on actual data available through September, 1989. The decrease in U.S. Trustee audits is based on the type of review requested by the EOUST per the terms of the FY 1990 reimbursement agreement, i.e. EOUST requested more detailed audit work in FY 1990 resulting in a concomitant decrease in the number of audits conducted.

The Office of Inspector General has begun development of an automated audit, investigations and inspections tracking system to more effectively plan work and capture workload statistics. This information will allow the OIG to accurately request and utilize resources to complete audits, investigations and inspections in accordance with the Inspector General Act. An automated case tracking system is the most effective and efficient means of completing this task. The automated system will also support the personnel and security program requirements of the OIG as well as provide more comprehensive workload data for budget justifications.

1/ The 1991 President's Budget reflects a program increase of $6,500,000. This increase erroneously included $296,000 for the 4% pay increase in 1991. The 1991 Congressional submission has been corrected to show a revised program increase of $6,242,000.

Program Changes:	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Audits, Investigations, and Executive direction and control....	296	300	$22,140	380	350	$28,382	84	50	1/ $6,242

Audit: An increase of 20 positions and $1,085,000 are requested for the Audit Division. The audit function was transferred from the Justice Management Division (JMD) to the OIG intact. With current resources, the Audit Division has been able to perform approximately 26 major internal audits and issue 300 external reports covering 929 contracts, grants, and other agreements. With the requested increase, an additional eight to ten major internal audits can be performed annually. While we are far from seeking the resources to cover the audit universe in total, we believe that an additional eight to ten audits are essential and can have a very positive impact on the management of DOJ resources.

Two representative examples of major audits include the "Adjudication and Naturalization Fees in the Immigration and Naturalization Service" and "Internal Controls over Seized Evidence in the Department of Justice." The Adjudication and Naturalization Fees audit took approximately 600 work days and was performed in INS' central office, one regional office, four regional service centers, six district offices, two airports of entry, and two land ports of entry. As a result of this audit, current fees were increased based on actual costs for services resulting in about $30 million in increased revenues annually. In addition, new fees are being established for services to applicants and petitioners not previously included which will result in about $20 million in increased revenues annually.

The Department-wide review of seized evidence required about 700 work days of effort and included visits to numerous field offices and headquarters activities of the FBI, DEA, INS, EOUSA, and OCDE Task Forces. The audit included a review of each agency's internal controls over seized evidence and resulted in 12 recommendations for strengthening controls by requiring: (1) prompt documentation of seizures, (2) enhanced procedures and documentation related to transfers of seized evidence, (3) improved procedures for conducting physical inventories of seized evidence, and (4) prompt destruction of drugs seized as evidence after approval by the Office of the U.S. Attorney. The capacity to conduct an additional eight to ten audits of this size and scope can have a very positive impact on the conduct of this Department's operations.

Investigation: An increase of 50 positions (43 investigators and 7 clerks) and $3,416,000 are requested for investigation functions in the Office of the Inspector General. Selected investigation functions and associated resources were transferred to the OIG from INS, USMS, and BOP; however, the OIG has investigative responsibility for all components of the Department. While approximately 38 percent of the base investigative caseload falls under the auspices of the Department's Office of Professional Responsibility (OPR), the OIG is conducting these investigations in support of OPR consistent with a "Memorandum of Agreement Regarding Conduct of Investigations" between the two offices.

For 1991, a total of 1,876 investigations are projected to be opened representing a conservative estimated increase of 472 investigations over 1990. Including the 43 new agents requested for 1991, this caseload reflects a ratio of 1 investigator for every 16 new cases.

The OIG's investigative caseload is expected to increase significantly in 1990 and beyond for the following reasons:

. A publicity program is planned and partially underway to advertise the existence and mission of the OIG to all DOJ employees. A similar program undertaken by the INS/OPR in 1987 resulted in a 250% increase in criminal cases opened over a two-year period ending with the beginning of 1989.

As part of this publicity program, a telelphone HOTLINE was activated in July 1989. More than 400 calls have been received to date on the HOTLINE and additional mailings throughout the larger bureaus urging employees to report misconduct are expected to increase this number dramatically. Additionally, an Inspector General Mailbox was opened to receive allegations as a part of this publicity campaign. We also continue to publicize our twelve nationwide investigative offices and consistently receive allegations at each of them.

. Until the creation of the OIG, no in-house capacity for investigations existed to handle the allegations and caseload being generated by the Offices, Boards and Divisions (OBDs). Since April, 1989, more than 80 allegations have been received relative to the OBDs which require handling by special agents. Additional resources to handle these new areas of investigation are needed.

. While the final nature and configuration of the OIG's relationship and responsibility related to the FBI and DEA is still being defined, the breadth of the OIG's statutory responsibility indicates there is a role for OIG investigations in this area. We expect to receive a considerable number of allegations in these areas and need additional resources to handle them.

Premised upon the actual growth of our investigative responsibilities versus the static nature of the numbers of investigators received in the transfer, we request an additional 50 positions in the investigative area - 43 investigators and 7 clerical.

Executive direction and control: An increase of 14 positions and $1,741,000 is requested for executive direction and control activities. Although the Inspector General Act of 1978, as amended, provides for the appointment of an Inspector General and two Assistant Inspectors General, and sets the Inspector General's salary level at Executive Level IV, no resources were provided to the Department for these positions. In addition, resources for other senior management and administrative support activities were not provided. The resources necessary to manage and administer the newly created Office of the Inspector General had to be drawn from operational resources transferred to the OIG. The Inspector General requires a minimum of an additional 14 positions to provide executive direction and control over the OIG.

From a general perspective, the OIG's workload is directly related to the total level of personnel and dollar resources of the Department. From 1982 to 1990 the Department's overall full-time equivalent personnel level increased from 54,000 to 81,000 or approximately 50 percent and the dollars increased from $2.6 billion to $7.8 billion or 300 percent while OIG personnel increased from approximately 241 to 296 or 23 percent (see exhibit 2, page 15). This means that the number of employees potentially subject to OIG review, whether audit, inspection, or investigation, increased at a significantly greater rate than the staff available to do the reviews or investigations. In addition, both the temptation and the opportunity for misconduct has increased significantly as a direct result of seizures of large sums of cash and valuables and the money to be made in drug trafficking and related crime. Finally, the total amount of funds potentially subject to audit increased threefold, while the audit personnel remained essentially constant (see exhibit 3, page 16).

Office of Inspector General
Salaries and expenses
Justification of Adjustments to Base
(Dollars in thousands)

	Amount
Mandatory increases:	
1. One additional compensable day The annual salary rate for Federal employees is based on 260 paid days. FY 1991 has one more compensable day (261) than 1990 (260). Appropriate personnel benefits are included in this figure.	61
2. 1990 full-year pay increase impact on 1991 This request provides for the full-year pay increase of 3.6 percent as contained in the general provisions of the U.S. Treasury, Postal Services and General Government Appropriations Bill, 1990, for civilian and military personnel to be effective in January of 1990. The Department will be required to absorb the total pay raise in 1990. The requested increase of $484,000, is the amount required for full-year funding in 1991. NOTE: The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.	484
3. 1991 pay increase For the first time, the Administration is proposing to include the costs of the pay increase effective in the budget year with the initial budget request. This request provides 50 percent of the proposed 4.0 percent pay increase effective in January of 1991. The Department will be required to absorb half of the costs of this pay raise. The amount requested, $258,000, is the cost of the pay increase for approximately three-quarters of the year assuming a 50 percent absorption.	258
4. Senior Executive Service increase This request represents the 1991 costs of the pay increase for senior executive service employees. This pay raise is to be effective in January of 1990, but will be absorbed completely for the first year. In 1991, $55,000 is necessary for this requirement. Funding for the executive level employees pay raise is completely absorbed in both years.	55
5. Health Benefits The Federal Employees Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1990, the actual contribution to health insurance increased 27 percent. The requested increase of $93,000 provides funds for actual increased costs from pay period 1 to pay period 2, projected for a full year.	93
6. Federal Employees Retirement System (FERS) This request provides for the additional costs in 1991 necessary to continue the implementation of the Federal Employees Retirement System Act of 1986, P.L. 99-335. The Act established a retirement program for Federal civilian employees and Postal workers hired after December 31, 1983, who are covered by social security and for employees under the Civil Service Retirement System who chose to transfer to the new system. The increased requirement for 1991 is based on actual agency payments for the basic FERS annuity, Social Security and thrift savings.	468

7. Federal Employees' Compensation Act (FECA) - Unemployment 5

This increase reflects the billing provided by the Department of Labor for the actual costs in 1989 of employees' unemployment compensation.

8. GSA rent 58

GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $58,000 is required to meet our commitment to GSA.

9. GPO printing costs 3

The Government Printing Office (GPO) is currently projecting a seven-percent increase over the 1990 printing costs of $45,000. An additional $3,000 will be required in 1991.

10. Employee data and payroll services 3

Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems, maintenance and payroll accounting, are based on the number of employee records maintained. The rate of $188.23 per record in 1990 will be raised to $199.52 per record for 1991. The change is based on anticipated uncontrollable cost increases of 6 percent for the operation of the Justice Employee Data Service. An increase of $3,000 will be required in 1991.

11. Security Reinvestigations 49

The security reinvestigation program has been receiving widespread attention due to the increase in espionage cases, and the many situations where employees, who had been working in their jobs for a number of years, were discovered to be involved in various activities that were detrimental to the nation's security. The Office of Personnel Management, Federal Personnel Manual, Chapter 736 requires incumbents of certain positions to be reinvestigated, at a minimum, every five years. By 1991, the Department will require 7,592 employees to be reinvestigated in each of the next five years to address the existing backlog. Requested resources will provide for an additional 2,300 cases per year of the 7,092 cases that remain unfunded. An increase of $49,000 will be required in 1991.

12. Project EAGLE Maintenance 80

As part of Project EAGLE, the OIG will be required to provide maintenance costs from its operating budget after the Government assumes ownership of the workstations and other equipment. Based on 1989 procurement of this equipment, the Office of the Inspector General will require $80,000.

Total mandatory increases $1,617

Decreases:

1. Federal Telecommunications System (FTS) .... -18

In 1991, the General Services Administration (GSA) is to have the FTS 2000 system fully implemented. At present, GSA projections indicate costs for current FTS minute user charges will decrease from 34 cents per minute to 18 cents per minute. The reduction of $18,000 reflects this decrease.

Total, adjustments to base $1,599

1991 BUDGET REQUEST

Mr. MOSCATO. As you noted, the fiscal year 1991 request totals $28,382,000 and 380 appropriated positions. Aside from the mandatory increases for specific operating costs, the 1991 request represents a program increase of 84 positions and $6,242,000. The increase provides 50 positions and $3,416,000 for investigations, 20 positions and $1,085,000 for audit, and 14 positions and $1,741,000 for management activities.

The Office of the Inspector General is approximately one year old. Born of the IG Act amendments of 1988, it was established in April of 1989 with appropriated full-time staffing of 296 positions and an annualized appropriation level of $19,671,000. The office was staffed and funded pursuant to the legislative scheme through the transfer of nine separate program elements from five of the Department's bureaus.

OIG COMPONENTS

Today the office consists of four divisions: audit; investigations; inspections and management and planning. Audit and investigations are the two traditional centers of Inspector General activity with which you are familiar. The inspections division was created, as it has been in several other offices of Inspector General, to provide an added degree of flexibility in addressing issues and an added capacity to provide early warning to departmental managers. In essence, we have created the inspections division to focus on very specific issues and/or field locations to move on a very fast track and to provide answers as rapidly as possible.

The fourth division, management and planning, provides the full range of management and control functions required to maintain the autonomy, independence and control required of an office of inspector general.

INVESTIGATIONS

In 1991, as I noted a moment ago, we are requesting an increase of 50 positions and $3,416,000 for investigations. This request is predicated upon both the rapid rise in workload and a need to perform this function in a rapid and controlled fashion.

At the inception of the office, the entities that make up our investigative function brought in over 900 active cases with them. Since then, in just under one year of operation, we have received over 1,400 new allegations of misconduct for investigation. If this trend continues—and we have no reason to doubt it will—we will be required to handle over 1,800 such allegations in 1991.

The vast majority of the staff of the Department of Justice are men and women of probity and integrity who perform very difficult tasks under difficult circumstances. It is critical, in our view, both for their individual reputations and that of the Department of Justice, that allegations of misconduct be investigated quickly and thoroughly, and that where they are substantiated, action be taken to prosecute, discipline or remove the employee, and that where they are not substantiated, the taint of doubt be removed from the individuals against whom the allegations were made. These additional resources will enable us to ensure that this workload is controlled and the work is done, as I said, quickly and thoroughly.

AUDIT FUNCTIONS

In the audit area for 1991, we are requesting an additional 20 positions and $1,085,000. This request is based both upon our current staffing level, which is too low, and the increased funding and financial sophistication of departmental operations. The Office of the Inspector General has only 90 total staff to manage and conduct an audit program for an executive department funded at almost $9 billion and staffed at approximately 80,000 in 1991. In addition, the recent enhancement or acceleration of such programs as debt collection, asset seizure and forfeiture, prison construction and user fees have created processes that move, quite literally, billions of dollars through the Department of Justice. In light of these factors, the requested increase, which will provide for an additional eight major internal audits, is modest in nature but, we think, critical to our continued effectiveness.

ADMINISTRATIVE AREA

Finally, in the area of executive direction and control, we are requesting an additional 14 positions and $1,741,000 for 1991. This request is based principally on the fact that this Office of Inspector General has never been provided with funds or resources for either a management structure or administrative support. The structure we have created has been supported by resources taken from line operations. It is critical that these 14 positions be funded so that we may return the borrowed resources back to the conduct of line operations.

I thank you for your attention. I will be happy to answer questions.

[Mr. Moscato's biography and prepared statement follow:]

ANTHONY C. MOSCATO

Anthony C. Moscato was appointed Acting Inspector General for the United States Department of Justice on April 10, 1989. Prior to that appointment, he served as Deputy Assistant Attorney General for Administration from 1987. In that role, he participated in supervising the Departmental Audit Staff. From 1984 to 1987, Mr. Moscato served as Counselor to the Assistant Attorney General for Administration. From 1977 to 1984, he served in a number of senior management positions in the Justice Management Division. In 1975 and 1976, Mr. Moscato was a Trial Attorney in the Tax Division.

Anthony C. Moscato was born in New York City, New York, on September 4, 1945, and grew up in that area. He received a B.A. degree in Government from Columbia University in 1967 and a J.D. degree from the National Law Center, The George Washington University in 1970. Mr. Moscato received the Attorney General's Award for Distinguished Service in 1988 and the Attorney General's Medallion in 1990.

Anthony C. Moscato is married to Deborah S. Moscato and has two children.

DEPARTMENT OF JUSTICE
OFFICE OF INSPECTOR GENERAL

STATEMENT OF THE ACTING INSPECTOR GENERAL
ANTHONY C. MOSCATO
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE, THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to have the opportunity to appear before you today in support of the 1991 budget request of the Office of the Inspector General. This request totals $28,382,000 and 380 appropriated positions. Aside from mandatory increases for specific operating costs, the 1991 request represents a program increase of 84 positions and $6,242,000. The increase provides 20 positions and $1,085,000 for audit functions, 50 positions and $3,416,000 for investigations, and 14 positions and $1,741,000 for management activities. I will, in a moment, address myself specifically to those three requests; however, since this is the first time that a representative of the Office of Inspector General has had the opportunity to testify before this Committee, I would like, with your permission, to take a brief moment to describe the office and its creation.

As you are aware, the Office of the Inspector General in the Department of Justice was established pursuant to the Inspector General Act Amendments of 1988. The statutory scheme for the establishment of the Office called for the transfer of nine distinct elements from five of the Department's components into a single entity. In April of 1989, that transfer was completed and the Office of the Inspector General began operations.

From its inception, this Inspector General's office has been fully active and fully operational. Audits and inspections that were ongoing at the time of implementation were conducted and issued. Misconduct investigations, almost 900 of them, were transferred in at the time of implementation and have been continued. In addition, we are proceeding to implement full audit and inspection programs, and we have handled in excess of 700 new allegations of misconduct filed during the first six months of operation.

In short, while we have moved through the process of creating a unified and cohesive entity from the nine individual elements that transferred in, we have continued and expanded the substantive activity of an Inspector General's Office.

Some of the major actions we have taken in establishing the office, include:

-- restructuring the nine elements into four operating divisions; Audit, Investigations, Inspections, and Management and Planning, including the administrative systems to support a nationwide field structure.

-- providing law enforcement authority to all Inspector General Special Agents by delegation from the Attorney General including authority to issue warrants, make arrests and carry firearms. This delegation will run through June 1991 and is subject to renewal based upon a review by the Deputy Attorney General.

-- establishing audit and inspection jurisdiction Department-wide, to include every component and operation within the Department.

-- submitting our first semiannual report last fall in accordance with the new reporting requirements established by the Congress, and

-- revising the audit resolution process which recognizes the role of the Inspector General within the Department of Justice, and accommodates the reporting requirement of both the Inspector General and Departmental management.

In short, the Office of the Inspector General at the Department of Justice is fully functional and fully operational.

Let me now turn to the specific requests for increases encompassed in the 1991 budget request.

Bureau of Prisons.................		...	...		...	150		...	...		...	...
Total.........................		18	1,888		33	2,350		33	2,200		...	-150

Goods or Services Provided:

U.S. Trustees: Provides for audit services related to recently appointed panel trustees to identify potential problem areas/weaknesses; Chapter 12 & 13 standing trustees to examine annual financial reports and cash management reviews of Chapter 7 panel trustees.

Environmental Protection Agency: Provides for 2 workyears to audit Superfund.

Justification of Increase/Decrease:

The FY 1990 reimbursement from the Bureau of Prisons represents a one-time transfer related to the costs for equipment and materials associated with the transfer of personnel in FY 1989; these resources were not transferred with the personnel.

Investigations

Pursuant to the Inspector General Act Amendments of 1988, the Inspector General of the Department of Justice is granted authority to conduct any investigation, criminal or administrative, into misconduct or fraud related to Department programs or activities that he or she considers appropriate.

Our total staffing in the investigative area is 110, with 83 line investigators, located in 13 offices around the country. The 1991 request will provide a total staffing level of 168 for Investigations. This increase is needed because of expanded jurisdiction, and the need to address increased workload in a timely manner.

From the first day of operation, our capacity to conduct this program has been complicated by a number of factors, including the following:

First, the Investigations Division was created and staffed with resources transferred from three bureaus; the Immigration and Naturalization Service, the Bureau of Prisons, and the U.S. Marshals Service, and they were busy with very active caseloads when they came into the office. Those three bureaus comprise approximately 50 percent of the employees of the Department. However, our jurisdiction now extends across the Department and, as allegations have come in from many of the other 27 components that make up the Department of Justice, we have had to spread our investigative resources to accommodate them. Our resources have been further strained because seizures of large sums of cash and valuables and the money to be made in drug trafficking have increased the temptation and the opportunity for misconduct within the Department.

Second, fraud and misconduct allegations must be resolved promptly. As the principal legal and law enforcement agency of the Federal Government, the public must be confident that when the Department of Justice undertakes an investigation or prosecution or law suit, it will do so with probity, equity and fairness. Our investigation program has two main goals: to identify and substantiate the misconduct of those who have been guilty of impropriety so that appropriate criminal and/or administrative action can be taken, and when allegations of misconduct are not sustained, to swiftly ensure the issue is resolved.

Both of these goals require the capacity to handle allegations and investigations in a proper and rapid fashion. The additional investigators we seek will ensure that we have the manpower to manage this difficult task in an efficient and timely manner. For 1991, approximately 1,876 investigations are projected to be opened, representing a conservative estimated increase of 472 investigations over 1990. Including the 43 new agents requested for 1991, this caseload reflects a ratio of one investigator for every 16 new cases.

Audit

At present, the Audit Division of the Office of the Inspector General is staffed with 90 people to cover a Department funded in excess of $9 billion and staffed with over 80,000 people.

The request for 20 additional audit staff is modest when viewed in the perspective of the Department's overall growth and is vitally necessary if the Congress is to have any assurance that the dollars it appropriates are well-spent and properly managed.

Based upon both historical data and current experience, we can expect the Audit Division to perform some 25 major internal audits of Departmental operations this year and issue 300 external reports covering over 900 contracts, grants and other agreements.

Although the Department's Audit Staff has not changed in size since 1982, the Department has grown significantly over the last several years, from less than $3 billion in 1982 to approximately $9 billion in 1990. It has also begun to change the focus of its activities. Where once the budget of the Department of Justice was basically composed of salaries and related expenses, it now is far more complicated and financially sophisticated:

-- We have seen a significant growth of user fees in the Immigration and Naturalization Service, funds through which millions of dollars flow annually.

-- The United States Trustees program has come of age, and with it have come literally hundreds of millions of dollars flowing through the trustee process, for which individual panel and standing trustees must be accountable and responsible.

-- The Debt Collection activities of the Department have significantly increased over the last decade, bringing, again, hundreds of millions of dollars through United States Attorneys offices and legal divisions.

-- The Office of Justice Programs has grown dramatically over the last several years. Total grant funding in 1991 will likely be in excess of $600 million.

-- Asset Seizure and Forfeiture activities have grown dramatically as well, requiring a program for the management of hundreds of millions of dollars in tangible assets.

These programs have all either begun or grown dramatically in the last several years, during a time in which there has been little or no concomitant increase in audit resources around the Department.

Inspections

While we are not requesting an increase for the Inspections program, it is important to note the need for the capability to provide a very rapid analysis and response regarding an organization's compliance with standing regulations. Specific problems in specific locations can be identified and dealt with by Bureau or Department management in a rapid fashion and provide an "early warning" of potential problems. In addition, patterns of difficulty that become evident can be surfaced to Department leadership quickly. Inspections may also be used to provide management assistance in response to requests by component heads. Such assistance may be provided to any department manager facing a problem who is either uncertain as to how to proceed or perhaps simply needs a fresh look at the situation. We plan to use the inspections function for a variety of efforts which are important to the successful conduct of the Department's programs.

Management Activities

We are requesting 14 additional positions in 1991 to supplement the resources taken from the operating components of the Office of Inspector General to provide management and support. Although the Inspector General Act Amendments provided positions for auditors, investigators, and inspectors, it did not earmark funds for the Immediate Office of the Inspector General or for the management support necessary to keep these people functioning. The resources necessary to manage and administer the newly created Office of Inspector General (OIG) were drawn from operational resources transferred to the OIG. An in-house administrative capability is essential if the Office of the Inspector General is to maintain the statutorily mandated independence from the programs and operations of the rest of the Department.

In sum, I believe that the 1991 request is essential to the accomplishment of our mission.

I appreciate this opportunity to present this brief summary of the Office of the Inspector General request. I will be happy to entertain any questions at this time.

RESPONSIBILITIES OF THE IG OFFICE

Mr. SMITH. Well, you seem to emphasize looking for dishonesty or lack of integrity, but your responsibility goes far beyond that.

Mr. MOSCATO. To efficiency and effectiveness.

Mr. SMITH. And finding examples of agencies that are not doing their job so you can report directly to the Attorney General.

Mr. MOSCATO. That is certainly correct, and is the major thrust of both the audit and inspections operations. I had not meant to give you the sense that misconduct was the only thing that we were looking at.

ATTORNEY GENERAL OVERSIGHT

Mr. SMITH. I see.

Well, now, you are fairly new; one of the newest IG departments. This all started 30 years ago. I happened to be on the subcommittee that set up the first IG down at the USDA. They have spread now almost throughout the government. One of the principal purposes of having IGs is so the head of a department, in your case, the Attorney General, does not depend upon people reporting to him inefficiencies in their own office, which they would not necessarily do.

The key to it is your being able to get all the information you need and to report directly to the Attorney General. Are you able to do that?

Mr. MOSCATO. Yes, we are. The Attorney General directly gets copies of our reports and our inspections, and our audits.

Mr. SMITH. He gets copies of them. Does that mean they are just sent to his office?

Mr. MOSCATO. They are sent to his office.

Mr. SMITH. You are not encountering any problems with rules down there that make it difficult to work through the bureaucracy?

Mr. MOSCATO. Rather the reverse; the Attorney General's office, from the moment we got started, has been consistently supportive of our activities.

Mr. SMITH. Yes, okay.

You are a fairly new office and we cannot question too much about what you did the year before last because you were not there. [Laughter.]

I think the rest of our questions can best be handled for the record.

Thank you.

Mr. MOSCATO. Thank you very much.

[The following questions were submitted to be answered for the record.]

QUESTIONS SUBMITTED BY CONGRESSMAN SMITH

Office of Inspector General

QUESTION: 1990 is your first full year of operating as a separate entity in the Justice Department. Have you completed the restructuring of your organization as required by the Inspectors General Act?

ANSWER: Yes. Today, the office consists of four divisions: Audit, Investigations, Inspections, and Management and Planning. Audit and Investigations are the two traditional centers of Inspector General activity, with which you are familiar. The Inspections Division was created, as in several other offices of Inspector General, to provide an added degree of flexibility in addressing issues and an added capacity to provide "early warning" to departmental managers. In essence, we have created the Inspections Division to focus upon very specific issues and/or field locations, to move on a very fast time track, and to provide answers as rapidly as possible.

QUESTION: Have all the Department's audit and inspection functions been transferred to your organization?

ANSWER: Prior to the 1988 enactment of an Office of Inspector General for Justice, the General Accounting Office identified 15 audit, inspections, and internal investigations units within the Department of Justice. (GAO, "Justice Department: An Assessment of the Need for a Statutory Inspector General" B-203900 (Feb. 24, 1986)). In the 1988 legislation, Congress moved 9 offices or parts of offices into the Office of the Inspector General, leaving 3 units in the Department with inspection or audit functions. They are:

Audits:	FBI - Audit Group, Office of Program Evaluation and Audit
Inspections:	FBI - Inspection Division DEA - Planning & Inspection Division

QUESTION: Do you believe you have had any impact on the operations of the Department that would not have been made prior to the formation of your organization?

ANSWER: When the creation of Inspectors General was under consideration by Congress in 1978, the Department pointed out that it had offices in existence that already fully served the objectives Congress had in mind. The Department of Justice (DOJ) had audit and investigations offices to safeguard it from fraud, waste and abuse. The principal criticism lodged by GAO about these activities is that they lacked independence from the program managers and bureau management that they scrutinized. This independence has been fully accomplished by the establishment of the Office of the Inspector General (OIG).

Some specific accomplishments responsive to your question:

(1) We have direct access to the Attorney General and his personal support in our activities.

(2) We have eliminated artificial office boundaries and compartmentalized approaches to the problems of fraud, waste and abuse, which allow more responsive, quicker and more innovative solutions. There is a very healthy interchange of ideas, with both our Audit and Investigation Divisions providing leads for inspections; and a number of inspections have uncovered irregularities that immediately became subjects for investigations criminally. We can team up auditors and investigators for contract and grant fraud investigations with an ease and speed that probably would not have been as possible under the former structure.

(3) The increase in the number of allegations and the success of the HOTLINE demonstrate the existence of a greater sensitivity on the part of Departmental employees to problems of fraud, waste and abuse.

(4) We have changed the character of inspections from the traditional "white glove" review of compliance with regulations to a broader, more flexible form of assistance and advice on tricky management problems that, in the long run, may be one of the most valuable contributions to the Department that this office can make.

(5) Finally, the semiannual reporting requirements and the audit resolution process that we have established have increased the responsiveness of management to the recommendations that follow from our audit and inspection activities.

QUESTION: Why do you believe it is necessary to increase your staffing by 84 positions (28 percent)?

ANSWER: This is the first opportunity that we have had to assess the needs of the Office against the funds available to do it.

As I mentioned in my prepared remarks, this office received no funding for management and executive control. The positions have been "borrowed" from our operations staff. In our 1991 request to Congress, we have requested an additional 14 positions and $1,741,000 to provide executive direction and control over the Office of Inspector General.

In the area of investigations, we expect a workload increase of 35 percent. This is potentially the most explosive area within the office's responsibilities. I do not ever want a Housing and Urban Development scandal or a Department of Defense Operation Ill Wind in the Department of Justice. I want to ensure that we have allegations that go to the integrity of the Department's personnel--

its most precious resources and the largest single use of its appropriations -- under control.

Our data show a significant need for more auditors. Our present ability to provide timely coverage to the universe of auditable Departmental activities is not adequate. We cannot meet accepted audit standards with our present workforce. The Department's budget has tripled since 1982; our Audit Staff has not increased at all. We have declined a number of requests from Bureau Directors to audit portions of their bureau because we do not have sufficient audit resources. Our request is a carefully-staged increase, based on a need that we are confident exists and that we are confident we can defend.

QUESTION: In 1990, you have decreased audits of the U.S. Trustees from 405 to 375. Why have you reduced these audits, especially considering the large amounts of funds being handled and the use of private sector individuals to administer the program?

ANSWER: The decrease in U.S. Trustees audits is based on the type of review requested by the Executive Office for United States Trustees (EOUST) per the terms of the 1990 reimbursement agreement, i.e., EOUST requested more detailed audit work in 1990 resulting in a concomitant decrease in the number of audits conducted. The scope of the scheduled 1990 audits includes more detailed cash management reviews of chapter 7 panel trustees designed to provide the U.S. Trustees with an assessment of the controls employed by individual panel trustees in the high-risk area of cash management. Further, at the behest of the EOUST, the OIG Audit Division will provide significant resources to the reconstruction of records of selected trustees who have not complied with EOUST reporting requirements. The performance of this effort, while more time consuming than cash management reviews, will enable the EOUST to determine the financial status of the reviewed trustee. Lastly, full scope audits of several chapters 12 and 13 standing trustees will be conducted to examine the accuracy of the annual financial reports submitted to the U.S. Trustees. The broader-scope nature of these reviews is anticipated to require the same amount of OIG Audit Division resources as in 1989, but will result in a slight reduction in the number of reports issued. In addition, U.S. Trustees has requested $1,000,000 for independent audits of panel trustees.

QUESTION: For the record, please provide a list of audit reports and any savings identified in those reports.

ANSWER: The nature of the majority of DOJ programs and activities do not lend themselves to significant cost savings, as the majority of the Department's appropriations are being spent on personnel and related costs, rather than on contracts and grants. While the Department's expenditures for contracts are still significant, 40 percent of such actions are for small purchases under $25,000. Consequently, the majority of the Department's audits are performance related, and are designed to assess the economy and efficiency of various DOJ operations as well as their compliance with applicable laws and regulations. These audits result in better operations, cost avoidance, and the use of available funds in more efficient or effective manners.

Internal audits include:

A Special Audit of the United States National Central Bureau - INTERPOL

Payment and Obligation Modules in the Financial Management Information System

The Bureau of Prisons' Procurement of Community Treatment Center Services

Unemployment Compensation Procedures and Controls in the Justice Management Division and the Federal Bureau of Investigation

OFFICE OF JUSTICE PROGRAMS REQUEST

Mr. SMITH. Continuing with our review of the Department of Justice, we will now hear testimony from the Office of Justice Programs. The fiscal year 1991 request of the Office of Justice Programs is $587,515,000.

We will insert in the record at this point the Office's fiscal year 1991 budget justification.

Justice Assistance

Summary Statement

Fiscal Year 1991

The Office of Justice Programs is requesting, for 1991, a total of $587,515,000, 345 permanent positions, and 345 workyears. This request represents a decrease of $26,775,000, seven positions, and seven workyears from the 1990 appropriation enacted.

Budget authority is requested for six missions: Research, Evaluation, and Demonstration programs, which conduct research into all aspects of the criminal justice system; Criminal Justice Statistical programs, which provide statistical information dealing with crime and the operation of the criminal justice system at all levels of government; a Juvenile Justice program targeted at high risk youth; the Missing Children program to combat the criminal and sexual exploitation of children; the Regional Information Sharing System program that aids State and local agencies in addressing select, multijurisdictional crimes; and the Anti-Drug Abuse program that enhances State and local efforts to control drug use and drug-related crime and the improvement of the criminal justice system.

Research, Evaluation, and Demonstration Programs

The National Institute of Justice (NIJ) is the principal sponsor of research and development on crime and the criminal justice system in the United States. Its mandate includes broad responsibility for research aimed at improving crime control and crime prevention at the State and local levels of government, in addition to the Federal level. NIJ conducts: 1) a core research program directed at discovering the causes and control of crime and improvement of criminal justice system practices; 2) a development program designed to translate policy-relevant research findings into practical programs and policies for use by criminal justice agencies; 3) a forensics and criminal justice technology program to aid law enforcement in solving crime; 4) the world's largest national and international computerized information service for use by practitioners, policymakers, and researchers; and 5) a multi-media dissemination program to get important research findings and criminal justice program information to criminal justice officials and the academic community as soon as possible. An increase of $1,758,000 is requested for the development of an operational Less-Than-Lethal Weapon. This initiative, requested in 1990 but only partially funded, was begun in an effort to develop an alternative to handguns in order to save the lives of police officers. (Between 1978 and 1987, 855 police officers and almost 3,000 suspects were killed during confrontations.) The development of such a weapon would also help avoid expensive legal judgments in wrongful death law suits and aid police officers in the apprehension of fleeing suspects.

Criminal Justice Statistical Programs

The Bureau of Justice Statistics (BJS) is responsible for all of the major national statistical series and other sources of data concerning crime and criminal justice with the sole exception of the FBI's Uniform Crime Reports. The mission of the Bureau is twofold: to provide senior officials of the Justice Department, the White House, the Congress, the Judiciary, and the public with valid and timely justice data and analyses relevant to policy decisions; and to support the emerging capacity of State and local governments to use data as a cornerstone of their criminal justice programs. For 1991, anincrease of $1,911,000 is requested for three initiatives. The comprehensive data base of drug and gun related crimes would be initiated at a cost of $1,100,000. This program will collect information through both existing BJS-sponsored criminal justice surveys and other new data collection efforts. Information to be collected will include: the relationship of drug use to crime and the use of firearms during the commission of crimes; the tracking of drug offenders from arrest through court disposition; examination of the criminal histories of drug offenders; and a full range of drug policy issues related to law enforcement resources. In 1991, the entire $1,100,000 amount will be used for the Quinquennial National Survey of Prison Inmates, the fourth State prison inmate survey BJS has conducted since 1974 and the only source of national level data on prison inmates. BJS plans to conduct this survey in conjunction with a similar survey being carried out with Federal inmates. The second initiative is an increase of $476,000 for implementation of the National Crime Survey (NCS) Redesign. The redesigned survey will more fully measure the number of crimes of which Americans are victims, including rapes, family violence, and crimes against the household, with vandalism being measured for the first time. The additional and more detailed questions being introduced are expected to increase reporting of some crimes to survey interviewers by as much as 25%. The third initiative is an increase of $335,000 to enhance the BJS Federal Integrated Data Base, which is a Federal criminal justice statistics program. This enhancement will allow the collection of more timely and comprehensive data on the processing of offenders, with particular emphasis on drug offenders. This system is unprecedented because it links data from a variety of offices and bureaus within the Department of Justice in order to track offenders through the Federal system. Last year, funds were requested for the second and third initiatives in the 1990 President's budget, but were not provided in the appropriation.

State and Local Assistance

The Bureau of Justice Assistance (BJA) administers this program that was established by the Justice Assistance Act to provide financial and technical assistance programs for States and localities to improve operations of criminal justice systems. Both a block grant program and a discretionary program were established by the Act, however, block grant funds have not been provided since 1987 and most of the discretionary funds appropriated in 1988 and 1989 were earmarked by Congress for specific projects. No funds are requested for the State and Local Assistance program in 1991. With passage of the Anti-Drug Abuse Act of 1988, the purposes of this program are now encompassed within the Anti-Drug Abuse program.

Emergency Assistance

This program offers a Federal response to situations of an emergency nature that exceed the capacity of local law enforcement resources. The legislation authorizes the provision of funds, equipment, training, intelligence information, and personnel to a State in the event of a law enforcement emergency. No funds are requested for this program in 1991. The 1990 appropriation was provided specifically to address needs arising from Hurricane Hugo and the earthquake in California.

Juvenile Justice Programs

Currently, this program provides funds to States and localities for juvenile justice and delinquency projects in the areas of education, training, research, prevention, treatment, and rehabilitation. The major thrust of the program has been to attain deinstitutionalization of status offenders and the separation of juvenile and adult offenders at the State and local levels. Since 1975, over one billion dollars has been made available for the various programs authorized by the Juvenile Justice and Delinquency Prevention Act and much has been accomplished in those sixteen years. In the absence of Federal funding, we believe that the States currently participating in the program would continue to commit their resources to those programs that have proven successful. Accordingly, for 1991 we are proposing a program that is directed solely at high risk youth. The 1991 request is a decrease of $61,905,000, which will leave $7,500,000 for the Office of Juvenile Justice and Delinquency Prevention (OJJDP) to continue its High Risk Youth program, which addresses the problems with gangs and drugs and their relationship with the juvenile justice system. Also, we are proposing that grant recipients contribute a hard cash match of 50 percent of total project costs. No new legislation will be needed since the Juvenile Justice and Delinquency Prevention Act specifically addresses such high risk youth factors as juvenile gangs, youth drug and alcohol use, weakened family structure, and school drop-outs. The program is directed at youth and teenagers who, because of certain characteristics or conditions, are especially likely to use illegal drugs and/or alcohol. The program priorities focus upon preventing involvement in illegal drug use and trafficking, strengthening families, and mobilizing communities to implement comprehensive strategies for high risk youth. Under the auspices of the Coordinating Council on Juvenile Justice and Delinquency Prevention, OJJDP already has the means with which to coordinate the activities of all agencies involved in any high risk youth initiative.

Missing Children

This program was first authorized and funded by Congress in 1985. Funds are used to combat the criminal and sexual exploitation of children by assisting families, citizen groups, law enforcement agencies and government institutions in a national effort to ensure the safety and protection of children. A program increase of $4,000,000 is requested for this program in 1991 to enhance the efforts of State and local communities in responding to missing and exploited children issues. Activities that will be funded include direct assistance in planning and program development and developing and disseminating policies, procedures, and programmatic information related to search teams, investigations, crisis intervention activities, and reunification of youth with their families.

Mariel Cubans

Since 1985, Congress has annually appropriated about $5,000,000 to reimburse States for part of the costs of incarcerating Mariel Cubans who had been originally paroled by the Federal government and have since committed State offenses. No funds are requested for 1991 since the program is not of sufficient priority to command a share of the limited funds that are available.

Regional Information Sharing System

This activity provides funds to maintain six regionally based information sharing centers throughout the United States that service State and local law enforcement agencies in addressing major, multi-jurisdictional crimes. The program encourages and facilitates the rapid but controlled exchange and sharing of information pertaining to known or suspected criminals or criminal activity among State and local law enforcement agencies and enhances coordination and communication among agencies in pursuit of criminal activity determined to be multijurisdictional in nature. Funds also support LEVITICUS, which is a consortium of 28 agencies in nineteen States that focus primarily on crimes, particularly fraud, related to energy industries. A program level of $9,750,000 is requested for 1991, which is $3,652,000 less than the 1990 appropriation. Since States and localities are the primary beneficiaries of this program, they should contribute resources. We are proposing that program participants provide a 25 percent hard cash match of the total program costs. The requested amount, combined with the cash match, would provide a $13,000,000 total program level.

Anti-Drug Abuse Program

An increase of $45,263,000 is requested for this program for 1991. The program was first authorized by the Anti-Drug Abuse Act of 1986 to assist State and local governments in their drug control and enforcement efforts. Amendments to the program were enacted in the Anti-Drug Abuse Act of 1988 to incorporate efforts to improve functioning of the criminal justice system, with emphasis on violent crime. The program offers a comprehensive, coordinated approach to the nationwide drug problem. It enables State and local units of government to attack their drug control problems while also contributing to and supporting national drug control approaches, making them partners with the Federal government in the war on drugs. For example, hundreds of multijurisdictional task forces are supported with these funds. Because of the combined participation of Federal agencies, these task forces expand the nationwide ability to disrupt drug trafficking. The program also raises the quality of drug enforcement efforts by transferring new technologies and the training of State and local personnel in areas such as financial investigations, seizure and forfeiture of assets, and upgrading crime laboratories. These special skills are needed to apply new technologies and laws related to investigation, prosecution, punishment, and treatment of drug crimes and offenders. The additional funds requested for 1991 will allow State and local units of government to expand and enhance their drug control activities.

Management and Administration

This activity provides for the executive direction and control of the National Institute of Justice, the Bureau of Justice Statistics, the Bureau of Justice Assistance, the Office of Juvenile Justice and Delinquency Prevention, the Office for Victims of Crime, and the Office of Justice Programs, as well as policy coordination and the full range of management responsibilities. The request of $24,719,000, 345 positions, and 345 workyears represents a net decrease of $398,000, seven positions, and seven workyears below the 1991 base level. Included in the request is an increase of $52,000 for migration of the Office of Justice Programs accounting system to the Justice Department's Financial Management Information System, to achieve the uniform accounting system requirements as specified in A-127. In addition, one position is requested for the National Institute of Justice to conduct major developmental work for the Less-Than-Lethal Weapons program and one position is requested to allow the Bureau of Justice Statistics to support the expanded Federal Integrated Data Base. A reduction of $450,000, nine positions and nine workyears is requested for the Office of Juvenile Justice and Delinquency Prevention (OJJDP). This sum represents the net effect of a decrease of sixteen positions and FTE for the phase-out of traditional Juvenile Justice programs, offset by the retention of seven positions and workyears that are needed to develop, implement, and administer the proposed High Risk Youth program.

Office of Justice Programs
Justice Assistance
Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Justice Assistance

For grants, contracts, cooperative agreements, and other assistance authorized by [title I of] the Omnibus Crime Control and Safe Streets Act, of 1968[, as amended, and the Missing Children's Assistance Act], as amended by the Anti-Drug Abuse Act of 1988, including salaries and expenses in connection therewith, [$90,783,000], to remain available until expended, [as authorized by section 6093 and 7289 of Public Law 100-690 (102 Stat. 4339-4340 and 4461)]

[In addition, for grants, contracts, cooperative agreements, and other assistance authorized by parts D and E of title I of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, for the Edward Byrne Memorial State and Local Law Enforcement Assistance Programs, including salaries and expenses in connection therewith, $150,000,000, to remain available until expended as authorized by section 6093 of Public Law 100-690 (102 Stat. 4339-4340)]

[In addition, for grants, contracts, cooperative agreements, and other assistance authorized by title II of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, including salaries and expenses in connection therewith, $64,193,000, to remain available until expended as authorized by section 7265 of Public Law 100-690 (102 Stat. 4448 and 4449), of which $350,000 is for expenses authorized by section 241(f) of part C of title II of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, and of which $2,000,000 is for expenses authorized by part D of title II of said Act.]

[In addition, $5,000,000 for the purpose of making grants to States for their expenses by reason of Mariel Cubans having to be incarcerated in State facilities for terms requiring incarceration for the full period October 1, 1989, through September 30, 1990, following their conviction of a felony committed after having been paroled into the United States by the Attorney General: Provided, That wiehin thirty days of enactment of this Act the Attorney General shall announce in the Federal Register that this appropriation will be made available to the States whose Governors certify by February 1, 1990, a listing of names of such Mariel Cubans incarcerated in their respective facilities: Provided further, That the Attorney General, not later than April 1, 1990, will complete his review of the certified listings of such incarcerated Mariel Cubans, and make grants to the States on the basis that the certified number of such incarcerated persons in a State bears to the total certified number of such incarcerated persons: Provided further, That the amount of reimbursements per prisoner per annum shall not exceed $12,000.]

and the Juvenile Justice and Delinquency Prevention Act of 1974

$587,515,000

of which $7,500,000 is provided for purposes set forth in sections 204, 243, 244 and 261 of the Juvenile Justice and Delinquency Prevention Act, notwithstanding the allocation and match provisions of sections 222, 261, 291, and 295 of such Act: Provided, That grants made under sections 204, 243, 244 and 261 of the Juvenile Justice and Delinquency Prevention Act may not be expended for more than 50 percent of the total approved project cost; and of which $9,750,000 is provided for purposes set forth in title I, Part M of the Omnibus Crime Control and Safe Streets Act: Provided, That grants and cooperative agreements awarded under Part M for intelligence and enforcement projects may not be expended for more than 75 percent of the total approved project cost.

(Department of Justice Appropriations Act, 1990.)

Office of Justice Programs
Justice Assistance
Justification of Proposed Changes in Appropriation Language (Continued)

Justice Assistance

[To fight the war on drugs, $308,821,000, to remain available until expended; of which $300,000,000 is for the Edward Byrne Memorial State and Local Law Enforcement Assistance Programs for State and local agencies to improve efforts in street-level and community-based drug law enforcement efforts; and of which $8,821,000 is for the Juvenile Justice and Delinquency Prevention Program in order to improve programs for the prevention, intervention and treatment of juvenile crime, especially where it relates to youth gangs and drugs.]

(Department of Transportation and Related Agencies Appropriations Act, 1990.)

Explanation of Changes:

1. The first change clarifies references to authorizing legislation so that the appropriated amount will include all program and all administrative funds that are provided in the Justice Assistance account. Proposed language will encompass authority for all programs, eliminating the need for references to title I and the Missing Children's Assistance Act.

2. The second change adds language for the following: To permit the use of $7,500,000 for a Juvenile Justice High Risk Youth discretionary program and require a 50 percent match for grant projects; and to provide a requirement of 25 percent match for the Regional Information Sharing System program.

3. The third change deletes unnecessary language for the Edward Byrne Memorial State and Local Law Enforcement Assistance program and the Juvenile Justice program. The Mariel Cuban program is also deleted since no funds are requested for 1991.

4. The fourth change deletes language for the Department of Transportation appropriation that is unnecessary in 1991.

Congressional Appropriation Action. Funding was reduced for the Research, Evaluation, and Demonstration program and the Criminal Justice Statistical program. Funding was included for the Emergency Assistance program to provide $5,000,000 to the localities affected by Hurricane Hugo and $5,000,000 to the localities affected by the October 17, 1989 earthquake in California. Congress restored $69,914,000 for the Juvenile Justice program of which $2 million is Part D Gangs. Funding was reduced for the Missing Children program. Funding for the Public Safety Officers' Benefits program in 1990 was established in a new current indefinite account within OJP, which was offset by its elimination from the "Justice Assistance" account. Congress restored $5,000,000 for the Mariel Cuban program and $13,500,000 for the Regional Information Sharing System program. Congress also provided an increase of $99,500,000 for the Anti-Drug Abuse program and an increase of $3,005,000 for Management and Administration.

1990 Sequestration. In accordance with P.L. 101-239, the Omnibus Budget Reconciliation Act of 1989, an across-the-board reduction was applied to OJP's programs.

Long-Range Goal: National Institute of Justice (NIJ) research and development (R & D) increases knowledge about the causes of crime and how it can be prevented or reduced through more effective, efficient, and equitable policies of the Nation's law enforcement and justice administration systems. Increased control of crime in American society is based on informed criminal justice policies resulting from R & D.

Major Objectives:

To concentrate as its top priority the Institute's R & D program on reducing illegal drug use and the crime associated with drug use.

To emphasize research in the Institute's White Collar and Organized Crime program consistent with the Attorney General's priorities.

To expand private foundation funding support for Federal criminal justice research priorities as in the landmark agreement between NIJ and the MacArthur Foundation.

To use research findings to prevent or reduce crime and mitigate its negative effects on victims.

To demonstrate the crime control effects of intermediate sanctions and increasing prison capacity.

To further increase the involvement of the law enforcement and criminal justice communities in the R & D program of NIJ.

To communicate research findings to policy officials, practitioners, and researchers through modern communications technology, including compact discs (CDs), videotapes, concise Research in Brief and Research in Action papers, a computerized national and international reference service, as well as through traditional media such as books and articles.

Base Program Description: Authorized by the Anti-Drug Abuse Act of 1988 (42 U.S.C. 3721), the National Institute of Justice is the nation's principal criminal justice research and development center. As the major resource for policy-relevant studies regarding crime and criminal justice in the United States, the Institute's programs are designed to improve society's ability to control crime and to assist criminal justice practitioners and policymakers in selecting the most effective solutions to their crime problems. Institute research products provide policymakers with a range of alternative strategies for improving their crime control efforts.

The Institute's Program Plan annually outlines the policy issues to be addressed by Institute research and development activities. The Plan results from extensive consultation with State and local governments, related Federal agencies, criminal justice professional associations, and academic researchers. The critical areas currently receiving priority attention include: controlling the supply of and demand for illegal drugs; reducing violent crime and apprehending the career criminal; investigating and prosecuting white collar and organized crime; alleviating jail and prison crowding; identifying early predictors of criminal behavior; assisting victims of crime; involving communities and the private sector in controlling crime; demonstrating the effectiveness of criminal sanctions; prosecuting domestic violence and child abuse and curtailing future such violence; improving the effectiveness of the adjudication process; providing better and more cost effective methods for managing the criminal justice system; identifying the impact of probation and parole on subsequent criminal behavior; and disseminating research results to inform State and local criminal justice policies.

Most of the Institute's research projects are implemented through grants, contracts, and cooperative agreements. The Institute has also established an in-house research capability to conduct short term studies on important topics of immediate policy-relevant interest. Researchers who work on Institute-funded projects are selected primarily through a competitive solicitation process using peer review. On Institute projects, a staff program manager works closely with the researcher to ensure successful completion of the project and to feed project findings back into the planning process. The Institute's visiting fellowship program provides an opportunity for researchers, as well as qualified criminal justice practitioners, to undertake a study of their own design at the Institute, thereby providing an occasion for direct and sustained interaction between scholars, criminal justice practitioners, and Institute staff.

Based upon research and evaluation findings, analyses and program models are developed detailing the advantages and limitations of policy options in a given topic area. These products help practitioners decide which research-based innovations may be appropriate for their jurisdiction. Selected programs are field tested and evaluated to determine the likelihood of success if replicated and institutionalized by State and local government agencies, the private sector, or community organizations. National conferences also are conducted in selected areas to give senior officials up-to-date information on new programs or new research findings with significant implications for the management of their agencies.

As mandated by law, the Institute communicates policy-relevant information to the field through modern communications technology and operates the National Criminal Justice Reference Service, the principal national and international clearinghouse for the exchange of information on criminal justice issues.

Accomplishments And Workload: Workload and productivity information for the National Institute of Justice is presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Program Solicitations Prepared	14	16	16	22
Policy Reports Prepared and Published	32	35	38	48

Number of requests for criminal justice information answered by NCJRS	17,280	18,000	21,250	23,400

Following are recent major accomplishments of the National Institute of Justice:

NARCOTICS ENFORCEMENT AND PREVENTION: In response to the emphasis on controlling illegal drugs, NIJ conceived and developed the Drug Use Forecasting Program (DUF). It provides the first hard evidence on offenders' drug use. Of the individuals testing positive for recent illegal drug use, nearly 65% provided false information in the interview preceding the urine test. Thus, it is only through urinalysis that any true measurement of drug use among this population can be obtained. Funded in part by the Bureau of Justice Assistance, DUF now permits the tracking of new trends in drug use nationwide, as well as changes in drug use over time. Twenty-five (25) cities are now participating in DUF. In each city, samples of 250-350 arrestees are asked to provide voluntarily and anonymously, answers to survey questions, and a urine sample to be analyzed for illegal drugs. New samples are collected every three months; an attempt is made to oversample from arrestees accused of non-drug related offenses, to examine the use of illegal drugs by offenders involved in a wide variety of criminal activities.

NIJ's most recent findings show that, nationwide, more than one-half of all arrestees tested thus far have been positive for one or more drugs. In fact, most sites yield significantly higher results, with some cities routinely finding 70-80% of arrestees positive for recent drug use. These figures are critical, because they reveal illegal drug use which occurred within 48 hours of arrest. The high results do not vary across a broad array of criminal arrest charges. Further, in all but one city, one quarter or more of all arrestees have tested positive for multiple drug use. Regional differences have also been discovered: PCP use is primarily found in Washington, D.C., while amphetamines are found mostly in the West. Female arrestees are just as or more likely to test positive as males. Many female arrestees are more likely to be drug injectors placing them at high risk of AIDS infection.

In Washington, D.C. and New York City (Manhattan), where trend data are available back to 1984, cocaine use is at or near its highest level. Cocaine use across all sites has increased from 39% to 53% within the past two years. Finally, DUF findings have underscored the severity of drug abuse among criminals and inspired calls for more, and targeted, treatment resources. Washington, D.C., for example, initiated its first PCP treatment program only after urinalysis testing demonstrated the high level of PCP use among arrestees.

DRUGS, ALCOHOL, AND CRIME RESEARCH PROGRAM: This research program awarded over $1.5 million in new grants in 1988. The projects include: a) Costs and Consequences of Crack Abatement, which assesses the impact of crack trafficking on local crime patterns and will support interdiction and demand reduction efforts; b) Neighborhood Reporting of Drug Crimes, which will increase community willingness to provide eye-witness information on local drug trafficking to law enforcement agencies; c) Drugs and Campus Violence, which will provide nationwide data on how campus officials can reduce the occurrences of drug and alcohol-rated violence; and d) Modeling of Drug Markets, which provides economic and law enforcement models of drug supplies and profits at national and local levels and will permit more effective targeting of drug trafficking organizations.

EVALUATION OF ANTI-DRUG ABUSE ACT PROGRAMS: The Anti-Drug Abuse Act of 1988 called upon the National Institute of Justice to conduct a reasonable number of independent evaluations of the national discretionary and state formula programs operated by the Bureau of Justice Assistance. For fiscal year 1989, the National Institute and the Bureau of Justice Assistance have targeted 10 major program areas, including an evaluation of a drug use prevention campaign, street level enforcement strategies, and narcotics control in public housing. In 1990 and 1991, additional program evaluations will be conducted. Evaluation of Anti-Drug Abuse Act programs is also addressed under Congressional or OMB Mandated Studies.

METROPOLITAN AREA DRUG INTERRUPTION STRATEGY (MADIS): NIJ has developed an initiative to improve police strategies for the suppression of the retail drug trade and to analyze the relative efficacy of different tactical approaches. The program will assist in guiding and assessing street-level efforts jointly undertaken by local law enforcement agencies, including those undertaken jointly with the FBI, DEA, and the Marshals Service. Without thorough, metropolitan wide knowledge of drug markets and of police enforcement activities, the effectiveness of street-level crack-downs will remain unclear. The goal of this program is the compilation and use of data on a near-real-time basis. NIJ awarded four grants to police departments early in fiscal year 1990 to begin experimental work on this program.

CONGRESSIONAL OR OMB MANDATED STUDIES: In keeping with its Congressional mandate, NIJ has also commissioned a project to develop evaluation guidelines for State and local anti-drug abuse programs funded under the Anti-Drug Abuse Act of 1988. NIJ and the Bureau of Justice Assistance cooperated on developing the guidelines. Guidelines were completed and issued in the spring of 1989. NIJ awarded 14 grant and contract awards for evaluations by September 29, 1989. The National Institute of Justice, in response to a Congressional directive, has awarded a grant to study issues and practices in the handling of bias motivated crimes in two jurisdictions, Baltimore County and New York City. The study will involve the matching of identified bias cases with non-bias cases by crime type and victim type, and will examine the differences, if any, in type of offender, victim-offender relationship, crime location, and criminal justice system response. A field test of toy gun marking systems and their impact on police behavior was designed and conducted at the Fairfax County Police Department range and the FBI training facility at Quantico. The test designers also conducted a pilot test to more definitively determine the appropriate sample size needed for the field test and data analysis. The final report has been completed and submitted to the Secretary of Commerce, as directed. In response to the Undetectable Firearms Act of 1988, the Institute collaborated with the FAA and the Treasury Department in a study of the adequacy of current gun detection technology. Following a specific request from OMB, NIJ conducted a feasibility study of privatizing Bureau of Prisons hospital services. A draft of the report has been submitted to OMB for review and comment. Pursuant to the 1989 Urgent Supplemental Appropriation Act, a grant was awarded to the University of South Carolina to study the disproportionate use of illegal drugs by blacks.

WHITE COLLAR AND ORGANIZED CRIME: In NIJ's expanded program of white collar and organized crime research, a study on targeting of narcotics wholesalers is being completed to provide guidelines to State and local law enforcement agencies in initiating or improving programs to control these mid-level drug traffickers. A case study of the RICO trusteeship of Teamsters Local 560 in New Jersey is focusing special attention on union members' responses to the trusteeship. Findings will have important implications for the 1991 elections of the International Brotherhood of Teamsters (IBT), required by the settlement of the Justice Department's RICO suit against the IBT. The Institute is also conducting research to improve police response to Asian organized crime as well as studies aimed at more effective prosecution of corporate crime and public corruption.

PUBLICATIONS: During calendar years 1987 and 1988, the Research Applications and Publications programs of NIJ produced 39 major reports including five on drugs and crime, five on various law enforcement management and operational issues, three on AIDS in criminal justice, and others on such topics as victims of crime, the treatment of child victims within the criminal justice system, and improvements in a variety of court and corrections management policies. NIJ also published the National Directory of Corrections Construction, 2nd edition (the American Corrections Association reprinted and disseminated at its own expense 10,000 copies of the Directory); and NIJ also published four volumes of the prestigious Crime and Justice series, including thematic volumes on Family Violence and Communities and Crime, and 55 Research in Brief and Research In Action summary reports. NIJ also published 39 technical standards, reports and articles under its Technology Assessment Program. In addition, and serving as evidence of the high quality of NIJ's research program, over 110 articles, based on NIJ sponsored research, were privately published in research and policy journals during 1987 and 1988.

AIDS: NIJ has initiated an AIDS and Criminal Justice Program, including an AIDS Clearinghouse, to respond to the serious management and policy issues posed by AIDS for criminal justice practitioners. Working with the Centers for Disease Control, the National Institute has done extensive work in this area including publishing the following widely disseminated reports: AIDS In Correctional Facilities and AIDS And The Law Enforcement Officer. These reports summarize current medical information; review AIDS policies and procedures with regard to corrections and law enforcement agencies; discuss policy options available to administrators; and provide recommendations for and documentation of agency operational and training programs, including a discussion of key legal and labor relations issues.

NATIONAL PROGRAM ON HUMAN DEVELOPMENT AND CRIMINAL BEHAVIOR: Both the Institute and the John D. and Catherine T. MacArthur Foundation are initiating and jointly funding this program. The program aims to undertake a coordinated, integrated program of longitudinal cohort studies and experimental research on the causes and correlates of violent and predatory criminal behavior. In 1988 the Institute and the MacArthur Foundation committed $600,000 each to the program. Beginning in 1990 and continuing through 1995, the Institute and the Foundation will commit $1.4 million apiece to this research program. The design of this program features multiple, overlapping age cohorts and is expected to produce findings within five years of initial funding on early childhood and later developmental causes of crime, onset of criminal behavior, and desistance from crime.

FORENSICS AND CRIMINAL JUSTICE TECHNOLOGY: NIJ forensic research is focusing on improving and modifying evidence analysis for suspect identification through new DNA typing techniques which examine hair, bone, blood, and body fluid samples. This research is also looking at the testing of environmental effects on DNA typing samples and the expanded testing of alternative DNA specimen collection and processing systems, including gene amplification using the polymerase chain reaction procedure. Other significant research supported by NIJ is the testing of a computer modelling procedure for restoring and enhancing blurred and "noisy" images taken from surveillance cameras as well as other photographic evidence provided by bystanders.

VICTIMS OF CRIME: A recently completed NIJ study on the psychological effects of victimization indicates that nearly 1 in 4 of family members of homicide victims suffer from post traumatic stress disorder symptoms severe enough to meet the diagnostic criteria in the Diagnostic and Statistical Manual of Mental Disorders-III (DSM-III). Victim research scheduled for completion in 1989 also included studies of how victim bill-of-rights legislation can be implemented more effectively in order to enhance the treatment and satisfaction of victims with the criminal justice system. Means of increasing the utilization of victim services and the benefits to victims of victim services are also being addressed in current research.

SCHOOL CRIME: Developed as a cooperative research and demonstration program with funding support from the U.S. Department of Education, the School Management and Resource Teams (SMART) program was initiated in 1983. The program has been implemented in more than 80 schools nationally and has enabled administrators to reduce crime and disciplinary problems. In 1988, the Institute received $200,000 from the Office of the

Secretary of the Department of Education to sponsor drug abuse education and prevention activities through SMART. Two major urban school districts - Washington, D.C. and Miami, Florida - have requested designation as SMART demonstration sites. These initiatives would begin at the start of the 1989-90 school year, and would place special emphasis on drug abuse education, prevention, and control.

VIOLENT CRIME: NIJ has contributed $600,000 for a National Academy of Sciences panel on the understanding and control of violent criminality. The interdisciplinary panel will synthesize and critique the body of social, behavioral, and physiological scientific research in the most prestigious and rigorous scientific evaluation of knowledge about violence since the 1967 President's Commission on Violence. While NIJ is the principal contributor, given that much of the recent research on violence was supported by NIJ funding, the National Science Foundation's Law and Social Sciences program has also contributed $300,000 to this effort. Negotiations are continuing with other Federal agencies for their support for that part of the panel's work that is important to their own mandate and mission. Recently completed research in eight jurisdictions evaluating a violence prevention education curriculum found that exposure to the curriculum had a positive impact on the attitudes and self reported violent behavior of an identifiable high risk subset of the sample involved in the test.

FAMILY VIOLENCE: NIJ is continuing support for multi-site experimental investigations on what works best to stop family violence. Field experiments are continuing in six jurisdictions to expand the test of the effectiveness of arrest in spouse assault cases in comparison to other police responses such as the use of protection orders, batterer counseling, and victim outreach services. Results from three sites are expected in 1989, and three more in 1990. In addition, findings from a recently completed NIJ supported study, using official records, on the intergenerational transmission of violence indicated, surprisingly, that while being abused or neglected as a child is not a significant predictor of becoming a child abuser as an adult, it does have implications for future delinquency and adult criminal behavior. A follow up study consisting of interviews with both abused and control subjects is being conducted to determine the actual extent of child abuse in both groups, to examine other positive and negative outcomes for abused children, and to identify protective factors in the abused sample that prevent subsequent criminality.

SHOCK INCARCERATION: A recent intermediate sanction being adopted by many correctional jurisdictions is shock incarceration. In these programs young, non-violent offenders spend a short period of time in prison in an atmosphere emphasizing discipline, physical training, and exercise. NIJ has sponsored research to examine the effectiveness of these programs in reaching their stated goals of reducing overcrowding at the system level and diminishing recidivism at the individual level. In-house research has shown that the costs of not incarcerating high frequency offenders far outweighs the costs of incapacitation through incarceration.

ELECTRONIC MONITORING OF OFFENDERS: NIJ sponsored surveys of State and local programs utilizing electronic monitors in 1987 and 1988 revealed a 300% increase in their use for offenders both pretrial and after conviction. Field experiments evaluating the feasibility and effectiveness of house arrest programs using electronic monitors are currently underway in San Diego, Indianapolis and Oklahoma. The potential for use and misuse of this approach with a wider range of offenders and offense types warrant continued attention by the National Institute of Justice.

NATIONAL CRIMINAL JUSTICE REFERENCE SERVICE (NCJRS): NIJ operates NCJRS, the largest national and international information center on criminal justice policy and issues. Over 1.4 million documents were distributed, by issue and upon request, to practitioners and researchers in 1988. NCJRS operates on a fee-for-service basis (FFS) and uses the net income from sales to offset operating expenses. FFS is mandated by OMB policy; in NIJ's case, NCJRS charges for documents and services that are in demand but which NIJ has insufficient funds to produce. Income in 1988 totaled $412,000, with $443,680 projected for 1989.

Program Change:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Research, Evaluation, and Demonstration Programs..................	...	...	$22,766	...	...	$24,524	...	...	$1,758

An increase of $1,758,000 is requested for 1991 for the Less-Than-Lethal Weapons Research and Development Program. This increase will support the development of an operational Less-Than-Lethal Weapon for use by Federal, State and local law enforcement personnel. The 1990 President's budget included a request of $2,000,000 for this initiative but only a small portion of the amount requested was provided by Congress.

The initiative was begun in an effort to develop an alternative to handguns in order to save the lives of police officers, innocent civilians, and offenders. Between 1978 and 1987, 855 police officers and nearly 3,000 suspects were killed during confrontations. In addition to the loss of life and human suffering, the direct and indirect costs to society of the police deaths alone has been estimated at $500 million. Furthermore, according to one expert witness, Dr. James Fyfe of American University, there have been at least 100 wrongful death suits over the past nine years which have resulted in judgments totalling approximately $30 million. Finally, the 1985 Supreme Court ruling in Tennessee v. Garner strictly limits the situations in which police officers may use deadly force against a fleeing suspect. The development of a LLW is thus a crucial step in effective law enforcement, as its availability and use would save many of these lives and avoid expensive legal judgments. Equally compelling, a LLW would also assist police in apprehending more suspects since a fleeing felon cannot be shot unless there is imminent danger posed by the felon to the police or a bystander, so a LLW would bring down the fleeing felon who might otherwise escape. The number of deaths and resulting costs from armed confrontations support the need for a research initiative to design an effective LLW.

Chemical Anesthetic Compound Testing: Research conducted in 1989 with $500,000 from base resources for the Less-Than-Lethal Weapons Program identified three promising anesthetic compounds, Hypnoidal, Alfentanil, and A3080 for further development. These compounds were evaluated in terms of how they enter the body and the reaction time of subjects, and have been scheduled for comprehensive medical testing up to and including human subject testing beginning in 1990. All testing and documentation for these compounds will follow established medical testing protocols and shall meet U.S. Food and Drug Administration (FDA) standards of safety for use on human subjects, in all ranges of health, including those whose biochemistry has been altered by drugs or alcohol. We are attempting to achieve a 1 1/2 second reaction time on both men and women of various heights, weights, and health status, hence the exhaustive testing needed. This work is being overseen by a special biomedical subcommittee of the Institute's Technology Assessment Program's National Advisory Council.

Compound Delivery System Development & Testing: The funds requested for 1991 will support the design, manufacture and testing of the delivery system(s) under consideration for the LLW. Design and testing of the delivery system(s) will again involve the complete range of medical testing of a compound designed for use on human subjects and will resolve questions of range or distance from a subject, effective dosage, and effect on any passersby as well as on the officer using the LLW. An interim report will be prepared for submission to the FDA.

This initiative will continue the development and testing phases of the Less Than Lethal Weapons program. Since this is an experimental project, we cannot definitively separate the cost of developing the anesthetic compound from the cost of developing the delivery system appropriate for the anesthetic.

Activity: Criminal Justice Statistical Programs	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Criminal Justice Statistical Programs..........	...	...	$20,879	...	...	$21,140	...	...	$23,051	...	...	$1,911

Long-Range Goal: To assist policy and decision makers at the Federal, State and local levels of government by providing for the collection, analysis, publication and dissemination of comprehensive and accurate statistical information concerning crime and the operation of this Nation's criminal justice systems.

Major Objectives:

To collect, analyze, publish and disseminate statistical information on crime and the operation of justice systems to the President, the Congress, the Department, State and local executives and officials, the media and the public.

To maintain and develop an analytic program which will address the implications of national criminal justice statistics for Departmental policy and legislative initiatives.

To recommend national standards for justice statistics and to ensure the interstate comparability, reliability and validity of justice statistics.

To conduct, support and implement recommendations from evaluations to improve the quality of justice statistics.

To encourage the development, maintenance, and utilization of State and local governmental organizations and facilities responsible for the collection and analysis of criminal justice data and statistics.

To ensure compliance with requirements relating to confidentiality and security of data.

Base Program Description: The Bureau of Justice Statistics (BJS) is an independent and objective national center which provides basic information on crime and the operation of the criminal justice system to the President, the Congress, the Judiciary, State and local governments, the general public, and the media. Additionally, BJS supports the developing capacity of State and local governments to use data as a cornerstone of their criminal justice programs. In meeting its statutory mandate, BJS maintains 24 statistical series, including the National Crime Survey, Expenditure and Employment Series, National Judicial Reporting Program, Prosecution of Felony Arrests, Law Enforcement Management and Administrative Statistics, Pretrial Release Statistics, National Recidivism Reports, National Prisoner Statistics, Annual Jail Survey, Uniform Parole Reports, National Probation Reports, Quinquennial Jail Census, Federal Criminal Justice Statistics, State Criminal Justice Statistics, Capital Punishment, Quinquennial Jail Inmate Survey, Quinquennial Prison Census, and Quinquennial Prison Inmate Survey. BJS also publishes a regular series of bulletins and special reports which disseminate data from the series.

The National Crime Survey (NCS), the largest BJS series, is the Nation's principal source of information on crime victimization and the victims of crime, and the third largest survey conducted by the Federal Government. Under the NCS program, interviews are conducted with 101,000 persons in 49,000 households in order to obtain data on the impact, frequency and consequences of criminal victimization in the United States. The survey publication program includes: yearly trends in victimization, households touched by crime, and special reports on topical issues such as teenage victims, crime and the elderly, and the impact of particular crimes, i.e., rape, robbery, and burglary.

The BJS corrections statistics program provides systematic information on correctional populations and facilities gathered from Federal, State, and local governments, and covers the major sub-units of the corrections system -- probation, jails, prisons, and parole. The overall program consists of five components: (1) annual National Probation Reports; (2) annual Uniform Parole Reports; (3) annual National Prisoner Statistics; (4) annual counts and characteristics of persons sentenced to death; and (5) quinquennial surveys of national samples of prison and jail inmates and censuses of State and local correctional facilities.

The Bureau's adjudication statistical programs provide support and technical assistance to award recipients who undertake major data collection efforts designed to give BJS, researchers, and policymaking officials representative statistics on felony prosecution, criminal defense, and felony court caseload. A major addition to the adjudication statistical series has been the National Judicial Reporting Program (NJRP). This program provides, for the first time, national data on judicial sentencing practices for seven major felony categories plus all other felonies. The NJRP series is key to closing the gap in information on what happens to felons upon conviction in state trial courts. Data are provided on the number and characteristics of convicted felons; the crimes for which they have been convicted; and the range of sentences they receive.

Most criminal justice activities in the nation take place at the State and local levels of government. A primary objective and legislative mandate of BJS is to support the States in the accurate and timely collection, aggregation, and analysis of State-level criminal justice data. This objective is accomplished primarily through the support of Statistical Analysis Centers (SACs) which analyze and disseminate statistical information, coordinate State criminal justice statistical activities among State, county and city agencies, and provide improved State data for BJS analyses; support is also given to State UCR programs which compile and analyze local law enforcement data and forward it to the FBI. Through extensive Federal funding over the years, BJS has created SACs in 46 States, the District of Columbia, and three Territories and has supported the development of approximately 45 State-level UCR systems.

Accomplishments and Workload: Actual and estimated accomplishments of the Bureau of Justice Statistics (BJS) are presented in the following table:

Item	1988	1989	Estimates 1990	Estimates 1991
Major statistical series perennially maintained.....	7	7	10*	10
Major statistical series intermittently maintained..	1	3	2*	3
Other special data collections.....................	7	5	4*	3
Statistical and related reports prepared for BJS by grantees and contracters and published by BJS.....	8	8	11	12
State statistical projects supported................	52	60**	72	72
Number of requests for data sets and documentation filled by criminal justice data archives..........	709	1,789	1,800	1,900
Number of information and technical assistance requests filled under BJS supported programs......	970	1,125	1,250	1,375

* Three "other" collections were reclassified as "perennials."

** The actual number of UCR and competitive State grants funded in 1989 was 10 fewer than estimated in the 1990 Congressional budget because of the unexplained low response by the States to the program announcement issued in November 1988.

Using the data collected, BJS published 34 reports, data releases, and user guides during 1989. These reports included eight Bulletins, which present in a non-technical format the latest statistics from BJS' data series on particular aspects of crime or the administration of justice; six Special Reports, also written in non-technical language, which provide data on a topic of current public interest and policy debate; and one technical report. BJS Bulletins and Special Reports are accompanied by press releases which are given considerable coverage in the Nation's electronic and print media. BJS reports are frequently discussed in the editorial columns of American newspapers.

The implementation of the National Crime Survey Redesign Project is proceeding on schedule. The revised screening questionnaire was implemented in 5% of the on-going sample beginning in January 1989. Three phases of pre-testing were completed in two month intervals: February/March 1988, August/September 1988 and February/March 1989. The new questionnaire includes an expansion of questions on the victim's use of self-protective measures, the addition of a question about drug use by offenders, and the addition of questions about the victim's contacts and experience with the criminal justice system. It is designed to improve respondent's ability to recall crimes, especially sensitive crimes such as family violence and rape. The detailed report on Criminal Victimization, 1988 will for the first time include a section about family violence. The new screener will continue to be phased into the sample in 1990-92.

In calendar year 1989, BJS published the first two reports based on findings from its newest statistical series, the Law Enforcement Management and Administrative Statistics survey (LEMAS). In March 1989 it issued a bulletin entitled Profile of State and Local Law Enforcement Agencies, 1987. This bulletin described the salient aspects of the survey results and yielded the first comprehensive profile of law enforcement agencies in terms of personnel, salaries, functions, policies and operations. A special report issued in August 1989 examine the same characteristics of the 25 largest city police departments in the U. S. Planning for the second survey, to be conducted in July 1990, is now underway. In addition to retaining a core set of questions from the first survey, a special battery of questions regarding drug enforcement policies and procedures will be added.

In 1988 the first-ever nationwide probability survey of felony sentencing was completed under the National Judicial Reporting Program. That survey was carried out in a random sampling of 100 counties. It yielded data on nearly 52,000 individual cases involving felons sentenced during 1986. The first report using the sample data was Felony Sentences in State Courts, 1986, published by BJS in February, 1989. It describes the number of persons convicted of felony offenses including drug trafficking, and the sentences received. The second publication, Profile of Felons Sentenced in State Courts, 1986, published in December, 1989, deals with the demographic and offense characteristics of convicted felons. Two other reports using the 1986 survey data are scheduled for publication early in 1990: Felony Case Processing in State Courts, 1986, comparing the various methods of conviction (e.g. type of trial) with respect to a variety of case characteristics such as duration and sentencing outcomes, and Felons Sentenced to Probation in State Courts, 1986, describing probationers and the sentences they received, and including comparisons with non-probationers.

The feasibility testing and development of survey instruments and procedures for the National Pretrial Reporting Program (NPRP) were completed in 1989. This new series will begin in 1990 and will be conducted every three years.

During 1989, BJS published reports on prisoner counts for year-end 1988 and mid-year 1989. On June 30, 1989 a record 674,000 prisoners were under the jurisdiction of State and Federal prison authorities---growth during the first half of the year translated into a need for 1,800 new prison beds per week across the nation. BJS also produced reports covering the nearly 2.4 million adults on probation and the 408,000 adults on parole at the end of 1988. A study of Capital Punishment across the States was also published and revealed that 2,124 persons were being held by 34 States under a death sentence. BJS completed an historical report during the year on juvenile custodial populations from 1975 to 1985 as well as a year-end compilation of corrections statistics drawn from more than 20 separate statistical reporting programs. In April, 1989, BJS issued the first report from a three-year follow-up covering nearly 109,000 offenders discharged from prisons in 11 States in 1983. Utilizing procedures devised by BJS staff, criminal history records from the States were merged with FBI records and revealed that 62.5% of those released were subsequently arrested within 3 years for nearly 327,000 new offenses. BJS also completed a major study of prisoner misconduct in State institutions and found that half of all prisoners are cited for rule violations while confined. The most frequently imposed punishment for prison misconduct was found to be solitary confinement or disciplinary segregation. Finally, BJS carried out the 1989 Survey of Inmates in Local Jails. This survey entailed 6,000 interviews with inmates housed in 407 jails across the nation. The data gathered will support an extensive array of studies of jail inmates covering such topics as criminal histories, drug and alcohol use backgrounds, weapon use, and the characteristics of those victimized.

Program Changes:

	1991 Base			1991 Estimate			Increase/Decrease		
	Pos.	WY	Amount	Pos.	WY	Amount	Pos.	WY	Amount
Criminal Justice Statistical Programs....................................	...	...	$21,140	...	...	$23,051	...	...	$1,911

A total increase of $1,911,000 is requested for three initiatives, as follows:

An increase of $1,100,000 is requested for the establishment of a COMPREHENSIVE STATISTICAL SERIES ADDRESSING THE RELATIONSHIP OF DRUGS, GUNS, AND VIOLENT CRIME. Data will be gathered both from existing BJS sponsored criminal justice surveys through enhancements or supplements, and by initiating new surveys and data gathering efforts. Because BJS has long been active in collecting data in these areas, the data base will also capitalize on past efforts to measure trends and chart progress. The many effects of drugs, illegal gun use and violence are all serious challenges demanding effective policy decisions which must be based on reliable data. To facilitate the development of these data, the following specific actions will be taken:

In 1991, this enhancement will be used in its entirety to provide partial funding for the Quinquennial National Survey of Prison Inmates, the fourth State prison inmate survey BJS has conducted since 1974 and the only source of national level data on prison inmates. The survey is planned to be conducted together with a similar survey being carried out with Federal inmates. These surveys will ask detailed questions on the use, frequency, onset, and dependency for each type of drug used illegally. Most of the questions have been used successfully before with inmate populations. The survey will permit an examination of illegal drug use by inmates prior to incarceration, the development of their drug use habits, and the relationship of illegal drug use to the onset and development of criminal careers. It will also allow an examination of the onset of different types of drug use in terms of age, frequency and dependency. Data on such important issues as the relationship of gateway drugs to more serious drug use and the development of criminal careers will also be developed.

The role of weapons and their use in the commission of crimes will also be examined in detail. Typical questions will include the number and types of weapons, if and how they were used, and any injuries that resulted. Questions will determine the source of any weapon used, whether it was purchased, borrowed, or stolen and from whom. Information on the complex relationship between drug trafficking, the legal and illegal market for guns, and violent crime will be developed.

As with previous surveys, this one will provide detailed information on inmate population composition and offense pattern. The survey will allow detailed comparisons of the State and Federal prison population with a special emphasis on drug offenders. It will also provide detailed information, comparable with that collected in previous surveys, on the background, education and employment, and criminal careers of inmates and will gather data, as well, on the characteristics of those victimized by violent offenders in State and Federal prisons. The survey will be conducted by the Bureau of the Census, who will interview approximately 14,000 state prison inmates in over 200 different correctional facilities. The sampling procedures employed will insure that the resulting data are reliably representative of the national prison inmate population.

In 1992 and succeeding years, this enhancement will provide funding for other aspects of this initiative including an incentive program to increase the precision of offense reporting by those 12 states currently participating in the BJS Offender Based Transaction Statistics (OBTS) program. Currently, many crimes which include weapon or drug descriptions as an element of the classification are coded into an "All Other" category rather than into available, more specific classifications. Funds will be provided for the states to trace the base drug offense from arrest through court disposition to obtain and record the desired level of detail. In 1986, as an example, the number of drug-related dispositions from five of the States reporting arrestees totaled 103,826. Of these dispositions, 92,780, or about 89% were coded "type of drug unspecified." The 12 States that will be reporting 1988 data account for approximately 35% of the population of the United States; more detailed statistics on these drug related crimes will significantly increase the knowledge base upon which informed decisions can be made. A recent BJS study of trends in offense dispositions shows that in five States the number of drug arrests increased 52% from 1983 to 1986 while the number convicted of drug offenses increased 73% in this brief period.

The periodic survey of Law Enforcement Management and Administrative Statistics (LEMAS) will also be expanded to include questions regarding the degree to which police and sheriffs' departments have drug testing policies, test arrestees for drugs, test recruits for drugs, utilize specialized drug investigation units or task forces, and a full range of other drug policy issues related to law enforcement resources. Other questions will be added relating to the number and type of weapons seized during a given time frame (e.g. handguns, long guns, automatic weapons, etc.). Improved statistics from these surveys will substantially improve our knowledge base from the law enforcement perspective.

Further efforts to be funded with this initiative include studies in selected cities of the criminal histories of those arrested for selling or buying drugs. The objective of the studies will be to provide estimates of the amount of crime reduction that would be achieved by varying the terms of incarceration or by restricting the use of probation. We will identify the specific numbers of arrests of individuals that would not have occurred if they had served the entire time of a prior sentence. In this way, we can estimate the proportion of drug related arrests that might have been averted by adhering to stricter sentencing guidelines.

Finally, with this initiative, BJS will expand its National Pretrial Release Program to provide increased emphasis on persons arrested for drug related crimes. This program collects data on defendants from the time the case is filed with the court through adjudication, with particular focus on pretrial release and outcomes. Currently there are 40 jurisdictions in the sample which are representative of the 75 largest counties in the United States. Information that is expected to result from this survey will include the characteristics of defendants who are released or detained, of those who fail to appear for court hearings, and of those who are rearrested while on pretrial release, by type of charge, prior criminal history, and community ties.

NATIONAL CRIME SURVEY REDESIGN IMPLEMENTATION: An increase of $476,000 is requested for implementation of the National Crime Survey (NCS) redesign. The NCS, in which over 100,000 American citizens in roughly 50,000 households are interviewed concerning crime victimization, underwent extensive redesign based upon the recommendations of a consortium of experts who have evaluated all aspects of NCS survey design, administration and analysis. During 1991, the fully redesigned victimization survey will be phased in. The redesigned survey will more fully measure the number of crimes of which Americans may be victims, including rapes, family violence, and crimes against the household, with vandalism being measured for the first time. The more detailed questions being introduced are expected to increase reporting of some crimes to survey interviewers by as much as 25%.

The funding being requested is required to cover additional costs involved in the retraining of Census Bureau interviewers; the development of new manuals and survey documentation procedures (for use by Census coders, interviewers and users of survey data); and the reprogramming of all NCS computer programs. These programs are used to edit the original data from the field, prepare data tabulations and develop public use tapes. There are additional field costs during the pretesting and phasing in of new questionnaires, particularly in 1991 when two questionnaires (the old and the new) will be in the field together. In order to avoid biasing effects, different interviewers will be used on each version of the questionnaire so that the economies that now occur with single interviewers handling larger work assignments will not again be possible until the entire program is phased in 1992. In addition, extra clerical staff will be needed at the various stages of processing in the regional offices and Jeffersonville to insure that the processing of each questionnaire is administered separately and questionnaires are not inadvertently merged together.

With concern for victims assuming an increasingly important place in our national consciousness, the new survey will also provide information concerning the experiences and reactions of victims to their contacts with police, prosecutors, and other officials of the criminal justice system. The goals of the redesign are to further increase the number of criminal incidents reported to survey interviewers and to increase our knowledge of how criminal victimization has an impact on the lives of victims. New or expanded questions are designed to help victims remember crimes they may have forgotten and encourage them to talk about sensitive crimes. Data of this nature have repeatedly been requested by policymakers including Congressional staff, criminal justice professionals, victims advocates and support groups, and the Attorney General's Family Violence Task Force. One of the recommendations of the Task Force urged the development of better measures of family violence.

Completion of this effort will fulfill a new national commitment to understanding the extent and consequences of personal victimizations. The implementation phase of the redesign is the final stage in carrying out the recommendations originally made in 1977 by the National Academy of Sciences and published in *Surveying Crime*. The changes were recommended by the redesign project conducted by a consortium of universities and private research organizations. The funding being requested represents only a relatively small additional cost compared to the total NCS program and redesign budget.

FEDERAL INTEGRATED DATA BASE: An increase of $335,000 is requested to enhance the existing Bureau of Justice Statistics Federal criminal justice statistics program to collect more timely and comprehensive data on the processing of offenders with particular emphasis on drug offenders. This expansion is important to better track the large increase in drug offenses; between 1980 and 1987 prosecutions for drugs were up 153%, convictions up 161%, and setences to prison up 177%. The Bureau of Justice Statistics Federal Statistics program annually collects data from the Federal Bureau of Investigation (FBI), the Executive Office for the U.S. Attorneys (EOUSA), the Administrative Office for U.S. Courts (AOUSC), the Bureau of Prisons (BOP), and the Parole Board. Data are linked to permit the tracking of Federal cases from prosecution through adjudication, sentencing and corrections. Based on these data a compendium of Federal data is issued annually, as well as special reports, addressing drug offenders, white collar crime, and trends over the years 1980-1986.

The objectives of this enhancement are: (1) to expand the database to include more data on Federal investigation and arrests with emphasis on drug cases; (2) to accelerate data acquisition to permit more real-time analysis; and (3) to respond more directly to departmental needs for current data to support fiscal and legislative options in key areas involving drugs and other priority criminal endeavors.

Specifically, these funds would be used:

1. To collect, analyze and incorporate data from at least three investigative agencies (DEA, INS, FBI) into the existing database. This will permit BJS to track arrests throughout the system and to estimate prosecution and correctional implications associated with changes in

arrest rates. Linkage of DEA data to the database will also present the first opportunity to track drug cases system-wide and to more clearly focus on the rate on which persons arrested on drug charges are prosecuted, convicted and confined to prison;

2. To collect and analyze data from all participating agencies on a quarterly real-time basis. Quarterly data collected will permit the development of descriptive statistical indicators relating to current activity and the preparation of annual data series relating to the most recent calendar year;

3. To prepare and distribute quarterly statistical releases providing an overview of Federal case processing over the preceding three months. The quarterly indicator series would enable departmental policymakers to identify long and short term trends and to assess the impact of changes on processing policies and/or legislation;

4. To respond to adhoc requests by DOJ officials.

Activity: State and Local Assistance	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
State and Local Assistance..................	...	...	...	...	...	...	...	...	...	...	...	...

Long-Range Goal: To provide financial and technical assistance to State and local jurisdictions and organizations to enable them to execute programs with a high probability of improving the operations of the criminal justice system, with emphasis on violent crime and serious offenders; and to provide assistance to public and non-profit agencies for the purpose of conducting education and training programs, providing technical guidance, carrying out national or multi-State projects, and demonstrating new programs.

Major Objectives:

To complete projects for which funds were appropriated.

Base Program Description: With enactment of the Anti-Drug Abuse Act of 1988, the purposes of this program are now encompassed in the Anti-Drug Abuse program. With this consolidation, programs formerly supported by Justice Assistance Act funds will now require support under the Anti-Drug Abuse Act program. In 1989, $3,497,000 was appropriated: $2,300,000 was provided for the National Crime Prevention Council (NCPC); $1,000,000 for Operational Information Systems Support; and the remainder of $197,000 was provided for "other high priority programs". No funds have been provided for the formula grant program since 1987.

Accomplishments and Workload: In 1989, Congress appropriated $3,497,000 for specific programs as described in the appropriations bill conference report:

THE NATIONAL CRIME PREVENTION COUNCIL CAMPAIGN ($2.3 MILLION) - The Campaign features McGruff the Crime Dog, a nationally recognized symbol for crime prevention, to teach children and adults about crime and drug prevention strategies. Through the Campaign and the various partnerships that have developed with other Federal agencies and the private sector, BJA's efforts in crime and drug prevention education reaches millions of children, law enforcement professionals, community groups, schools, and businesses. The Campaign will be continued under the Anti-Drug Abuse program.

STATE AND LOCAL INFORMATION SYSTEMS ($1 MILLION) - This program provided technical assistance and training to assist states that do not have automated criminal justice information capabilities and operates two computer training centers designed to test and identify technology that can be used by state and local criminal justice officials to improve their information management capabilities and provide training for these officials.

Activity: Emergency Assistance	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Emergency Assistance........................	...	...	$9,927	...	...	...	...	...	...	...	...	...

Long-Range Goal: To provide financial and technical support to assist States in responding adequately to law enforcement emergencies.

Major Objectives:

To provide a rapid and coordinated Federal determination of State eligibility for assistance to respond to uncommon law enforcement situations.

To ensure that once a determination of eligibility is made, such assistance is rendered without delay.

Base Program Description: Natural disasters and crime epidemics strike States and localities arbitrarily and without warning, often exceeding the capacity of law enforcement resources to protect life and property, and to enforce the law. It is clear from the authorizing legislation and its legislative history that certain situations are viewed as appropriate for emergency law enforcement assistance. Equally clear is the firm intention to avoid unnecessary Federal involvement or intervention in matters which are primarily of State and local concern. To this end the Anti-Drug Abuse Act excludes assistance for planning or other activities related to crowd control for general public safety projects and assistance for a situation requiring the enforcement of laws associated with scheduled public events. Thus, the high law enforcement costs associated with political conventions and international sporting events should be borne by the localities that sought the events.

The Act authorizes the Attorney General to receive requests from State chief executives for designation of a State or local jurisdiction as a law enforcement emergency jurisdiction. Once submitted, the application is to be approved or disapproved within 10 days. The Attorney General will make his determination to approve or disapprove the application, after consultation with appropriate members of the Federal law enforcement community. If the Attorney General approves the application, the Federal law enforcement community will proceed to provide appropriate equipment, training, intelligence information, personnel or funding. Funds are made available only when other forms of assistance are insufficient to assist the State.

Historically, few applications have been submitted for the funds, with only two grants having been awarded during the years 1985 (the year of inception) through 1989. The 1990 appropriation, which was provided to specifically address needs arising from Hurricane Hugo and the earthquake in California, is a non-recurring decrease in 1991.

Accomplishments and Workload: In 1989, one grant was awarded for $1,100,000 to the South Carolina Department of Public Safety for expenses related to Hurricane Hugo. To date, from the 1990 appropriation of $9,927,000, a grant for $1,600,000 has been awarded to South Carolina. In addition, an award for $4,963,000 was made to the State of California in the month of January.

Staff work required to administer the program includes: assistance in application preparation; application review; recommendations to the Attorney General and Assistant Attorney General; grant administration; financial administration; and assistance coordination.

Activity: Juvenile Justice Programs	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Juvenile Justice Programs....................	...	...	$69,405	...	...	$69,405	...	...	$7,500	...	...	-$61,905

Long-Range Goal: To aid in the prevention, reduction, and treatment of juvenile crime and delinquency and to improve the administration of juvenile justice by providing financial and technical support to State and local units of government, public and private agencies, organizations and institutions.

Major Objectives:

To facilitate, through provision of technical/financial resources and national leadership:

a. Secure full compliance, as well as maintain full compliance, with the requirement that status offenders and nonoffenders not be held in secure detention and correctional facilities.
b. Removal of all status offenders and non-offenders from secure detention and correctional facilities within five years from the date that each State/territory began participation in the JJDP Program.
c. A 75% reduction in the number of juveniles held in adult jails and lockups, in all States and territories which participate in the JJDP Program, after December 8, 1985, and 100% removal after December 8, 1988.
d. Separation of juveniles found to be delinquent or status offenders, from adult persons incarcerated for criminal offenses in institutions in States not in compliance, and maintenance of separation of those States having achieved compliance.
e. Development and maintenance of compliance monitoring systems as required by Section 223(a)(15) of the Act for purposes of supporting maintenance of compliance with the deinstitutionalization, separation and jail removal requirements.

To conduct research which can be applied to the development of programs for preventing and controlling juvenile delinquency and illegal drug use and improving the response of the juvenile justice system to high risk youth.

To develop and test program models based on a synthesis of research and field experience for preventing and controlling juvenile delinquency and illegal drug use and improving the response of the juvenile justice system to high risk youth.

To demonstrate existing programs for preventing and controlling juvenile delinquency and illegal drug use and improving the response of the juvenile justice system to high risk youth, which are determined to be effective in a variety of jurisdictions.

To disseminate information produced by research, development, and demonstration activities through training, technical assistance, and clearinghouse activities.

To develop, demonstrate, and disseminate information on prevention and treatment programs relating to juvenile gangs and drug abuse and drug trafficking.

To provide for auditing State monitoring compliance systems and to oversee required corrective actions.

To make formula grant allocations available to public and private non-profit agencies in States not participating in the JJDPA.

To provide technical assistance to State and local governments, and other service providers, in the development and implementation of programs related to deinstitutionalization, separation, jail removal, juvenile delinquency and other programs to improve the juvenile justice system.

Base Program Description: The Formula Grant Program represents 70% of the total amount appropriated for Juvenile Justice and Delinquency Prevention. This program provides funds to States on the basis of population under the age of 18. To receive its allocated funds, a State or territory must submit a three year comprehensive plan that meets statutory criteria. Funds may be expended for innovative programs to prevent delinquency, divert juveniles from the system, provide community-based alternatives to secure confinement, and to provide programs for juveniles who commit serious crimes. In 1989, 57 States and territories participated in the program. The non-participating States are: South Dakota and Wisconsin. In 1989, North Dakota received both its 1988 and 1989 awards. This is the first time that North Dakota has participated in the Juvenile Justice program. Wyoming's 1988 and 1989 formula grant awards are being held pending the submission of applications. This will be the first time that Wyoming has participated in the program.

The National Institute for Juvenile Justice and Delinquency Prevention (NIJJDP), within the OJJDP, conducts research and program development activities to increase understanding of the risk factors for delinquency and the effects of alternative juvenile justice policies. This information is applied to the development of promising program models, through joint initiatives with the Special Emphasis program. The NIJJDP also serves as an information collection and dissemination center for the Office. Information on juvenile delinquency, promising programs, and innovative juvenile justice policies and procedures are disseminated through clearinghouse, training, and technical assistance activities.

New program development efforts funded by the Special Emphasis Division address a wide range of national juvenile justice issues by developing and testing prototypes and demonstrating effective programs. Program information generated throughout the development process is disseminated to the field. Competitive awards are made to support comprehensive planning and program development in many areas impacting on high risk youth. The design and implementation of these new efforts are coordinated with NIJJDP and the State Relations and Assistance Division.

The Office of Juvenile Justice and Delinquency Prevention, through the Coordinating Council on Juvenile Justice and Delinquency Prevention, coordinates and concentrates Federal resources on the problems of delinquency and the operations of the juvenile justice system. This includes the development of Federal youth policy and joint programs to target high risk youth.

Accomplishments and Workload: The following table represents accomplishments of the Juvenile Justice Programs.

Item	1988	1989	Estimates 1990	Estimates 1991
States and territories participating in program	55	57	55*	...
States in full compliance with deinstitutionalization provisions	51	48	50	50
States in compliance with separation requirements	39**	34***	37	37
States with monitoring systems	49	49	51	51
Juvenile justice formula grants awarded	55	57	55	...
Juvenile justice special emphasis grants awarded	38	11	11	...
National institute of juvenile justice grants awarded	14	13	9	...
Inter-agency agreements entered into	4	4	2	...
High risk youth research programs/projects	5	6	7	5
High risk youth training projects	3	5	7	9
High risk youth demonstration projects	8	19	17	15
High risk youth information/dissemination projects	3	1	2	3

* Reduction is based on the elimination of eligibility and the phase-out of funding for the Marshall Islands and Micronesia by the Compact of Free Association.

** Thirteen States are making progress toward achieving compliance. They have not yet reached their designated date for achieving compliance pursuant to 28CFR31.

*** Sixteen States and territories are making progress toward achieving compliance. These States have not yet reached their designated date for achieving compliance pursuant to 28CFR31.

Since enactment of the Juvenile Justice and Delinquency Prevention Act of 1974, the provision of Federal technical and financial resources has enabled participating States to undertake a number of system-wide improvements. The Formula Grants Program has had a significant impact on rates of incarceration throughout the United States. Forty-eight of the States participating in the program have achieved full compliance with the statutory mandate to deinstitutionalize status offenders and non-offenders. In 1990, 50 States are expected to achieve full compliance. Since 1979, the number of violations of the statutory mandate of deinstitutionalization of status offenders and nonoffenders has been reduced from 165,531 in 1979 to 9,693 in 1987 among the participating States.

Program Change:	1991 Base			1991 Estimate			Increase/Decrease		
	Pos.	WY	Amount	Pos.	WY	Amount	Pos.	WY	Amount
Juvenile Justice	...	...	$69,405	...	...	$7,500	...	...	-$61,905

The 1991 request for $7,500,000 will assist the Office of Juvenile Justice and Delinquency Prevention (OJJDP) in continuing to coordinate and fund its High Risk Youth Program. The $7,500,000 requested for 1991, together with a 50% match from grant recipients, would provide $15 million for the juvenile justice high risk progam. The Program focuses on youth and teenagers under the age of 18 who, because of certain characteristics or conditions, are especially likely to use illegal drugs and/or alcohol. These characteristics include such factors as: children of substance abusers; school dropouts; victims of physical, sexual, or psychological abuse; and youth who have committed violent or delinquent acts. OJJDP is giving high priority to preventing high risk youth from becoming involved in the use or trafficking of illegal drugs, and on developing comprehensive, coordinated responses by the juvenile justice system to those youth who are involved in illegal drugs.

Initiatives included in the High Risk Youth Program, generally are based upon two guiding policies: (1) zero tolerance for illegal drug use by high risk youth; and (2) accountability on the part of individuals, families, and communities for preventing and controlling illegal drug use among high risk youth. Therefore, OJJDP's programs are based on four principles: (1) Research-based program designs that target risk factors; (2) Emphasis on change at the legal, policy, procedural, and practice levels; (3) System coordination of services and programs; and (4) Identification and redeployment of existing Federal, State, local, as well as private resources. In doing so, OJJDP assumes a national leadership position, with the traditional Federal functions of program development/demonstration, training and technical assistance, research and information dissemination. Examples include but are not limited to: development of program models that effectively address the factors that place juveniles at high risk for initiation or continued involvement in illegal drug and alcohol abuse; development of a program to help communities coordinate drug prevention activities by providing technical assistance and training to help schools, civic groups, police, courts and other juvenile justice decision-makers to work together to plan and implement community drug and alcohol abuse programs; a project to assess the gang problem nationwide and develop model juvenile gang suppression and control programs, emphasizing elimination of the sale and distribution of drugs; and development of a national public awareness campaign on high risk youth that communicates a strong message of zero tolerance for illegal drugs and that everyone -- youth, families, and communities -- is accountable.

At the requested level of funding, OJJDP will be able to continue funding its High Risk Youth Program. OJJDP has long funded programs that are designed to address the problems of high risk youth. No new legislation will be needed since the Juvenile Justice and Delinquency Prevention Act (JJDPA) specifically addresses such high risk factors as juvenile gangs, youth drug and alcohol use, weakened family structure, and school drop-outs. Indeed, under the auspices of the Coordinating Council on Juvenile Justice and Delinquency Prevention, the OJJDP already has the means with which to coordinate the activities of all agencies involved in any High Risk Youth initiative. This proposal reflects the Administration's support for programs to address the problems with gangs and drugs and their relationship with the juvenile justice system.

The Juvenile Justice program provides funds to States and localities for juvenile justice and delinquency projects in the areas of education, training, research, prevention, treatment and rehabilitation. Since 1975 over one billion dollars has been made available for the various programs, including discretionary and formula grants, authorized by the JJDPA. Considerable progress has been made in achieving the major objectives of the JJDPA with the use of Federal funds. The figures in the accomplishments section amply demonstrate that substantial progress has been obtained in achieving the major objectives of the Juvenile Justice Act. Due to the budget constraints this Nations is facing, there are insufficient resources available to meet the Federal responsibilities of the Department let alone State and local juvenile justice systems. We believe States that are now participating in the program will continue to commit their resources to the juvenile justice programs which have proven effective. These types of programs would not be funded in 1991, resulting in a decrease of $61,905,000.

Activity: Missing Children

	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Missing Children............................	...	...	$3,971	...	...	$3,971	...	...	$7,971	...	...	$4,000

Long-Range Goal: To reduce the incidence of crimes against children, particularly kidnapping and sexual exploitation and to improve the criminal justice, social services and treatment systems which are responsible for dealing with these crimes when they occur.

Major Objectives:

To ensure that there is effective coordination among all Federally funded programs related to missing children.

To establish and maintain a national resource center and clearinghouse to:

a. provide to State and local governments, public and private non-profit agencies, and individuals information regarding free or low cost legal, restaurant, lodging, and transportation services available to benefit missing children and their families; and information on Federal programs available to assist missing children and their families;
b. coordinate public and private programs that locate and recover missing children;
c. nationally disseminate information on innovative missing childrens' programs, services, and legislation;
d. provide technical assistance and training to law enforcement agencies, State and local governments, private non-profit agencies, and individuals in the prevention, investigation, prosecution and treatment of the missing or exploited child case and in locating and recovering missing children.

To periodically conduct national incidence studies to determine the actual number of children reported missing each year, the number of children who are victims of stranger abductions, the number of children who are victims of parental kidnappings, and the number of missing children who are recovered each year.

To provide to State and local governments, public and private non-profit agencies, and individuals information to facilitate the lawful use of school records and birth certificates to identify and locate missing children.

To begin a study to determine obstacles to the recovery by legal custodians of children who have been removed by noncustodial parent and submit a report summarizing the results to the Congress within three years.

To prepare an annual report to the President, Speaker of the House, and President pro tempore of the Senate which includes information contained in Section 404(a)(5) of the Juvenile Justice and Delinquency Prevention Act as amended.

To provide a program to establish and maintain a 24-hour national toll-free telephone line where individuals may report information regarding the location of missing children and request information on reuniting such children with their families.

Base Program Description: The public and the criminal justice community continue to be concerned about runaways and other missing and exploited children. Numbers of cases of abduction, sexual abuse, sexual exploitation and murder of children, are being found. Estimates of the number of missing children vary widely. We do not know precisely how many children are abducted and/or sexually exploited, how many run away, or how many are homeless. But even the most conservative estimates suggest that a large number of children may be missing and/or exploited.

The 1988 amendments to the Juvenile Justice and Delinquency Prevention Act (JJDPA) require the Office of Juvenile Justice and Delinquency Prevention to publish in the Federal Register for public comment annual research, demonstration and service program priorities for making grants and contracts pursuant to section 405 and the criteria based on merit for making such grants and contracts. The final program priorities should be published in the Federal Register by January 31, 1990.

Accomplishments and Workload: The following table presents accomplishments of the Missing Children Program.

Item	1988	1989	Estimates 1990	Estimates 1991
Law enforcement and social service professionals trained..........	3,000	1,800	2,000	2,000
Telephone calls requesting information (NCMEC)1/....................	100,000	100,000	100,000	100,000
Telephone calls requesting information (State clearinghouses)2/...	70,000	70,000	70,000	70,000
Instances of technical assistance related to missing or exploited children's cases (NCMEC)	4,000	4,000	4,000	4,000
Instances of technical assistance related to missing or exploited children's cases (State clearinghouses)2/......................	50,000	50,000	50,000	50,000
Brochures, manuals, and child safety guides developed, published and mailed..	971,000 3/	592,000	600,000	600,000

1/ Represents workload estimates for National Center for Missing and Exploited Children (NCMEC).

2/ Represents workload estimates for State operated clearinghouses - - range of responsibilities include: operate toll-free in-State telephone lines to accept information about sightings of missing children; assist in the investigation of missing child cases; expedite the entry of missing child information into the NCIC system; and establish a data system to collect and disseminate information that can assist agencies in recovering missing children.

3/ Major distribution increase in 1988 caused by supplying publication materials for Federal training programs.

Program Change:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Missing Children	...	...	$3,971	...	...	$7,971	...	...	$4,000

Funds for this program are used to reduce the incidence of crimes against children, particularly kidnapping and sexual exploitation, by assisting families, citizen groups, law enforcement agencies and government institutions in a national effort to insure the safety and protection of children.

The missing children problem is not a simple dilemma that can be resolved with a single approach. No one sector of our society--not the public sector, private sector, not the family--can work independently and expect to develop any useful or lasting solutions. When a child disappears, for any reason, a variety of resources must be used to coordinate a comprehensive response. These same resources must also be used for developing and implementing long-term solutions to the overall problem.

Local, State and Federal law enforcement; schools; missing children non-profit organizations; community-based service providers; private attorneys; prosecutors; juvenile courts; families; and Federal, State, and local governments must coordinate their resources in developing comprehensive responses to prevent missing child incidents and to effectively respond when an event occurs. If they do not work together, the predictable outcomes will be costly duplication of effort, frustration among professionals and victimized families, and failure to resolve an immediate crisis or create a successful prevention strategy. Sadly, our Nation's children have, in some instances, become the victims of well-meaning but uncoordinated efforts.

Therefore, the $4,000,000 increase in the Missing Children program for 1991 will be used to enhance the efforts of State and local communities in their comprehensive response to missing and exploited children issues through such activities as direct assistance in planning and program development at the local level, and developing and disseminating policies, procedures and programmatic information related to search teams, investigations, crisis intervention activities, as well as reunification of youth with their family and, responding to the issues related to victimization of the families and youth involved in the missing and exploitation problem.

Other program areas that may be considered for funding are: the development of materials for local communities and State agencies to assess the incidence of missing and exploited children activities; providing financial as well as training and technical assistance support to missing children private voluntary organizations operating at the State and local level; support and expansion of existing missing children State clearinghouses; and support to the National Center for Missing and Exploited Children for continued support in all the above-mentioned areas. Joint program activities with other appropriate Federal agencies such as the Office for Victims of Crime would be undertaken to focus and enhance victim assistance services for the families and youth involved in the problem of missing children and child exploitation.

Activity: Mariel Cubans	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Mariel Cubans..............................	...	...	$4,963	...	...	$4,963	...	...	...	...	...	-$4,963

Long-Range Goal: To provide financial assistance to States that have Mariel Cubans incarcerated in State facilities.

Major Objective: To award grants to reimburse States for expenses incurred for incarcerating Mariel Cubans.

Base Program Description: Beginning with the 1985 appropriation act, Congress has regularly provided about $5,000,000 for the purpose of making grants to States for their expenses incurred for the incarceration of Mariel Cubans in State facilities following their conviction of a felony committed after having been paroled into the United States by the Attorney General. Each State that applies for funds is required to submit a list of incarcerated Mariel Cubans that is certified by the Governor. The list of inmates is then verified by the Immigration and Naturalization Service (INS). On the basis of a per capita allocation, each State receives a pro-rata share of the amount available.

Accomplishments and Workload: Significant data for this program is presented in the following table:

Item	1988	1989	Estimate 1990	Estimate 1991
Number of States reimbursed........................	38	36	36	...
Number of inmates verified by INS..................	2,414	2,358	2,375	...
Average number of months incarcerated (per inmate).	10.0	10.4	10.4	...
Average total payment per inmate...................	$2,071	$2,120	$2,090	...
Average payment per month per inmate...............	$208	$203	$201	...

Program Change:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Mariel Cubans......................................	...	...	$4,963	...	...	...	...	...	-$4,963

No funding is requested for 1991. In this period of scarce Federal funds, the Mariel Cubans program is not of sufficient priority to command a share of the limited funds available. Available resources do not permit continuation of this program when compared to other Departmental priorities; the Department must first use any available funds to meet its Federal justice responsibilities.

Activity: Crime Control Programs	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Crime Control Programs......................	...	...	...	...	...	...	...	...	...	...	...	...

This activity is used to reflect adjustments to prior year obligations and outlays for programs that were authorized by preceding legislative authority but are not authorized by existing legislation. The programs have terminated and require no new budget authority in 1991.

Activity: Regional Information Sharing System	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Regional Information Sharing System (RISS)...	...	...	$13,402	...	...	$13,402	...	...	$9,750	...	...	-$3,652

Long-Range Goal: To enhance the ability of State and local criminal justice agencies to identify, target, and remove criminal conspiracies and activities spanning jurisdictional boundaries.

Major Objectives:

To encourage and facilitate the rapid exchange and sharing of information pertaining to known or suspected criminals or criminal activity among Federal, State, and local law enforcement agencies.

To enhance coordination/communication among those agencies in addressing multi-jurisdictional crime.

To provide technical and financial resources to augment existing multi-jurisdictional enforcement resources (including specialized equipment, training, and investigative expense).

Base Program Description: The RISS Program was initially designed as a pilot program to test the benefits of establishing regionally based information sharing centers throughout the United States to service State and local criminal justice agencies. Once established, non-Federal sources would be sought for continuation of the various regional systems. Since then, the specific strategy has been to maintain the operations of the six existing regional information sharing centers: the Mid Atlantic-Great Lakes Law Enforcement Network; the Mid-States Organized Crime Information Center; the New England State Police Information Network; the Regional Organized Crime Information Center; the Western States Information Network; and the Rocky Mountain Information Network. Each of these projects is comprised of an information sharing capability, an intelligence analysis component, and a telecommunications system, and provides for investigative expenses in extraordinary situations, investigative equipment, technical assistance and training. In addition to these six information sharing projects, there is one other, LEVITICUS, which is a consortium of approximately 28 agencies in nineteen States committed to the investigation and prosecution of conspirators engaged in major white collar securities crimes. Each participating agency provides its enforcement resources, supplemented by Federal funds, and coordinates these resources with other agencies to focus on multi-jurisdictional offenses.

Accomplishments and Workload: The accomplishments of this activity are divided between the six Regional Information Sharing Systems and LEVITICUS. To date, LEVITICUS has referred over $484,359,050 in tax fraud cases to the IRS; criminal charges have been filed against 414 defendants in 226 cases; and civil charges have been filed against 310 individuals. In addition, as of September 30, 1989, the LEVITICUS project has resulted in the assessment of fines totalling $4,562,146, restitution payments of $13,606,867, and the recovery of equipment valued at $2,034,950.

The accomplishments of the six Regional Information Sharing System projects follow:

			Estimates	
Item	1988	1989	1990	1991
Membership	2,369	2,613	2,750	2,500
Inquiries	54,389	98,374	100,000	90,000
Hits	17,505	41,125	40,000	25,000
Arrests	5,253	6,071	6,200	6,200
Seizures	$222,351,278	$319,867,511	$175,000,000	$175,000,000
Property Seizures	$19,122,863	$95,447,449	$23,000,000	$23,000,000
Civil (RICO) Seizures	$305,884	$3,369,533	$2,000,000	$2,000,000

Program Change:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Regional Information Sharing System	...	...	$13,402	...	...	$9,750	...	...	-$3,652

A funding level of $9,750,000 is requested for this program for 1991, with Federal funding to be phased out over a three year period by requiring an escalating match from the State and local agencies participating in the RISS program. Since States and localities are the primary beneficiaries of this program, they should contribute resources. The match requirement in 1991 would be 25 percent, 1992 would be 50 percent, and 1993 would be 75 percent. In 1994, the participating agencies would assume 100 percent of the costs. The $9,750,000 requested for 1991, together with a 25 percent match from participating agencies, would provide $13,000,000 total for all RISS activities, supporting the continuation of existing program activities.

The request will provide funds to maintain the six regionally based information sharing centers that aid participating agencies in addressing major, multijurisdictional crimes and the LEVITICUS project, which has expanded its scope of operations to include precious metals investigations. LEVITICUS provides a multi-state, interagency program of coordination and support of member agency investigations and prosecutions of organized crime and major frauds in the coal, oil, natural gas, and precious metals industries.

Activity: Anti-Drug Abuse Program	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Anti-Drug Abuse Program......................	...	...	$444,737	...	...	$444,737	...	...	$490,000	...	...	$45,263

Long-Range Goal: To enhance State and local efforts to control drug use and drug-related crime, and to improve the functioning of the criminal justice system.

Major Objectives:

To encourage the establishment of drug policies, the development of strategies and reallocation or targeting of resources to increase the effectiveness and efficiency of drug control efforts.

To provide State and local criminal justice agencies with state-of-the-art information on innovative and effective programs, practices and techniques.

To improve and enhance the capability of State and local agencies to engage in effective drug control efforts.

To encourage and facilitate coordination and cooperation.

To assess the impact of activities on the drug problem and the criminal justice system.

Base Program Description: The purpose of the Drug Control and System Improvement Program is to assist States and units of local government in carrying out specific programs which offer a high probability of improving the functioning of the criminal justice system, with emphasis on violent crime and serious offenders. Special emphasis is placed on a nationwide and multilevel drug control strategy. Programs and projects are developed to assist multijurisdictional and multistate efforts to control drugs and to support national drug control priorities.

The Anti-Drug Abuse Act of 1988 authorizes programs in 21 purpose areas to control drugs and improve the criminal justice system. The legislation allocates 20 percent, or $50,000,000, whichever is less, to the discretionary grant program. The remaining funds are distributed to the States by a formula which provides each State a base amount of .25 percent of total funds available or $500,000, whichever is greater, with the remaining funds distributed to the States on a population share basis. Each State must prepare a statewide drug strategy, which serves as the basis for their application for funds. The fifty states, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa and the Northern Mariana Islands are eligible to receive a formula grant award. The Bureau, through its discretionary grant program, tests and demonstrates the effectiveness of new programs, practices and techniques; provides technical assistance and training to State and local criminal justice practitioners; and implements programs that are national or multijurisdictional in scope.

Accomplishments and Workload: Much has been accomplished by the Bureau of Justice Assistance (BJA) and the States during the past year to increase the levels of coordination and cooperation among Federal, State and local agencies and among the criminal justice, drug treatment and education communities, resulting in a more effective utilization of resources. Model programs and new practices and techniques, which enhance the criminal justice system's ability to investigate, prosecute and adjudicate drug cases and to identify, punish and treat drug offenders have been identified and are being shared with practitioners throughout the country. This sharing of information is increasing the efficiency of the criminal justice system and public safety. Specific examples of accomplishments follow.

DRUG DEMAND REDUCTION ACTIVITIES:

McGruff the Crime Dog is being used to reach millions of children with a drug use prevention message. He is recognized by 99 percent of children between the ages of 6 and 12, and 97 percent say they try to do what McGruff tells them to do. Program initiatives are focused on five primary tasks: Community responses to drug abuse prevention, in conjunction with the National Training and Information Center of Chicago; Revision of the "No Show" video, replacing copies as necessary and distributing the balance to remaining school districts in the U.S.A.; Publishing and disseminating the Law Enforcement/Demand Reduction Guide to the majority of law enforcement agencies in the country; Establishing pilot demand reduction training for law enforcement and community leaders teams; distribution of selected reproducible NCPC drug abuse prevention materials to every elementary school in the nation that will include a survey of approximately 750 schools to assess the utility of the materials; and Drug abuse prevention initiatives for middle school students, initially focusing on behavior research.

The Drug Abuse Resistance Education (DARE) program places a uniformed officer in the classroom to teach a 17 part drug use prevention curriculum. Over 2,600 officers have received intensive training from BJA's Regional DARE Training Centers, nearly 800 programs have been implemented and an estimated 3 million students had been trained by the end of 1988.

DRUG LAW ENFORCEMENT ACTIVITIES:

In 1988, 4,626 high-level criminals were arrested and $205 million in cash, drugs and property were seized by the Organized Crime Narcotics Trafficking Enforcement projects implemented under BJA's discretionary grant program. These projects have demonstrated the effectiveness of the shared management concept as a model organizational structure for multijurisdictional task force operations.

The six operational Crack Task Force Demonstration projects made 2,625 felony crack/cocaine-related arrests and seized 329 pounds of crack and cocaine with an estimated street value of over $29 million. This program, like the Pharmaceutical Diversion and the Clandestine Laboratory Enforcement Programs, is demonstrating the effectiveness of the task force concept to address specific drug control problems.

New approaches to drug control are being tested through the Problem-Oriented Approach to Drug Enforcement, which brings line officers and community groups together to address their drug problem; the Street Sales Enforcement Program, which targets street-level drug dealers and users; and the Drug Recognition Program, which is testing the effectiveness of a non-intrusive method of identifying drug-impaired persons.

Over 700 multijurisdictional task forces and drug units have been established or expanded throughout the country as a result of the Anti-Drug Abuse Act. These task forces serve as the foundation for the drug strategies implemented by the States under the formula grant program.

DRUG PROSECUTION ACTIVITIES:

Initial investigations and prosecutions conducted by the Statewide Drug Prosecution Demonstration projects resulted in seizures of $33 million in drugs, $2.7 million in currency and property. Additional seizure under Racketeer Influence Corrupt Organizations (RICO) statutes were $5 million. This program is demonstrating the effectiveness of enhancing drug control efforts through the statewide coordination of narcotics and financial investigations and prosecutions.

Program Change:

	1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Anti-Drug Abuse Program	...	...	$444,737	...	...	$490,000	...	...	$45,263

A funding level of $490,000,000 is requested for this program for 1991. This represents an increase of $45,263,000 over the 1990 funding level of $444,737,000. Virtually all of the increase will be allocated to the States under the formula grant program ($364,000 would be available for the discretionary grant program) and will provide additional financial resources to enhance and improve State and local drug control efforts. This additional funding will enable State and local drug control agencies to consider new program initiatives for which 1990 funding was not available and will increase the Federal commitment to assisting State and local governments in their drug control initiatives.

This activity consists of six sub-activities for the offices that provide executive direction and control and support services for the programs authorized by the Juvenile Justice and Delinquency Prevention Act, the Missing Children's Assistance Act, the Anti-Drug Abuse Act, and the Victims of Crime Act.

Long-Range Goal: To administer programs in the most effective and efficient manner possible.

Major Objectives:

To provide executive direction, control and coordination over the various OJP programs.

To develop an annual research and development program plan.

To manage and analyze results of individual research programs and monitor all current research projects.

To conduct in-house research on timely topics and provide policy briefings to senior officials.

Demonstration projects have been established in two states to encourage State Attorneys General to attack the economic base of drug trafficking enterprises using civil remedies available in state civil RICO statutes.

Prosecution programs initiated by the States include prosecution support for multijurisdictional task forces, special prosecutor and vertical prosecution units, career criminal prosecution programs, and crime laboratory enhancements.

DRUG CASE ADJUDICATION ACTIVITIES:

The Large Court Capacity Program, which monitors caseflow management in 26 large courts, promotes systemic and permanent improvement in court operations by developing performance standards for trial courts and assisting courts with delay problems.

Differentiated Case Management is providing courts with procedures to handle the growing number of drug cases by increasing the efficiency of the case management system. Differentiated Case Management was used by one large court to reduce the pending caseload, reduce the number of cases over 180 days in age and reduce the length of time to trial from 106 to 88 days, despite a 21 percent increase in filing.

BJA is providing the States guidance related to the use of drug testing to identify drug-involved offenders and to monitor their drug use while under correctional supervision through the Drug Testing and Intensive Supervision, Drug Testing Technology/Focused Offender Disposition, Drug Testing Technology Evaluation and Drug Testing Standards Programs.

The States are using formula grant funds to implement drug courts, enhanced court processing, treatment alternatives to street crime (TASC) and differentiated case management programs.

DETENTION, REHABILITATION AND TREATMENT OF DRUG OFFENDERS ACTIVITIES:

Through the Prison Capacity Program, BJA is assisting States in developing creative ways of addressing prison crowding, while providing appropriate sanctions for criminals, including the growing number of drug offenders.

The Comprehensive State Department of Corrections Treatment Strategy for Drug Abuse and Drug Treatment for State Correctional Programs are designed to help States reduce the rates of recidivism among drug offenders by providing a range of drug treatment programs in institutions and in conjunction with community supervision.

Intensive supervision probation and parole programs, which provide close supervision and frequent drug testing for drug-involved offenders, are being implemented under both the discretionary and the formula grant programs. A number of the programs are also testing the effectiveness of electronic monitoring of offenders.

To develop program models describing strategies to prevent and reduce crime.

To produce and disseminate policy-relevant research findings to criminal justice officials and agencies at the Federal, State, and local levels.

To maintain an effective and efficient criminal justice reference service.

To collect, analyze, and publish statistical information on crime and the operations of the justice systems at all levels of government.

To manage major national statistical series regarding crime, its victims, and the operation of the justice system.

To develop national standards for justice statistics to ensure the inter-State comparability, reliability and validity of justice statistics.

To provide support to State and local governmental organizations and facilities responsible for the collection and analysis of criminal justice data and statistics.

To develop statistical reports, focused analytic reports, bulletins and national advisories aimed at improving the understanding of the general public concerning crime, crime prevention, and the functions of law enforcement, judicial and correctional agencies.

To provide technical assistance to eligible institutions, agencies and individuals regarding implementation and operation of programs.

To direct and administer the Federal Surplus Property Transfer program and Private Sector/Prison Industry Enhancement Certification program.

To process and determine eligibility of claims for payment of benefits under the Public Safety Officers' Benefit program within two weeks of receipt of complete claims documentation.

To direct and administer the Anti-Drug Abuse program.

To direct and administer the Emergency Federal Law Enforcement Assistance program and the Regional Information Sharing System program.

To direct and administer the Missing Children's program and Juvenile Justice programs.

To administer a program which provides grants to eligible crime victim compensation programs and a program which awards grants to States to provide victim assistance programs.

To direct and administer a program which improves services to victims of Federal crimes.

To direct and administer a program which will improve the investigation and prosecution of child abuse on Native American reservations.

To direct and administer a training and technical assistance program aimed at eligible State crime victims programs.

To direct and administer a program that establishes and expands victim assistance services for crime victims in Indian Country in areas where the Federal Government has authority to investigate and prosecute crime.

To prepare and disseminate program solicitations; review applications, concept papers or proposals; rate applicants and award grants, contracts, and cooperative agreements.

To monitor all active grants, contracts, cooperative agreements, and interagency agreements.

To prepare annual reports as required.

To close out grants and contracts within 180 days of their end-date.

To provide grant review and award functions in the most economical and efficient centralized manner.

To provide the full range of support services to the program offices.

Base Program Description: The Office of Justice Programs (OJP) carries out policy coordination and general management responsibilities for the Bureau of Justice Assistance (BJA), Bureau of Justice Statistics (BJS), National Institute of Justice (NIJ), Office of Juvenile Justice and Delinquency Prevention (OJJDP), and the Office for Victims of Crime (OVC). Since the functions and responsibilities of the five program bureaus and offices are described in the justifications for those programs, they are not repeated here.

Accomplishments and Workload: The following table reflects some of the major workload and accomplishments of the Office of Justice Programs:

Item	1988	1989	Estimates 1990	Estimates 1991
Grants and contracts awarded by NIJ	111	125	135	150
Policy reports prepared and published by NIJ	32	35	38	48
Research, development and evaluation projects monitored	280	290	295	320
Criminal justice conferences and workshops sponsored by NIJ	18	16	14	16
Response to requests for criminal justice information	17,280	18,000	21,750	23,400
Statistical bulletins, special and technical reports	19	15	26	26
Other statistical reports prepared and published by BJS	12	12	14	20
Statistical reports disseminated (in thousands)	491	683	700	700
Responses to telephone requests for statistical information	6,896	7,156	7,200	7,200
Juvenile justice formula grants awarded	55	57	55**	...
Juvenile justice special emphasis grants awarded	38	12*	26	...
National institute of juvenile justice grants awarded	14	17*	23	...
Juvenile justice active grants monitored	300	300	200	200
Juvenile Justice interagency agreements entered into	4	4	2	...

* The 1988 amendments altered OJJDP's fund distribution formula, significantly reducing the amount of funds available for 1989 discretionary programs. Also, in 1989 there were no jail removal grants. Both of these factors contribute to the decrease in 1989 grant awards.

** Reduction is based on the elimination of eligibility and the phase out of funding of the Marshall Islands and Micronesia by the Compact of Free Association.

Item	1988	1989	Estimates 1990	Estimates 1991
High risk youth research programs/projects	5	4	6	5

Response to requests for drug control and criminal justice information	7,160	7,700	8,300	8,900

Program Changes:	1991 Base Perm. Pos.	1991 Base WY	1991 Base Amount	1991 Estimate Perm. Pos.	1991 Estimate WY	1991 Estimate Amount	Increase/Decrease Perm. Pos.	Increase/Decrease WY	Increase/Decrease Amount
Management and Administration	352	352	$25,117	345	345	$24,719	-7	-7	-$398

A net decrease of seven positions, seven workyears, and $398,000 is requested for 1991 in the following sub-activities:

Executive Direction and Control, NIJ:

In view of its substantially increased workload and the priority need for research in criminal drug use and less-than-lethal weapon development, the National Institute of Justice is requesting an increase of one position and one workyear. This position will be funded with existing funds available within the base. The position requested is needed to conduct major developmental work for the Less-than-Lethal Weapon Program. A technological research and development effort was endorsed by the Attorney General's Conference on Less-than-Lethal Weapons in June 1986. The total of police and civilian deaths during armed confrontations between 1977 and 1986 was almost 5,000. These human losses could be reduced or avoided if an alternative, non-lethal weapon were available to law enforcement officers to subdue, temporarily, dangerous suspects threatening the officers. To implement the research and development plan, and to manage the Institute's investment, one chemist/chemical engineer position is requested. As Assistant Program Manager for Technology Standards, the employee would conduct safety evaluations, delivery system development, and toxicity studies; report on program progress to the Technology Assessment Program Advisory Board and its subcommittees overseeing the research; monitor the activities and progress of the development subcontractor; and revise development plans based on testing findings. The employee would be a U.S. citizen eligible for a security clearance.

Executive Direction and Control, BJS:

An increase of one position and one workyear is requested in 1991 to support expanded functioning of the Bureau of Justice Statistics (BJS) Federal integrated data base. This data base links information collected by several offices and bureaus within the Department of Justice (DOJ) and represents the only single source of data linking the investigation, prosecution, adjudication, and sentencing of Federal offenders. This position will be funded with existing funds available within the base.

Under the expanded program, data will be collected from investigative and corresional agencies not currently participating in order to present a more comprehensive view of Federal activity. Data will also be collected on an expedited basis to permit current analysis of criminal justice activities and trends in order to anticipate impact on correctional programs. Additionally, new products will be developed to meet specific operational needs at the Federal level. These include: production of monthly reports which trace specific Federal criminal justice indicators and which provide ongoing analysis of data to permit real time response to departmental inquiries.

Due to the enthusiastic response within DOJ and the additional data and products that will be provided through the expanded program, one position is required to handle the anticipated heavy volume of requests for information and analyses. The professional in this new position will be a social science analyst who will act as a liaison between the requester of information and the contractor, a central point of contact to obtain information from the BJS Federal integrated data base. This position involves managing all requests and monitoring the quality, relevance and timeliness of the responses.

The individual in this position also would design reports to be prepared from the integrated data, perform limited in-house statistical analyses, prepare tables, and write reports for publication. In order for this data to be fully utilized by other offices, divisions, and bureaus within DOJ, as well as by Congress, researchers, and the general public, requests must be processed quickly and efficiently, and the information disseminated properly and in a timely manner. Without an additional staff member, BJS is not in a position to undertake these critical tasks, and the funding of this initiative will not be productive.

Executive Direction and Control, OJJDP:

A net decrease of nine positions, nine workyears and $450,000 is requested for Executive Direction and Control, Office of Juvenile Justice and Delinquency Prevention (OJJDP) in 1991. Since the 1991 President's budget request proposes a phase-out of the traditional Juvenile Justice Program, fewer workyears and financial resources are required for the Office. A decrease of sixteen positions and sixteen workyears is associated with the phase-out, however, of the positions and FTE that would otherwise be cut, OJJDP needs to retain seven for the proposed High Risk Youth discretionary program. The seven positions would be responsible for the coordination and implementation of all activities related to that program, including the development of the initiatives, the award and monitoring of projects, and clerical support. The request would leave a staff of 53 positions in 1991 to administer both the High Risk Youth and Missing Children programs and to responsibly close down the Juvenile Justice program. Although 1990 is proposed to be the last year of funding for the program, the existing grants will require monitoring, guidance and assistance for a few more years. The 1990 formula grants will still be active into mid-1993 and discretionary grants that were awarded in 1990 will still be active until at least 1992. To allow OJJDP to responsibly close out the program in a gradual, fiscally-sound fashion, an additional cut of sixteen positions will be proposed in 1992, another reduction of sixteen is anticipated in 1993, and the final reduction of ten positions would take place in 1994, leaving a staff of eleven to administer both the High Risk Youth and Missing Children programs.

OJP Program Support Services:

An increase of $52,000 is requested for migration of OJP's accounting system to the Justice Department's Financial Management Information System (FMIS), in compliance with the Department's goal to achieve OMB Circular A-127 requirements for a single modern integrated financial system. OJP, like other Federal agencies, must maintain a financial system to facilitate program management and control. Such a system is critical to the operation of OJP and must provide: support for formulation and budget execution; support processes necessary to manage and control programs, funds and other resources; and allow full disclosure of information necessary to the Congress, Treasury, OMB, GAO and the public. Conversion to the FMIS will improve the current financial management operation within OJP. This increase will provide the necessary funds to have the system operational during 1991.

Office of Justice Programs

Justice Assistance

Status of Congressionally Requested Studies, Reports, and Evaluations

1. Section 102(b) of the Anti-Drug Abuse Act of 1988 requires the Assistant Attorney General to submit an annual report to the President and Congress by March 31 of each year. The report will be submitted on time.

2. Section 810 of the Anti-Drug Abuse Act of 1988 requires the Assistant Attorney General, the Director of the Bureau of Justice Assistance, the Director of the Bureau of Justice Statistics, and the Director of the National Institute of Justice to submit to the President and the Speaker of the House of Representatives and the President of the Senate by April 1 of each year, a report on their activities from the preceding fiscal year. The annual reports for each unit will be submitted on time.

3. Section 404(a)(5) of the Missing Children's Assistance Act, as amended, requires the Administrator of the Office of Juvenile Justice and Delinquency Prevention to submit a report to the President and Congress not later than 180 days after the end of each fiscal year, which: (1) contains a comprehensive plan to facilitate coordination and cooperation among agencies and organizations with missing children responsibilities; (2) identifies effective Federal, State and local coordination and cooperation models for locating and recovering missing children; (3) identifies effective program models that provide treatment, counseling, or other aid to parents of missing children or children who have been victims of abduction; (4) describes how the Administrator provided adequate staff and agency resources to carry out title IV responsibilities; (5) describes the number and types of telephone calls received over the national toll-free telephone and the referrals to HHS's national communications system (runaway hotline); (6) describes the activities of the national resource center and clearinghouse; (7) describes all programs assisted under the Section 405 discretionary grant program in the preceding fiscal year; (8) summarizes all missing children research completed in the preceding year under title IV; and (9) identifies each clearinghouse assisted under Section 405(a)(9) in the preceding fiscal year, the activities carried out, the types and amount of other assistance received, and specifies the number and types of cases handled/resolved and the circumstances of each case. The report for fiscal year 1989 is due March 31, 1990 and will be submitted on time.

4. Section 408 of the Missing Children's Assistance Act, as amended, requires the Administrator of the Office of Juvenile Justice and Delinquency Prevention to begin a study within one year from the enactment of the 1988 amendments to determine obstacles to the recovery by legal custodians of children who have been removed by a noncustodial parent. The study is to be completed, and a report submitted to the Congress discussing and summarizing the results, within three years. The application for this study is in process of being awarded. The report is expected to be submitted on time.

5. Section 207 of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, requires the Administrator of the Office of Juvenile Justice and Delinquency Prevention to submit an annual report to the President and Congress within 180 days of the end of each fiscal year. The report must contain: (1) a detailed summary and analysis of juvenile custody data, including offender type, offense, race, gender, age, facility type, and death rate information; (2) a description of part A funded activities; (3) a description of each State's compliance with Section 223 and the State plan; (4) a summary of each part C or part D funded program or activity, evaluation information and an assessment of replication potential; and (5) a description of exemplary delinquency prevention on programs funded under title II. The report for fiscal year 1989 is due March 31, 1990 and will be submitted on time.

Office of Justice Programs

Justice Assistance

Status of Congressionally Requested Studies, Reports, and Evaluations (Cont'd)

6. Section 248 of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, requires the Administrator of the Office of Juvenile Justice and Delinquency Prevention to do two studies, each of which is to be started within one year from enactment of the 1988 amendments and completed within three years, with a description and summary of the results submitted to the Congress. The studies would: (1) review conditions in juvenile detention and correctional facilities, the extent to which such facilities meet national standards, and make recommendations to improve conditions in such facilities; and (2) determine (a) how American Indian and Alaskan Native juveniles accused of committing offenses on or near Indian reservations and Alaskan Native villages, respectively, are treated under reservation/village justice systems that perform law enforcement functions; (b) the financial resources available to Indian tribes and Alaskan Native organizations that perform law enforcement functions to support community-based alternatives to incarcerating juveniles; and (c) the extent to which such tribes and organizations comply with the DSO, separation and jail removal requirements of the JJDP Act. Applications for both studies are in process of being awarded. Reports are expected to be submitted on time.

7. Section 520(c) of the Anti-Drug Abuse Act of 1988 requires the Director of the National Institute of Justice to annually report to the President, the Attorney General, and the Congress on the nature and findings of the evaluation and research and development activities under Sections 501(c), 506 and 511. The Institute will report on its activities to initiate an evaluation of anti-drug programs and will report on anti-drug research and development projects shortly after the conclusion of the first year after passage of the Act. The report is scheduled for completion in early April, 1990.

8. Section 522(b) of the Anti-Drug Abuse Act of 1988 requires the Director of the Bureau of Justice Assistance not later than 180 days after the end of each fiscal year to submit to Congress a report that includes with respect to each State (1) the aggregate amount of grants made under subpart 1 and subpart 2 to such State for such fiscal year; (2) the amount of such grants awarded for each of purposes specified in subpart 1; (3) a summary of the information provided in compliance with paragraphs (1) and (2) of subsection (a); (4) an explanation of how Federal funds provided under this part have been coordinated with Federal funds provided to States for drug abuse education, prevention, treatment, and research activities; and (5) evaluation results of programs and projects and State strategy implementation. The report will be submitted on time.

9. Section 609U of the Anti-Drug Abuse Act of 1988 requires the Attorney General to submit to the President and Congress by April 1 of each year, a report describing Federal law enforcement emergency assistance provided during the calendar year preceding the date the report is made. The report will be submitted on time.

Note: Congressionally requested annual reports for OJP agencies are expected to be published in a consolidated OJP annual report.

[1] The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.

Office of Justice Programs

Justice Assistance

Justification of Adjustments to Base
(Dollars in thousands)

Mandatory increases:	Amount
1. One additional compensable day.......... The annual salary rate for Federal employees is based on 260 paid days. During 1991 there is one more compensable day (261) than 1990 (260). Appropriate personnel benefits are included in this figure. (Permanent personnel compensation $13,824/260 = $53,000 plus $8,000 for benefits.)	$61
2. 1990 full-year pay increase impact on 1991.......... This request provides for the full-year pay increase of 3.6 percent as contained in the general provisions of the U.S. Treasury, Postal Services and General Government Appropriations Bill, 1990, for civilian and military personnel to be effective in January of 1990. The Department will be required to absorb the total pay raise in 1990. The requested increase of $849,000 is the amount required for full-year funding in 1991. NOTE: The 1991 budget requests an increase to fund the reductions made in 1990 to cover the 1990 pay raise. The details of the reductions have not yet been identified by the Department, but will include deferral of equipment purchases, hiring staff, and reducing other expenses such as travel funds. For display purposes, however, this requested increase is reflected in the following detail as a mandatory increase and built into the 1991 base.	849
3. 1991 pay increase.......... For the first time, the Administration is proposing to include the costs of the pay increase effective in the budget year with the initial budget request. This request provides for 50 percent of the proposed 4.0 percent pay increase effective in January of 1991. The Department will be required to absorb half of the costs of this pay raise. The amount requested, $333,000, is the cost of the pay increase for approximately three-quarters of the year assuming a 50-percent absorption.	333
4. Senior Executive Service pay increase.......... This request represents the 1991 costs of the pay increase for senior executive service employees. This pay raise is to be effective in January of 1990, but will be absorbed completely for the first year. In 1991, an increase of $82,000 is necessary for this requirement. Funding for the executive level employees pay raise is completely absorbed in both years.	82
5. Special Salary Rates.......... This request provides increases as authorized by law in 5 U.S.C. 5303. The Office of Personnel Management (OPM) has approved these rates for positions where retention and recruitment of qualified applicants is a problem. The Department's request represents coverage of 33 authorized special rates.	17

	Amount
6. Health Benefits	$11
The Federal Employees Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1990, the actual contribution to health insurance increased 29 percent. The requested increase of $11,000 provides funds for actual increased costs form pay period 1 to pay period 2, projected for a full year.	
7. Government Printing Office (GPO) printing costs	45
The GPO is currently projecting a seven percent increase over the 1990 printing costs of $645,000. An additional $45,000 will be required in 1991.	
8. Employee data and payroll services	4
Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems, maintenance and payroll accounting, are based on the number of employee records maintained. The rate of $188.23 per record in 1990 will be raised to $199.52 per record for 1991. The change is based on anticipated mandatory cost increases of 6 percent for the operation of the Justice Employee Data Service. An increase of $4,000 will be required in 1991.	
Total mandatory increases	1,402
Decrease (Automatic non-policy):	
1. Non-recurring costs for Emergency Assistance	-9,927
Decrease for funds provided in 1990 to assist those localities most devastated by Hurricane Hugo and to assist localities in California which suffered from the impact of the earthquake of October 17, 1989.	
2. GSA rent	-193
This decrease reflects GSA's projected rental charges for 1991.	
3. Federal Telecommunications System (FTS)	-68
In 1991, the General Services Administration (GSA) is to have the FTS 2000 system fully implemented. At present GSA projections indicate costs for current FTS minute usage charges will decrease from 34 cents per minute to 18 cents per minute. The requested reduction of $68,000 from a 1990 base of $204,000, reflects this decrease.	
4. Federal Employees' Compensation Act (FECA) - Unemployment Compensation	-3
This decrease reflects the billing provided by the Department of Labor for the actual costs in 1989 of employees' unemployment compensation. The 1991 amount will be $6,000 or $3,000 less than the 1990 base.	
Total decreases	-10,191
Total, adjustments to base	-8,789

Consulting and Related Services

(Dollars in thousands)

	1989 Actual	1990 Estimate	1991 Estimate
Consulting Services	$117	$119	$121
Management and Professional Services	2,210	2,000	2,000
Special Studies and Analysis	165	130	100
Total	2,492	2,249	2,221

Consulting and related services are used in the Office of Justice Programs (OJP) only when the required services are most cost effective to contract out. The majority of our management and professional support services are required to support mandated program areas which have been selected for national emphasis.

The OJP is reporting a level of consulting and related services that is significantly less than the level reported in previous years, for the following two major reasons:

1. The Contracts Division has been closely reviewing each contract request to determine if the required services directly relate to OMB Circular A-120.
2. The Contracts Division has improved its internal controls on accurate reporting of Federal Procurement Data System (FPDS) service codes.

Office of Justice Programs

Crime victims fund

Summary Statement

Fiscal Year 1991

The Crime Victims Fund was established by the Victims of Crime Act of 1984, as amended by the Children's Justice Assistance Act of 1986 and reauthorized by the Anti-Drug Abuse Act of 1988 (P.L. 100-690). Current legislation provides for the deposit into the Fund of Federal criminal fines, bond forfeitures, and penalty assessments up to $125,000,000. These funds are used for five programs: 1) reimbursements to States for victim compensation programs (40% of their prior year expenditures); 2) allocations to each State for the purpose of providing services, other non-financial assistance, and limited emergency financial assistance to victims of crime; 3) training and/or technical assistance services to eligible crime victims assistance programs, Federal law enforcement officers, prosecutors and victim/witness coordinators, and for the financial support of victims of Federal crime by eligible crime victim assistance programs; 4) Children's Justice/Child Abuse Prevention and Treatment grants, a program administered by the Department of Health and Human Services; and 5) of the Children's Justice allocation, 15 percent is retained by the Office for Victims of Crime to be used for Native American tribes to improve the handling of child abuse cases. Currently, the judicial branch will receive any amount collected above the $125,000,000 cap -- up to $2,200,000, for administrative costs. Any funds collected that exceed $127,200,000 will be transferred to the General Fund of the Treasury. Collections are expected to total at least $127,200,000 in 1990. The Fund would obligate $125,000,000 and $2,200,000 would be transferred to the Administrative Office of the U.S. Courts.

Long Range Goal: To encourage all States and Federal territories to provide victims of crime access to compensation and assistance programs designed to reduce the emotional, financial, and physical effects of victimization, and to support and facilitate the participation of crime victims in the criminal justice process.

Major Objectives:

To implement the provisions of the Victims of Crime Act of 1984, as amended by the Anti-Drug Abuse Act of 1988 (P. L. 100-690).

To monitor State compensation and victim assistance programs to ensure compliance with Federal guidelines.

To monitor State victim assistance grants for Native American reservations.

To provide technical assistance to the States in implementing victim assistance and victim compensation programs.

To provide technical assistance to the Native American organizations which serve Federal crime victims.

To compile and analyze data submitted by the State programs.

To monitor compliance with the Attorney General's Guidelines for Victim and Witness Assistance in agencies with Federal law enforcement or prosecutorial responsibilities.

To provide technical assistance support to Federal victim/witness coordinators, other U.S. Attorney and Federal investigative personnel.

To provide limited, direct assistance to unserved victims of Federal crimes.

To develop and implement a program to improve handling of child abuse cases on Native American Indian Reservations.

To provide training for Federal law enforcement agencies regarding implementation of the Victim Witness Protection Act.

To manage national scope discretionary grants that provide information or training to improve services to crime victims.

Base Program Description: The Victims of Crime program is funded by collections of fines, penalty assessments, and bond forfeitures from people convicted of Federal crimes. The Fund was established by the Victims of Crime Act of 1984, (P. L. 98-473) as amended by the Children's Justice and Assistance Act of 1986 (P. L. 99-401) and reauthorized by the Anti-Drug Abuse Act of 1988 (P. L. 100-690). Up to $125 million may be deposited into the Crime Victims Fund in 1989, 1990, and 1991. Beginning in 1992 the cap is raised to $150 million. If deposits into the Fund exceed $100 million, the next $5.5 million shall be available for the Children's Justice program. Any available amount in excess of $105.5 million and up to $110 million would be available for the Victim Assistance program for States. Of the money deposited in the Fund above $110 million and up to the cap of $125 million, 47.5% will be made available for compensation programs under Section 1403; 47.5% will be made available for assistance programs under Section 1404(a); and 5% will be made available for direct services to victims of Federal crime under Section 1404(c)(1)(B). Up to $2.2 million collected, in excess of $125 million, will be made available for the judicial branch by the Treasury Department. Funds are not obligated during the year of collection. Instead, they are allowed to accumulate for one year so that the total amount available for obligation for the next year is determined in advance. Approximately $93.5 million was deposited into the Fund during 1988 and collections exceeded the $125 million cap in 1989. It is anticipated that collections will also exceed $125 million in 1990.

Funds are targeted at five program areas: 1) Crime Victim Compensation - The legislation sets aside 49.5 percent of the first $100 million in the Fund for this purpose. These funds are distributed to the States on the basis of 40 percent of their eligible victims compensation payouts during the preceding fiscal year. 2) Crime Victim Assistance - Forty-five percent of the first $100 million in the Fund is set aside to be awarded to States for the purpose of providing services, other non-financial assistance, and limited emergency financial assistance to victims of crime. Priority must be given to eligible crime victim assistance programs which provide assistance to victims of sexual assault, spousal abuse, child abuse, and victims previously underserved. Recipient organizations eligible for victim assistance funding would be non-profit organizations, agencies of State or local governments (or combinations of such entities) which provide services to victims of crime, including crisis intervention services, emergency aid, and assistance to victims - participating in criminal justice proceedings. 3) Federal Victims Assistance - Up to $1.75 million of the Crime Victim's Fund shall be allocated for the financial support of services to victims of Federal crime and for training and technical assistance services to eligible crime victims assistance programs. 4) Children's Justice - The legislation requires that up to $10 million shall be transferred to the Department of Health and Human Services for grants to States to assist in developing, establishing, and operating programs designed to improve the handling of child abuse cases and the investigation and prosecution of cases of child abuse, particularly child sexual abuse. 5) Children's Justice/Native American - The 1988 amendments require that 15 percent of the first $4.5 million earmarked for the Children's Justice Act be retained by OVC to conduct projects with similar purposes as the HHS program but aimed at Native American Indian tribes.

Management and Administration expenses for the Office for Victims of Crime are included in the "Justice assistance" appropriation.

Accomplishments and Workload: During 1989, the Office for Victims of Crime (OVC) awarded $44,922,000 to 42 States for victim compensation programs and $43,492,000 to 59 States and territories for victim assistance programs. In 1990, the Office anticipates awarding up to $55,832,000 to 42 States for victim compensation and $55,832,000 to 59 States and territories for victim assistance. One or two meetings of appropriate State officials are to be convened by the Office to facilitate monitoring and administrative review of the compensation and assistance grant programs. Training and technical assistance was provided to State administrators during 1989.

In 1990, the Office completed grants with the Task Force on Families in Crisis, and the Illinois Coalition Against Domestic Violence to further implement recommendations of the President's Task Force on Victims of Crime. The Office also completed grants to several national organizations for training and technical assistance to victim assistance programs, grants to study the role of law enforcement in child abuse cases, to provide direct services to sexually exploited minors and to conduct training in this area; to provide training to clergy on domestic violence issues; to strengthen and increase the number of chapters nationwide; and, training for mental health professionals regarding treatment of victims with crime related mental health problems. OVC and the Executive Office for U. S. Attorneys jointly sponsored a training conference on assisting victims of Federal crime and improving law enforcement coordination. Representatives from U. S. Attorneys' offices with responsibilities in those areas attended. OVC will transfer funds to the Executive Office for U. S. Attorneys (EOUSA) to cover the expenses of recently hired Victim-Witness Coordinators who will spend up to a week observing and learning about the programs of more experienced Coordinators. OVC will continue its policy of periodically mailing victim-related information to

Victim-Witness Coordinators. To directly aid victims of Federal crime, OVC will transfer up to $80,000 to EOUSA to be used by U. S. Attorneys, with OVC approval, to provide emergency services to Federal victims when no other services exist. Additionally, OVC will continue its efforts by once again establishing a fund totalling $490,000 for a discretionary grant program to the States to support the development of programs to assist Federal victims of crime in Indian country. In March 1990, OVC and the National Children's Advocacy Center in Huntsville, Alabama co-sponsored a training conference on child sexual abuse and OVC provided funds to EOUSA to allow for Federal attendees at the conference. OVC will again work with EOUSA to provide specialized training in this area for Federal law enforcement officials, including Assistant U. S. Attorneys, LECC/Victim-Witness Coordinators, and Federal investigators who will attend this conference.

Initiatives in 1990 and 1991 include two national conferences on developing victim assistance services for crime victims in Indian country; grants to Parnside to improve services for survivors of homicide, a grant to improve state compensation services, regionally based training for local and state law enforcement agencies on responding to family violence, Children's Justice Act (CJA) grants made directly to Indian tribes to improve the investigation, prosecution and handling of cases of child abuse, particularly child sexual abuse; and a training and technical assistance program to assist Victim Assistance in Indian Country subgrantees and CJA grantees to establish "on reservation" services and train their personnel. Efforts begun in 1989 that will be continued through 1990 and 1991 include training for Federal law enforcement officers, Assistant U.S. Attorneys and Victim/Witness Coordinators, a transfer of funds to enable U.S. Attorneys to provide emergency services to Federal victims and continued support for the grant program to states for the development of victim assistance services in Indian country. On January 18-19, 1990, OVC sponsored special training for Federal, state, and tribal officials in Scottsdale, Arizona on effective approaches to combatting child exploitation and responding to the large numbers of sexually exploited children.

Program Change:	1990 Obligations			1991 Obligations			Increase/Decrease

Office of Justice Programs

Crime Victims Fund

Status of Congressional Requested Studies, Reports, and Evaluations

Section 1407(g) of the Victims of Crime Act of 1984, as amended by the Anti-Drug Abuse Act of 1988, requires that the Director of the Office for Victims of Crime shall on December 31, 1990, and on December 31 every two years thereafter, report to the President and to the Congress on the revenue derived from each source described in section 1402 and on the effectiveness of the activities supported under this chapter. The Director may include in such report recommendations for legislation to improve this chapter. The report will be submitted on time.

Office of Justice Programs

Public Safety Officers Benefits

Summary Statement

Fiscal Year 1991

The Office of Justice Programs is requesting, for 1991, a total of $26,075,000 for the Public Safety Officers' Benefits Program. This request represents an increase of $1,257,000 over the 1990 enacted appropriation.

This program provides for payment of a death benefit to eligible survivors of Federal, State, and local public safety officers whose death was the result of a traumatic injury sustained in the line of duty. Public safety officers covered by the program include, but are not limited to, police, corrections, probation, parole and judicial officers, public ambulance or rescue squad members, and firefighters. Amendments in the Anti-Drug Abuse Act of 1988 raised the benefit from $50,000 to $100,000 and provided for an annual cost of living escalation that is tied to the Consumer Price Index (CPI). The requested amount represents the base funding level, which includes a mandatory adjustment for the anticipated CPI increase.

Office of Justice Programs
Public Safety Officers Benefits
Justification of Proposed Changes in Appropriation Language

The 1991 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Public Safety Officers Benefits

For payments authorized by part L of title I of the Omnibus Crime Control and Safe Streets Act of 1968 (42 U.S.C. 3796), as amended, [$25,000,000], *to remain available until* expended as authorized by section 6093 of Public Law 100-690 (102 Stat. 4339-4340).

$26,075,000

(Department of Justice Appropriations Act, 1990.)

Explanation of Change:

1. No substantive change proposed.

Activity: Public Safety Officers' Benefits Program	1990 Appropriation Anticipated			1991 Base			1991 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Public Safety Officers' Benefits Program.......	...	...	$24,818	...	...	$26,075	...	...	$26,075	...	...	...

Long-Range Goal: To provide a death benefit payment to survivors of Federal, State and local public safety officers who have died as a result of personal injury sustained in the line of duty.

Major Objectives:

To pay eligible claims within two weeks of the filing of a fully documented claim.

To issue determinations on ineligible claims within four weeks of the filing of the fully documented claim.

To conduct an appeal hearing within 60 days of an appellant's request.

To issue the appeal determination within 30 days of the official close of the appeal hearing.

Base Program Description: This activity addresses death benefits for the eligible survivors of Federal, State and local public safety officers who die from injuries received in the line of duty. P.L. 100-690 (42 U.S.C. 3796) authorizes payment of a death benefit when a Federal, State or local law enforcement officer, fire fighter, corrections officer, judicial official or public ambulance or rescue squad member dies, in a duty status, as the direct and proximate result of a traumatic injury. On November 18, 1988, President Reagan signed the Anti-Drug Abuse Act of 1988 (P.L. 100-690) amending the Public Safety Officers' Benefits Act. The amendment doubled the amount of the benefit to $100,000 from the $50,000 level set in 1976 and the increase was made retroactive to include deaths occurring on or after June 1, 1988. In addition, the Act was amended to eliminate the requirement that an eligible parent be dependent upon a public safety officer. Effective on June 1, 1988, when a public safety officer is not survived by a spouse or eligible child, his or her parents are automatically entitled to the PSOB benefit without regard to dependency. The elimination of parent dependency will increase PSOB awards by an estimated 24 claims per year. The Act was also amended to include a cost of living escalator tied to the Consumer Price Index (CPI). This escalator will, on October 1 of every year, increase the benefit by the percentage of increase in the CPI. Because Congress made the effective date of the $100,000 benefit retroactive to June 1, 1988, the first cost of living increase was made for deaths occurring on or after October 1, 1988. At that time, the death benefit to survivors was increased to $103,890, based on a 3.89 percent increase in the CPI. If a widow and eligible children survive, the widow receives one-half of the benefit and the remaining one-half is apportioned among the children. If there are no eligible children, the widow receives the full benefit. Parents are eligible for the death benefit when a widow and/or eligible children do not survive the deceased public safety officer. Each year the amount of the payment will be adjusted by the annual percentage change in the Consumer Price Index. If the estimated 1991 CPI increase of 4.3 percent is realized, the benefit would increase from $109,460 in 1990 to $114,166.

Generally, the PSOB program staff receives a death report within one week of the public safety officer's death, usually from the employing agency. Claims are initiated by the PSOB staff when the death report is received. Employing agencies generally take from 75-80 days to file a complete claim. Eligible claims are paid within two weeks of being filed and documented; ineligible claims are processed within four weeks of being filed and documented.

When a claim is denied, appeal instructions are provided to the claimant. Appeals are heard within 60 days of the claimant's request and decisions are rendered within 30 days of the official close of the appeal hearing. Hearing officer denials may be appealed to the Director. Once an appeal is heard by the agency and the denial affirmed, the claimant may appeal directly to the U.S. Claims Court. Claims entering the Federal court system may take from six months to two years or more to resolve, depending on how rapidly the court and the claimant's attorney respond to statutory and procedural requirements.

Accomplishments and Workload: Actual and estimated workload and accomplishments of the Public Safety Officers' Benefits Program are presented in the following table. The administrative costs associated with the program are borne by the "Justice assistance" appropriation.

Item	1988	1989	Estimates 1990	Estimates 1991
Claims Initiated	234	322	310	310
Claims Closed*	240	306	316	316
Agency Appeals Requested	7	11	8	8
Agency Appeals Closed*	8	7	9	9
Court Appeals Initiated	1	...	2	2
Court Appeals Closed*	2	1	2	2

* Figures include newly initiated claims and appeals as well as active claims and appeals carried over from a previous year.

Claim processing objectives have been met in that the average eligible claim was paid within two weeks of completed filing, and the average ineligible claim was closed within four weeks of certified documentation.

Following is a summary of public safety officer death claims that were found eligible during the period 1979-1989:

Fiscal Year	Law Enforcement Officers	Fire Fighters	Corrections Officers	Others	Total Claims Paid	Total Amount Paid
1979	157	79	16	6	258	$12,900,000
1980	153	70	6	5	234	$11,700,000
1981	188	64	9	8	269	$13,450,000
1982	152	56	7	2	217	$10,850,000
1983	160	43	6	5	214	$10,700,000
1984	134	44	8	2	188	$9,400,000
1985	144	61	7	14	226	$11,300,000
1986	130	37	5	8	180	$9,000,000
1987	119	43	4	20	186	$9,300,000
1988	120	48	10	8	186	$9,300,000
1989:						
Newly inititated claims	155	60	5	10	230	$21,575,150
Supplemental payments *	11	8	...	...	19	$950,000

* Supplemental payments of claims paid in FY 1989 for deaths that occurred between June 1, 1988, and September 30, 1988, in accordance with the Anti-Drug Abuse Act of 1988.

Public safety officer line of duty deaths through 1988 had generally been declining from the program's starting years. The decline had occurred despite the fact that coverage was extended to Federal public safety officers in 1984 and to public rescue and ambulance squad members in 1986. The following chart illustrates this trend:

	1977	1978	1979	1980	1981	1982	1983	1984	1985	1986	1987	1988	1989
Number of Deaths Reported.................	349	379	322	291	282	302	237	259	277	257	225	234	322

Based on the number of deaths reported during 1989, the decline in deaths appears to be reversing. During 1989, 322 deaths were reported to PSOB. This is an increase of 88 deaths over the number reported in 1988. An analysis of the increase indicates both an increase in fire fighter and law enforcement officer deaths, with the greatest increase being among law enforcement officers. Law enforcement officer deaths increased in both felony and accidental deaths. The felony death increase may signal a trend and will be closely monitored. It is difficult to say, at this time, whether or not the upward trend in accidental deaths will continue.

OPENING STATEMENT

Mr. SMITH. The Committee welcomes for his first appearance, Deputy Assistant Attorney General for the Office of Justice Programs (OJP) Clifford White. Mr. White, you may proceed with your statement.

Mr. WHITE. Yes, I do, Mr. Chairman. I believe we submitted a full statement.

Mr. SMITH. All right.

Mr. WHITE. I could summarize, if the full statement could then be in the record.

Mr. SMITH. All right. That will be fine, yes.

Mr. WHITE. Thank you.

Mr. Chairman, I am pleased to have the opportunity to be before the subcommittee today to support the Bush Administration's 1991 budget request for the Office of Justice Programs. With me this morning is Mrs. Phyllis Black, the budget officer for OJP.

As the primary criminal justice research, development, and assistance agency of the Department of Justice, our mission is to provide policy-relevant information to decisionmakers and to enhance the Federal-State partnership in fighting crime and standing up for victims of crime. We have an important opportunity this year to play an increasingly vital role in the Nation's war against drugs. In many ways, OJP serves as a crucial link between Federal, State and local law enforcement in carrying out the National Drug Control Strategy. The budget before this subcommittee would provide us with the necessary funds to accomplish this mission.

As you noted, the President has requested approximately $588 million and 345 positions for the Justice Assistance appropriation covering OJP. This requested appropriation would permit us to continue to sharpen our focus on drug-related activities and to forge more productive partnerships with State and local criminal justice systems. This amount is, however, exclusive of the Crime Victims Fund, which consists of non-appropriated funds, and the Public Safety Officers' Benefits mandatory account.

The program changes include the following:

DEVELOPMENT OF A LESS-THAN-LETHAL WEAPON

First is an increase of approximately $1.8 million for Research, Evaluation, and Demonstration Programs to permit further development of an effective less-than-lethal weapon for use by law enforcement officers. Such a weapon may save both lives and dollars. The current choice, which is often between the use of deadly force or no weapon at all, can be inadequate to meet a variety of law enforcement emergencies such as prison disturbances and apprehension of fleeing suspects. If successfully developed, a new less-than-lethal weapon may reduce deaths of law enforcement officers and the number of wrongful death judgments against governmental authorities, while at the same time enhancing law enforcement's ability to apprehend fleeing suspects.

INCREASES FOR STATISTICAL PROGRAMS

Next there is an increase of approximately $1.9 million for Criminal Justice Statistical Programs that would allow for three enhancements.

First, the Bureau of Justice Statistics (BJS) proposes to establish a comprehensive statistical series to address the relationship between drugs, firearms, and violent crime. The annual cost would be $1.1 million. In 1991, this enhancement would fund the National Survey of State Prison Inmates that is conducted every five years. BJS will conduct a parallel survey of Federal prison inmates that would be funded by the Bureau of Prisons.

Second, BJS would use $335,000 of the requested funds to expand and enhance the Federal Integrated Data Base. These improvements would have particular advantages for tracking drug-related offenders from arrest through time served in prison. Under this program and under this enhancement, more information would be available to Federal policymakers on a more timely basis than is now possible.

Third, out of this request, is $476,000 to implement the redesigned National Crime Survey (NCS). The NCS produces the most complete accounting of victimization in the country, and upon completion of the final phase of redesign, the NCS may increase reporting of some crimes—sensitive crimes in particular, such as family violence—by up to 25 percent.

MISSING CHILDREN PROGRAM

The next item of enhancement is an increase of $4 million for the Missing Children's Program. This program was created to provide a central focus for research, data collection, policy development, and information regarding missing and exploited children. By almost doubling the budget of this important program, we would be able to undertake a variety of new initiatives to, among other things, combat drug abuse-related exploitation of juveniles.

ANTI-DRUG ABUSE PROGRAM INCREASE

We also request an increase of more than $45 million for the Anti-Drug Abuse Program. This request represents a 600-percent rise in appropriations since 1988, a 230-percent increase over 1989, and about a 10-percent enhancement over 1990. The increase would permit a significant expansion of State and local drug control activities, while simultaneously supporting national drug control policies and objectives. The Bush Administration has evinced a strong commitment to State and local drug enforcement assistance, and OJP plans to enhance its efforts to ensure that programs funded with scarce resources allocated to this fairly broad-based program are carefully evaluated and focused on drug control purposes.

JUVENILE JUSTICE PROGRAM

There are some decreases requested, beginning with a decrease of about $62 million for the Juvenile Justice Program. This decrease would eliminate the formula grant program, which is not directly related to drug abuse. But $7.5 million is requested for assisting high-risk youth who are or may soon be caught up in the cycle of substance abuse and other crimes. As the subcommittee well knows, this proposal is quite different from those it has seen for the past nine years, all of which recommended termination of the entire program. Over a period of 16 years, the Federal Government has invested more than $700 million towards achieving the goals of the formula grant program. The total juvenile justice budget during that time has been in excess of $1 billion. It would stand to reason then, that the States would now be in a position to determine which programs work most effectively and are worthy of State, local, or private financing. This proposal reflects a highpriority in preventing high-risk juveniles from becoming involved in illegal drug use, trafficking, and gangs. Now, with a new 50-percent matching requirement that would be imposed upon grantees, the high risk youth projects could be continued at a level of about $15 million.

MARIEL CUBANS PROGRAM

The next item is a reduction of just under $5 million to eliminate the Mariel Cubans Program. This program has provided small amounts of money to reimburse States for costs associated with incarcerating those admitted into the United States during the Mariel Cuban boatlift. These are not Federal offenders, and resources simply do not permit continuation of this aid.

REGIONAL INFORMATION SHARING SYSTEM

We also request a reduction of about $3.7 million for the Regional Information Sharing System (RISS). Now, like the juvenile justice proposal, this request also represents a change in policy. It would provide $9.75 million in Federal funds, but combined with a 25-percent match requirement, RISS would be continued in 1991 at a program level of about $13 million, which is very near the current level. Inasmuch as State and local law enforcement authorities are the primary beneficiaries of RISS, it is appropriate that they begin to share more equitably in the program's costs. Accordingly, the budget proposal recommends an escalating match requirement over a three-year period that would result in phasing out of Federal funding. In 1994, the participating agencies would assume 100 percent of the program's costs, yet sufficient time will have been provided to allow them to eventually maintain the program independently.

MANAGEMENT AND ADMINISTRATION

Next is a reduction of $398,000 for Management and Administration, which incorporates various enhancements and reductions which are spelled out in the statement. There is also a decrease of about $8.8 million, representing various mandatory adjustments to our budget base.

PUBLIC SAFETY OFFICERS' BENEFITS REQUEST

The total request of about $26 million for the Public Safety Officers' Benefits appropriation includes a mandatory increase of

$1.257 million to cover the anticipated number of claimants and a projected increase in benefits.

CRIME VICTIMS FUND

Finally, the Crime Victims Fund is fully budgeted at the maximum amount permitted under its authorizing statute. This Fund, of course, consists of Federal criminal fines, bond forfeitures, and penalty assessments. Expenditures from the Fund are therefore borne by criminals, not by the law-abiding taxpayers. The funds are earmarked for victim assistance activities and compensation, and the request is based upon a projection that payments into the fund this year will reach the statutory cap, namely $125 million plus an additional $2.2 million for transfer to the Administrative Office for the U.S. Courts for administrative costs associated with collections.

The budget just described reflects the Administration's strong commitment to working in partnership with the States on a broad array of criminal justice fronts, but most particularly in a joint campaign against the supply of and demand for illicit narcotics. I would be happy now to try to answer any questions that the chairman may have.

[Mr. White's prepared statement follows:]

DEPARTMENT OF JUSTICE
OFFICE OF JUSTICE PROGRAMS

STATEMENT OF THE DEPUTY ASSISTANT ATTORNEY GENERAL
CLIFFORD J. WHITE III
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE, THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to have the opportunity to appear before the Subcommittee today in support of the Bush Administration's 1991 budget request for the Office of Justice Programs (OJP). As the primary criminal justice research, development, and assistance agency of the Department of Justice, our mission is to provide policy-relevant information to decisionmakers and to enhance the Federal-State partnership in fighting crime and standing up for victims of crime. We have an important opportunity to play an increasingly vital role in the nation's war against drugs. In many ways, OJP serves as a crucial link between Federal, State, and local law enforcement in carrying out the National Drug Control Strategy. The budget before this Subcommittee would provide us with the necessary funds to accomplish this mission.

The President has requested $587,515,000 and 345 positions for the Justice Assistance appropriation covering the operations of OJP, including an increase for State and local drug control grants. The requested appropriation would permit OJP to continue to sharpen its focus on drug-related activities and to forge more productive partnerships with State and local criminal justice systems. This amount is exclusive of the Crime Victims Fund, which consists of non-appropriated funds, and the Public Safety Officers' Benefits mandatory account.

Program changes include the following:

-- An increase of $1,758,000 for Research, Evaluation, and Demonstration Programs. This budget category covers the National Institute of Justice (NIJ), which conducts the Federal Government's core research program on the causes and correlates of crime. The requested increase would permit further development of an effective Less-Than-Lethal Weapon for use by law enforcement officers. Such a weapon may save both lives and dollars. The current choice, which is generally between use of deadly force or no weapon at all, is inadequate to meet a variety of law enforcement emergencies, such as prison disturbances and apprehension of fleeing suspects. NIJ has already invested $550,000 in this project and will spend another $500,000 for the initiative this year. Although it is difficult to project the total cost of this initiative until testing results are available, the project is expected to be completed by 1993 with the total price reaching 8 to 10 million dollars. If successfully developed, a new Less-Than-Lethal Weapon may reduce deaths of law enforcement officers and the number of wrongful death judgments against governmental authorities.

-- An increase of $1,911,000 for Criminal Justice Statistical Programs. The program activities of the Bureau of Justice Statistics (BJS) are funded from this budget account. BJS is the primary Federal agency that collects, analyzes, and disseminates criminal justice statistical data. It sponsors all of the Federal criminal justice data series except for the Uniform Crime Report of the Federal Bureau of Investigation. The budget enhancement would allow for the following activities:

First. BJS proposes to establish a comprehensive statistical series to address the relationship between drugs, firearms, and violent crime. The annual cost would total $1,100,000. In 1991, the enhancement would fund the National Survey of Prison Inmates that is conducted every five years. BJS will conduct a parallel survey of Federal prison inmates that would be funded by the Bureau of Prisons.

Second. BJS would use $335,000 of the requested funds to expand and enhance the Federal Integrated Data Base. These improvements would have particular advantages for tracking drug-related offenders from arrest through time served in prison. Under this program, more information would be available to Federal policymakers on a more timely basis.

Third. Of the request, $476,000 would be used to implement the redesigned National Crime Survey (NCS). The NCS produces the most complete accounting of victimization in America. Upon completion of the final phase of redesign, NCS may increase reporting of some crimes, such as family violence, by up to 25 percent. The research and development phase of the NCS redesign covered a period of six years, beginning in 1979, at a cost of $4,300,000. The amount requested for this initiative is not a recurring need and will be removed from the base in 1992.

-- An increase of $4,000,000 for the Missing Children's Program. This program was created to provide a central focus for research, data collection, policy development and information regarding missing and exploited children. By doubling the budget of this important program, new initiatives may be undertaken to enhance the efforts of State and local communities in addressing missing and exploited children issues. The additional resources would be directed at formulating programs to ensure a more coordinated, effective response at the local level when incidents of kidnapping, runaway and throwaway youth, and sexual exploitation occur. These programs may have particular relevance in combatting drug abuse-related exploitation of juveniles. Activities would include the development of crisis intervention programs, procedures and guidelines for missing children search teams and investigations, and expanded support for private voluntary organizations and State clearinghouses.

-- An increase of $45,263,000 for the Anti-Drug Abuse Program. This request represents a 600-percent rise in appropriations since 1988, a 230-percent increase over 1989, and a 10-percent enhancement over 1990. The increase would permit significant expansion of State and local drug control activities, while simultaneously supporting national drug control policies and objectives. The Bush Administration has evinced a strong commitment to State and local drug enforcement assistance, and OJP plans to enhance its efforts to ensure that scarce resources allocated to this broad-based program are carefully evaluated and focused on drug control purposes.

-- A decrease of $61,905,000 for the Juvenile Justice Program. This decrease would eliminate the formula grant program, which is not directly related to anti-drug abuse, but $7,500,000 is requested for use in assisting High Risk Youth who are, or may soon be, caught up in the cycle of substance abuse and other crimes. As you well know, this proposal is quite different from those you have seen for the past nine years, all of which recommended termination of the entire program. Over a period of sixteen years the Federal government has invested more than $700 million towards achieving the goals of the formula grant program. It stands to reason that States would now be in a position to determine which programs work most effectively and are worthy of State, local, or private financing. This proposal reflects a high priority in preventing high risk juveniles from becoming involved in illegal drug use, trafficking, and gangs. The request would allow the traditional Federal functions to be continued, such as program development and demonstration, training and technical assistance, research, and information dissemination. With a new 50 percent matching requirement that will be imposed upon grantees, the High Risk Youth projects could be continued at a total level of $15,000,000.

-- A reduction of $4,963,000 is requested to eliminate the Mariel Cubans Program. This program has provided small amounts of money to reimburse States for costs associated with incarcerating those admitted into the United States during the Mariel Cuban Boat Lift. These are not Federal offenders, and resources simply do not permit continuation of this aid.

-- A reduction of $3,652,000 for Regional Information Sharing Systems (RISS). Like the Juvenile Justice proposal, this request also represents a change in policy. The proposal would provide $9,750,000 in Federal funds, but combined with the suggested 25 percent match requirement, RISS would be continued in 1991 at a program level of $13,000,000. This level is very near the current level. Inasmuch as State and local law enforcement authorities are the primary beneficiaries of RISS, it is appropriate that they begin to share more equitably in the program's costs. Accordingly, the budget proposal recommends an escalating match requirement, over a three-year period, that would result in the phasing out of Federal funding. In 1994, the participating agencies would assume 100 percent of the program's cost, yet sufficient time will have been provided to allow them to eventually maintain the program independently.

-- A net reduction of $398,000 for Management and Adminis-

Office of Justice Programs

Public Safety Officers Benefits

Summary of Change and Justification of Adjustments to Base

(Dollars in thousands)

	Amount
1990 as enacted	$25,000
1990 Sequestration	-182
1990 Appropriation anticipated	24,818
Adjustments to base:	
Mandatory increase:	
General pricing level adjustment	1,257
1991 Base/Estimate	26,075

Mandatory increase:

1. General pricing level adjustments	$1,257

This request applies OMB pricing guidance as of December 6, 1989, to selected expense categories. The increased costs identified result from applying a factor of 4.3 percent, which represents an annual cost of living escalator tied to the Consumer Price Index (CPI). The public safety officer benefit payment is expected to rise from $109,460 in 1990 to $114,166 in 1991.

Total, adjustments to base	1,257

tration. This amount incorporates specific enhancements and reductions, to wit:

First. An increase of $52,000 is requested to complete integration of OJP's accounting system into the Department's Financial Management Information System. This would further the long-standing goal of the Office of Management and Budget to achieve a unified accounting system for each Department.

Second. A reduction of $450,000 and nine positions is requested for the Office of Juvenile Justice and Delinquency Prevention due to the proposed termination of the Juvenile Justice formula grant program.

Third. An increase of one position each for NIJ and BJS is proposed to support recommended enhancements in developing a new Less-Than-Lethal Weapon and to improve the Federal Integrated Data Base, respectively.

A net decrease of $8,789,000, representing various mandatory adjustments to our budget base, is also included in the Justice Assistance account.

The total request of $26,075,000 for the Public Safety Officers' Benefits appropriation includes a mandatory increase of $1,257,000. Under the Anti-Drug Abuse Act of 1988, the lump sum payment to survivors of public safety officers who died in the line of duty was doubled, with an additional increase each year tied to the cost-of-living index. Given the anticipated number of claimants and a projected increase in benefits from $109,460 in 1990 to $114,166 in 1991, the requested increase would be needed to satisfy all eligible claims.

Finally, the Crime Victims Fund is fully budgeted at the maximum amount of $127,200,000 permitted under its authorizing statute. This Fund consists of Federal criminal fines, bond forfeitures, and penalty assessments. Expenditures from the Fund are therefore borne by criminals -- not by law-abiding taxpayers. The funds are earmarked for victim assistance and compensation. This request is based upon a projection that payments into the Fund this year will reach the statutory cap, namely $125,000,000 plus an additional $2,200,000 for transfer to the Administrative Office for the United States Courts for administrative costs associated with collections.

The budget just described reflects the Bush Administration's strong commitment to working in partnership with the States on a broad array of criminal justice fronts, but most particularly in a joint campaign against the supply of and demand for illicit narcotics. I would now be happy to try to answer any questions from members of the Subcommittee.

STATE AND LOCAL DRUG GRANTS

Mr. SMITH. The biggest share of your budget by far is the anti-drug abuse grants to State and local government. My memory is that it was $75 million just two years ago, and then $150 million, and now it is $450 million. Have all of the formula grants been distributed?

Mr. WHITE. Yes, I believe that awards have been made to each of the States for fiscal year 1990.

DISTRIBUTION OF DRUG FORMULA FUNDS WITHIN THE STATES

Mr. SMITH. We hear complaints about how the states distribute the money to local agencies. Have you done any monitoring or have you got any reports on how the money has been used?

Mr. WHITE. Yes. We do get reports, really in two ways. First, a precondition for receipt of the award from the Bureau of Justice Assistance, which administers that program, is submission by each State of a State-wide drug strategy which is supposed to describe a broad-based approach to drug control which would cover urban and rural areas in the State, plus various phases of the criminal justice system from apprehension onward. More particularly, after those awards then are made, we do receive regular reports back of the subgrant awards made by each State to State agencies or to local governments.

Now our policing power, of course, under the statute is just to ensure that the funds are used for statutory purposes and that a sufficient amount of funds, as described in the statute by a percentage ratio, is passed through to local government. So we are not terribly prescriptive with the States because, under principle of federalism embodied in the statute, the guiding principle has been that the States develop a State-wide strategy, which may vary from one State to the other, and the States are in a position to best determine the allocation within a State.

The statute does require—and reports to us do not indicate that there is any major problem in this area—that the States, in making their decisions, allocate funds according to need. I believe that the reports, as submitted to us, by and large demonstrate that the States are making those kinds of rational choices; but again, we do not have specific policing power to disagree with a particular approach that a State may take.

STATEWIDE DRUG STRATEGIES AND DIRECT PASSTHROUGH OF FUNDS TO LOCAL LEVEL

Mr. SMITH. Well, it is not necessarily policing power. It is a matter, though, of reporting back the information so we know how the money is being used——

Mr. WHITE. Yes.

Mr. SMITH. And there is a requirement that you do that. We do get a lot of complaints, and we are getting more complaints all the time. They may have a State drug strategy, but do they carry out the drug strategy? If they don't, what amendments are needed to the law?

We are also getting a lot of demands for direct passthroughs to cities and sheriffs and so forth, because they are very dissatisfied with the way some of the States are distributing the money. Do you have information as to which ones are doing the best jobs, where you get the least complaints, and which ones are accomplishing their objectives the best?

Mr. WHITE. I think, by and large, there are some urban jurisdictions that perhaps have a dispute within their State governments, and they don't think they have received a sufficient passthrough. If one were to prescribe to the States that they make a passthrough, say according to population, which some urban areas have suggested, one would, of course, then be disrupting the whole statutory scheme, the concept of a State-wide strategy and apportionment according to need.

I might add, Mr. Chairman, we have been pleased by recent trends of the States devoting an increasing portion of their funds—and it is reflected in fiscal year 1990 state-wide strategies—to evaluation activities. So not only have we from headquarters tried to undertake an enhanced evaluation activity of State programs and discretionary programs, but we have strongly encouraged States to make investments in evaluation of their activities. We have seen a growth, I believe—rough estimates, because we are still analyzing the 1990 strategies—of probably at least a doubling of their resources from 1989 to 1990, in their plans for evaluating the use of their funds.

Mr. SMITH. Well, have you distributed the results of these evaluations, so that others might know which ones work the best and which ones are accomplishing their objectives the best?

Mr. WHITE. We do. Now the largest enhancement in evaluations under the 1988 act would have been made only in 1989, so we have gotten just a few evaluations out, some of them released just in the last few months, and we will have some more evaluations this year. So I am afraid I cannot report that we have a large body of new evaluatory data, but that is really a function of social science and the time it takes to compile those kinds of reports.

USER ACCOUNTABILITY PROGRAMS

Mr. SMITH. Well, one of the—just one, but it is an important one—of the disputes involves the extent to which programs should involve users rather than distributors. Have you gotten any evaluations back that indicate the success or lack of success of programs designed to discourage users?

Mr. WHITE. Well, we certainly have some trends in the States that indeed they are using their funding for various user accountability kinds of programs, and we do have some evaluations in the field on that. Generally speaking, I think it would be fair to say that this is a very encouraging area for investment, and perhaps if I could try to submit more detailed information for the record——

Mr. SMITH. Well, I would like that, but I think I have heard more complaints from law enforcement agencies that want to go after users. They know they can't clog up the courts, but they think they need to do something to discourage users.

Users in most of the country—I think I used the word "most" advisedly—in most of the country think that they are immune from any embarrassment of any kind. If they are buying drugs, they will arrest the guy that sells the drugs but they won't pay any attention to users.

There are a lot of law enforcement people who think that it is time that we do something to embarrass the user a little bit, without clogging up the courts. You can't prosecute them all and throw them in jail, but there are different ways, even short of a boot camp, which might be the eventual solution. I hear a lot of complaints that say that it just isn't being done by the States in their State strategies.

Mr. WHITE. Well, Mr. Chairman, I think indeed there is an increase in State strategies, or rather there seems to be some indication reflected in the State strategies of increased attention to user accountability provisions.

I might add that BJA rewrote its guidance to the States, its formula grant guidance, before the start of the distribution of this fiscal year's funds. User accountability and adoption of civil penalties and other innovative intermediate sanctions was a key new point introduced in that guidance, which, of course, we drew from the National Drug Control Strategy, which makes a very compelling case for the necessity to experiment with civil penalties, boot camps, other kinds of intermediate sanctions. We hope that that guidance we have provided will bear some positive results.

Mr. SMITH. The concern of some people is that they don't really have a way to get to some of these users before it is too late. If you start arresting users, even if they are turned loose as soon as they are booked then at least they have been caught before they are too far gone to rescue. You may be able then to get them into some kind of a program. In many cases it is just a matter of them becoming a little bit more enlightened about where they are headed if they don't do something different. There is a great feeling out there, I think, that this money is not being used sufficiently in that regard.

[Subsequent to the hearing, the Department submitted the following information:]

User Accountability Programs

The 1990 Program Plan for Anti-Drug Abuse Discretionary funds contains the following user accountability programs:

- Civil Penalties for Drug Offenders - This new program will assist from one to three jurisdictions in the planning and demonstration of the use of civil penalties to promote user accountability among first-time or casual drug users. Jurisdictions will demonstrate an expanded range of civil penalties such as suspension of drivers licenses, forfeiture of automobiles, fines, suspension of professional licenses, and other penalties that will be imposed in combination with drug testing and treatment as appropriate.

- Denial of Benefits to Drug Offenders - Title V, subtitle G of the Anti-Drug Abuse Act of 1988 provides that any individual who is convicted of a Federal or State offense for the distribution or possession of a controlled substance may, at the discretion of the court, be denied Federal benefits including: grants, contracts, loans, professional licenses or commercial licenses. This program will establish a system for reporting drug convictions to the General Services Administration (GSA). These individuals will be added to the list of Debarments and Suspensions published by GSA. Funds may also be available to award grants to States for pilot programs.

The following are 1990 drug testing programs that are related to user accountability:

- Program for Drug Testing throughout the Criminal Justice System:

  Pretrial Component - This component of the program will provide technical assistance and demonstration models for drug testing programs of pretrial offenders. Criminal justice agencies will make use of drug testing results in rendering detention and release decisions and developing supervision and drug treatment programs for drug abusing defendants/offenders. This program will assist pretrial service agencies with development of pretrial screening and monitoring programs.

  Probation and Parole Component - This component will assist State corrections divisions and local jails with development and implementation of drug testing programs during probation and parole. The program will utilize offender management tools such as the threat of additional sanctions and imposition of user fees. In addition, the program will stress the linkage between intensive monitoring and drug testing after adjudication. The program will also contain a training component for probation/parole personnel.

Correctional Drug Testing and Interdiction Component- Substance abuse issues are placing increased demands on custodial facilities. Drug interdiction strategies are of particular importance in correctional institutions, which must be kept drug-free. In collaboration with the National Institute of Corrections, this program will develop comprehensive strategies and specific options for training State and local agencies to combat drug abuse in correctional programs among offenders and staff. The project will emphasize the importance of effective drug testing policies and procedures as a tool for interdicting drugs and making appropriate treatment referrals.

Model Demonstration Site(s) - This component will provide financial assistance to one or two jurisdictions (including Statewide) to demonstrate a comprehensive drug testing system encompassing all stages of the criminal justice process, from pre-trial through supervised release. The selected sites will be required to: (1) utilize a management system which ensures that assigned offenders are systematically tested and tracked throughout the criminal justice system and (2) use drug testing results in decisions concerning release of the arrestee/offender. The imposition of user fees by the selected projects will be strongly encouraged. The demonstration sites will be eligible to receive training and technical assistance from those agencies selected for the drug testing programs described previously.

o Drug Use Forecasting - This program, administered by the National Institute of Justice, provides specific information on the prevalence and type of drug use among arrestees, in over 20 sites. A new component will collect data on illegal aliens held in local jails and lockups to provide better information on the involvement by illegal aliens in the trafficking of drugs, especially in the border areas.

Two user accountability programs are currently being evaluated:

o Maricopa County, Arizona, has developed a unique program that undoubtedly will be copied by other jurisdictions. Directed primarily at drug consumers rather than user-dealers, the program: (1) requires police officers to arrest suspects who possess even small amounts of drugs and refer them for prosecutor screening; (2) permits prosecutorial discretion in suspending prosecution of cases if the arrestee will admit guilt; (3) requires the arrestee to enroll in a treatment program; (4) requires the arrestee to submit to periodic urine tests to ensure drug abstinence; (5) requires those arrestees who can afford to do so, to pay for the treatment/urine testing; and (6) permits the prosecutor to drop charges after one year if the arrestee remains drug free and abides by all other conditions of release. This research will examine both the process and operation of the program in Maricopa County, as well as track the post-program performance of arrestees who successfully complete treatment.

- The other project seeks to determine the relative merits of four types of sanction options that provide promising alternatives to complement traditional State and local law enforcement approaches of arrest, prosecution, and incarceration. These include: (1) suspension and postponement of driving privileges; (2) imposition of fines based on local substance abuse and related ordinances; (3) application of land use controls, including nuisance abatement and zoning laws; and (4) enforcement of State civil asset forfeiture statutes. The evaluation methods will include analyses of implementation, including problems encountered; awareness of alternative sanctions by targeted populations; time series comparisons of offense trends before and after alternative sanctions are initiated; rearrest data; and case studies of land use controls in specific neighborhoods.

EVALUATION EFFORTS

Mr. SMITH. About municipalities wanting a direct passthrough. If all the money were to go according to population, and just then the real possibility exists that some of them would put it under a heading called "drugs" but it wouldn't be used that way. It would be used for something they were going to do anyway.

We ran into that problem with the old LEAA program, and we finally had to kill the program because it got so bad. It wasn't accomplishing its objectives.

We need to know the ones that are not doing their job, and that is important. If that is a fear that we have in this program, that is the best answer for those who don't think we should pass the money directly through.

We have jumped rapidly from a small amount of money to a large amount of money in a few years, but we need evaluations and we need information pumped out as fast as we can get it, both good and bad, on these programs. Are you putting sufficient effort into getting evaluations as rapidly as we can and getting the information out, whether it is good or bad?

Mr. WHITE. I think we are making good progress in that area, but I could not agree with you more: It is absolutely a key challenge right now to ensure that sufficient evaluation dollars are being devoted to programs now.

We have, of course, under the statute two kinds of evaluations. Broad impact evaluations are being done through the National Institute of Justice, with transfer of some funds from the Bureau of Justice Assistance, which will be about $4 million this year. In addition to that, we are seeing about a like amount being invested by the states in evaluations. Then, in addition to that, a meaningful kind of assessment of accomplishments is required to be reported to BJA for every formula program that is funded under the Anti-Drug Abuse Act program.

But Mr. Chairman, you are absolutely right that if the only test we try to pass is how fast we can distribute the money, and not look at the effectiveness at the end, we will not be doing our jobs. If we only concentrate on funding of programs that have been funded before, instead of emerging criminal justice areas such as the user accountability approaches that you identified, again we will not be doing our job.

This is an important time, I think, for BJA to ensure that it is using the money as cost effectively as possible, monitoring what states are doing, and then sharing the results of that so that the taxpayers will be getting a return on this very substantial investment that they are making.

[Subsequent to the hearing, the Department submitted the following information:]

Anti-Drug Abuse Evaluation Activities

	1989	1990 Projected
State Evaluation Activities	$1,915,000	$4,364,950
Section 520 Evaluations	3,151,622	4,247,500
Other Evaluations	1,835,000	2,205,000 *
Total	6,901,622	10,817,450

State Evaluation Activities: Section 501(c) of the Anti-Drug Abuse Act of 1988 requires that each program funded with formula grants contain an evaluation component, unless the program is not of "sufficient size" or the program is designed to provide equipment or other resources that would be used to augment existing State or local drug control efforts.

Section 520 Evaluations: Section 520(a)(2) of the Anti-Drug Abuse Act of 1988 requires the National Institute of Justice (NIJ) to conduct comprehensive evaluations of both formula and discretionary grant programs. A list of programs for which evaluation efforts were undertaken by the Bureau of Justice Assistance and NIJ in 1989 and those planned for 1990 is provided.

1989

Evaluation Topic	Amount
Street-Level Enforcement (2 projects)	$704,281
State Drug Strategies	154,600
Assets Seizure/Forfeiture	252,144

Total	2,205,000

MULTI-JURISDICTIONAL APPROACH TO DRUG PROBLEM

Mr. **Smith**. Well, another thing that we are hearing is that when we say "local" people immediately think that means each township, each sheriff, and others think that just means cities. But in this drug problem, the sheriffs will tell you that if all you do is concentrate on the city, the drugs go just over the city line. The problems are easily moved a short distance. The sheriffs will tell you they need it on a county level, or, now that they are hooked up electronically the way they are in many areas, they need funding on a regional basis.

We need some answers on how to distribute these funds.

We need something broader than a city, unless it is a very large city, and certainly something more regional in nature. In these drug bills that we have passed, I don't think we have quite identified how the formula should be written at the State level. I guess what you are saying is, "We will let the State decide how to do that," but it doesn't seem to be getting the results.

Mr. **White**. If I may respond, among the programs we have encouraged, and States do seem to be devoting a lot of funds to this are multi-jurisdictional task forces within the State. Also, we encourage that not only in the advice we give to the States on technical——

Mr. **Smith**. How do you encourage that?

Mr. **White**. Well, we provide formula grant guidance to each of the States, and the multi-jurisdictional approach is contained in that. In addition, when we sponsor demonstration efforts through our discretionary program, we have been trying to accent multi-jurisdictional enforcement approaches. Indeed, we do have an evaluation in the field on the multi-jurisdictional activities of the States. There are about 700 or so multi-jurisdictional task forces now being funded under formula grants.

In the discretionary grant program, this past year we embarked on a tri-State multi-jurisdictional task force involving Northern Virginia, suburban Maryland, and the District of Columbia. We thought, as I think you are suggesting correctly—that multi-State approaches, also regional approaches, may also be a very promising area.

Mr. **Smith**. Well, there are some who think, and I am not sure they are wrong, that there should even be a preference given for multi-jurisdictional grants and programs. There is a bill that I understand they are seriously considering in the Senate, doubling the current $450 million. I mean, we have gone from $75 million to $150 million to $450 million, and when you go up that fast, you need some answers on the way up.

MATCH REQUIREMENT FOR STATE AND LOCAL FORMULA GRANTS

Now we had a question last year in our conference that came up two or three times. In fact, we finally put legislation, I guess in the appropriations bill, that continued the 25 percent matching requirement instead of 50 percent as the law mandated. What are you suggesting now in that regard?

Mr. **White**. Well, the statute, absent some amendment, through appropriations rider or otherwise——

Mr. **Smith**. It will go to 50.

Mr. **White** [continuing]. will move it to 50, that is correct. We have been supportive of this, feeling that if the purpose of the program is to be sparking innovation within the States and providing seed money, then with the passage of time perhaps the states can make judgments on greater investments of funds in the programs which they find most appropriate.

Mr. **Smith**. How many are matching it 50-50 now?

Mr. **White**. I am not certain that our reports would indicate any are. I can certainly provide that for the record. Since the requirement is only 25——

Mr. **Smith**. Yes, yes.

Mr. **White** [continuing]. They would only have to report how they are matching up to 25 percent, but I would be happy to——

Mr. **Smith**. Okay. For the record—I know it will take a little work to do this, but I think it is worthwhile—try to determine how many could qualify if it were 50-50, and somewhat the nature or the identification of those that would not, and are they moving that way, how fast can they move that way. It is no secret, I guess, that some of us were reluctant to put the legislation in to make it 75 percent for another year. We have got to move at least to 50, but we don't want to do so so fast that we leave some states unable to even get into the program. Are all states now putting up the 25?

Mr. **White**. Oh, yes. That is a requirement. They are all meeting it.

Mr. **Smith**. And they all are doing that?

Mr. **White**. That is correct.

Mr. **Smith**. And also include in what you put in the report, we will have to take into consideration the levels at which funding is provided. In otherwords, at $150 million their share at 25 percent is much smaller than it would be at $900 million. In otherwords, how fast can they go up with their share of the funding, if we are to continue to have a matching program?

[The information follows:]

State and Local Drug Grants—Match Requirement

In 1990, the States are required to provide 25% of the cost of projects funded with Drug Control and System Improvement formula grant funds. By statute, the matching level will rise to 50% in 1991. We do not anticipate that States and localities will have difficulty meeting the higher 50% match requirement. Since the States and units of local government have primary responsibility for drug control efforts in their jurisdictions and they have been aware of the escalating match requirement since 1988, additional matching funds should already be incorporated into their budget development process for 1991. Further, State and local jurisdictions have revenue sources available that provide significant potential matching funds. As an example, the Federal Asset Forfeiture Equitable Sharing Program provided $157.3 million to States and localities in 1989. Approximately $190.5 million is expected to be available for distribution to States and localities in 1990 and $200 million in 1991. In addition to the Federal program, each State has an Asset Forfeiture statute. State statutes differ insofar as the purpose for which cash proceeds may be used, however, forfeitures under State statutes may offer another viable source of additional resources that could be used for matching funds. (It should be noted that if a State does not qualify for its entire formula grant allocation due to a shortage of matching funds, the remaining balance would then be made available directly to local jurisdictions within the State.)

The purpose of this grant program is to promote innovative programs and programs that offer a high probability of improving State and local drug control and system improvement efforts, with the intent that recipient agencies eventually assume full support of the programs. This intent is evidenced by the legislative history accompanying the Anti-Drug Abuse Act of 1988. For instance, the initial Senate proposal of a comprehensive drug bill, titled the Omnibus Anti-Substance Abuse Act of 1988, states "The graduated matching fund approach reflects the purpose of this grant program to use Federal resources to promote innovation and information-sharing among the States, thereby enabling the States to assume the funding of those activities most effective within that State." This is also the rationale for the statutory four-year funding limitation for grant projects. The Federal government should not bear an unfair share of the financial burden for grant programs; there should be an equitable partnership between State, local and Federal governments, particularly in this era of fiscal restraint.

DRUG USE BY TEENAGERS

Mr. SMITH. Also I think that during February I got around a little bit, talked to people about these drug problems, and there seemed to be a consensus that one area in which we are not doing enough is teenagers. Casual use appears to be—and I don't know if I can rely on these statistics—casual use seems to be down, maybe considerably, at almost all levels except high school level. At that level, the information I am getting is that it is as strong as ever, if not stronger. We just don't seem to be reaching the ones in high school.

One boy who is in a drug program, I asked him how many in his high school were not at least experimenting with drugs or alcohol, and he said more of them with alcohol than drugs, but between the two he said he didn't think there were a dozen in the whole high school. He said that is much, much worse than it was two years ago.

Then at the same time there are some teenagers who find themselves out on the street for one reason or another, and they are very, very susceptible not only to prostitution but to drugs, selling drugs or using drugs or whatever. They appear to be hopeless.

We don't have enough youth shelters. In Iowa I think there are eight shelters, and they just don't have enough beds. They did have, as late as two years ago, to sort of take care of them as they came in, but they don't have any more. The number of youth that need help in those circumstances has increased.

JUVENILE JUSTICE 1991 REQUEST

And this gets into Juvenile Justice programs, what you are providing in Juvenile Justice programs. I know in previous years the proposal has been to zero it out completely, and we always put the money back in, but only at the same dollar level, which means there has been a reduction in the program level steadily over the years because we have had considerable inflation. What about that? How do you justify that? Is this the budget you asked for for Juvenile Justice?

Mr. WHITE. I believe that the budget here is substantially similar to various recommendations made through the budget cycle period. I would be happy to try to provide more detailed information for the record.

Mr. SMITH. Well, is this the one you asked the department for?

Mr. WHITE. I must tell you I am not sure I can give a precise answer. It is substantially similar, though.

Mr. Smith. Substantially similar, and it wasn't cut out over at OMB, it was cut out at the department level?

Mr. White. If I may, I can provide more detailed information for the record.

If I might add, Mr. Chairman, I think though that the purpose and advantage of the targeted approach reflected here in Juvenile Justice would permit us to address the problems of high-risk youth, including teenagers, maybe most especially teenagers.

If you were to take the entire Juvenile Justice budget for this past fiscal year, primarily on the discretionary side, we probably can break out of it $11 million that was targeted for high risk youth. If we take this $7.5 million budget that is being proposed, and with a 50-percent match we come to $15 million, then we are continuing an effort at a comparable level for high risk youth.

In addition, with the budget increase proposed for the missing and exploited children's account, if we put the accent on exploited, we are dealing again with high risk youth, the very population you have indicated there is a need to address. And in 1989, through the discretionary program, the Juvenile Justice Office has increasingly tried to put a focus on high risk youth.

One program that we are embarking on now is also reflected in a conference report earmark. Juvenile Justice is working with an organization for a new "Teens, Drugs, and Crime" program. They have also embarked upon a partnership to borrow some expertise from the Office for Victims of Crime, in getting some other programs together to help address high risk youth. So I think we fully share your concern that the Juvenile Justice effort needs to focus on high risk youth.

As you know, the Juvenile Justice statute, the only mandates for the use of the formula funds have to do with deinstitutionalization, removal, and separation. There is not a drug focus in that statute. Although, of course, unless a state is out of compliance—and I think about 12 states fall into that category, that have either requested a waiver or are nonparticipating—it may use its money on drug control. Two States aren't participating this year and 10, I believe, roughly, have requested a waiver, meaning that they will have to put 100 percent of their formula funds into meeting those Juvenile Justice mandates, which would mean not addressing the high risk youth problem that you have identified.

REQUEST TO DOJ AND OMB FOR HIGH RISK YOUTH

Mr. Smith. Well, these high risk youth don't necessarily start out with a drug problem, but they are very susceptible to getting into a drug problem.

Mr. White. Right.

Mr. Smith. Maybe your budget officer or Mr. Roper might want to respond. Do you have the figures that I asked for here?

Mr. Roper. Yes, sir.

Mr. Smith. What are they?

Mr. Roper. The request to the Department was for $15 million.

Mr. Smith. $15 million?

Mr. Roper. Yes.

Mr. **Smith**. And then that was what went to OMB, and OMB cut it back to $7 million?

Mr. **Roper**. No. No, sir. The Department actually cut it back slightly. The Department had proposed to OMB that there be a 25-percent match on the Juvenile Justice high risk program, and then eventually the Administration's request called for a 50-percent match. That is why you see the eventual request of $7.5 million.

1990 EMERGENCY ASSISTANCE PROGRAM

Mr. **Smith**. I see. This $10 million emergency assistance for Hurricane Hugo and the California earthquake, what is the status of that?

Mr. **White**. Well, I believe that California made a request for roughly $5 million, backing out the Gramm-Rudman amount, and that award was made some time ago. South Carolina, I believe received an award for its full request of $1.6 million, which would still permit under conference report terms about $3.4 million for those states impacted by Hurricane Hugo.

Mr. **Smith**. You mean there is that much left?

Mr. **White**. That is correct.

Mr. **Smith**. And they have not applied for that?

Mr. **White**. That is correct, and we have undertaken some outreach efforts to ensure that the relevant states are aware of the availability of those funds.

Mr. **Smith**. Do you expect them to apply for it?

Mr. **White**. I hesitate to give a definite answer, but we will continue our effort so that if there is a need, they will be aware of the funds, and we will process applications as expeditiously as possible.

REGIONAL INFORMATION SHARING SYSTEM PROGRAM

Mr. **Smith**. Now explain your proposal concerning the funding for the RISS program.

Mr. **White**. Well, what this would provide is an escalating match, so that the Federal funding would be phased out by 1994. Of course, this is a change again from previous proposals which were a zeroing out. This change reflects the Administration's recognition that RISS is a valuable tool for the states and that it can be a valuable tool in the war against drugs. However, something that was originally a pilot project many years ago continuing to be funded at 100 percent by the Federal Government, does not provide an incentive for the states to make a contribution, which is perhaps commensurate with the benefits that they receive.

If I might also add, Mr. Chairman, I think that the logic behind an escalating match is similar to the one that you indicated for the Anti-Drug Abuse Act program. There are two provisions of relevance in the Anti-Drug Abuse Act program: one, the escalating match from 25 to 50 percent and, second, the notion that no program will be funded for more than four years. Again, the purpose would be to increase state investments.

So what we think this would do is allow that valuable program to continue this year at its full level with a 25-percent match, and then phase out the Federal appropriation for it. But it does evince our recognition of the importance of that program and reflects a new approach.

Mr. SMITH. But it is a program for which it is important that everybody participate, isn't it? They make a contribution to the system by being in it.

Mr. WHITE. Well, not every law enforcement agency joins. It is voluntary in membership requirements——

Mr. SMITH. But it is important to have as many in as possible.

Mr. WHITE. Well, I guess that that is indicated by the number who voluntarily join. Obviously those that aren't participating members don't feel that the benefits are sufficient, but the potential is there and it has indeed, we believe, borne some very positive results, which is why we are proposing to fund it at this level.

Mr. SMITH. I don't think there is anything that local law enforcement officers agree on more than the value of the RISS system.

MARIEL CUBANS PROGRAM

Now tell me about the Mariel Cubans. I think you proposed that to be zeroed out last year, too, didn't you?

Mr. WHITE. Correct.

Mr. SMITH. Yes. What is the support for your position?

Mr. WHITE. Well, these are individuals who are offenders under state law. They are not Federal offenders, and they are housed in state facilities. Federal budget stringency needs dictate that first priority on the limited resources be given to uniquely Federal functions, and it does not seem to us that that is at a priority level justifying continued funding.

Mr. SMITH. Are there as many of them as there were?

Mr. WHITE. I understand it is about the same. I can try to submit more detailed information for the record. I am afraid I don't have that information.

[The information follows:]

Mariel Cuban Program
Comparison By Year

State	Number of Inmates Original Request			Number of Inmates Verified			Inmate Months*			Award Amount

Number of States Reimbursed.. (38) (36) (39)

State Allocation Formula: The cost of each inmate per month times the number of inmate months for the respective State equals the total State allocation.

	1988	1989	1990
Allocation	$5,000,000	$5,000,000	$4,963,000
Inmate Months	24,070	24,604	26,132
Cost of inmate per month	$207.73	$203.22	$189.92
Actual average cost per inmate	$2,071	$2,120	$1,999
Average number of months per inmate	10.0	10.4	10.5
Average annualization cost per inmate	$2,493	$2,439	$2,279

* Rounded to the nearest month.

Budget Staff 3/29/90

QUESTIONS FOR THE RECORD

Mr. SMITH. We have some additional questions, but I think that you can answer them for the record. Thank you.

Mr. WHITE. Thank you.

[The following questions were submitted to be answered for the record:]

Questions Submitted by Congressman Dwyer

Office of Justice Programs

Operational Information System Support

QUESTION: As you know, the Bureau of Justice Assistance Discretionary Program Plan for 1990 was published in the *Federal Register* this Monday, March 19, 1990. The plan includes $300,000 for operational information systems support and computer training - a decrease of $400,000 from 1989. Traditionally, BJA has strongly supported interstate computer assistance because this infrastructure support provides vital information necessary for the 'war on drugs' and crime.

Does this decrease signal a change in priorities and, if so, what is the basis for this change?

ANSWER: Pursuant to the Anti-Drug Abuse Act of 1988, the Discretionary Program Plan of the Bureau of Justice Assistance (BJA) was designed to assist State and local units of government in implementing appropriate elements of the National Drug Control Strategy as well as other authorized program purpose areas. The plan is organized by priority objectives -- one of which is Information Systems. Over $10 million will be spent on information systems during 1990. Among the major initiatives in this area is a grant program to improve criminal history information systems through a program administered by the Bureau of Justice Statistics (BJS). This effort will improve overall levels of accuracy and completeness of criminal history records at the State level. In addition, it will continue funding to assist States through training and technical assistance in developing and implementing automated information systems. Other Information Systems programs in the BJA Program Plan include: (1) A Criminal Justice Simulation Models program that will develop computerized criminal justice simulation models and provide related training; (2) Operational Systems Support, which will provide training and assistance in the development, acquisition, and integration of information systems technology; (3) Computer Lab Capacity, a program to provide training and assistance to State and local agencies in automating criminal justice functions and implementing automated systems; (4) Criminal Justice Expenditure Analysis, which is a program to analyze criminal justice expenditures in order to update information used by BJA to determine the amount each State must make available to local units of government from its Drug formula grant funds; and (5) the Drug Data Clearinghouse, which provides assistance to all levels of government, through the identification, collection, and analysis of drug and crime information that is necessary for strategic planning.

For several years, the Office of Justice Programs has directed resources to criminal justice information system programs, particularly through two of the forerunners in this field -- SEARCH Group, Inc. and the Criminal Justice Statistical Association. Since 1980, SEARCH Group, Inc. has received grant awards totalling $9.6 million and will likely receive at least an additional $350,000 this year. The Criminal Justice Statistical Association has been awarded more than $4.8 million since 1982 and is expected to receive approximately $1,130,000 during the balance of this fiscal year.

QUESTION: The Office of Justice Assistance Discretionary Plan for 1990 calls for $9,000,000 to assist States in meeting voluntary standards for reporting arrests and dispositions. This is a key element in the Attorney General's plan for identifying felons who attempt to purchase firearms.

Precisely how will this money be used?

ANSWER: Awards will be made to the States under this program to:

1. Update, interpret or create offense codes or other data recorded in criminal history record systems which will enable a State to accurately identify individuals convicted of felony charges. Emphasis would be placed on arrests and convictions made within the last five years.

2. Establish systems and procedures to ensure that complete arrest, disposition and custody information are recorded in the State's computerized criminal history (CCH) system. Convicted felons would be identified on an on-going basis and appropriate indicators would be set in their criminal history records.

3. Conduct a baseline audit of criminal history record systems to assess existing data quality levels, identify problems in the present system and establish a basis for evaluating the success of a data quality improvement program.

4. Convert manual offender identification data into an automated format. This information would be used to add to an existing Master Name Index (MNI) or to establish a MNI with pointers to automated and manual criminal history records. Individuals identified as being ineligible to purchase firearms could be flagged in the MNI.

5. Establish a CCH system or add to and enhance offender information in an existing system. The State must develop a cost effective strategy designed to meet the needs of criminal justice practitioners and identify felons at minimal costs before cost for conversion activities will be funded. Limited funds will be available for States without a computerized system to

design a CCH system and to develop a strategy for data conversion. Additional funding may be available for system or data conversion once the necessary system design has been completed.

6. Upgrade existing data systems to meet improved data quality requirements by obtaining auxiliary equipment such as disk drives, printers, communication lines, etc. Program funds may not be used to obtain primary CCH equipment unless criminal history record information is being automated for the first time and currently available equipment in the State repository is at maximum capability.

7. Meet voluntary Federal reporting standards developed by BJS and the Federal Bureau of Investigation (FBI). Program funds may also be used to provide the FBI with information on individuals convicted of a felony offense and to assist States to participate in the Interstate Identification Index (III) program.

QUESTION: Will money be available for improving the accuracy and completeness of criminal history data in general or only to assist in compliance with Federal standards?

ANSWER: Program funds will be available: (1) to improve the quality and timeliness of criminal history record information; (2) to enhance State criminal history records in order to identify felons attempting to purchase firearms; and, (3) to comply with Federal voluntary reporting standards. The focus of this program is to improve reporting of all criminal justice actions and dispositions to State and Federal criminal history record systems, particularly those arrests and dispositions occurring in the last five years; to increase automation of criminal history records at the State level; and to meet FBI reporting standards.

QUESTION: Does the Bureau of Justice Assistance anticipate using demonstration programs and other programs aimed at replicating the success that some States have had in improving the accuracy and completeness of their information systems?

ANSWER: Demonstration and other programs aimed at replicating the success that some States have had will be funded. In addition to direct funding to the States, BJS will fund, from its Statistical program funds, a series of workshops and conferences aimed at sharing successful procedures and techniques for improving the quality of criminal history records. Specific initiatives include:

At an April 1990 workshop in Washington, D.C., representatives from ten States will discuss their audit experiences and problems.

Five States will be visited from April through August 1990 to document data quality issues in detail and evaluate innovative procedures for improving data quality.

At two data quality workshops in Washington, D.C. in May and September 1990, representatives from ten States will discuss impediments to improving data quality. A national conference will be convened in June 1990 to identify and discuss problems and procedures to improve the quality and completeness of criminal history record data.

The proceedings of the conference and all of the workshops will be published for general dissemination.

QUESTION: Does the Bureau of Justice Assistance anticipate using any of this money for computer system support involving technical assistance and training.

ANSWER: BJS will establish procedures to provide States participating in the program with technical information on procedures and techniques used by other States to successfully meet program goals and objectives. Periodic site visits will be made to selected States and information will be disseminated through publications, bulletins, and regional or national meetings. In addition, technical assistance programs currently funded by the Office of Justice Programs will be continued. Since 1976, BJS has funded SEARCH Group, Inc. to operate the National Clearinghouse of Criminal Justice Information Systems. Activities of the Clearinghouse include the operation of an electronic bulletin board that is available to the criminal justice community via a toll-free telephone number; maintenance of an index of automated criminal justice information systems throughout the United States; provision of telephone technical assistance; and systems and statistics training in four States each year. Moreover, BJA currently supports on-site technical assistance, on-site training, and the operation of training centers in Washington, D.C. and Sacramento, California.

Development of a Less-Than-Lethal Weapon

QUESTION: Could you provide detailed information on this $1.8 million increase for the National Institute of Justice to continue the development of an effective less-than-lethal weapon for the use of law enforcement officers in the United States?

ANSWER: If the request for $1.8 million is approved, the intensive experimental work needed to test the safety and efficacy of the chemical compound selected for Less-than-Lethal-Weapon (LLW) use would begin. Work to date has been to identify potential compounds and to conduct preliminary testing. So far, two out of six compounds have been examined; the $1.8 million request is based on successful preliminary work on the second compound now being tested. If this compound, hypnodil, is found to be a likely candidate, a number of extensive experiments must be undertaken to ensure that it meets FDA standards. The research is being conducted at the U.S. Army Chemical Research Development Engineering Center in Aberdeen, Maryland, which has established the following protocol for testing. First, ninety-day long-term testing ($600,000) must be done to assess the health hazards associated with long-term exposure at low levels, such as that encountered by personnel involved in the compound's storage or by law enforcement officers who may handle it often. Second, blood level analysis ($50,000) is needed to determine the correlation between blood levels of the agent and its effects. Third, two reproductive toxicity testing ($600,000) experiments are needed. These tests are to determine if there are any effects of the agent on the ability of a species to reproduce. Fourth, metabolic studies ($200,000) are required to determine how the body chemically absorbs and expels the agent. Finally, a phase I clinical test would be run ($350,000).

QUESTION: Are you working in conjunction with the FBI in this regard?

ANSWER: The National Institute of Justice (NIJ) has coordinated this project extensively with the FBI Laboratory and has been assured that the FBI supports this research. The FBI, along with many other Federal law enforcement agencies, participated in the 1986 Attorney General's Conference on Less-than-Lethal Weapons which synthesized the information on the possibility of developing an LLW and recommended that the funding initiative be pursued.

Missing Children Program

QUESTION: Was the Missing Children Program helpful or involved at all with the Melissa Brennan case?

ANSWER: The National Center for Missing and Exploited Children (NCMEC), a non-profit organization which receives Missing Children funds, reports that it provided immediate and major technical assistance to the Melissa Lee Brannen case of Lorton, Virginia. Within hours of her abduction, a Case Manager was assigned and sent on-site. Since then, the NCMEC reports that it has:

- provided 85,000 photo flyers done free by PIP Printing with a photo enhanced by NCMEC/Sony/QMA within hours of the abduction;
- provided counseling and support to the family on dealing with the media, dealing with stress, and technical aspects of case handling;
- provided two Search & Rescue experts from the North Carolina Missing Children Clearinghouse for on-site technical assistance to the Fairfax County Police Department and family;

- provided assistance and liaison for the reward system offered by the family/police;
- provided case management and analysis for over 150 sightings/leads called into NCMEC's Hotline;
- provided media liaison for the family to the national media and press;
- provided her photo/bio to major national media/press and numerous interviews for media/press and a 10-second video tape for the media to use throughout the nation;
- provided technical assistance to the Fairfax County Police Department and the FBI.

The NCMEC continues to provide case assistance to the Brannen family and plans to do so until the child is located.

Bureau of Justice Assistance 1990 Discretionary Program Plan

QUESTION: According to the March 19, 1990 Federal Register, the Bureau of Justice Assistance Discretionary Program Plan funding suggest a substantial reduction, of about $30 million, in the amounts that will be made available to the States in 1990, but a substantial increase in the amounts that will be made available to the Federal Government.

Why this change in formula?

ANSWER: There is no formula for distributing the discretionary funds. The goal of the program remains drug control and the improvement of State and local criminal justice systems, with particular emphasis on law enforcement activities. In some instances, other Federal agencies may be the most effective vehicle for providing training and technical assistance to State and local agencies. Without the participation of Federal agencies, programs of this type may be delivered through a third party. In devising the plan this year, the intent was to bring greater efficiency, consistency, and coordination to Federal efforts to forge stronger partnerships with the States and localities in controlling crime.

QUESTION: Why is discretionary money being made available to the Federal Government instead of the States in 1990, since this is a State nct a Federal, program?

ANSWER: Eighty percent of the monies for the Edward Byrne Memorial State and Local Law Enforcement Assistance Program is awarded directly to States in formula (or "block") grants. The remaining 20 percent (not to exceed $50 million) is for discretionary grants that "provide additional Federal financial assistance to public or private agencies and private nonprofit organizations. . ."

(Section 510(a) Omnibus Crime Control and Safe Streets Act, as amended). All of the discretionary funds awarded by the Bureau of Justice Assistance will be used to benefit State and local criminal justice systems. Throughout the history of the program, BJA has made awards to public and private agencies and entered into collaborative agreements with other Federal agencies to provide assistance to States and localities. These practices will continue in 1990.

The discretionary program plan was written to make the most effective and efficient use of BJA's funds. In instances where another bureau, office or Federal agency possesses special expertise in a program, the States are best served if that bureau, office or agency takes the lead in the program's administration. This assistance could come in several forms, by transfer of funds, joint funding, memorandum of understanding or through other collaborative efforts. Utilizing existing Federal expertise in training and administration may, in some cases, more directly and cost-effectively serve the interests of States and localities than would direct grants to intermediary nongovernmental third party providers. Examples of such arrangements in the past include administration of the Drug Use Forecasting program and development and monitoring of independent evaluations of BJA programs. These projects are funded by BJA and carried out by NIJ. In addition, training in asset forfeiture has been provided by the FBI. Finally, the use of interagency agreements may be particularly appropriate in light of BJA's statutory mandate "to support national drug control priorities" and the theme of the President's National drug Control Strategy to enhance coordination among all Federal agencies in the delivery of assistance to States, localities, and the public.

QUESTION: Please provide for the record a specific breakdown of Federal, state and local funding under the Bureau of Justice Assistance Discretionary Program Plan for 1989 and 1990?

ANSWER: A breakdown of 1989 drug discretionary obligations by type of recipient is provided. For 1990, it is not possible at this time to provide a specific breakdown of obligations.

	State	Local	Public/Private
1989	$4,428,402	$12,170,062	$11,716,270

In addition, following are 1989 discretionary programs that were implemented with the assistance of other Federal agencies and entailed reimbursement by BJA of costs incurred to provide State and local assistance:

Federal Agency	Amount	Program
Drug Enforcement Administration	$200,000	Clandestine laboratory training and certification for State and local officials.
Federal Law Enforcement Training Center	75,000	Gang/drug training program for State and Local juvenile juvenile justice agencies.
National Highway Traffic Safety Administration	100,000	Pilot demonstrations of drug classification and evaluation process in Colorado, Arizona, New York, Virginia, Texas, Indiana, Utah, and other sites.
Executive Office U.S. Attorneys	25,000	Five-year analysis and on Organized Crime Drug Enforcement.
Drug Enforcement Administration	100,000	Conference on drug abuse and violence in America (participants included State and local law enforcement executives).

The BJA is one of five program offices that exist within the Office of Justice Programs (OJP) organization and appropriation accounts. All of these offices share a common goal, which is to implement innovative programs and foster improvements in the Nation's criminal and juvenile justice systems. Therefore, in many instances, BJA programs, as well as those of the other OJP components, are implemented in concert with other OJP offices. The following is a list of 1989 drug discretionary programs that were funded by BJA and jointly carried out by BJA and other OJP offices. Awards were made to State, local, or public/private agencies.

OJP Participating Office	Program	Award Amount	Grant/Contract Recipient
National Institute of Justice	Drug Use Forecasting	$655,550	Funds awarded to thirteen State, local, and public/private agencies.

OJP Participating Office	Program	Award Amount	Grant/Contract Recipient
Bureau of Justice Statistics	Data Center Clearinghouse for Drugs and Crime	$199,986	Research Triangle Institute
Office for Victims of Crime	National Resource Center Clearinghouse of information on victim-related subjects.	100,000	Aspen System Corp.
Office of Juvenile Justice and Delinquency Prevention	Development of a model school-based effort in the District of Columbia to design and implement a drug-free school zone April 23, 1990strategy	37,500	Cities in School, Inc.
National Institute of Justice	Evaluation program of BJA formula and discretionary grants.	50,092	Delaware Statistics Analysis Center
		197,298	Institute for Law and Justice
		214,694	Arizona Institute for Criminal Justice
		198,782	Arizona Institute for Criminal Justice
		499,893	Police Foundation
		288,210	Jefferson Institute
		44,221	Louisiana State University
		104,758	Criminal Justice Statistics Association
		254,281	Michigan State Univ.
	Subtotal	1,852,229	

OJP Participating Office	Program	Award Amount	Grant/Contract Recipient
Office of Juvenile Justice and Delinquency Prevention	Model program for converting public housing into opportunity centers.	$37,500	City of Wilmington, Delaware
National Institute of Justice	Drug testing technology study-comparison ness of the four urine testing technologies most commonly used.	81,989	Public Health Foundation of Los Angeles County, Inc.
		2,964,754	

QUESTION: When were these March 19, 1990 *Federal Register* guidelines originally due for release/print in the *Federal Register*?

ANSWER: The BJA plan does not have a statutorily-mandated publication date. Publication of the 1990 Program Plan compares favorably to previous years. In 1987, the Plan was published on March 19, 1987; the 1988 Plan was issued on March 8, 1988; and for 1989, it was published on January 9, 1989. In 1990, final funding levels were not determined until late December because of the Gramm-Rudman-Hollings sequester and, programmatically, a more detailed review and analysis was necessary: 1) to ensure consistency with the President's National Drug Control Strategy, which was released in January; 2) to ensure appropriate coordination with other Federal drug control agencies; 3) to address projects earmarked for funding in the Conference Report accompanying the 1990 Appropriation Act; and 4) because many programs were three-year continuations that expired last year, a more thorough review and analysis was required to determine what new programs would be undertaken.

QUESTION: Please explain what you mean by "collaborative work" with the Federal Government in relation to this program?

ANSWER: Collaborative efforts range from advice from another agency/organization to actual involvement in development or implementation of programs.
